A Kellogg Switchboard for Every Size and Type of Exchange

THE UNIVERSITY OF CHICAGO
LIBRARIES
CHICAGO, ILL.

Magneto Wall Board, 34 lines

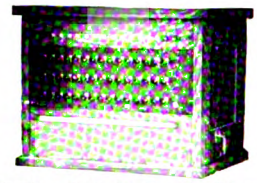
Magneto boards for rural and small town exchanges.

Private branch exchange boards for offices, factories, hotels, etc.

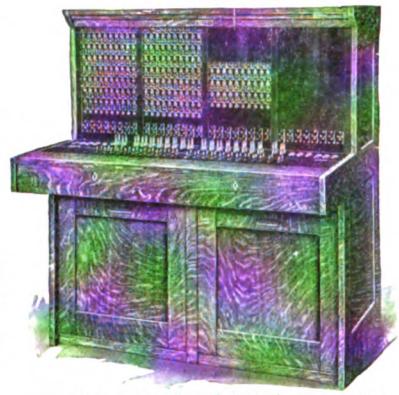
Common battery boards for the largest city exchanges.

Universal boards for the medium size towns that grow into cities.

Kellogg switchboards, telephone apparatus and line supplies are made to give the utmost service at the minimum expense.

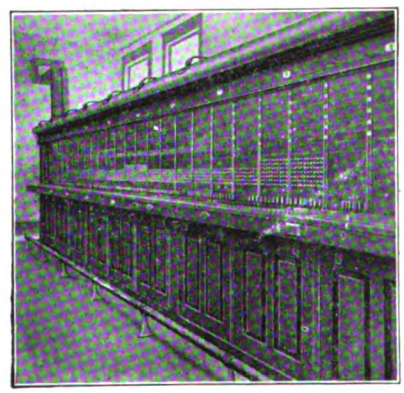


Cordless P. B. X. Board, 10 local and 3 trunk lines



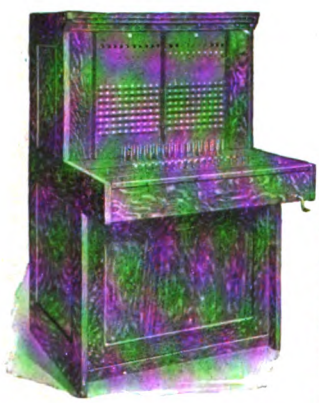
Magneto Switchboard, 320 lines capacity

50-line Magneto Floor Switchboard



Universal Switchboard in a large City exchange

"Use Is the Test"



P. B. X. Switchboard, 200 lines capacity

One of the largest Independent exchanges in the country. A Kellogg common battery multiple installation

KELLOGG SWITCHBOARD & SUPPLY CO.
CHICAGO, ILLINOIS

FEDERAL EMPLOYEES

The up-to-the-last-minute management in non-public industries finds it pays to provide employees with sanitary lunch rooms in which are used tables with pure white enameled iron bases and snow white glass-like tops, especially the variety with the raised rim (SANI-ONYX) and white enameled iron stools and SANI-ONYX Serving Counters.

Instead of losing money in providing employees with sanitary furniture and wholesome food, actual profits result through increased efficiency and a contented mind in a healthy body.

It is a good business venture and not philanthropy or charity, because loyalty and enthusiasm result to those who try to serve the welfare of employees.

Whatever you are getting is up to you

THE

FEDERAL EMPLOYEE

Vol. IV JANUARY, 1919 No. 1

The Course of Events

A brief summary of things done or planned since the close of our last report—the recent story of matters of particular concern to federal employees in general. Special attention is given late developments in the fight for better salaries and wages in the government service.

$240 Substituted for $120

The House of Representatives by a vote of 202 to 79 has raised the amount of the emergency salary increase for 1920 from $120 to $240.

The provision for a joint commission to investigate and report on salary conditions in the Executive Departments in Washington has been eliminated on a point of order.

The National Federation will make every effort to induce the Senate to grant the full amount asked for, $360.

GENERAL SALARY INCREASE FOR 1920 LIMITED TO $120

THE HOUSE Appropriations Committee has reported to the House, the Legislative, Executive, and Judicial Appropriation Bill for the fiscal year 1920 carrying only the current emergency salary increase of $120.

Amendment of the bill on the floor of the House will be sought by our National Federation, in order to secure the salary increase of a dollar a day, or $360 per year, asked for by the Federation.

BILL CREATES JOINT COMMITTEE ON RECLASSIFICATION

The Appropriations Committee has recommended the creation of a joint commission of five members of the Senate and five members of the House to investigate salary conditions in the government departments and to report a reclassification of the services within the District of Columbia As this commission is to be appointed in the next Congress, however, it cannot be expected to report in time for the workers to receive the benefits of the reclassification during the next fiscal year. Pending a fair and thorough reclassification of salaries, nothing less than a dollar a day increase can meet the situation, the Federation contends.

"The Committee has ignored the fact that living costs have risen and that, with salaries stationary, the condition of the government employees has grown steadily worse and worse," said President Luther C. Steward, of the Federation. "There are thousands of government employees who are receiving less than a living wage, to say nothing of just compensation, and the increase of at least a dollar a day is absolutely necessary if they are to support themselves and their families in health and decency. Our membership, representing every branch of the service, in every part of the country, is demanding, and expects to secure, as fair treatment as that accorded to other American wage workers.

"Reclassification, which is contemplated by the Committee through a joint congressional commission, is a vital need—but the very fact that the increase provided this year is merely a repetition of the provision of last year, arbitrarily made without reference to changing costs of living, emphasizes the necessity for a more elastic method of wage-fixing than Congress has ever employed.

"We ask Congress to grant the dollar-a-day increase pending reclassification. We think this a just request, and we shall do our best to induce the House to amend the Committee's report."

SENATE SUBCOMMITTEE TO CONSIDER JOHNSON-NOLAN BILL

The appointment of Senator Henry F. Hollis, of New Hampshire, as chairman of the subcommittee which is to consider the Johnson-Nolan Minimum Wage Bill for Government employees has just been announced by Senator Hoke Smith of Georgia, who is chairman of the Senate Committee on Education and Labor, to which this bill was referred. The other members of the committee are Senator Wm. E. Borah of Idaho and Senator A. A. Jones of New Mexico.

As Senator Hollis is known to be deeply interested in labor legislation, his selection for this chairmanship is regarded by officers of our National Federation as marking a definite advance for the bill toward a vote in the Senate. It is expected that a date for hearings will be announced shortly.

All kinds of expedients are resorted to by government employees to eke out a living, according to reports on file at National Federation headquarters, from night jobs as bookkeeper to extra

Digitized by Google

hours as rag-picker. The service is seriously handicapped through the excessive labor turnover. In the custodian force in the federal building in Chicago, numbering 185, the number of resignations is said to average more than one per day. The last annual reports and the Supplemental Estimates of department heads and other high officials (excerpts from which are given on pages 37-48) lay stress on the grave injury resulting to the public service from existing conditions, especially the totally inadequate salaries paid thousands of employees.

THE OUTLOOK FOR THE MCKELLAR-KEATING RETIREMENT BILL

Very little change has taken place in the retirement situation since our last report. The motion of Senator Sutherland to reconsider the vote by which the Pomerene bill was substituted for the McKellar bill is still pending in the Senate. It is the plan of Senator McKellar to ask for a vote on this motion at an opportune time in the hope that the Senate will reverse its former action. A recent canvass of the House Committee on Interstate and Foreign Commerce indicates that a large majority of that committee favors the general principles of the McKellar-Keating bill. The joint committee of federal employees handling the retirement question, headed by R. H. Alcorn of the Naval Gun Factory, Washington, D. C., Navy Yard, will endeavor to induce the House Committee to report the bill at an early date.

The joint committee gives the following cogent reasons why the McKellar-Keating bill should be promptly enacted into law:

A civil service without a retirement system defeats the purpose of the merit system to maintain a civil service of the highest efficiency through the retention of thousands of employees incapacitated by old age and other disabilities.

The present system of retaining the services of those incapacitated workers is extremely expensive and an unnecessary burden on the pay rolls of the government.

Large corporations interested in maintaining the highest efficiency have adopted liberal retirement systems in the interest of larger dividends. A great number of these corporations pay the entire cost.

Every government in the world except those of the United States, Venezuela and Turkey has the retirement or pension scheme in operation.

The cost of the McKellar-Keating bill will be borne equally by the government and the employees. Any other plan will only serve to defeat legislation along this line.

The retirement annuity, $600 per annum, would be much cheaper than the present plan of virtually pensioning those in the service at full salary.

Civil service retirement has been indorsed by state legislatures, hundreds of city councils, boards of trade and organizations of all kinds representing public sentiment in the interest of humanity throughout the country. The McKellar bill has been unanimously reported to the Senate by the committee on civil service and retrenchment. It has the indorsement of organized labor, including all of the organizations represented in the civil service and the organizations represented in this conference committee.

Retirement is an unredeemed pledge of both major political parties. It was a plank in the platforms. Hundreds of thousands of federal workers and their friends in the labor movement as well as in other walks of life are looking forward to the redemption of this pledge.

The consensus of opinion of the best qualified experts throughout the world unanimously indorses the underlying principle of the McKellar-Keating bill, which equitably divides the cost between the government and its employees.

The return of our many soldiers, sailors and marines will make a demand for places where our boys may honorably and usefully earn their living. The retirement of 7,500 superannuated employees who are in the way will make available automatically that additional number of places.

PAY OF EMPLOYEES OF BUREAU OF ANIMAL INDUSTRY

The Book of Estimates for the fiscal year 1920 makes the following provision for overtime pay for employees of the Bureau of Animal Industry, Department of Agriculture, engaged in meat inspection:

That, hereafter, the Secretary of Agriculture is authorized, in his discretion, to pay employees of the Bureau of Animal Industry employed in establishments subject to the provisions of the meat-inspection act of June thirtieth, nineteen hundred and six, for all overtime work performed at such establishments, at such rates as he may determine, and to accept from such establishments wherein such overtime work is performed reimbursement for any sums paid out by him for such overtime work.

The Department of Agriculture, according to a letter recently received from Secretary Houston with regard to increases in salaries of lay inspectors in the Bureau of Animal Industry, "will continue to promote efficient employees to the extent of the funds available." The Secretary continues, "I cannot say definitely at this time just what further promotions it will be able to make." In the same communication it is pointed out that during the last year "the minimum for lay inspectors was increased from $840 to $960 per annum"; that the salaries of all lay inspectors of the $960 class were raised to $1,080, and of those receiving $1,080 to $1,140; and that the $120 emergency increase was granted the employees of the above-named Bureau.

SEMI-MONTHLY PAY DAYS IN INTERNAL REVENUE SERVICE

The National Federation has taken up with the Commissioner of Internal Revenue, the question of paying employees in the Internal Revenue Service semi-monthly instead of monthly as at present, and the Commissioner is giving the matter serious consideration.

HEARING BEFORE THE SUBCOMMITTEE ON THE LEGISLATIVE BILL

At the hearing granted the National Federation of Federal Employees by the subcommittee of the House Committee on Appropriations (Hon. Joseph Byrns, chairman) charged with the preparation of the Legislative, Executive, and Judicial Appropriation Bill for the fiscal year 1920, the case of the employees was presented by President Luther C. Steward.

PRESIDENT STEWARD OUTLINES POSITION OF ORGANIZED EMPLOYEES

In accordance with the program previously agreed on, a general increase in salaries of $1 a day or $360 a year was asked, to take the place of the $120 increase, which will die with the end of this fiscal year. On page 57 will be found the draft of the section of the legislative bill dealing with the salary question, as proposed by the National Federation. This is based on Section 6 of the existing law, which is changed in the draft only to the extent necessary to incorporate therein the increase asked for.

As President Steward pointed out, the $120 increase was never adequate and the increase in the cost of living during the past twelve months leaves the government employees in an almost intolerable situation.

"All price fixing of commodities, and all wage adjustments for private employment," said Mr. Steward, "have been based on increased cost of production, but the government employee's wage has not been reckoned on this basis, although he has had at the same time to pay those higher prices, including the cost of the higher wage awards. In other words, the costs to government employees are compounded, without the added income received by other wage workers to meet the increased cost.

Citing minimum family budgets, ranging from $1,400 to $1,800 per year for a family of five, as submitted by various official boards and bureaus, Mr. Steward drew special attention to the exhaustive cost-of-living studies of the National War Labor Board, which showed a minimum of $34.80 per week, or 72½ cents per hour, as the minimum necessary to support a family in health and reasonable comfort. "Any wage less than this, according to former Chairman Frank P. Walsh," he pointed out, "is penalizing the worker's family for the benefit of the employer or the general public."

The situation of the federal employees whose salaries are fixed by Congress, as compared with those whose pay is adjusted by wage boards upon the basis of the cost of living, was also dwelt upon by the federal employees' president. The mechanical force of the shipyards and navy

Digitized by Google

yards, he stated, have received an increase of $1.52 per day within the past year. Within the last six months those employees have received an increase of 15 per cent, to correspond with the Labor Department's figures for the increase in the cost of living since October, 1917—but the statutory employees and other office workers have had no such increase.

Labor turnover at the rate of 5,000 per month, which, according to the Civil Service Commission in its latest annual report, was the condition in the departments at Washington during the past year, represents an expensive and untrained and therefore highly inefficient working force, Mr. Steward stated, one which to a private employer would indicate an alarming condition of his business. He also emphasized the fact that prohibition of transfers between departments and the establishment of an actual "blacklist" for employees who should resign had been resorted to by departmental executives in order to retain their experienced workers in the face of higher costs of living and the offer of better salaries outside the government service.

SUPPLEMENTAL ESTIMATES SUBMITTED TO CONGRESS WHOLLY INADEQUATE

This year the heads of the executive departments, by request of the President, omitted from the annual estimates submitted to Congress in accordance with law provision for increases in statutory salaries, adopting the unusual course of presenting supplemental estimates dealing with this matter. These supplemental estimates are regarded by the Legislative Committee of the National Federation as wholly inadequate.

After referring to the efforts of the National Federation to "secure the establishment of a wage-adjustment commission and the passage by the Senate of the Johnson-Nolan Minimum Wage Bill for government employees, which has already passed the House by a large majority," the statement of the committee continues:

"The departments' estimates very justly provide first of all for the lowest paid workers, of whom there are many thousands receiving less than a living wage. But they do not give these workers enough. We ask for the Nolan $3-a-day minimum, or $1,080 per year, while they ask for as little as $900 and even $600 in some cases.

"The department heads very justly provide also for better pay for a considerable number of the higher grade executives. This we advocate as a matter of both justice and efficiency.

"But with relatively few exceptions, the department heads 'skip' in their recommendations the vast numbers of the middle group of workers, in which salaries run from $1,200 to $2,000 per year. These employees, like all the rest, have to contend with the fact that the purchasing power of the dollar has gone down to 54 cents, and most of them have families or other dependents to support. If Congress should adopt the departments' recommendations, omitting the $1,200 to $2,000 group from the increases, these employees would suffer an actual reduction in their present pay, because they would lose the $120 increase allowed them during the current year.

"The situation is easily realized on examination of the table of department estimates submitted to the Appropriations Committee. Of the total $2,353,000 called for in these estimates, $1,644,000 would go to the District of Columbia employees alone, the District government having the largest proportion of workers receiving less than a living wage, though not the largest number of all grades. The Interior Department, which is the only department that recommends any considerable number of increases in the grades between $1,200 and $2,000, will receive $259,320. The Department of Commerce, which confines its recommendations largely to the higher salary grades, would receive the next smaller allotment, amounting to $106,580. Thus nearly $2,000,000 of the estimates would be allotted to three departments, while such big establishments as the Postoffice Department and the Navy Department would receive but $8,000 and $7,500.

"In other words, counting only the normal 40,000 government employees in Washington, and leaving out the 50,000 recent appointees, to say nothing of the entire field service, it may be seen at a glance what a small proportion of the government workers would be relieved by the increases asked for by the department heads. Their proposed increases would help, of course, but as a practical measure of general relief from the stress of present high costs those increases would reach so few people that they would be but a drop in the bucket.

"The National Federation of Federal Employees will continue to urge Congress to grant a flat increase of $360 per year, pending the enactment of some measure which will bring about a scientific reclassification of the civil service, through a commission on which the employees shall have representation. This temporary increase, with the passage by the Senate of the Johnson-Nolan Bill, providing a minimum wage of $3 per day, will tide us over to the point where we can, we believe, put the civil service on a sound and business-like basis, with a cornerstone of justice to the workers."

TRANSFERS AND VOCATIONAL TRAINING OF SOLDIERS

Two measures of vital importance to the federal civil service will be introduced in Congress in the near future on request of the National Federation of Federal Employees. One will provide for repeal of restrictions on interdepartmental transfers and the other for vocational training of soldiers and sailors as a prerequisite to appointment to government positions.

The law of 1917 forbidding transfers at higher salaries or with promotion in less than one year has been aggravated since the war began by departmental rulings which, the federation contends, are virtually "blacklist" orders in some departments, namely, the Navy and Interior. The result has been that experienced government workers, although needed seriously on important war work, even when transferred thereto, were denied the salaries belonging to such work. At the same time new and inexperienced appointees, brought in by thousands, have received salaries at entrance higher than the experienced workers were allowed.

The Federation does not contend that the new workers were overpaid. On the contrary, it protests against the generally low salary scale in the Government, and especially against the injustice of holding down the pay of the experienced employees.

The proposed legislation regarding transfers reads:

Be it enacted, etc., That from and after the passage of this Act, and subject to the other provisions of existing law, an employee serving in one executive department or independent establishment may be transferred to any other executive department or independent establishment: *Provided,* That such employee has been an occupant of the position from which transfer is sought for a continuous period of at least six months immediately preceding the transfer requested: *Provided further,* That the United States Shipping Board Emergency Fleet Corporation shall be considered a Government establishment for the purposes of this Act: *Provided further,* That nothing contained in section seven of "An Act making appropriations to supply urgent deficiencies in appropriations for the fiscal year ending June 30th, 1918, and prior fiscal years, on account of war expenses, and for other purposes," approved October 6th, 1917, shall prevent the payment of increased compensation to employees who, within one year, have been transferred from one department or independent establishment to another department or independent establishment.

The U. S. Employment Service

"A romance of absorbing interest"—how there was built overnight, as it were, vast intricate machinery, which speedily and effectually mobilized an industrial army of two and a half million men for winning the war. The same great engine, reversed, is now proving equally effectual in replacing these millions in the industries of peace.

By D. M. REYNOLDS

Of the Council of National Defense

THE story of the development and growth of the U. S. Employment Service is a romance of absorbing interest, a romance to which a group of loyal, enthusiastic workers under brilliant and able leadership have contributed of their best in mental and physical endeavor, almost to the limit of endurance of both, that a patriotic ideal might be realized and a great service rendered to country and to humanity. Theirs was service to the country of the first magnitude, and that their achievements contributed in large measure toward winning the war is recognized by all who are in a position to know what the Employment Service has accomplished in the comparatively brief period of its existence.

ORIGIN AND STUPENDOUS TASK OF THE EMPLOYMENT SERVICE

Starting from a small beginning in the Immigration Service, the unit almost overnight leaped into a position of usefulness and importance to the world that challenged the admiration not only of governmental departments and the public at large but actually proved a revelation to those in whose brain the plan had had its inception. They had builded even better than they knew, and at the psychological hour that their country had need of the services they were giving to it. Yet even these men, possessed of the vision to see into the future and its vital needs, did not wholly foresee all that they were to be called upon to accomplish. Perhaps it was as well so, for the task was one of almost forbidding magnitude, and the obstacles to be met and overcome were many and complex.

Men in numbers running into the millions must be taken from their ordinary peace vocations and placed in useful war work, and that without delay, for production must be speeded up, and a cry for haste was heard across the sea. Plans also must at the same time be carefully laid for taking care of millions of soldiers and sailors and for placing them in positions at the close of the war, following demobilization. All this must be accomplished with a minimum of disturbance to the industrial field and to the people themselves. The "impossible" was accomplished in the first stages of the plan, and in the brief period of a few months approximately two and a half million men were drawn from their peace occupations and established in work that would help in winning the war.

DIRECTOR GENERAL JOHN B. DENSMORE

SERVICE ORGANIZED AS A SEPARATE UNIT BEGINS WORK

Congress early came to the conclusion that the Service should be a separate unit, and took formal action in this direction in the Urgent Deficiency Bill, approved October 6, 1917, when it gave recognition to the fact that its activities warranted the Service in being operated as a separate entity. An appropriation of $250,000 was set aside for the immediate needs of the new Division. It was not until January, 1918, however, that the Secretary of Labor issued instructions for the creation of a distinct Employment Service, at which time he decided that the Department should consist of the following organization:

Advisory Commission.
Director of Employment.
Assistant Director for Field Work and Quasi-official bodies.
Assistant Director for Administrative Work.
Division of Information.
Women's Division.
Public Service Reserve.
Boys' Working Reserve.
Farm Service Division.
Division of Investigation.
Division of Service Offices.
Statistical Division.

The Service began work at once by establishing offices in several states. Field men with government experience were detailed to states to expand existing offices and organize new ones. Their efforts met with instantaneous success, until at the present time more than nine hundred offices are in existence, all performing services of vital import to the entire country.

Coincident with this early field work thirteen employment districts were organized in the states with a superintendent for each district and a federal director in each state. Shortly thereafter the department approved a plan for dividing the United States into districts, these districts to be based on the Federal Reserve Bank System, except that the employment districts were to follow state lines. Necessities of the service led the Secretary to issue a modification of the order for the organization of the unit. This modification provided as follows:

The Employment Service shall be administered by the department.

There shall be a director, who shall have supervision of all the activities of the Employment Service.

There shall be an Assistant Director who shall perform such duties as may be assigned to him and act as Director in the absence of his chief.

Digitized by Google

There shall be a Policies and Planning Board composed of chiefs of the different divisions.

There shall be a Division of Information to be known as the Division of Information, Administration, and Clearance, in charge of ordinary administrative questions, etc.

There shall be organized a Division of Training of Personnel, to give necessary training to the personnel.

The magnitude of the tasks in hand made necessary the creation of subdivisions, though the main framework of the organization as decided upon by the Secretary in January, 1918, still stands practically as organized at that time. Not the least of these tasks fell to the Public Service Reserve. This division supplemented the employment offices with 15,000 enrollment agents, reaching out in all directions into the rural districts, ever in search of workers in less essential occupations, whom they placed in more vital occupations. When final statistics are compiled it will be shown that the Public Service Division has performed a service to the country in its hour of need, second to none. Thousands of men, engineers, technical experts, and the like have been furnished to the Army, Navy, and government departments. Even the Emergency Fleet Corporation has obtained from the Reserve's lists thousands of skilled men, while many hundreds of officers of technical training have been supplied by it to the Army with the least possible delay. No sooner did the need arise for skilled men in any branch than the Reserve had the men ready, even to civilian administrative heads, many of whom were provided from the Reserve lists. Among its various services might be mentioned the enlistment of 1,500 motor mechanics for the aviation service; the submission to the Division of Military Railways for enlistment the names of 4,500 railway men, 470 for the Tank Corps, 472 for tower men for the Navy, and so on. Altogether the Reserve had registered and indexed nearly half a million men, skilled and unskilled, for service, and the zenith of usefulness of this division is yet to be reached.

GREAT SUCCESS ACHIEVED BY THE BOYS' WORKING RESERVE

The Boys' Working Reserve has justified its existence many times over, and early became a vital factor in food crop production. This branch concerns itself mainly with the mobilization and training of boys 16 to 21 years of age and placing them in essential occupations, principally on farms, and has worked out and applied an effective working system. Central farm training camps were established in various states, and in these camps, under proper supervision and moral influences, thousands of uniformed boys received intensive training in agriculture. From these central camps they were sent out to smaller camps known as "Liberty Camps," whence they were taken each morning by farmers who had need of their services. It is a matter of record that many crops doomed to disaster from lack of labor have been saved by the boys so organized and trained, and in one instance the entire beet crop of a state was saved by

ASSISTANT DIRECTOR GENERAL NATHAN A. SMYTH

them. It is gratifying to learn from reports from various directors that more than 95% of boys so placed on farms, have proved themselves efficient.

FARM SERVICE DIVISION A BIG FACTOR IN FOOD SITUATION

Another division that has had to do with the food production of the country and that has accomplished heroic results is the Farm Service Division, and were it not for the thorough work of this division America would undoubtedly have fallen far short of the demands made upon it to feed the world. The problems confronting this unit were handled with system and thoroughness. Conditions were studied at first hand, needs diagnosed, plans prepared, and cooperation with other divisions touching farm problems was sought. The result was a fine working system that produced immediate results and through its operation the wheat crops of the West and Middle West were saved at a time when they were in peril of almost total loss.

HOW THE GREAT WHEAT DRIVE WAS CARRIED THROUGH

Preparations for the great wheat drive illustrate the value of the carefully thought-out system that began to operate early in April last, when the Assistant Director General for the Wheat Drive established employment offices in Oklahoma, Kansas, Nebraska, the Dakotas, Minnesota, Iowa, and Missouri, to which later were added temporary offices in these states to assist in the harvest work. Like a general directing his army, daily reports kept the Assistant Director informed as to conditions, and ripening of fields of wheat, thus enabling him to marshal his forces at any given point with a minimum loss of time and effort. Speed and efficiency marked every maneuver of this land army of nearly ten thousand men, and the wheat crop was saved. Cooperation was sought from the editors of newspapers, who were asked to devote a small space in each issue to the local needs of farmers for help and thus form a Newspaper Farm Agency, to which proposal several hundred papers gave ready assent. Added to these other agencies, moving picture manufacturers were asked to assist by running trailers putting forth the labor needs of the country, and this the manufacturers of film did, at very great expense to themselves. Still further, cooperation of the National Grange was obtained looking to the placing of farm help, each subordinate grange being requested to appoint a member to act as Farm Labor Agent. Commercial organizations throughout the country also were asked to serve as Farm Labor Agents, a request to which they gave ready and cheerful compliance. One of the most important factors that was called into the service was the rural telephone lines, over which at stated hours of the day operators called up farmers, asking as to their labor needs, thus reaching, it is estimated, millions of farmers. The Postmaster General placed at the service of the Employment Service the support of 98,000 third and fourth class postmasters and rural carriers, who lent assistance that cannot be overestimated.

WORK OF THE FLYING SQUADRON OF ORGANIZED LABOR

Early in the life of the U. S. Employment Service the needs and resources of the country, so far as skilled and unskilled labor were concerned, were taken up exhaustively, and in order to make up the deficiency —a disturbing shortage—caused by

Digitized by Google

the draft, a flying squadron of properly equipped men was selected through international labor organizations, and these men were able to transfer large numbers from non-essential to essential occupations. But even this was insufficient to make up the deficiency, and action was taken looking to the furloughing of men experienced in the trades and inducting them into war industries, which in large measure relieved the disturbing conditions then existing.

EMPLOYMENT SERVICE TO RECRUIT ALL INDUSTRIAL LABOR

It had now come to the point where the necessity of centralizing all recruiting of industrial labor was apparent, and the War Labor Policies Board decided that such recruiting should be done through or in accordance with methods authorized by the United States Employment Service. In June was begun the organization of State Advisory Boards, Community Labor Boards, and State Organization Committees, in cooperation with employers, employees, and the U. S. Employment Service, for the purpose of recruiting unskilled labor for war work. It was also part of the plan to extend the machinery of the service to all parts of the United States. President Wilson at about this time lent great strength to the plans of the Employment Service by giving his unqualified approval to the decision of the War Labor Policies Board to centralize the distribution of labor in the Employment Service. In the words of the President:

"The U. S. Employment Service must have sole direction of all recruiting of civilian workers in war work; and, in taking over this great responsibility, must at the same time have the power to assure to essential industry an adequate supply of labor, even to the extent of withdrawing workers from non-essential production."

This led to an immediate invitation from the Director General to employment experts to come to Washington for a discussion of plans for the carrying out of the great undertaking. He wished them to give him the benefit of their experience. Out of this conference and the following weeks of study of the internal organization grew a plan of operation, and the Director General authorized a readjustment. This consisted principally in the abolition of the system of thirteen employment districts; the gradual elimination of the district superintendencies; the centering of the responsibility for field organization on the Federal Directors of Employment for the states; the institution of uniform methods of office operation; and the readjustment of the work of the Director General's office in Washington and aligning it into five divisions, each in charge of a director. Still another conference followed, that was productive of much good when state directors of the U. S. Employment Service and of the U. S. Public Reserve were called to Washington for a three-day conference, at which conference every phase of the labor problem was thoroughly canvassed. There were addresses from the Secretary of Labor, the Assistant Secretary, and the Chairman of the War Labor Policies Board, and a mutual understanding of the problems facing the service resulted from the conference, as well as the best methods for solving these problems. More than a hundred officers were in attendance.

This point marked the turn of the balance, and from then on the service has been working along firmly established lines, placing thousands of men, stabilizing industry in various directions, putting pressure of labor on vital points at critical moments and establishing a balance that has been felt in the great work of keeping our armies at the front supplied with needed equipment and munitions.

TASK OF PROVIDING SOLDIERS AND SAILORS WITH SUITABLE JOBS

Since the signing of the armistice on November eleventh two new problems have arisen: first, that of unscrambling the mass and returning men to their former or similar industries; second, that of finding suitable jobs for men of the Army and Navy. The machinery for this task was ready and in working order when the emergency arose, except for the organization of some new units, made necessary by the demobilization of millions of men in the next few months. Complete pooling of effort by the Government and the national welfare organizations to assist in finding suitable employment for soldiers, sailors, and war workers, was accomplished at a conference held in Washington on December 5, at which a plan of cooperative action, linking the national and local machinery of the welfare organizations with the U. S. Employment Service, was adopted. At this meeting there was organized a cooperative Central Committee, which will direct the amalgamated efforts to help the nation's fighters and war workers.

The joint action of the large welfare organizations permits assistance to soldiers, in finding employment, in every army camp and every community in the United States. It further brings to the aid of the Federal Employment Service more than half a million local agencies, such as the local units of the Council of National Defense, the 10,000 Home Service Committees of the Red Cross, and tens of thousands of churches, social, civic and other bodies. It assures the establishment of a cooperative bureau for returning soldiers and sailors in every city and town in the country. The agents of the welfare organizations in the army camps will work with the camp representatives of the Federal Employment Service in acquainting soldiers with the facilities for assisting them after leaving camp, while their agents on homeward-bound transports will perform the same service.

Upon notification of adoption of its program by the Secretaries of the War, Navy, Interior, Commerce, and Agricultural departments, the U. S. Employment Service issued telegraphic instructions to its state directors setting in motion machinery for the immediate establishment of cooperative bureaus. The response was immediate, one state completing the organization of bureaus within forty-eight hours after receipt of orders to go ahead. At the present time bureaus are in operation in every state in the Union and applicants are being placed at a rapid rate.

The Community Labor Boards of the Federal Employment Service, are working jointly in the large towns and cities with the local councils of defense in organizing the drive to assist soldiers and sailors to positions, and in the large communities the managers of the bureaus are, in most instances, regular officers of the Employment Service.

To the Men of Oxford

I saw the spires of Oxford
As I was passing by,
The gray spires of Oxford
Against a pearl-gray sky.
My heart was with the Oxford men
Who went abroad to die.

The years go fast in Oxford,
The golden years and gay,
The hoary colleges look down
On careless boys at play.
But when the bugles sounded war
They put their games away.

They left the peaceful river,
The cricket-field, the quad,
The shaven lawns of Oxford
To seek a bloody sod.
They gave their merry youth away
For country and for God.

National Federation of Federal Employees

(Affiliated to the American Federation of Labor)

ITS OBJECTS, METHODS, AND ORGANIZATION

The NATIONAL FEDERATION OF FEDERAL EMPLOYEES is an active organization of civilian workers in the government service, composed of representatives from virtually all branches except the postal service, the employees of which have organizations of their own.

The *Objects* of the FEDERATION are: To advance the social and economic welfare and education of the employees and to aid in the perfection of systems which will make for greater efficiency in the various services of the United States.

The *Methods* for attaining these objects are petitioning Congress, creating and fostering public sentiment favorable to proposed reforms, cooperating with government officials and other employees, securing the enactment of appropriate legislation, and other lawful means. Under no circumstances is the FEDERATION to engage in or support strikes against the United States Government.

The FEDERATION now comprises 111 local unions, located in nearly as many cities and towns throughout the United States, in Canada, and the Panama Canal Zone. A list of these unions appears on pages 63 and 64. Additional unions are constantly being formed.

WHAT THE FEDERATION IS FIGHTING FOR

Adequate and proper salaries for the employees of the national civil service, including a minimum living wage.

Standardization and reclassification of the civil service, to the end that salaries and working conditions shall be fairly adjusted in the interest of the efficiency of the service and the well-being of the employees.

Retirement of superannuated employees under a system which shall be equitable and beneficial to both the employees and the Government.

The right of civil service employees to adequate representation in connection with the regulation of the essential conditions of their employment, as salaries and wages, hours of labor, promotions and demotions, transfers, removals, and sanitation.

WHAT THE FEDERATION HAS ACCOMPLISHED

Although the formation of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES dates back only to September, 1917, and the present movement for the organization of civil service employees is but little older, much has already been accomplished—more than had been accomplished in this direction by federal employees without organization during many decades of helpless dependence on others.

More specifically, organization has been instrumental in bringing about, during the very brief period mentioned, these results, among others:

Substantial increases in salaries and wages.

Redress of many grievances of employees in various services of the Government.

The defeat of an attempt, both unnecessary and unjust, to fasten on employees of the Government a longer workday.

The arousing and marked development among federal employees of a spirit of self-reliance and cooperation, and of closer affiliation and sympathy with the great mass of the nation's wage-earners.

GODSPEED TO THE CAUSE FROM "HIGHER UP"

PRESIDENT WILSON (*to the Washington, D. C., Union*).

"They [resolutions of the Washington, D. C., Union] have given me a great deal of genuine pleasure and I wish that I could convey to each member of the Union my most cordial wishes for the New Year."

HON. CHAMP CLARK, *Speaker of the House of Representatives.*

"It gives me pleasure to felicitate the Union on the progress it has made and to extend to it every good wish for the future."

HON. LOUIS F. POST, *Assistant Secretary of Labor.*

"It is really an advance that the people employed by the Government of the United States in such large numbers should have come to recognize their industrial relationship with the people out in the rest of the world who have been trying to organize what is called labor for its own protection during the last forty or fifty years—the period of the present labor organization movement. . . . I think that in respect to your organization and to what you are endeavoring to get I can bring you not only my personal sympathies with your work, but I may safely say that I bring the sympathies of the Department in which I am engaged, and I am sure that Secretary Wilson is thoroughly in sympathy with what you are trying to do."

HON. CARL VROOMAN, *Assistant Secretary of Agriculture.*

"I think it is not only the privilege but the duty of the employees of the Federal Government to organize themselves; to organize themselves not only to see to their own rights, not only to secure for themselves the best kind of treatment from the Federal Government, but in order to increase the efficiency of the civil service of these United States. The possibilities that lie before this great organization . . . are limitless . . . Organized, you can accomplish far more, not only for yourselves, but for the nation, than you have ever been able to accomplish in the past."

HON. SAMUEL J. ROSENSOHN, *formerly Assistant to the Secretary of War.*

"It is the definite policy of the War Department not to interfere in the slightest way with the right of the workers to organize in trade unions and to prohibit any person in the Department from discharging workers by reason of their membership in trade unions for legitimate trade union activities."

HON. CHAS. M. GALLOWAY, *U. S. Civil Service Commissioner.*

"The impression which appears to have been entertained that the Commission objected to its employees becoming members of the [Federal Employees] Union is wholly without foundation and must have arisen from some misapprehension. The Commission has no such objection and has not sought in any way to influence its employees in the matter."

HON. FELIX FRANKFURTER, *Chairman of the War Labor Policies Board.*

"Never before in history have the civilian employees of a government performed duties more vital to the continued well-being of the republic. . . . The chance which the national crisis presented has been wisely utilized by Federal employees. Of my own experience at Washington I can testify to the devotion which you have shown. . . . I take great pleasure in wishing well this valuable organization which represents so many. You are a conscious part of the world-wide labor movement. You are in your Federation endeavoring to make practical the faith that self-government is desirable even beyond the familiar bounds of politics. I congratulate you and the nation you are so faithfully and so successfully serving."

HON. EDWARD N. HURLEY, *Chairman of the United States Shipping Board.*

"I am in hearty accord with the good work that you are doing and I sincerely hope that you will continue working out your problems along sound practical lines."

The New York City Union

How the New York City Union came into being and grew to be the great organization, with many branches, that it is today. The result is the outcome of hard, persistent, intelligent work in the face of many obstacles.

By WM. E. JUNKER

First Vice-President of National Federation of Federal Employees and Member of F. E. U. No. 4

THE federal employees of the City of New York joined the ranks of organized labor on August 4, 1916. The aims and purposes of this organization were plainly set forth in the preamble of the platform of principles adopted, namely: "to secure for its members all the advantages and benefits known to have accrued from the principle of organization."

PRESIDENT JOHN FITZGERALD

The question has been asked, "Why didn't the employees organize years before they did?" The logical answer might be that there was no incentive nor apparent reason for organizing. It is said that the artist needs "inspiration" and the successful writer requires "color" in order to put "pep" into the finished product. It verily seems that the federal employees of New York, too, required some extraordinary incentive to put them on the union band wagon.

FEDERAL EMPLOYEES IN NEW YORK CITY BEGIN TO ORGANIZE

Some three years ago Brother Ainsworth, father of the San Francisco Union, came east and called a rally meeting with a view of having the employees form a union. He met with no success. Why? It seemed that the motive for such action was still lacking. But a very few months later the essential stimulus was unconsciously supplied by the man from Missouri, when he first introduced his now famous Borland amendment. The New Yorkers read in the daily papers how the federal employees in the Capital City had quickly organized a federal labor union with a view of fighting the proposed legislation, and that the American Federation of Labor had taken a hand in beating the obnoxious Borland rider. This display of progressive organization spirit of the Washington workers seemed to act like the influenza germ and quickly spread to the Empire City, and New York at last woke up.

A self-appointed committee issued a call for a meeting with a view of discussing the advisability of forming a union. Brother Hugh Frayne, our genial friend and General Organizer of the A. F. of L., was invited, and he delivered a most inspiring talk on the benefits of organization. Those present seemed enthused and a temporary organization was formed and a committee on organization appointed. This committee reported at a subsequent meeting, when it was resolved to apply for a charter to the A. F. of L. Brother Frayne delivered the charter at a meeting in the World Building on August 4, 1916, and installed the following officers: W. E. Junker, President; John F. Mann, Vice-President; James J. Kelly, Corresponding Secretary; Jeremiah Monahan, Recording Secretary; John Crown, Treasurer, and Michael Walsh, Guardian.

THE UNION MOVEMENT GRADUALLY MAKES HEADWAY DESPITE OPPOSITION

The union did not grow by leaps and bounds as some of us had anticipated. Many employees were afraid to join for fear their superiors might object. Some of the workers displayed a strong dislike for some of the leaders of the parent organization. Others vehemently objected to our joining the A. F. of L. as an integral part and advocated the forming of an independent organization. Then there were those who strenuously objected to having to separate themselves from a two-dollar bill as their contribution for initiation fee and three months' dues, the principal reason for the "kick" of this group being that if, eventually, some benefits should be obtained as a result of our

SECRETARY HENRY H. CRUM

organized effort, these advantages would be on tap for them, too, free of expense, even though they did not join the union. But the enthused band of pioneer workers resolved then and there never to let up until the flag of success had been safely nailed to the masthead of the union ship, come what might. A systematic campaign of education was mapped out and the boys knuckled down to hard duty work six and seven nights a week. Success at first was slow. But owing to the tireless and persistent pegging away of these union volunteers, we steadily gained more and more recruits for our cause and we converted a goodly lot of the doubting Thomases

Digitized by Google

to the organization angle of view. And after a few months' hard work the efforts of these workers were crowned with glorious success and the union's membership was increased by groups of workers.

ORGANIZATION PROBLEMS ARE SUCCESSFULLY WORKED OUT

On account of the various classes of employees, which began to join the union, it was deemed best to organize each group of workers, under its own officers, as a separate "branch" of the union. This system of branch organizations has proved a success. It enables the members of each branch to discuss fully at the monthly meeting any grievances they may have and the remedy to be applied, put matters into concrete shape and then have their delegate present same at the meeting of the Board of Representatives, the central body of the union, for indorsement and disposition. This Board of Representatives consists of one representative for each fifty members or major fraction thereof of the various branches, and it meets monthly.

Considerable impetus was given to the growth of the union after the passage of the five- and ten-per cent bills. At the first annual convention, held in Washington, the membership numbered approximately 950 members. At this convention President Junker was elected one of the national officers and was therefore not a candidate for reelection at the annual electon in October, 1917.

Mr. John Fitzgerald, President of the Appraisers' Stores Branch, was unanimously elected President of the Union. During his incumbency the membership has been more than trebled. In addition, permanent headquarters have been opened in the World Building, a complete office equipment has been installed and accommodation is supplied for the meeting of the branches at headquarters. It is the aim and purpose of the union to aid the various *groups* of employees in bettering their working conditions and to adjust any grievances presented. All such petitions, having these aims in view, must emanate from and be approved by the branch of which the petitioners are members. The matter is next brought before the Executive Committee, consisting of the Past Presidents and officers of the union and the Presidents of the various branches. Each petition is voted upon and with its recommendation laid before the Board of Representatives or the union for final disposition. The usual procedure is then to take the matter up with the local executive official of the Government, and if unsuccessful, to submit complete details to our national officers for their action and disposition.

NEW HOME OF NATIONAL FEDERATION OF FEDERAL EMPLOYEES
The Continental Trust Building, Fourteenth and H Streets Northwest, Washington, D. C. The offices of the Washington Local (No. 2) adjoin those of the National Federation on the fourth floor.

The officers of the Union at this time are: *President,* John Fitzgerald; *Treasurer,* Alfred I. Merkle; *Corresponding Secretary,* Henry H. Crum; *Recording Secretary,* John B. Greiner; *Registrar,* J. P. Thomas.

Favor Child Labor Tax

The Senate recently approved a bill assessing a tax of 10 per cent on child labor by a vote of 50 to 12. The minority vote was cast by southern democrats. The new amendment was drawn after the decision of the Supreme Court invalidating the previous law and has the approval of the President. It provides that those who employ child labor "shall pay for each taxable year, in addition to all other taxes imposed by law, an excise tax equivalent to 10 per centum of the entire net profits received or accrued for such year from the sale of the products of such labor." The labor of children is prohibited in certain industries under 16 years and in others as low as 14. The amount of revenue resulting from the amendment may be nominal. The main purpose of this legislation is to stop a very great evil and throw around the children a protection that will assure the nation a more vigorous and healthy progeny.

You can tell a real patriot by the way he cooperates!

Cooperation between employers and wage earners makes good times!

Mrs. Russell—What is your husband's average income, Mrs. Harper?

Mrs. Harper—Oh, about midnight. —*Life.*

The Jester's Page

The Minister and the Devil

The story is told of Horace Greeley that, in his salad days, when following the gentle avocation of printer's "devil" as a means of earning his daily bread, he was greatly enamored of the daughter of the minister of the church which he was wont to attend. For a while at least fortune seemed to smile on his suit. One day the young lady of his choice gave him a cordial invitation to accompany her to church the following Sunday, saying that her father was to preach a sermon which he thought would be of special interest to the future editor. Needless to say the next Sabbath found young Greeley, arrayed in his best, sitting beside the fair object of his devotion in the ministerial pew. Naturally enough many of the village people cast stray glances at the youth bold enough to court the parson's daughter. At length the auspicious moment came; the minister was about to begin his discourse, and Horace was all attention. Imagine his dismay when the holy man, looking pointedly at the unhappy youth, gave as his text, twice repeated for emphasis, "Lo! My daughter is grievously tormented by a devil."

Ordnance Department Proverbs

A time card stirreth up strifes, but a pay check covereth all woes.

Love not sleep lest thou come after 9.05 a. m.

An indorsement passeth the buck, but another indorsement soon passeth it back.

Better is a dinner of crackers and cheese where home is than a turkey where a long line standeth.

It is better to dwell in a corner of a housetop than to have three roommates.

Train up a stenographer in the ways of your work and your superior officer taketh her for his secretary.

Take thy recesses and breathe deeply.

Trust in the card index with all thine heart and depend not upon thine own memory.

He that walketh to work getteth there surely.

Woe be unto him who loseth his pass.

—*Intowin.*

We are told that we have ascended from the ape; but some of us are using round-trip tickets.

No Financier

"Pat" shouted an officer to his Irish servant, "here's a shilling to get me some cheese, and a shilling for some biscuits."

Pat started on his errand, and, after a long delay, returned, fumbling with the coins in his hand apparently in great distress.

"Well, Pat, what's wrong?" said the officer.

"Shure, sir, Oi've got the shillings mixed, and Oi don't know which is for cheese and which is for biscuits." —*Tit-Bits.*

Nothing in a Name

Mr. Grouch was in an unusually bad humor because he had not been able to get home for his Christmas dinner.

"Look here, waiter," said he, scowling deeply over his plate. "I ordered turtle soup. There isn't even a morsel of turtle flavor in this."

"Of course not," returned the waiter. "What do you expect? Shakespeare said there was nothing in a name. If you ordered cottage pudding would you expect a cottage in it? In Manhattan salads would you look for a Flatiron or a Singer Building? You can't expect to come in here and order a Christmas dinner for fifty cents and have a Christmas tree thrown in. Any tea, sir?"—*Ladies' Home Journal.*

Why Royalty Bored Him

For three weeks he had borne all the horrors of the annual cleaning without a murmur. Then his patience gave way.

"And you," sobbed his wife, "you used to tell me I was your queen."

"Yes," he said, with a wild glare in his eyes; "but when a man finds his queen has used his best tobacco jar for pale oak varnish and his meerschaum pipe for a tack hammer he begins to grasp the advantages of a republic."—*Tri-City Labor Review.*

Exempted

The Fag—"Oh, I'd go to the war quick enough, but mother wouldn't like me to; and I've never disappointed her since the day I was born."

The Snag—"Well, if she was hoping for a daughter, I'm sure you've done your best to console her."—*Sydney Bulletin.*

His Returns

"Did you ever realize anything on that investment.

"Oh, yes."

"What did you realize on it?"

"What a fool I had been."—*Baltimore American.*

Primary Education

Little Tommy had spent his first day at school.

"What did you learn?" he was asked on his return home.

"Didn't learn nothin'."

"Well, what did you do?"

"Didn't do nothin'! A woman wanted to know how to spell 'cat,' and I told her."

Shaky

"I have been the architect of my own fortune, sir."

"I thought so. Lucky for you the building inspector wasn't around when the structure was erected."

Getting His Number

Edith—Dick, dear your office is in State street, isn't it?

Dicky—Yes. Why?

Edith—That's what I told papa. He made such a funny mistake about you yesterday. He said he'd been looking you up in Bradstreet.—*Pittsburgh Dispatch.*

Two Reasons Why

There are two reasons why some people don't mind their own business. One is that they haven't any mind, the other that they haven't any business.—*Harvard Lampoon.*

Not Large

Maude—Fred seems to be wandering in his mind.

Betty—Then he can't stray far.

What He Was Afraid Of

Percy—Lend me a five, old chap, and I'll be everlastingly indebted to you.

Reggie—That's just what I'm afraid of, old fellow.—*Pathfinder.*

In the Department Store

He wanted a copy of "Tales from Shakespeare" by Charles and Mary Lamb, and being in a hurry, he asked the clerk for "Lamb's Tales," only to be told by the sweet young thing behind the counter, "Lamb's tails? Fur department—third floor."

Forceful Words from Big Men

Ex-President Taft and Frank P. Walsh, Joint Chairmen of the National War Labor Board, here give their views on wages, hours of labor, necessity and value of unions — of particular moment to government workers, whose salaries are often compared to those paid in the commercial field.

By William Howard Taft

THE National War Labor Board submitted to the Secretary of Labor and the President the question whether, in view of the cessation of hostilities by the armistice, its labors should be considered at an end. . . .

The Secretary of Labor, after conference with the President, has advised the Board that they deem it necessary for the Board to continue in life and in action until peace shall be declared by the President after the ratification of the treaty of peace. . . .

SIMILAR BOARDS NEEDED AT LEAST FOR READJUSTMENT PERIOD

The conclusion of the President is a wise one. Indeed, the experience of the National War Labor Board justifies the conclusion that a Board of somewhat similar jurisdiction should be created either by the President or by law as an instrumentality for the peaceful settlement of industrial disputes during the period of readjustment after the war, if not thereafter. The Board should be constituted, as this one is, of representatives of organized labor, chosen or nominated by organized labor, and of representatives of the employer group, chosen or nominated by the associations of that group.

Then, if such can be found, there should be put upon the Board men of intelligence with no predilection for either side. The difficulty of easily reaching a decision in a board so constituted on any industrial issue is manifest, but if both sides have an earnest desire to reach a conclusion and serve the purpose of their creation it is not impossible.

BOARD WILL INSURE JUSTICE AND MAINTAIN PEACE

Of course, the decisions are more often compromises than judgments based on clearly reasoned considerations. Neither side may be able to justify to itself, by logical steps, the decision; but after a while, by the constant recurrence of cases of similar character a rule of decision will be reached which approximates practical justice. When this is made clear employers and workers will base arguments on it without resort to the tribunal.

While it is an anomaly to have a tribunal of quasi judicial duties composed of partisans, the great advantage of such a board is the confidence on the part of each side that with such partisans on the Board real injustice will not be done that side. In many industrial fights it is more important that peace should be established than that there should be a nice weighing of exact justice between the contending parties. More than that, it is very difficult to say, for instance, in the matter of wages, what shall be the division of the joint product of labor and capital.

ORGANIZATION ESSENTIAL FOR LABOR AND HERE TO STAY

The theory of labor is that it has never been adequately paid, and that any means of increasing its share is only a step toward real justice. The law of supply and demand will not be entirely ignored in wages any more than the law of gravitation in the physical world. While by the use of strikes and other pressure which organized labor is able to bring, its force may be mitigated for the time, ultimately it cannot be excluded as a factor. Still, the organization of labor has demonstrated that wages may be made higher through collective bargaining and group dealing than they would be were there no such massing and concentration of the interests of individual laborers.

Organization of labor has become a recognized institution in all the civilized countries of the world. It has come to stay; it is full of usefulness and is necessary to the laborer. It shows serious defects at times and in some unions. These are an apparent willingness to accept benefits enforced through a fear of lawlessness, a disposition to use duress to compel laborers to join unions, and efforts to limit output and to create a dead level of wages, and thus wipe out the necessary and useful difference in compensation of those who are industrious and skillful and of those who are lazy and do not strive to increase the product of the employer whom they serve.

JUSTICE, NOT PATERNALISM, NEEDED ON PART OF EMPLOYERS

These are evils that as the unions grow in wise and intelligent leadership we may well hope are well being minimized.

Much can be done by employers in anticipating just demands of employees. Workers have had too many instances of holding back of employers until they are forced to do justice. Too many employers seek to justify failure to raise wages by pointing to their welfare work for their employees. This is of a paternal character and impresses the workers with the idea that they are being looked after as wards and not being treated as men capable of exercising independent discretion as to their welfare. They are apt to give the employees the idea that it is a generous concession they are making out of the goodness of their hearts and that they are not merely yielding a right in fair exchange for what they receive.

EXTREMISTS ON BOTH SIDES HARD TO DEAL WITH

The most difficult persons to deal with are the extremists on both sides. On the side of labor there seems to be so much suspicion by one leader of another, that few are willing to make a just concession, not because they don't recognize its justice, but because if they admit it they are charged with betraying the cause of labor. Thus they furnish to their rivals in leadership among workingmen the opportunity to undermine their standing with their fellows. This often puts the labor side in an indefensible position and offers to its enemies a basis for criticism that might easily be avoided.

On the other hand, there is among employers the bourbon, the man who never learns anything and never forgets anything; the man who says: "It

Digitized by Google

is my legal right to manage my business as I choose, to pay such wages as I choose, to agree to such terms of employment as I choose, to exclude from my employment union men, because I don't approve of the tenets of the union, and to maintain a family arrangement of my own. I do fairly by my men; I pay them what I think is right, and they will not complain unless some outside union agent interferes. I run a closed non-union shop, and I am happy and propose to continue happy."

This man is far behind in the progress of our social civilization. He lacks breadth of vision extending beyond the confines of his shop. He looks to fear of courts and injunctions and police and militia as the ordinary and usual instruments for continuing his business peacefully and maintaining his rights. He is like the man who regards the threat of a divorce court as a proper and usual means of continuing domestic happiness. He does not recognize that we have advanced beyond the state in which employers and employees are mere laws unto themselves.

He does not see that the whole public is interested in industrial peace. He does not see that the employers have certain duties social in their nature that are not defined and are not enforcible in law, but exist just as family duties of care and affection exist. He has not followed the growth of things.

COLLECTIVE BARGAINING A NECESSITY FOR THE WORKERS

As long as the system that he insists upon continued, individual laborers were at the mercy of their employers. Whatever they got was a concession. They could not maintain themselves in a contest with their employer, dependent as they were on their daily wage and independent as he was with accumulated capital. That very unjust situation led to the organization of labor that the employee by massing contributions may maintain himself during an industrial struggle without wages.

This has come to collective bargaining, which is bargaining by the group system. A group of laborers knowing their rights and knowing how to maintain them, put themselves on a level with their employers and the result reached is far nearer a just one than any before attained. That it may often be unjust goes without saying, but so are all human attempts to reach the right line. Of course those individual laborers who do not see the advantage to them of the group system have a right to stay out and must be protected in doing so. But whether we will or not, the group system is here to stay, and every statesman and every man interested in public affairs must recognize that it has to be dealt with as a condition, to be favored in such a way as to minimize its abuses and to increase its utility.

WORKERS HAVE ACQUIRED SENSE OF POWER IN UNITED STATES

The workingmen of the country since the war began and the importance of their group action, as been emphasized by the requirements of the war, have been given a sense of power in their united action which we must recognize and deal with. Of course, they may abuse this power, and, if so, they may find that they are not the entire community; but if under level-headed leadership they do not push it to an excess, they will be able to do much for their members and indeed for the community at large.

The junkers and the hunkers on both sides must stand aside and will be set aside if common sense prevails. The danger from Bolshevism is far greater than from reaction to the bourbon type of employment. The intelligent, conservative leaders of the labor movement should be encouraged. Their difficulties in dealing with their extreme constituents should be recognized. . . .

By Frank P. Walsh

I CONSIDER it most deplorable that immediately following the patriotic outburst of our people over the victorious close of the war, a man assuming to speak for large employers should have for his first utterance that the workers of America must be deprived of the 8-hour day; implying that the 8-hour day was something that was extended to labor as a war measure.

EIGHT-HOUR DAY ESSENTIAL TO WORKERS' WELL-BEING

The fact is that the fine thought of this country, in both the ranks of workers and employers, and the general public, is with the declaration which President Wilson made almost five years ago, to the effect that society had reached the point where it was insistent in its demand that no man should be compelled to work over eight hours a day in order to earn a living. This was not, even at that comparatively early date, an arbitrary announcement, but simply a declaration of a palpable economic and physiological fact: That man's best efforts and fullest life can only be accomplished when he is not taxed beyond his physical strength by his daily task, and when he has sufficient time for his mental development and recreational needs, all of which are a necessary basis for useful citizenship.

The so-called basic 8-hour day, which is criticized as being a mere scheme for raising wages, will disappear when the actual 8-hour day is installed with a fair living wage for eight hours' work. When men insist upon working more than eight hours a day it is because they cannot make enough to live upon in comfort during eight hours.

WAGES ARE NONE TOO HIGH TODAY EVEN FOR PEACE TIME

As to wages: It may be a startling fact to some, but nevertheless the research of our Government shows conclusively that prior to the war the great majority of the common laborers of the country were earning far below enough to live upon. The deficiency was made up by public and private charities, so that the community as a whole carried the heaviest burden of the cost of industry. With the increased cost of living during the war, it was found that *the lowest possible wage upon which a worker and his family could subsist in health and reasonable comfort was 72½ cents per hour; this, of course, based upon the actual 8-hour day.* [Italics ours. —EDITORS.]

The National War Labor Board fixed the minimum rate for common labor at 42½ cents per hour, a bare subsistence wage. If the industries of the country are to be on a self-sustaining basis after the war and common laborers are not to be forced to live in part upon charity, it is obvious that there can be no reduction of wages, at least in the field of common labor.

Likewise, as the wages paid skilled mechanics, considering the preparation for the work and the value of the product turned out, as well as the colossal fortunes gained by others from their energy and skill, in my opinion no disinterested person who has made a careful study of the question can honestly say that wages of skilled craftsmen in general are too high today, even for peace time.

The fact is that on account of economic repression of various kinds, workers prior to the war were not in a position to secure anything like the fair fruits of their efforts from employers. War necessity, shortage of labor, accelerated movement in trade union organization, and a desire upon the part of the Government, as well as many large employers, to deal justly with workers, all have operated to bring wages to the present general standard. When the cost of necessities of life diminishes to a pre-war level (which I doubt will occur within

Digitized by Google

less than five years), then the workers in the average industry will be receiving only a fair return for their work, if present wage standards are rigidly maintained, otherwise not.

DANGER FROM ULTRA-RADICALISM AND ITS AVOIDANCE

The reconstruction problems in industry are manifold and must be met in the highest spirit of fairness and accomodation. To throw the whole subject into the realm of bitter controversy at this time will make the task of allocating the industrial structure exceedingly difficult. None but the thoughless have failed to observe the sweep of ultra-radicalism throughout the world; call it what you will. That it has roots in this country cannot be denied, and the situation must be faced by our common citizenship in a spirit of breadth and clear understanding.

If America can handle its industrial and economic problems with justice and fairness and in the period of reconstruction establish a constructive program which will lead us along a broad highway of consideration and justice for the producing masses, it will not only bring enduring contentment and happiness to our people, but make our country the exemplar of the rest of the world. I confidently believe that this great end can and will be attained.

If, however, these self-constituted spokesmen of industry (who I refuse to believe typify the enlightened employers of the country), in their fatuous disregard for things as they are, insist upon reaction as expressed in their threatened extension of the hours of labor, wage-cutting, and like practices, the industrial workers of the country may take their threats seriously, make common cause with the farmers and agricultural laborers and, through peaceful political means, take charge of and operate the Government solely in the interests of the producing masses, changing our present industrial and economic regime with a thoroughness and swiftness unparalleled in the history of nations.

An Important Conference

Problems of vital concern to federal employees—Government Insurance, Economic Organization of Industry, Demobilization, Interests of Women Workers, Employees' Compensation—discussed at the Richmond meeting of the American Association for Labor Legislation. The National Federation of Federal Employees was well represented at this gathering.

SOCIAL insurance for Government employees, especially the McKellar-Keating Retirement bill and a proposal to extend the benefits of the war risk plan to the civil service, occupied prominent place in the discussions of the American Association for Labor Legislation at its annual meeting held at Richmond, December 27 and 28. By unanimous vote the meeting adopted a resolution urging Congress to pass the Retirement bill, and the Association's President, Dr. Samuel McCune Lindsay, who devoted his annual address to the subject of "Next Steps in Social Insurance," advocated as one of these steps that the civilian employees of the United States Government be given opportunity to obtain life, health, and accident insurance through Government agency at the same low cost now available to the men in military service.

The Richmond program dealt throughout with the immediate social and economic issues requiring legislation. The speakers included government officials, specialists, and trade-unionists, two of them classifiable in all three of these groups through their membership in the National Federation of Federal Employees—namely, Ordway Tead and Miss Mary Van Kleeck. Mr. Tead, it will be remembered, wrote recently an article on government trade unions (see page 23) in which he effectively answered the reactionary argument of William Dudley Foulke, of the National Civil Service Reform League.

UNEMPLOYMENT, DEMOBILIZATION, AND PROBLEMS OF WOMEN WORKERS

At the Richmond conference, discussing the prevention of unemployment, Mr. Tead, with characteristic vigor and clear-headness, urged unemployment insurance, as advocated by the American Association for Labor Legislation and contemplated in the reconstruction program outlined by the National Federation of Federal Employees' Convention at Chicago, and further proposed that industry organize nationally both the demand for and the sale of its products. "This is no Utopian dream," said Mr. Tead, "but a practical possibility which should be carried out by each big industry within

(Continued on page 20)

U. S. EMPLOYMENT SERVICE CLUB'S FIRST "AFFRAY"

The U. S. Employment Service Club was organized December 10. All members of the U. S. Employment Service are eligible to membership. A constitution second only to that of the United States was adopted, and the following officers were elected: Honorary President, John B. Densmore; President, Marguerite Mitchell; Vice-Presidents, Sanford H. E. Freund, Mrs. Margaretta Neale, Nathan A. Smyth; Secretary, Aline Solomons; Treasurer, Harry Parks. *Advisory Committee*: Mr. Densmore, Mr. Smyth, Mrs. Neale, Mr. McGrew, Mr. Hall, Mr. Freund, Mr. Steward, Mr. Chiquoine.

MR. STEWARD, Chairman, Executive Committee; MRS. ELDRIDGE, Chairman, Entertainment Committee; MR. PARKS, Chairman, Finance Committee; MISS STEIN, Chairman, Publicity Committee; MISS CHILDS, Chairman, House Committee.

The dues are 25 cents a month and the chief object is to promote sociability.

A dancing class under the leadership of Miss Mary Weir, of the Mail and Files Section, is meeting Monday evenings, in the Gordon Hotel.

The first "affray" of the Club was a dance and reception at Rauscher's, January 11, which, in the words of our Assistant Director General, gave ample evidence that the U. S. Employment Service is ornamental. There could have been no real U. S. Employment Service party without the radiating personality of our "BIG CHIEF." We were received by Miss Mitchell, President of the Club, our "big chief" Mr. Densmore and by Mrs. Neale and Mr. Smyth.

The Reception Committee consisted of the officers and the members of the five committees mentioned above, assisted by twenty young women. Army, Navy and Marine officers lent a military coloring which was heightened by the presence of several Croix de Guerre.

The success of the party was largely due to the efforts of the Mistress of Ceremonies, Miss Mary Weir. Thanks are also due to the orchestra, who generously gave many encores, and to everyone who helped to make the happy evening.

The committee has planned to give entertainments monthly, and of such variety that each member will have a chance to indulge in his pet diversion. A vaudeville and dance is planned for February, when the latent talent of the Service will be brought forward. All those who sing, play, recite, or dance have been requested to line up.

America in 1918

This searching questionnaire is a ringing appeal to every thinking man and woman in the country to consider most seriously some of the gravest of our national shortcomings. The distinguished author has never done finer public service than in bringing these stupendous problems so graphically before the American people. We must grapple with them, as with the problems of war, the slogan "Courage and Victory" on our lips.

From the last annual report of

HON. FRANKLIN K. LANE, *Secretary of the Interior*

(With a slight annotation by the editors)

THE VITALITY of this question[1] was put strongly to the nation during the past year in a form that was not altogether agreeable; for the draft revealed the astonishing percentage of those in this country who were unable to speak our language or to read or write any language. Yet, I take it, there is no one thing so supremely essential in a government such as ours, where decisions of such importance must be made by public opinion, as that every man and woman and child shall know one tongue—that each may speak to every other and that all shall be informed.

There can be neither national unity in ideals nor in purposes unless there is some common method of communication through which may be conveyed the thought of the nation. All Americans must be taught to read and write and *think* in one language; this is a primary condition to that growth which all nations expect of us and which we demand of ourselves.

What should be said of a world-leading democracy wherein 10 per cent of the adult population cannot read the laws which they are presumed to know?

What should be said of a democracy which sends an army to preach democracy wherein there was drafted out of the first 2,000,000 men a total of 200,000 men who could not read their orders or understand them when delivered, or read the letters sent them from home?

What should be said of a democracy which calls upon its citizens to consider the wisdom of forming a league of nations, of passing judgment upon a code which will insure the freedom of the seas, or of sacrificing the daily stint of wheat or meat for the benefit of the Roumanians or the Jugo-Slavs when 18 per cent of the coming citizens of that democracy do not go to school?

What should be said of a democracy in which one of its sovereign states expends a grand total of $6 per year per child for sustaining its public-school system?

What should be said of a democracy which is challenged by the world to prove the superiority of its system of government over those discarded, and yet is compelled to reach many millions of its people through papers printed in some foreign language?

What should be said of a democracy which expends in a year twice as much for chewing-gum as for schoolbooks, more for automobiles than for all primary and secondary education, and in which the average teacher's salary is less than that of the average day laborer?

[*What should be said of a democracy in which the National Legislature permits three-fourths of the teachers in the public schools of the Nation's Capital to work for a pittance of* not more than $800 a year?

A democracy in which the Librarian of the great National Library makes the caustic comment that "the salaries paid a large part of the library staff today are not living salaries," *66 per cent of the entire staff receiving $1,100 a year or less?*

A democracy in which there were in its Civil Service (even before war conditions led to a large increase in the force) more than 65,000 full-time employees paid less than $3 a day or $1,080 a year?

A democracy in which the Secretary of the Treasury and other department heads are compelled to urge higher salaries for civilian employees on the ground of humanity *as well as of economy and efficiency, and in order that our Government may not continue in practice to* lag behind private employers *to whom it preaches enlightened treatment of workers? And, finally—*

A democracy the civil servants of which, with but very few exceptions, have no more voice in the regulation of the conditions attached to their employment than have the benighted denizens of Timbuctoo?—EDITORS.]

What should be said of a democracy which permits tens of thousands of its native-born children to be taught American history in a foreign language—the Declaration of Independence and Lincoln's Gettysburg speech in German and other tongues?

What should be said of a democracy which permits men and women to work in masses where they seldom or never hear a word of English spoken?

Yet this is all true of the United States of America in this year of grace 1918, wherein was fought the second Battle of the Marne and the Battle of the Argonne Forest.

These figures and facts look discouraging. They seem to present a picture that bodes ill for the republic. But in reality they present an outlook that is far from disturbing, and that is the one cheering thing about such a government as ours, wherein we can do as we will. And our will to do is never wanting when we see clearly the difficulty and know the way out. Already there have been devised methods by which these conditions may be remedied in large part, and these methods have been worked out practically by experiment and in no little detail.

If once we realize that education is not solely a state matter but a national concern, the way is open. And what argument that could be advanced would be more persuasive that education deserves and must have the consideration of the Central Government than the figures that are given?

[1] The question to which Secretary Lane here refers he puts thus: "Are we making out of America as a growing crop all that might reasonably be expected or that is demanded by our position in the world?"

Digitized by Google

An Important Conference

(*Continued from page* 18)

itself. It would substitute intelligent cooperation for cutthroat competition, increase and stabilize demand, and consequently increase and stabilize output and prevent unemployment."

At the same session of the conference, which was devoted to problems of demobilization, the mustering out of the National Army and the difficulties encountered in placing the men were discussed by Nathan A. Smyth, Assistant Director General of the United States Employment Service. Mr. Smyth advocated as a substitute for the present plan of mustering out by military units, the immediate discharge of all men who have the certainty of jobs awaiting them, retaining in camp temporarily the men for whom jobs have to be found. In all cases, said Mr. Smyth, the soldiers should be allowed thirty days' pay in advance, and not dismissed as at present with merely the past month's pay.

The afternoon session on the 28th, presided over by Mrs. Raymond Robins, president of the National Women's Trade Union League, covered a variety of topics under the general head of "Some Legislative Phases of Labor Reconstruction," but gave the principal place to the problems of women workers. Miss Mary Van Kleeck, director of the Woman-in-Industry Service of the Department of Labor, who was the principal speaker on this subject, sounded a warning as to the reactionary tendency now manifest toward the women who have entered new fields of industry during the war, and the apparent desire of the male workers to eliminate them. This problem is not to be solved on sex lines, declared Miss Van Kleeck. The right of the soldier to his former job is not contested, by either women or men, she pointed out, but the right of other workers to other jobs should be determined on the basis of fair competition, irrespective of sex.

WORKMEN'S COMPENSATION AND OLD AGE INSURANCE DISCUSSED

Workmen's compensation for industrial cripples and the deficiencies of the present United States employees' compensation act were other subjects discussed by speakers at the conference. The American Association for Labor Legislation is endeavoring to secure the extension of the soldiers' and sailors' rehabilitation act to the men and women crippled in industry, who far outnumber the war cripples. Dr. Royal Meeker, Commissioner of Labor Statistics of the Department of Labor, discussing workmen's compensation, urged the immediate enactment by Congress of such a law for the District of Columbia to give the workers living under federal jurisdiction the same protection that has now been given to the workers in the states that have passed workmen's compensation acts.

"Old Age and Health Insurance" was the subject of a paper by John A. Lapp, director of Investigations of the Ohio Commission on Old Age and Health Insurance. Mr. Lapp's paper led up to the resolution endorsing the McKellar-Keating Retirement bill, which was presented by Mr. Robert H. Alcorn, chairman of the Joint Civil Service Retirement Committee.

N. F. F. E. WELL REPRESENTED AT THIS IMPORTANT MEETING

Members of the National Federation of Federal Employees who attended the conference were the National President, Luther C. Steward; R. H. Alcorn and C. Eder Reed of the Joint Civil Service Retirement Committee; Miss Florence P. Smith, corresponding secretary of Local No. 2, Washington; Miss Mary Van Kleeck, director of the Women-in-Industry Service, Miss Clara E. Mortenson, secretary of the Minimum Wage Board of the District of Columbia, and Ordway Tead of the United States Employment Service, all members of Local No. 2, Washington; Miss Ethel M. Smith, secretary of the Legislative Committee of the National Federation of Federal Employees and of the Legislative Committee of the National Women's Trade Union League; James B. Botts, Federal Director of the United States Employment Service for Virginia, and Ralph Izzard, special assistant to the Director General, both of the Richmond local.

True to the Last Word!

Postal employees, in common with all other workers, will suffer a distinct loss in Congressman Keating's absence from the 66th Congress. In the vernacular of the office Ed. Keating had "everything." He had personality, ability, a wonderful grasp of the large fundamentals, and the patience to study the minor legislative woes of the submerged government employee. In a comparatively short legislative career he had won a high place in the House. As the chairman of the labor group he was the recognized spokesman for the organized workers on the House floor. He represented more than one district; his constituency was spread over the entire country in the mills, the mines and the factory.

Because of a combination of circumstances, including a hostile press, the influenza epidemic, apathy of some supporters and over-confidence of others, and a political revolution in the State of Colorado, the people of this country will be deprived of the service of Ed. Keating in Congress during the reconstruction period, when men of his vision are so sorely needed. A splendid letter of commendation from President Wilson did not avail. . . .

Ed. Keating has earned the love, esteem, confidence and best wishes of a host of friends and admirers into whose lives and homes he has brought sunshine and happiness through his unselfish legislative efforts. For the good of the nation and mankind he should not be permitted to remain long in political retirement. We look for a speedy come-back.—*Union Postal Employe.*

A Prize Offer

In accordance with the expressed wishes of a number of members of various locals, and encouraged by the helpful results of the recent "Ideas Competition," THE FEDERAL EMPLOYEE will give "until further notice," beginning with the March issue, the following prizes:

A prize of ten dollars ($10.00) each month for the best article on the subject "My Day's Work," dealing with a typical day's work of a civilian government employee—it may be a stenographer and typewriter at a departmental desk in Washington, a forest ranger in the woods of Maine or Oregon, a coast guard on the Atlantic, an immigration inspector on the Canadian border, or any one of the legion of employees working for Uncle Sam in this country or in any other part of the world. The articles submitted should tell the story, true to fact, in an interesting way, in 1,500 to 2,000 words. Several photographs suitable for reproduction, which have real "human interest," would add materially to the value of the narrative.

A prize of five dollars ($5.00) each month for the letter contributed to the OPEN FORUM which shall be adjudged to be the best. In this connection read the caption of OPEN FORUM section.

A prize of five dollars ($5.00) each month for the best suggestion regarding methods of organizing new locals, and conducting existing locals. Among the questions which might well be dealt with under this head are: Increasing membership, retaining members when once secured, collecting dues, developing publicity work, making our meetings more helpful, and educating our membership in the special problems of civil-service employees and the broader problems of organized labor and citizenship as well. Suggestions submitted should be clear-cut and practical, and expressed as concisely as possible, and should be plainly marked, "Suggestions for Organization and Conduct of Locals."

Government by Employees

"A business of the workers, by the workers, for the workers — and how it suceeds"— the remarkable story given here (in abridged form) of the management of a great commercial establishment. Are there not lessons in this experience which might well be heeded by our Government in connection with the much needed reconstruction of the Civil Service? In better days to come federal employees are certain to be accorded a voice in regulating the conditions of their employment. "Eventually—why not *now?*"

MANY of our readers doubtless know of the William Filene's Sons Company of Boston, which conducts a specialty store for the sale of clothing and furnishings, described as being the largest establishment of the kind in the world, employing about 2,700 people of whom usually two-thirds are girls or women, and doing a gross business of more than $14,000,000 a year. In the December number of *System,* President Edward A. Filene tells the interesting and illuminating story of the development of the present plan of conducting this vast enterprise until *"today the employees are practically self-governing in all matters, including their own wages; they share in the profits of the company; and they elect four of the nine directors of the corporation.* [The italics throughout this article are ours.—EDITORS.]

"We are feeling our way toward a business democracy; but it would be more accurate at this stage of development to call us a kind of constitutional monarchy with more constitution than monarchy, even though we have no formal instrument defining respective rights. And we have reached this point of self-government simply by taking counsel with our people when serious question has arisen."

After stressing the necessity for regarding the human element as a vital factor in the success of a business—"nothing will take the place of skilled employees"—Mr. Filene refers to the "overwhelmingly important principle that employees would rather do for themselves than have things done for them." Answering the question: "What's the truth about the 'good' employer?" he speaks to the point:

"We do not desire to be good employers. I think there is a deal of hypocrisy in that pose; for, although we have done many things without a thought of financial return, yet it is a fact that we have never yet done a decent thing in our business that did not pay! I am not smug enough to want to be known as a good 'employer.' *Our sole thought is to be just and to take counsel with our employees to the end that we shall have a common judgment on what is just.*"

Filene "Pointers"

"Although the retail distributor is at present indispensable to the community, he is not performing his services at a reasonable price. Practically speaking, an article doubles in price by the time it reaches the consumer and that is an absurd condition. So absurd that if retailing does not make faster progress, the day is not far distant when commodities will be sold direct from the producer to the consumer."

"If we are to attain a maximum efficiency it will be only through the development of the human element, which is, after all, the greatest factor in business."

"It was inevitable that the distinction between capital and labor would grow. There is not an absolute identity of interest between the employer and the employee because there must be a point of possible conflict in the distribution of profits. This lack of identity is something to face and not to dodge. Although there cannot be an identity, the interests can be so compromised that the result is a working identity. That is what we have been seeking."

"We are feeling our way toward a business democracy."

"We have reached this point of self-government simply by taking counsel with our people when serious question has arisen."

"Nothing will take the place of skilled employees."

"Employees would rather do things for themselves than have things done for them."

"We have never yet done a decent thing in our business that did not pay."

"It is part of the development of employees to know them as individuals."

EMPLOYEES' ASSOCIATION LARGELY SUPPORTS AND GOVERNS ITSELF

Mr. Filene then describes at some length the organization and practical operation of the central governing body—the Filene Cooperative Association. This is, he says, in good measure, self-supporting and fully self-governing. Every employee belongs to it by virtue of his employment. It has no dues; a member merely pays for what he gets. The store contributes part of a floor as club quarters and aids in other directions. But the ultimate aim of the organization is to be fully self-supporting. More than $100,000 now flows through its treasury in the course of a year. Its present organization is a growth.

"At first all of the members directed its affairs through mass meetings. Then that became too cumbersome and they elected a council of 23 members.

"The council is responsible to the members of the F. C. A. and its bi-weekly meetings are reported back to the members through the weekly paper, the *Echo,* or by written notice. If the actions of the council do not please the members, they reserve the right of referendum and recall.

"The council contains one member for each of the twelve sections of the store, nine members elected at large, and the officers. Directly responsible to the council are a president, vice-president, secretary, and treasurer, all of whom are elected by the members.

HOW THE BUSINESS OF THE ASSOCIATION IS HANDLED

"Because of the growing activities of the association it became impossible for any employee serving in the association to give adequate attention to both the store and the F. C. A. This resulted in the establishment of a permanent executive secretary and staff.

"The secretary, although his salary is paid by the store, is in no way responsible to us. He is the executive

Digitized by Google

and administrative head of the F.C.A., is appointed by its president, and must be confirmed by a five-sixths vote of the council. The secretary is thus the intermediary between the association and the store management and, in any disputes between an employee and the store, he appears as counsel for the employee.

"Reporting to the executive secretary and through him to the officers, the council and the members, are a number of committees—some elective and some appointive—the medical department, and the subordinate clubs of the large association. These clubs are not cliques but efforts to bring those of the same tastes into close organization—for instance, the girls' club (for girls under 21), the young women's club (for those over 21), and the men's club.

"The F. C. A. has at least these absolute powers: If two-thirds of the members vote in mass meeting to change, initiate, or amend any rule which affects the working conditions, the vote becomes operative at once. If five-sixths of the members of the council vote for any rule or its repeal, their judgment goes into effect at the close of one week, unless in the meantime it has been vetoed by the general manager, the president, or by the board of managers of the corporation.

"But the measure may go in force in spite of the veto by a two-thirds vote of the mass meeting of the F.C.A. This power is so broad that, as may easily be seen, it will cover almost any situation that may be expected normally to arise, for there are precious few things which do not affect the discipline or working conditions of the store.

GOOD JUDGMENT HAS BEEN SHOWN IN THE USE OF POWER

"They have used the power wisely. One of the first things they did was to cut down the voluminous rule book to a tiny 3 by 4-inch pamphlet of seventeen pages. For a mass of more or less complicated rules they substituted a comparatively few fundamental ones and put stress on the spirit of the interpretation instead of on the letter.

"They have used their right of voting on store rules in the matter of their holidays. For instance, if July 4 falls on a Friday they have frequently voted to take Saturday also. Later they decided to close all day Saturday in July and August. On one occasion when a state holiday fell on Friday, June 17, the meeting overwhelmingly voted down the motion to have an extra holiday. They have voted against keeping open evenings preceding Christmas; the opening and closing hours of the store have been submitted to their vote.

"But mark this: Never once have they used their power unfairly or attempted to take any advantage of their position—we have never had anything approaching a 'hold-up.' This is not remarkable to me because I have an endless faith in human nature; but it is worthy of note when one considers the hundreds of 'hold-up' statutes which municipal and state bodies have from time to time emitted.

DEMOCRATIC JUDICIAL SYSTEM NECESSARY FOR REAL DEMOCRACY

"I feel this whole democratic structure would fall did it not provide that any employee may have upon necessity his day in court and a judgment from his peers. *Without a democratic judicial system democracy is itself impossible. The arbitration board is what we call our judiciary.* It now consists of twelve members, one being elected from each section of the store; the chairman is a member of the F. C. A. council and is appointed by its president. Here are the purposes and powers of the board as they are defined in the constitution of the F. C. A.:

Purpose: The purpose for which arbitration is established in the business is to insure justice in the administration of the work of the store.

Scope: The scope of its activity shall include all cases in which any member of the F. C. A. has reason to question the justice of a decision by a superior or the action of an F. C. A. committee or member.

Duty: The duty of the board shall be to see that justice prevails either by initiating or by granting a hearing to any member of the F. C. A. It shall conduct an exhaustive examination of each case coming before it.

Powers: The powers of the arbitration board are intended to extend to all cases of difference relating to

1. An employee and the management.
2. Two or more employees in matters of store interest.
3. The justice of a rule in question affecting an employee.

"The board is organized as a court. The executive secretary of the F. C. A. appears as counsel for the complainant, while the store has an executive act as its advocate. Witnesses are called, examined and cross-examined; their testimony is taken stenographically, and then the board goes into executive session to make its finding.

"In most cases the majority vote of the board is a decision, but in judgments on dismissals and for increases in pay a two-thirds vote is required.

"This board does not have jurisdiction over controversies arising between an executive and the executive authority of the corporation, but any such differences are passed upon by a special arbitration commitee, one member to be chosen by the executive, another by the corporation, and a third by the two arbitrators already chosen.

"The work of the board has been almost uniformly good. Their judgments are accepted without question and it is interesting to note that, taking the decisions as a whole, about half have resulted in favor of the corporation and half in favor of the employees.

"We think we have managed to avoid the highly objectionable paternal and half-charitable features which, I am sorry to say, distinguish so much welfare work, by putting the management with the F. C. A. We give our advice and our suggestions and when it is necessary we pay the bills, but we do not attempt to impose our idea of right and wrong.

"Our thought is that good working conditions, fresh air, legitimate amusement, and a square deal are the seeds of morality and that a tract or a preachment tacked onto everything only makes people feel that somehow you are trying to get the better of them under the cloak of welfare work. Therefore we leave all of these things to the people themselves.

THEY RAN IT THEIR WAY—AND MADE A SUCCESS OF IT

"Or take the case of the *Echo*. The company started it as a house organ, paying an editor, and all expenses. We thought it was an interesting, well-written sheet, but the employees would have nothing of it. We withdrew from the paper. The F. C. A. took it over and we agreed to buy space for such use as we saw fit. Now the paper is a success. Of course we stood by ready to help—but we did not have to.

"And thus it is that today every activity touching employees—such as the insurance fund, the bank, the extension courses, the athletics, the outings, the summer camps—everything is managed by the F. C. A."

The Last Chance

The clerk was most obliging, but the young woman customer was hard to please. Roll after roll of blankets did he patiently take down and show to her; nothing suited.

For some fifteen minutes this mock sale went on, then the young woman said condescendingly, "Well, I don't intend to buy. I was just looking for a friend."

"Wait a moment, madam," cried the clerk. "There is one more blanket left on the shelf. Maybe you will find your friend in it."—*Ladies' Home Journal.*

Wages—Government and "Outside"

THE Department of Labor recently made an investigation into the wages paid by the United States Government, the government of the District of Columbia, and private employers in Washington, to certain classes of employees. The results of this investigation are set forth below. The comparisons, which have attracted much attention, are not, it will be noted, very flattering to the Government as a model employer. The rates indicated below as "recommended" are contained in the Supplemental Estimates (see page 24), for certain statutory salaries for the fiscal year 1920. The conclusions of the Secretary of Labor were adopted for the greater part by other department heads, and the increases were submitted to Congress in the hope that relief, at least to this extent, would be granted in the annual appropriations now under consideration.

Blacksmiths — Government, minimum, $900; maximum, $1,000; recommended, $1,620; non-union establishments, minimum, $1,565; union rate, minimum, $1,670; union establishments, minimum, $1,670; maximum, $1,716.

Carpenters—Government, minimum, $720; maximum, $1,500; recommended, $1,680; District of Columbia, minimum, $1,602; maximum, $1,802; non-union establishments, minimum, $1,095; maximum, $1,878; union rate, minimum, $1,716; union establishments, minimum, $1,716; maximum, $2,002.

Carpenters' Helpers—Government, recommended, $1,000; union establishments, minimum, $915.

Electricians — Government, minimum, $720; maximum, $1,500; recommended, $1,680; non-union establishments, minimum, $1,252; maximum, $2,080; union rate, minimum, $1,716; union establishments, minimum, $1,716; maximum, $2,288.

Electricians' Helpers—Government, recommended, $1,000; union establishments, minimum, $984; maximum, $1,373.

Elevator Conductors—Government, minimum, $480; maximum, $1,200; recommended, $1,000; non-union establishments, minimum, $522; maximum, $1,040; not organized.

Engineers—Government, minimum, $840; maximum, $1,800; recommended, $1,800; District of Columbia, minimum, $1,252; maximum, $1,802; non-union establishments, $1,080; maximum, $2,400; union rate, minimum, $1,830.

Chief Engineers—Government, minimum, $1,320; maximum, $2,160; no recommendation; non-union establishments, maximum, $2,607.

Assistant Engineers—Government, minimum, $720; maximum, $1,800; recommended, $1,560; non-union establishments, maximum, $1,565.

Firemen—Government, minimum, $660; maximum, $840; recommended, $1,252; District of Columbia, minimum, $840; maximum, $1,252; non-union establishments, minimum, $840; maximum, $1,409; union rate, minimum, $1,252.

(*Continued on page 24*)

Federal Employees Unions and the Government

Civil Service workers not only have the right to organize but should organize, contends the author, Ordway Tead of the U. S. Employment Service. Further, they should have a voice in the conduct of the Department's affairs and in the determination of its policies. Justice and fair dealing, not arbitrary methods, are the keynote of the welfare of the employees and of the public service.

ORDWAY TEAD, of the United States Employment Service, writing for *Good Government* under the caption of "Labor Unions in a Democratic State: Right of Civil Servants to Combine and to Strike if Necessary," declares that "the current confusion of thought regarding the rights of the civil employees of governmental bodies can in the last analysis be traced back to the prevailing idea of sovereignty." Taking as his text, G. D. H. Cole's statement in *Self-Government in Industry*, that "the key to real efficiency is self-government; and any system that is not based upon self-government is not only servile, but also inefficient," Mr. Tead goes on to say that we are still dominated by the notion that the state, *i. e.*, the governing power, backed by force if necessary, is vested with inherent and unquestionable rights. An instrument intended as a means has become an end; it is taken for granted that the abrupt and unwarranted statement that "the chief end of the state is to conserve the state," is merely an expression of the German state—absolutism without currency elsewhere. But the writer calls attention to an article by Mr. Wm. D. Foulke in the August number of *Good Government*, comparing the status of employees of private industry with that of state employees. "Those in the civil service," he says, "are not in the same position; . . . they are the servants of the state; they have not the right to resist the Government; they have no right to strike or to combine for the purpose of striking or to exert pressure of any kind upon their employers by means of their organizations."

This conclusion, Mr. Tead reasons, presupposes either an infallible or an all-powerful state. But the former assumption is disproved by the failure of the Government to adjust salaries to increasing prices; and the latter involves the absurd and inhuman premise that an abstract state should be elevated and regarded as a fetish at the expense of the individual. After warning against the tendency toward bureaucracy, and emphasizing the value and worth of the human being in the machine of which he is a cog, Mr. Tead continues:

"What people really want in reconstruction is a chance to contribute of their own efforts and special abilities to the common good and in return to share in the development of a great community of growing and happy people. They have been impressed, as this new century began, with the terrible fact that our generation has been in danger of suffocating itself with organization, of crushing the individual under the weight of an appalling system running at a more and more accelerating speed. And now people are realizing that after the war the further demands of organization —international, national, professional, local—will strangle initiative and interest, unless some conscious effort is made to organize in ways that cherish rather than choke personality."

THE QUESTION OF DIRECT CONTROL BY THE PEOPLE

Democracy, in Mr. Tead's opinion, is valuable only as a means of "assuring to the largest number of people the opportunity for that self-direction and personal achievement which human nature craves;" and no institution can be democratic unless it "deliberately grants representation and equal power to the different parties in interest."

EMPLOYEES MUST HAVE VOICE IN ADMINISTRATION

And in Mr. Tead's opinion it is clear that "there are different parties at interest in the civil service today. Mr. Foulke's own statement of the array of employees' associations is sufficient indication of that. His evidence is convincing that the workers feel that they have rights which it is essential to respect if their pecuniary interests are to be voiced, if their integrity and happiness are to be safeguarded. There is but one way for these rights to be fully and fairly considered in relation to the rights of the department heads and of the taxpayers; that way is by representation of workers in the conduct of the department's affairs, in the determination of its policies.

Digitized by Google

"Trade unions happen to be the groups into which, for mutual protection, assertion of rights, and the encouragement of self-direction, the workers gather. And it will be the recognition of these trade unions in the control of the affairs of governmental bodies that will begin to assure democratic management, that will promise to end in a fuller measure of wise self-direction than we have today, and in a conscious effort to foster personality.

JUSTICE AND FAIR DEALING WOULD PREVENT DANGER OF STRIKES

"These unions, the writer argues, are, like democracy, a means to an end, which end is to insure life, liberty, and the pursuit of happiness, and when this can be achieved in no other way, abstention from performing labor is justifiable, the right of an oppressed minority to revolt being recognized as fundamental even when the notion of absolute sovereignty was completely dominant. The right to strike is as native as the right of revolution, and the causes leading up to such action should be considered, as well as its inconvenient results. Strikes should be prevented, not by the exaction of promises, but by the creation of just conditions and assurance of fair treatment to all, which the unions help to bring about by exerting a pressure which requires common deliberation over problems which affect them. Collective dealings in the public service bring this result. But they will work toward an end which is far more fundamental. The operation of government departments and agencies on a basis of participation in management by the workers will result in a fostering and cultivation of the sources of interest, initiative and worth-while personality.

"The setting of this human purpose as the purpose of all organized activity means an abandonment of state sovereignty. It means a denial of any abstract absolutism. It puts power—ultimate power—not in the hands of a huge, bureaucratized machine, but in the hands of a great number of groups. It splits up sovereignty. It makes it plural, not singular. And in that division of controlling power among functional groups the individual gets his chance to live and grow."

Higher Salaries Recommended

Government officials submit to Congress Supplemental Estimates, for the fiscal year 1920, asking that many statutory salaries throughout the various departmental services be increased. Figures and facts are given in abundance to prove that the salaries and wages now paid are miserably inadequate and unfair, and that the result is the demoralization of the public service. Will the appeal fall on deaf ears?

AT THE instance of the President the heads of the executive departments and other officials upon whom rests the duty of submitting yearly estimates to Congress omitted from the regular estimates for the fiscal year 1920 increases of statutory salaries of civil service employees. Such increases were included in Supplemental Estimates recently presented to Congress through the Secretary of the Treasury. The submission of these estimates is an unusual procedure and it remains to be seen how they will be received by Congress.

While limitations of space prevent printing these Suplemental Estimates in their entirety, THE FEDERAL EMPLOYEE here places before its readers data taken therefrom which show in a general way the treatment accorded employees, from the highest to the lowest. Comment on the inadequacy of the Supplemental Estimates to meet the existing situation, at least in so far as the great mass of federal employees is concerned, will be found on page 7. Attention is directed further to the testimony of department heads and other officials in high places, on pages 37-48, which sets forth plainly the utter failure of the present antiquated salary schedule to meet the demands of humanity, economy, or efficiency at this time.

TREASURY DEPARTMENT

Position.	Estimated salary.	Proposed salary.
Office of Secretary of Treasury		
Five Assistant Secretaries of the Treasury	$5,000	$7,500
One Assistant Secretary (in lieu of Assistant to the Secretary at $5,000)	5,000	7,500
Office of Chief Clerk and Superintendent		
Chief Clerk and Superintendent	4,000	5,000
Superintendent of Supplies	2,250	2,750
Ten members of General Supply Committee (in addition to their departmental salaries)	.....	600

Wages, Government and Outside

(*Continued from page 23*)

Skilled Laborers — Government, minimum, $600; maximum, $1,590; recommended, $1,600; District of Columbia, minimum, $1,001; maximum, $1,565; non-union establishments, minimum, $1,017; maximum, $1,565.

Laborers—Government, minimum, $400; maximum, $1,000; recommended, $1,000; District of Columbia, minimum, $782; maximum, $1,017; non-union establishments, $626; maximum, $960; union rate, minimum, $915; union establishments, minimum, $915.

Machinists—Government, minimum, $840; maximum, $1,800; recommended $1,680; District of Columbia, minimum, $1,652; maximum, $1,802; non-union establishments, minimum, $1,252; maximum, $1,817; union rate, minimum, $1,716; union establishments minimum, $1,602; maximum, $1,716.

Messengers — Government, minimum, $720; maximum, $960; recommended, $1,000; District of Columbia, minimum, $600.

Chief Messengers—Government, minimum, $1,000; maximum, $1,100; recommended, $1,200; not organized.

Assistant Messengers—Government, minimum, $480; maximum, $600; recommended, $900.

Messenger Boys — Government, minimum, $240; maximum, $420; recommended, $600.

Painters—Government, minimum, $900; maximum, $1,200; recommended, $1,680; District of Columbia, minimum, $1,592; maximum, $1,752; non-union establishments, minimum, $1,095; maximum, $1,300; union rate, minimum, $1,716.

Plumbers—Government, minimum, $720; maximum, $1,565; recommended, $1,680; non-union establishments, minimum, $936; maximum, $1,486; union rate, minimum, $1,716; union establishments, minimum, $1,716; maximum, $2,288.

Plumbers' Foreman—Union establishments, maximum, $2,997.

Plumbers' Helpers—Recommended, $1,000; union establishments, minimum, $858; maximum, $915.

Won the Third Prize

MR. JAMES C. BANKS, the winner of the third prize in the recent "Ideas Competition," entered the Customs Service, after competitive examination, as clerk and stenographer in the Custom House at Mobile, Alabama, in December, 1905. During a period of nine years service at the port of Mobile, Mr. Banks performed various duties. During the latter four years of that period, he performed the important duties of Acting Shipping Commissioner under the supervision of the Collector of Customs, handling matters connected with the shipping and discharge of seamen, and the difficult problems arising between masters and seamen, on American vessels at Mobile. Mr. Banks was subsequently transferred to the Custom House at Los Angeles, Cal., where he now serves as clerk and stenographer.

Notes from the Labor Field

LEADING ENGLISH CHURCHMEN URGE HIGHER IDEALS

A committee of churchmen, headed by the Bishop of Winchester, has published its report on "Christianity's Industrial Problems."

The committee declares that it is the duty of the church, while avoiding dogmatism as to the precise methods, to insist that Christian ethics are as binding upon economic conditions and industrial organizations as upon personal conduct and domestic life.

The sufferings of children, inadequate wages, bad housing conditions and irregularity of employment are matters which society as a whole should make impossible. It is important, the report states, to insist that what is wrong for an individual to do cannot be right for a collective body.

The first charge upon every industry should be the payment of sufficient wages to enable the worker to maintain himself and his family in health and honor, with such a margin of leisure as will permit reasonable recreation and the development of mind and spirit.

The report states that the principle of the living wage involves not only adequate payment during employment, but continuity of employment. The deliberate casualization of labor merely for the convenience of employers is strongly to be condemned.

The employment of child labor is condemned as "folly and injustice," and in the future, it is stated, the demands of industry should not be allowed to prevent any child from securing full opportunities of education as a human being and a citizen.

It is declared that trade unions and employers' associations are the best foundation for mutual understanding, industrial peace and social progress, and that the representatives of these two interests should often meet, not only to discuss hours and wages, "but all such questions affecting the trade as may be suitable for common discussion."

LONGER HOURS FOR MACHINES; SHORTER HOURS FOR OPERATIVES

In discussing the question of a six-hour work day as advocated by Lord Leverhulme, one of England's most successful business men, the Toronto (Canada) *Globe*, says:

That a great captain of British industry should present such a panacea for industrial unrest is one of the most significant signs of the times.

Notes from the Labor Field

(*Continued from page 25*)

In effect, the theory on which Lord Leverhulme bases his six-hour proposal is that by working machinery longer hours, with shorter hours for those attending it, the product will be almost doubled, and the workers will be able to secure comforts and luxuries now undreamed of.

The *Globe* has to say further:

> Long factory hours have a deadening effect on the operatives. From 14 years of age to 70 years of age is a long life span, and if you consider the conditions attending for eight hours a day the same automatic machinery, and following the same routine with its continual, deadly monotonous round of toil, those of us whose employment is varied will realize how this bites into the soul of a man or a woman and tends to corrode it.

LONG WORKING HOURS MEAN LESS PRODUCTION

In a pamphlet issued by the United States Public Health Service it is shown that the claim that fewer hours mean less production is untrue.

The pamphlet contains a study on industrial fatigue by a committee of the Council of National Defense.

"It is obvious," report the investigators—

> That a man can do more work in two hours than in one hour; but it does not necessarily follow from this that he can do more in 12 hours than in 10 or more in 10 hours than in eight. In fact, whenever the work is of such duration that fatigue begins to be pronounced, it has been shown again and again that shortening the working period actually increases the amount of work done. This may not always be evident in the first few weeks, but it appears later.
>
> In an English munitions factory when the average weekly hours of men sizing fuse bodies were reduced from 58.2 to 51.2 the total output was increased 21 per cent.

NO RELIEF FROM HIGH LIVING COSTS YET IN SIGHT

Retail prices of food for the United States increased 1 per cent from October 15 to November 15, and 18 per cent in the year from November, 1917, to November, 1918, according to reports received from retail dealers by the United States Bureau of Labor Statistics.

An increase of 72 per cent for all food combined is shown for the five-year period ending September 15, last. Every article for which prices have been obtained for this long period shows an increase of not less than 56 per cent.

In the year ended November, 1918, pork chops advanced 26 per cent, roast rib and sirloin steak 28 per cent, round steak, chuck steak and plate beef 30 per cent, while in the month ended

Notes from the Labor Field

(*Continued from page 26*)

November 15, pork chops decreased in price 5 per cent, chuck roast 2 per cent, sirloin steak, round steak, rib roast and plate beef, 1 per cent each.

Lamb, corn meal, potatoes, onions and beans also declined in price during the month ended November 15. Rice, which increased 23 per cent since November, 1917, shows no increase in price for the month ended October, 1918. Lard, bread and flour also remained at the same level as in October. The greatest advances during November, 1918, were in eggs, the increase being 16 per cent; cheese, 5 per cent, and milk, 4 per cent.

LIVING COSTS IN SAN FRANCISCO AND VICINITY $14.75 WEEK

Mrs. Sarah Hagan, chairman of the United Garment Workers, appeared before the Industrial Welfare Commission with documentary evidence to show that the cost of living of a single woman in these times, without putting anything aside for a rainy day, is $14.75 a week. Her list shows such items as wholesome food, substantial clothing, one picture show a week and 10 cents for church plate. The purpose of the meeting was the proposed readjustment of the wage schedule for women to fit post-war conditions. No decision was reached. Representatives of employers advocated a national wage scale in order that there might be no disadvantage suffered by any of the various States.

HIGH PRICES WORLD WIDE SAYS BRITISH OFFICIAL GAZETTE

In an international survey of increase in food prices during the war, the *Labor Gazette* published by the British Government says:

> In all commercial countries, whether neutral or belligerent, the last four years have been marked by an advance in prices of the necessaries of daily life so great as to cause an unprecedented reduction in the purchasing power of the pre-war rates of money wages and to give rise to repeated demands on the part of the manual labor and salaried classes for successive readjustments of their rates of pay to meet the rapidly changing conditions.

BETHLEHEM SHIP BUILDING CORPORATION RECOGNIZES UNIONS

The Bethlehem Ship Building Corporation has signed an agreement with the A. F. of L. metal trades department, which represents 13 national and international trade unions. The agreement states that the corporation "recognizes the said unions collectively as a suitable agency to represent its

employees in questions arising as to wages, hours of labor and general working conditions."

A committee of five international officers, who will represent the 13 unions involved, has been appointed. The corporation also appoints a committee of five. These committees will jointly consider all matters covered by the agreement.

The agreement is signed by E. G. Grace and J. W. Powell, president and vice-president of the corporation, and James O'Connell and A. J. Berres, president and secretary-treasurer of the metal trades department. The significance of this agreement can be appreciated when it is recalled that Mr. Grace is executive of the Bethlehem Steel Company.

The Bethlehem Ship Building Corporation is the ship building organization of the steel company. The corporation is the owner of a number of plants in various places, employing in all about 75,000. Its production last year was approximately 60 per cent of the naval construction of the entire country and about 25 per cent of the total merchant vessel tonnage.

AFTER-WAR PLAN OF BOSTON CENTRAL LABOR UNION

The central labor union of Boston, Mass., has adopted a reconstruction program which will be submitted for consideration to the state branch of the A. F. of L.

The program in part provides:

That all returning soldiers and sailors be found places in industry by the government; that wages shall not be reduced; that all labor by children under the age of 16 years shall be prohibited; that the principle and fact of equal pay for equal work, irrespective of sex, shall be established in industry and commerce; that workers shall have the unrestricted and unqualified right to organize, and act collectively in all matters in industry and commerce affecting their interests; that the national government shall assume ownership and retain control and operation of railroads, telephones, express business and mines, and all other lines of industry where practical monopoly prevails; the establishment of a system by national and state governments for the erection of homes for the workers in the interests of health and morals; prohibition of immigration until such time as the needs of industry warrant the lowering of the bar; establishment of a permanent world trade union congress; establishment of a league of nations, as proposed by President Wilson; establishment of free speech, free press, right of assemblage and constitutional guarantees of personal liberty.

RECENT DECISIONS OF COMPTROLLER OF TREASURY

Increase of Compensation of Civilian Employees

Those employees of the office of the recorder of deeds, District of Columbia, who are paid salaries of $2,500 per annum or less are entitled to the increased compensation under section 6 of the act of July 3, 1918, at the rate of $10 per month; and those who are paid at the rate of $2.50 for every day they are employed are entitled to the increase at the rate of 38 1-3 cents per day.

Employees of the office of the recorder of deeds, District of Columbia, who are paid a percentage of the fee received by the office for recording instruments copied by them are not entitled to increased compensation under section 6 of the act of July 3, 1918, because paid for specific services rendered.—*Comptroller Warwick to John F. Costello, Recorder of Deeds, District of Columbia, November 2, 1918.*

Overtime Compensation of Per Diem Employees

In the absence of stipulation as to overtime compensation, per diem employees working in excess of eight hours are not entitled thereto; but if payment for such overtime be authorized in suitable orders or regulations issued by competent authority to apply to employees generally, payment accordingly may be made thereafter.—*Acting Comptroller Foree to the Secretary of the Interior, November 6, 1918.*

Increase of Compensation of Civilian Employees

The additional employees of the Post Office Department whose employment is authorized in the deficiency appropriation act of November 4, 1918, are entitled to increased compensation under, and subject to the limitations of, section 6 of the act of July 3, 1918.—*Acting Comptroller Foree to the Postmaster General, November 14, 1918.*

Commutation of Quarters, Etc., for Maintaining Dependents

Under the act of July 1, 1918, warrant officers of the Coast Guard on sea duty during the period of the present war, who maintain a place of abode for a wife, child, or dependent parent, are entitled to commutation of quarters, heat, and light as provided in the act of April 16, 1918.—*Comptroller Warwick to C. E. Anstett, second lieutenant, Coast Guard, November 19, 1918.*

Officer of Coast Guard Dying Before Receipt of Temporary Commission

Where an officer of the Coast Guard was temporarily promoted to take effect from a prior date in accordance with the act of July 1, 1918, and confirmed therein by the Senate, his death before the issuance of the temporary commission prevents payment being made thereunder in the absence of legislation authorizing it.—*Comptroller Warwick to Second Lieut. C. E. Anstett, Coast Guard, November 20, 1918.*

"It's funny how afraid your horses still are of automobiles up here," said a summer visitor to a Maine farmer.

"I don't know that it is so funny," answered the farmer. "Not so strange, when you think how an automobile must look to a horse. Wouldn't it seem strange to you if you saw my pants comin' down the road with nothin' in 'em?"—*Ladies' Home Journal.*

Editorials

THE COLONEL'S LAST MESSAGE

Equal representation of workers and employers in the management of industries was strongly advocated by Colonel Roosevelt in his last article, "Eyes to the Front," written for the February *Metropolitan* magazine. Declaring that the wage-worker must never "be looked upon primarily as a mere cog in the industrial machine," he voiced the conviction that "we should endeavor cautiously to introduce a system of representation on the directorates so that labor shall have its voice just as much as those who furnish the capital and those who furnish the management." Thus the movement for democracy in industry receives no slight impetus from the dominating personality who has just passed from among us.

Some day, when the Great Composite known as the Government can take a little "time off" from the job of making private employers "be good" to their employees, in order to clean house at home, Uncle Sam's civilian workers may get a taste of real democratic management. The examples of the National War Labor Board, the Macy Board in the shipbuilding industry, and the railroad adjustment boards show that the leaven of democracy is having its effect. There can be no effectual reconstruction of the civil service until both the responsible executive officials and the great mass of the employees are represented at the council table. Nor can the efforts of the employees be allowed to relax for a moment until this fundamental condition shall become an established fact.—J. G. G.

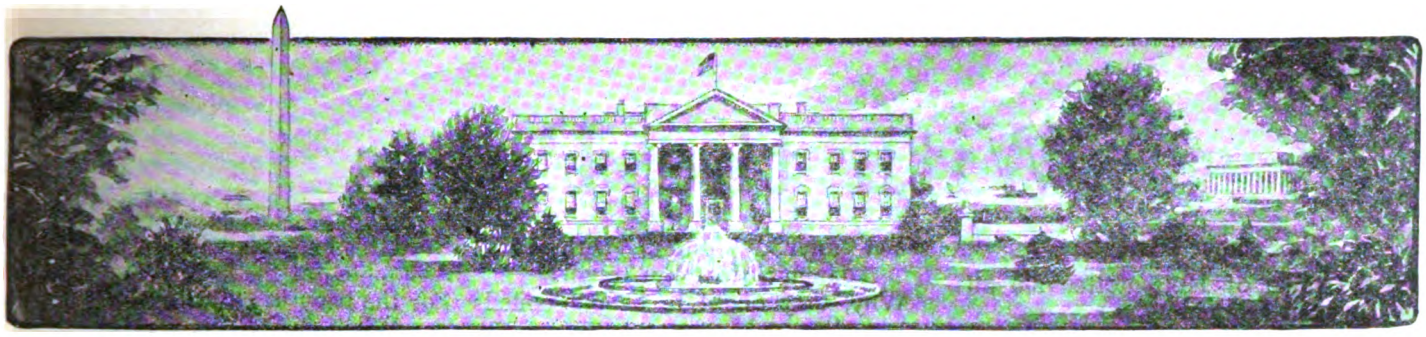
NFFE

TRAINING THE RETURNED SOLDIER

The defenders of a nation upon the field of battle or under other circumstances of hardship and personal danger deserve well of it, and it should be cause for deep satisfaction that the American people are giving substantial form to their gratitude to the returning "boys" who did such splendid work on the battlefields of France and Italy or on the sea. Those who suffered incapacitating injuries are to receive vocational training, at government expense, designed to "rehabilitate" them as far as this can be done. Vast tracts of the public domain are to be reclaimed and made available in accordance with plans so drawn as to enable returned soldiers and sailors to make a living during the time necessarily consumed in transforming a piece of swamp, "cut-over" or arid land into a homestead which will support a family.

In line with these efforts is the proposed plan of the National Federation of Federal Employees whereby returned soldiers and sailors may receive, at government expense, vocational training designed to equip them for the national civil service. This plan is in harmony with approved civil service methods, since there is retained the cardinal principle of the "merit system," that appointment to the government service shall be made of those who, upon approved tests, are found best qualified, and is not open to the criticism made regarding some of the measures proposed, that preference in appointment shall be given to "those who may just get by, and this with assistance." Under the plan advocated by the Federation the civil service is not permitted to become an adjunct of the pension system (much less an adjunct of our military system), at vast expense as the result of loss in efficiency. What storms of indignant protest would come from all parts of the country were it so much as suggested that in the *military* service those ascertained most fit, upon approved tests, should be passed over, and those shown, by the same tests, to be relatively unfit, selected. Yet this is but the application, in another field, of the principle embodied in certain "veteran preference" measures now before Congress, some of which would include in the preferred class the entire military and naval force engaged in the present war, so that, were they to

Digitized by Google



become law, the national civil service would, for all practical purposes, be closed, for the next generation at least, to any but persons having had military service. It does not appear that the soldiers and sailors themselves have requested any of this coddling.

The plan urged by the National Federation of Federal Employees avoids the twin evils of appointment to the government service of a privileged class, and the impairment of the efficiency of such service by permitting appointment to depend on something other than relative fitness as ascertained by examinations designed to meet the requirements of the positions to be filled. A measure which the Federation has drafted and will endeavor to have introduced provides that the Federal Board for Vocational Education shall prescribe, prepare and conduct courses of instruction designed to equip those taking them to meet the examinations required for appointment to the civil service, and that such courses shall be open, free of charge, to any honorably discharged soldier or sailor who wishes to avail himself of them.

In its entire field of operation this plan carries benefit without incidental injury. It assists a peculiarly deserving class, that we all desire to honor, in vocational training which can be used within the government service or elsewhere, and equips the returned soldier or sailor for efficient service in the civil branch of the government by the application of methods akin to those employed in fitting him for the military service. It makes for good citizenship and promotes the general welfare while rewarding the individual. Let every member of the National Federation of Federal Employees get behind this measure and push it for all he or she is worth.—G. A. W.

NFFE

DEPARTMENT HEADS AND SALARIES

Considerable space in this issue of THE FEDERAL EMPLOYEE is devoted to the last annual reports of department heads and other officials and to the supplemental estimates for increases in statutory salaries recently laid before Congress. Much light is shed on the subject from these sources, which are commended to the close scrutiny of all interested. Although a number of statutory salaries are recommended for increase, it is distinctly disappointing that, on the whole, the case as submitted to our legislators absolutely fails, by way of both omission and commission, to meet the imperative needs of the existing situation. Certainly it is hard to reconcile the measures of relief proposed by those presumably familiar with the facts with the dark picture of present-day conditions drawn, without exaggeration, in many instances by the same hands. Especially hard to explain is the attitude of the estimating officials in ignoring the basic measure known as the Johnson-Nolan bill, providing a general minimum wage for civilian government employees of $3 a day, or $1,080 a year, which passed the House almost unanimously, by recommending a large number of salaries for full-time adult workers below this grade.

There is something fatally askew in a governmental system in which Cabinet officers and other officials are compelled to ask, as they do ask, that salaries be based at least on ordinary humanity and decency; in which the average salary today for the mass of employees below those holding supervisory positions is but little, if any, more than $1,100 a year, no greater than the allowance made for the maintenance of pauper families in one of our largest cities, while the minimum for family maintenance in health and reasonable comfort ranges from $1,400 to $1,800 a year; in which more than 65,000 adult employees, on full time, receive less than $3 a day; in which there is no consistent line of demarcation based on education, special training, and skill.

This indictment of the civil service of today is not drawn by the employees any more than by those responsible for the conduct of the Government; it is a composite picture, which may be verified by anyone who will read what has been written recently by the heads of the executive departments and of other governmental establishments as well as by the Civil Service Commission.

With the Poets

Sic Semper Dissenters

In the town of Hottentottenville an aged Hottentot,
Whose name was Hottentotten-Tillypoo,
Was feebly hottentottering around a vacant lot,
With a vacant look upon his higgaboo.
Now "higgaboo" is Hottentot, as you may know, for "face,"
And to wear a vacant look upon your face is a disgrace.
But poor old Mr. Tillypoo, he had no other place,
Though I understand it grieved him through (and through).

He was grubbing up potatoes in an aimless sort of way
(Which really was the only way he had),
And an officer was watching him to hear what he might say,
And arrest him if the thing he said was bad.
For it seems this wretched Tillypoo had gone and had the thought
That his neighbors didn't always do exactly as they ought;
And as this was rank sedition, why, they hoped to see him caught;
For it naturally made 'em pretty mad.

So the men of Hottentottenville, they passed a little law,
Which they called the Hotta-Shotta-Shootem Act,
Which fixed it so the postman was a kind of Grand Bashaw,
Who determined what was false and what was fact.
And the postman sentenced Tillypoo, and wouldn't hear his wails,
But kept him twenty years apiece in all the local jails,
And said he couldn't vote no more, and barred him from the mails,
And expressed the hope that this would teach him tact.

Well, the last I heard of Tilly, he was trying not to think,
And he'd tied a piece of string around his tongue,
And he never went within a mile of either pen or ink,
And he always stood when any song was sung.
And maybe you are thinking that his fate was rather tough,
But what I say is, not a bit; they didn't do enough.
When anybody differs with you, dammit, treat 'em rough;
Why, they ought to be bub-boiled alive and hung.

—Clarence Day, Jr.,
in the *New Republic*.

The New Year

The last note of the sounding bugle dies.
The drums are still. Into the realm of years
Which are no more, where even memories
Are dead, and petty jealousies and fears
Have ceased to be, where bitterness has gone,
And only leaves behind a heritage
Of happiness, the Old Year passes on.
The echoes now are still. Time lifts the page
Of young men's blood and battlefields of death,
And, as he turns it o'er, in love of them
Who gladly sacrificed their mortal breath,
The clear-voiced bells ring out a requiem.
And with the bells a New Year has begun:
Then beams the dawn of Hope, the night is done.

—Thomas Hornby Ferril, in the Denver *Rocky Mountain News*.

When Daddy Gets a Raise

Clouds will rift, skies get clearer,
Paradise will seem much nearer,
Home itself a trifle dearer—
When daddy gets a raise.
There'll be pictures for the wall,
Pretty carpet in the hall,
Trinkets new, for one and all—
When daddy gets a raise.

Days for mother will be brighter,
She will hug the wee one tighter,
For her task will then be lighter—
When daddy gets a raise.
With her needle and her yarn,
She'll not have to stitch and darn,
Sore of heart and tired of arm—
When daddy gets a raise?

Skies will be a-turning bluer,
Holes and patches will be fewer,
For the duds will all be newer—
When daddy gets a raise.
Brother's breeches will not be
Amputated at the knee
For the baby boy of three—
When daddy gets a raise.

As the children swing and teeter,
I am sure they'll all look sweeter,
And, perhaps, a little neater—
When daddy gets a raise.
Willie's feelings won't be hurt
'Cause he has to wear a shirt
Made from mother's faded skirt—
When daddy gets a raise.

Mother's heartaches will be rarer,
All the world to her'll be fairer,
In its joys she'll be a sharer—
When daddy gets a raise.
There'll be hours for quiet ease
'Neath the blossoms of the trees,
With the flowers and birds and bees—
When daddy gets a raise.

Is it, therefore, any wonder
Prayers are daily offered yonder
For these blessings without number—
When daddy gets a raise?
And when mother, good and true,
Giveth thanks where they are due,
Won't she include the union, too—
When daddy gets a raise?

—Judge Albert C. Baker
in *The Railway Clerk*.

Somewhere in France

Just an empty fireplace,
Torn aside;
Just the heart-throb of a home
That has died.
Just the fabric of a dream
Swept away;
Just the echo of a last
Yesterday.

Just the heart-throb of a home
That was bright;
Just the shadow of a dark
Endless night.
Just a hearthstone that was once
Flaming gold;
Weary as one woman's soul—
And as cold.

Just an empty fireplace
Touched by years:
Blackened with the sweep of guns,
Washed by tears.
Just a face with sorrow's brand
On its brow;
Just the heart-throb of a home—
Vanished—now!

Locksley Hall
(Selected Stanzas)

Men, my brothers, men, the workers, ever reaping something new;
That which they have done but earnest of the things that they shall do.

For I dipt into the future, far as human eye could see,
Saw the Vision of the world, and all the wonder that would be.

Saw the heavens fill with commerce, argosies of magic sails,
Pilots of the purple twilight dropping down with costly bales.

Heard the heavens fill with shouting, and there rain'd a ghastly dew
From the nations' airy navies grappling in the central blue.

Far along the world-wide whisper of the south-wind rushing warm,
With the standards of the people plunging thro' the thunder-storm.

Till the war-drum throbb'd no longer, and the battle-flags were furl'd
In the Parliament of man, the Federation of the world.

There the common sense of most shall hold a fretful realm in awe,
And the kindly earth shall slumber, lapt in universal law.

. . .

Yet I doubt not thro' the ages one increasing purpose runs,
And the thoughts of men are widen'd with the process of the suns. —Alfred Tennyson.

Salute

Another song for the brave old Flag
  As full-staff high it flies,
Whether a shot-torn, smoke-grimed rag
  Or bright as the wintry skies.

We watch from the slips as the transport ships
  Come plunging through the foam,
And mothers and dads hail the glorious lads
  That bring the old Flag home.

They bore it away in the morn's dim light
  With never a good-bye cheer,
For they stole to sea like a thief in the night
  Lest the Hun of their course should hear.

But now in the breeze o'er the ransomed seas
  The proud ships make their track,
And the sirens sing and the great bells ring
  As they bring the old Flag back.

There are stripes more red where our heroes bled;
  Their memory gilds the stars;
But thanks we give for the lads that live,
  For the "doughboys" and the Tars.

Oh! let them brag of their well-served Flag
  Wherever their glad feet roam!
And let none be mute in the high salute
  As they bring "Old Glory" home.

—Edward A. Church in *Life*.

In Memoriam
(Selected Stanzas)

Ring out the grief that saps the mind,
  For those that here we see no more;
  Ring out the feud of rich and poor,
Ring in redress to all mankind.

Ring out a slowly dying cause,
  And ancient forms of party strife;
  Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the want, the care, the sin,
  The faithless coldness of the times,
  Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in.

Ring out false pride in place and blood,
  The civic slander and the spite;
  Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease;
  Ring out the narrowing lust of gold,
  Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
  The larger heart, the kindlier hand;
  Ring out the darkness of the land,
Ring in the Christ that is to be.

—Alfred Tennyson.

While Summers Pass

Summer comes and summer goes,
Buds the primrose, fades the rose;
But his footfall on the grass,
  Coming swiftly to my door,
  I shall hear again no more,
Though a thousand summers pass.

Once he loved the clovers well,
Loved the larkspur and bluebell,
And the scent the plum-blooms yield;
  But strange flowers his soul beguiled,
  Pallid lilies, laurels wild,
Blooming in a crimson field.

So he plucked the laurels there,
And he found them sweet and fair
In that field of blood-red hue;
  And, when on a summer night
  Moonlight drenched my clovers white,
Lo! He plucked Death's lilies too.

It may be that e'en tonight,
In the Gardens of Delight,
Where his shining soul must dwell,
  He has found some flowers more sweet
  Than the clovers at my feet,
Some celestial asphodel.

But while summer comes and goes,
With the primrose and the rose,
Comes his footfall on the grass,
  Gladly, lightly to my door—
  I shall hear it echo o'er,
Though a thousand summers pass.

—Aline Michaelis in *The Enterprise*.

THE OPEN FORUM

THE FEDERAL EMPLOYEE invites letters from its readers on subjects which properly come within the scope and purpose of the magazine. Particularly desired are suggestions which place the emphasis on the constructive side of things, looking toward the improvement of the United States Civil Service and of the condition of its employees.

Communications should be written concisely and should not exceed 300 words in length. Please write on one side of the paper only; otherwise the editorial blue pencil may have to be used. Typewritten manuscript, OPEN-SPACED, will be greatly appreciated by the editors. Each correspondent should retain a copy of his contribution. Every communication must be accompanied by the writer's name and address, which will be withheld from publication on request.

THE FEDERAL EMPLOYEE assumes no responsibility for expressions of either fact or opinion by correspondents.

PRIZE ANNOUNCEMENT

Beginning with our March issue, THE FEDERAL EMPLOYEE will pay the sum of five dollars for the letter published in the OPEN FORUM which shall be adjudged the best in the number of the magazine in which it appears.

Reconstruction Suggestions

To the Editors:

I THINK it is conceded by thinking people now that the war is over, that our nation is face to face with some of the most difficult problems this or any other country has ever been called upon to solve. Possibly four or five millions of young, able-bodied men will be released from the national service, only a small number of whom will have any but the vaguest idea of how they are going to make a living or what particular vocation they will follow upon returning to civil life. If these men or one-quarter of them are discharged from the army within, say, six months after peace is declared, will conditions and the labor market be such as to absorb them? In other words, will there be jobs for them?

It is reasonable to suppose that all classes of industry will require some reorganization after the war. Take the case, for example, of the manufacturer of a certain low-priced, popular motor car. He has stopped turning out cars, and for some time has devoted all his facilities to manufacturing products used in the war, for which, presumably, there will now be no demand. If, as may be supposed, he has all the machinery formerly used in the manufacture of his cars stored away, and will begin manufacturing with it as soon as possible, still, considerable time must elapse before he can install it and readjust himself and his factory to the change.

This, then, being true in his case, with machinery *at hand*, needing only to be installed, with a market eagerly awaiting his finished product, how long will it take manufacturers of such products as railroad equipment, bridge and structural steel, etc., to be in position to give employment to other than the relatively small number necessary to rearrange and equip the plants? Take the case of the railroads: The Government is to retain control of them for at least a year after the war is over, during which time former owners and officials cannot well accomplish much toward the work which will be necessary when they come again into possession. Upon regaining control it will be necessary, as a first step, to organize, and then to elect directors and other officials. Until this is accomplished, nothing can be done looking toward bids and the letting of contracts for supplies, however badly such may be needed. It is not to be presumed that factories and manufacturing plants will make up any articles not staple, except under contract, so we may fairly assume not much will be done in the opening of mills and factories that have been diverted to the manufacture of necessities of war until contracts are placed with them or are at least in sight.

The return of our brave boys from "over there" will probably result in such a congestion of the labor market, such an overflow of necessarily idle men, such poverty and want, and, I fear, even worse than that, as this country has never seen; and I need not say what a train of evils long and enforced idleness brings to any individual, community, or nation.

It seems to me that the leaders of labor, our heads of great industries, our statesmen and our officials in high places should at the earliest possible moment get together and perfect plans whereby the grave menace of a terribly congested labor market, with consequent idleness, poverty and want, may be averted, and not wait until it is upon us. Far be it from me to suggest any plan to these men, who have proved so wonderfully efficient in solving so many other mighty problems, but, as one standing afar off, I can see some things that may not be apparent to those close up. We have learned many lessons lately in transportation, both at home and "over there." Because of lack of railway transportation upon one occasion it was found advisable to move motor trucks under their own power from the factory where they were built to the point where the manufacturers had agreed to deliver them, and, owing to the good roads, it is said it was done in a very prompt and satisfactory manner. There is much country, however, east, west, north and south, over which in certain seasons of the year, and some of it at any time of the year, where nothing short of a flying machine could get over the roads found there. If it should be found desirable at the present time, or in the near future, to move a million soldiers for immediate use to any of our borders, we have but to recall the difficulties that beset General Pershing when he with but a few thousand entered Mexico a short time ago, to understand the delay and difficulties that would confront us in the matter of transportation in such an undertaking.

There come, from all parts of this country, increasingly long and loud cries for "good roads," and the ease and facility experienced in hauling heavy loads either with motor trucks or by horse-power over such hard-surfaced roads are such that farmers and manufacturers would welcome such roads in their community, leading to and from the large cities near them. It is a well-established fact that a thoroughfare with good, hard surface, passing by a farm, enhances the value of that particular property. It also produces a greater amount of taxes to the government, which the owner is both able and willing to pay; so the nation at large benefits in the end, as well as the individual, by the road.

For possible military emergencies alone we should have at least three good national highways reaching from the Atlantic to the Pacific coast, and, when we consider the resultant benefits to farmers and manufacturers along such roads, the added revenue in taxes, to say nothing of the additional stimulus to tourists and sightseers, the need for such hard-surfaced thoroughfares seems, indeed, imperative. If plans were now made looking to a beginning of the construction of one or more such roads coincident with the landing of the boys from "over there" it would serve to absorb just that amount of surplus labor and

Digitized by Google

by that much assist in avoiding troublesome times until a natural adjustment can be had in the labor and industrial world.

I believe that immediate steps should be taken by the Government, first, by choosing a committee of persons of proven ability whose duty it should be to so arrange and plan that every returning soldier, before he lands shall have a definite plan of action and know exactly what he is going to do from the moment he steps off the ship that brings him home, and that this committee should be empowered to render the soldier every assistance (in money if necessary, and especially advice), based upon that particular soldier's needs, requirements and abilities, as well as the opportunities that offer in different parts of this country. This would I know, necessitate a large amount of skilled work on the part of a large number of especially efficient persons, but it seems to me the only manner in which such large numbers of men can possibly be returned to civil life in a short time without causing unrest, disturbance, trouble, want and poverty among those who have so freely offered their all, and it seems to me that a grateful nation should prove by works rather than deeds its appreciation of a task well done, and assure our heroes that they and their dependents shall not suffer more at home after peace is declared than they did during the war.

Government Employees and Others

To the Editors:

In a recent editorial concerning the Nolan Minimum Wage bill, the *Civil Service Chronicle* asks somebody to explain "why the Government is so lavish in its justice to railroad employees and other adopted children" while resisting "to the last ditch the proper demands of its own children."

WHY SOME GOVERNMENT EMPLOYEES ARE FAVORED ABOVE OTHERS

There are probably several explanations. The term "government" is susceptible of several interpretations. In reference to the railroad employees, the term is practically synonymous with Secretary McAdoo. But the term "Government" in relation to its own children, the civil service employees, is to be interpreted by the word "Congress." And thus is suggested one answer to the *Chronicle's* question. In the former case Mr. McAdoo was given the authority and the means to deal directly with the railroad employees, who consequently have received a substantial increase of wages in response to the requests of their powerful organizations. In comparison with the railroad men, the civil service employees are but indifferently organized and are under the immediate control of Congress.

The United States has been likened to an immense corporation, of which the voting citizens are the stockholders, who elect the members of Congress to serve as a board of directors. The members of the President's Cabinet are the executive officers of the corporation. The history of successful big business in this country is largely a record of accomplishments of captains of industry and of general managers rather than of boards of directors. Do not the same principles of action apply to the Federal Government, which is the biggest of all business? Students of governmental affairs for years have been criticizing congressional methods in dealing with the executive or administrative departments of the Government. Instead of appropriating a lump sum corresponding to the approved request of the departmental head and holding that head responsible for the proper disbursement of that sum, Congress is inclined to dictate just how each dollar of the appropriation shall be spent. Such a method would spell disaster in the case of a private corporation, and it just as surely and inexorably spells inefficiency in governmental administration. Thus Congress is directly responsible through its peculiar policy regarding salaries, for such inefficiency in the departments as is inevitable from the constant drain of the abler and more ambitious employees into the better-paid positions of private employment. It goes without saying that no private corporation could pursue such a short-sighted policy and survive. (I am told that recent history has proved the contrary in one or two cases in which a departmental head seemingly has been loath to advance his employees after authorization by Congress. If such a situation existed, it was an anomalous one, and quite at variance with the natural order of things.)

EMPLOYEES PRIMARILY RESPONSIBLE FOR EMPLOYMENT CONDITIONS

Now, the remedy for the admittedly unjust conditions to which the *Chronicle* refers rests in the hands of the civil service employees themselves. It is not correct to say that Congress as a body is indifferent to the welfare of the Government's own children. The members of Congress are estimable gentlemen, whose time and energy are so engrossed in the performance of their public duties that it requires a forceful effort to secure their attention toward a specific object. Only a strong organization has the requisite power to produce such an effort. It thus becomes a duty—I was going to say a sacred duty—to themselves and their posterity for the men and women of the civil service to perfect their organization and to employ its energies in harmony with the laws of psychology. A word to the wise—or even the near-wise—is (or ought to be sufficient.

A. W. STOCKWELL,
Boston, Mass., F. E. U.

A Plea for Free Discussion

To the Editors:

Allow me to voice my hearty approval of the plan of your newly established department entitled, "The Open Forum," wherein you invite discussion of topics bearing on "the constructive side of things." Properly conducted, this department will be the means of accomplishing much good, for it will afford a medium whereby the readers of the magazine may practice the rule of action approved at the Chicago convention of the National Federation of Federal Employees last September, recommending to all members "the study of taxation problems." This course is urged on account of its educational value in developing "the most feasible methods of controlling war profits," and also of "legitimately regulating corporate and individual control." In the same connection the record shows that the convention officially endorsed the statement:

> It is manifestly injurious to social progress and the public interest to penalize industry and thrift by taxing the products of labor for public revenue so long as other more equitable sources of revenue exist;

and also the additional statement that these problems of taxation "are vital to the welfare of labor and to the prosperity of the workers and, therefore, vital to the welfare of society."

WHY SINGLE TAX SHOULD BE DISCUSSED IN THE MAGAZINE

I am led to rehearse these acts of the convention because they constitute a complete answer to the objection raised by Brother Jul Johnson, of F. E. U. No. 6 Balboa Heights, Canal Zone, who (pages 1113-1117 of your November issue) attacks the editorial policy of the magazine in having permitted the publication of an article in the August number of Brother W. I. Swanton, of the United States Reclamation Service, giving an outline of the Henry George philosophy, which contemplates the "exemption from taxation of all personal property and improvements" and embodies the plan

Digitized by Google

of raising public revenue by levying a tax on the site value of land.

Brother Johnson repeatedly condemns the article specified as having "no place in the columns of THE FEDERAL EMPLOYEE or any other organ published in the interest of labor," seemingly unmindful of the fact that to exempt the products of labor from taxation would to that extent inure to the benefit of labor. Then he proceeds to misrepresent the Henry George plan, which he calls "fanaticism." After thus setting up a man of straw and clothing it in raiment so utterly irrelevant that the image is grotesquely absurd, he proceeds to demolish the effigy.

The conviction is borne in upon us that Brother Johnson is plainly unacquainted with the writings of Henry George, or else he is so biased that he is unable to draw logical conclusions therefrom, it matters not which. If he had followed Brother Swanton's brief but well-considered and truthful statement, which forms the basis of his attack, he would not have gone so far astray in his characterization of the Henry George plan of taxation.

THE PRESENT WORLD-WIDE STATUS OF SITE-VALUE TAXATION

Even if the national organization of Federal Employees had not taken action recommending the study of economic questions, it would seem that a method of taxation which has been so widely accepted as to receive the unqualified endorsement of Surgeon General Gorgas, who cleaned up the Canal Zone and rendered it habitable, deserves consideration in an "Open Forum" on its own merits. This fact ought to appeal strongly to our isthmian brothers.

The almost universal adoption of the site-value tax in the provinces of western Canada and the very excellent results of its practical working there make it almost certain that this fiscal measure is destined to spread into the adjacent states on our northern border. Already it has been endorsed by the Washington State Grange, and the Farmers' Non-Partisan League, which dominates North Dakota, has a strong plank for site-value taxation in its platform.

This method of raising revenue has been endorsed by the National Grange, by the Commission on Industrial Relations, and by other organizations, state and national, too numerous to be here recounted.

The Provisional Committee of Manufacturers on Federal Taxation calls public attention to the fact that "the value of land is one-half the entire property of the United States, and it pays no federal taxes." This committee, which numbers among its members many leading manufacturing concerns, is seeking to shift taxation from production to land values.

Under the able guidance of Premier David Lloyd George, Great Britain has learned anew what a great agricultural industry means; has learned that the land is for use first, for ornament afterward. Taxes on the broad, unused acres of great manorial estates are solving the land question of England, which suggests that it may be wise to apply this remedy before the question becomes as acute in this country as it became in England. The alarming increase of tenancy in the United States shows where we are now drifting.

SEVERAL ANTI-SINGLE-TAX FALLACIES HERE LAID BARE

Brother Johnson makes the absurd claim that any burden laid upon the land owner will ultimately fall upon the wage earner, "with interest and profit added." He forgets that this cannot possibly be true if the products of labor (which include the improvements on the land) are exempt from taxation, and he seemingly is unaware of the fact that the very reason why the possessors of large fortunes in land holdings are opposed to site-value taxation is that they are unable to shift this kind of tax so as to cause it to fall on someone else.

Brother Johnson certifies to his own qualifications in these words:

> Speaking from personal experience, I own a house and lot in Vienna, Va. The rent I receive from it just covers the repairs necessary to keep the place in livable condition. I am therefore qualified to speak on the subject from both sides.

This statement seems to prove that Brother Johnson has found by personal experience that he for one has been unable to pass on to the "ultimate consumer," the tenant, his burden of taxation, "with interest and profit added." The reason for this he seems to have overlooked. Rents are always fixed at a rate as high as the traffic will bear, regardless of any tax burdens the landlord may or may not be carrying.

Assuming that the improvements on this lot are adequate to the neighborhood, they must have cost at least five or six times as much as the site upon which they are located. Obviously, therefore, it would be to Brother Johnson's advantage if these improvements were exempted from taxation, even if to do this involved the doubling or perhaps the quadrupling of the rate upon the site value. This exemption is part of the Henry George plan of taxation. Strange that Brother Johnson cannot see how it would benefit him. The benefit to the municipality of Vienna, Va., would come from the fact that the doubled or quadrupled rate upon site values would also fall upon vacant lots just as advantageously situated in the same neighborhood. This would tend to encourage improvement by compelling their present owners either to improve them or to sell them at a rate which would attract buyers whose object would be to improve these lots or put them to adequate productive use. This explains why it is that the application of the site-value tax is opposed by landlords who are holding for speculative purposes valuable sites vacant or inadequately improved.

The only people whose proprietary rights would be directly affected adversely by the Henry George plan of taxation are those whose interests as land speculators exceed their interests as holders of personalty and improvements. It would directly benefit everybody else and indirectly benefit in the end even those who under the system advocated by Brother Johnson are classed as speculators.

If the Henry George plan involves any "fanaticism" or fallacy, as Brother Johnson seems to think, let it be freely discussed, so that the good may appear and the bad be thrashed out and separated. No fallacy in economics has ever yet been eliminated by suppression of free discussion.—CHARLES SUMNER DAVIS, *Agricultural Branch, Federal Employees Union No. 2, Washington, D. C.*

Old Employees and War Workers

To the Editors:

Enclosed please find an article from a recent *Sunday Star Magazine*, which, I believe, should be taken up for study by the union heads. For instance, this portion of the article seems to suggest a loophole for wholesale dismissals or reductions of older employees:

> *Any employee* of the civil service may be dismissed when it becomes necessary to reduce the force, and the *older employees are not in a different* class from *new* war workers in this respect. But, of course, it is natural to expect that the recent appointees will be the first to be dismissed, *unless through demonstrated ability they have proved to their superiors that they are more valuable in the office organization than older clerks.* [Italics by the writer.]

This paragraph could be used by Congress (by those opposing the employees' increase and retirement pension bill) as a weapon. For instance, several years ago, when the Retirement and Pension bill, along with the salary increase, was up for passage, several Congressmen opposed it, and one said: "If the older clerks do not like their present salary, they may re-

(*Continued on page* 49)

A Severe Indictment

Department Heads and other high officials here lay bare some of the glaring injustices and shortcomings of the Civil Service, especially in the treatment of its employees, and point out clearly measures urgently necessary to remedy existing conditions, at least in part. What the organized employees are protesting against and contending for is here proved out of the mouths of the Government's own chief witnesses. All interested in the well-being of the civilian federal employees should read every word of this testimony.

(*From the Supplemental Estimates for* 1920)

HON. FRANKLIN K. LANE, SECRETARY OF THE INTERIOR

Indian Bureau.—The salaries now paid employees of the Indian Bureau were established a great many years ago, when prices and living conditions were entirely different from what they are today. Also, it is getting more difficult to obtain and retain satisfactory employees at the salaries now paid. The bureaus of the Government established in recent years pay larger salaries than the older bureaus of the Government. Outside commercial houses in recent years have as a general rule materially increased the salaries of their employees.

In view of the greatly increased cost of living, the difficulty in procuring satisfactory employees at the salaries now paid, the great responsibilities connected with the positions of the officials and employees of the Indian Bureau, and in order to meet changed conditions and do justice to faithful employees, the increases suggested should be granted, it being understood that these proposed increases will not include the $120 increase now paid.

General Land Office.—These increases are considered necessary to keep in the service experienced employees, the loss of whose services would very seriously interfere with the proper conduct of the office, and to secure new employees to bring up to normal a very much depleted force. While employees may be, and have been, prohibited from going into other branches of the service where they would receive materially higher salaries for similar service, they cannot be prevented from quitting the service and accepting positions with private concerns which are offering and paying higher salaries than can be paid under present appropriations for this office.

The condition of the work in the General Land Office is not nearly as current as it should be. The principal cause contributing to the arrears is inability to procure or retain experienced employees. During the fiscal year ended June 30, 1918, with a force of less than 500, there were 177 separations from the office. There were 173 new appointments during the year, of which nearly half were temporary. The excessive number of temporary employees indicates the difficulty the office is confronted with; nobody without experience can handle any except the simplest work of the office efficiently.

Salaries for the General Land Office were established more than 50 years ago, since which time salaries with private concerns have more than doubled, and the cost of living has more than kept apace. It is impossible to get satisfactory employees at the present entrance salaries, and in order to get absolutely necessary employees higher salaries have been offered than are being paid to experienced employees already in the office, only to be rejected in many cases by those to whom offered. To do this it is necessary to deny deserved promotions, which, of course, is unjust.

Bureau of Education.—These increases in the force and in salaries are requested because the work of the Bureau of Education has grown very rapidly in the last few years, the activities of the bureau are much wider, and there is reason to believe that the duties which it must undertake will be much greater in the immediate future. It is not possible to secure or retain persons qualified to fill these positions at the salaries now allowed because of the increased cost of living, the constant demand for the services of such people in other fields, and the higher salaries paid officers and teachers in schools and colleges and in all positions connected with the administration of public-school systems.

Patent Office.—And there is further good ground for complaint. The purchasing power of a dollar has now shrunk to a point where a salary of $1,200 to-day amounts to not much more than the equivalent of $700 or $800 five years ago. The Patent Office clerks have learned this by the painful trial of experience, and very many of them who have worked for five years or more without a promotion and who have little or no prospect of promotion for five years in the future, are inclined to regard themselves as unfairly treated. They see mere novices everywhere engaged at as much or more than they receive after all their years of faithful service, and the result has been that a considerable number of the best of these clerks have sought, and a number have obtained, transfers to other bureaus under the Government with a view to receiving better pay; a larger number have resigned outright—several to take positions at higher salaries in the notoriously underpaid profession of teaching. Others have sought to obtain promotions by interesting Members of Congress, who generally express surprise at the existence of a condition of affairs such as is here set down. Very many others are continually begging to be promoted, and asserting that they can not possibly live on the salaries they receive.

In drafting the above noted proposals for increases in salaries not only the cause of the clerks but also the general betterment of the office has been kept in mind.

At the present time, counting all possible places, there are only 45 clerical positions in the Patent Office to which a clerk receiving $1,200 can hope to aspire by promotion. In fact there are practically less from the point of view of a female clerk for it has never been the custom to promote a woman to the position of chief or assistant chief of a division.

Also there is recommended an increase of 14 clerks at $1,000. The Patent Office has experienced great difficulty of late in getting suitable clerks who have passed the Civil Service examination to accept appointment at $900 per annum, and this would be quite impossible but for the $120 additional compensation provided by the appropriation bill for the current year.

Among the proposed increases of salaries are one of $400, and two of $200 each for three $1,200 draftsmen; and four of $200 each for four $1,000 draftsmen. A comparison of the salaries paid draftsmen in any other branch of the Government service with the salaries paid in the Patent Office will show the basis of this recommendation.

The Patent Office has had two vacancies in the $1,000 draftsman position for many months. One has been filled by a woman holding a temporary clerical position; the other has remained vacant, and neither the Civil Service Commission nor the appointing officers of the office have been able to find a sufficiently skilled person who would accept it. Those who at present are employed at this work are dissatisfied and some of them are asking to be released to take work elsewhere at higher pay.

Bureau of Standards.—I desire to call your attention to a very serious situation at the Bureau of Standards in connection with the salaries of its leaders. These salaries are nowhere near those paid by the industrial concerns for the same grade of service, nor are the increases submitted based upon present conditions. Indeed, these increases were submitted three or four years ago and represent what should have been paid at that time. In most cases the salaries of our leaders are not over 50 per cent of those paid elsewhere. There can be but one result, namely, a serious deterioration of the quality of the Bureau's personnel; this needs no argument from me. During the past three or four years the bureau has lost many of its best men. The loss of these men leads to inefficient work and tends to destroy the bureau's usefulness to the public.

Bureau of Fisheries.—This readjustment in the Division of Fish Culture is imperatively demanded by the changed industrial and living conditions since the present salary scale was established upward of a quarter of a century ago and by the recent experience of the bureau in obtaining qualified men. For several years it has been most difficult to induce desirable persons to enter the service at the meager salaries offered, and the entire field personnel has become disorganized in consequence. The situation is most serious as regards the lower grades, but an advance all along the line is necessary in order that the bureau may properly conduct its operation.

HON. W. B. WILSON, SECRETARY OF LABOR

It is recommended that because of war conditions, and the resulting higher cost of living, the per diem in lieu of subsistence allowance be raised from $4 to $6.

HON. CORNELIUS FORD, PUBLIC PRINTER

In presenting increases enumerated herewith, I am not only considering the fact that a dollar of 1914 is but 54 cents of today, but the fact that a large number of employees of the Government Printing Office have been solicited by other departments and bureaus as well as commercial

institutions and offers made which have been hard for them to resist, and they have only done so upon the assurance that the Public Printer would meet the situation, as he should, by recommending financial consideration of a fair and equitable character. Unless this is done, the office will undoubtedly lose the services of many trained and experienced clerks whose places it would be exceedingly difficult to fill. The situation is becoming a very serious one, owing to the low salaries in effect; these salaries were fixed by Congress in most cases years ago, and cannot be changed without congressional action.

DR. HERBERT PUTNAM, LIBRARIAN OF CONGRESS

The Library is facing a serious situation. Since January, 1917, it has lost heavily by resignation; and it has been found almost impossible to secure, or having secured, to hold, at the existing salaries, persons who possess the proper qualifications for the work to be done.

The salaries paid a large part of the library staff today are not living salaries; and until they equal those paid elsewhere, especially until they shall be equalized with those paid in other Government establishments, the library will find itself seriously crippled at the very times, as at present, when it is called upon to render service of a character that requires the highest efficiency.

C. S. RIDLEY, COLONEL, UNITED STATES ARMY, SUPERINTENDENT OF STATE, WAR AND NAVY DEPT. BLDGS.

The increases requested above are submitted with the idea of securing salaries which will result in this office being able to obtain competent mechanics. Even the highest salaries authorized for mechanics in the new buildings in Potomac Park are below what such mechanics can now obtain in private employment. The salaries which are asked to be increased are lower than those provided in the above-mentioned buildings. This results in the necessity of employing incompetent help and in a constant changing of the force which makes it almost impossible to operate the building efficiently. The responsibility attached to some of the positions, such as assistant engineer, is such as to make it poor economy to employ other than the very highest class of workmen. The increases herewith submitted are in addition to any general percentage increase which Congress may provide for all employees of the Government.

F. L. AVERILL, SUPERINTENDENT OF BUILDING AND GROUNDS OF LIBRARY OF CONGRESS

In the mechanical positions the salaries thus far paid, even with the temporary increase provided, are still so far below the scale obtaining outside the government service that the supposed more favorable working conditions in the government service do not have the same force as formerly.

The proposed scale would furthermore serve to advance some most deserving employees who have remained here solely through loyalty.

The few changes in designation noted are recommended because the present designations in these cases do not at all indicate the special duties and the qualifications required. With these changes in designation it is hoped that at least some applications of properly qualified men for appointment may be received. For a long time no such applications have been filed, and it is now practically impossible to fill vacancies with qualified employees in these particular positions.

Digitized by Google

HON. ROBERT LANSING, SECRETARY OF STATE

But it is not alone in the interest of the present incumbents that the suggested increases in these salaries are recommended. The responsibilities of the positions will, in the future, be vastly greater than they are now and if it should unfortunately happen, as there is reason to believe that it may, that the present incumbents should find it to their interests, when their obligations to the Government are discharged, to accept more remunerative employment elsewhere, it would be absolutely impossible to obtain properly qualified successors for the salaries now provided by Congress. This is no exaggeration but a frank statement of fact.

These increases are requested for the reason that it is believed to be only fair that these employees should have more compensation in view of the present cost of living and wages being paid elsewhere. The Secretary of Labor has investigated the question, and the salaries herein recommended are understood to be in accordance with the conclusions reached by him after an examination of the subject.

HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY

I cannot speak too highly of the valuable service rendered by the civilians occupying the more responsible positions since our participation in the war became imminent. The organization of the Navy Department was such that when the time came for expansion, the work, exceptionally arduous and complex as it proved to be, was carried on without friction, without delay, and with results of which everyone can well be proud. This smooth working of its bureaus and offices and their many ramifications was possible only for the reason that most of its principal clerks, all men of long experience in the Navy Department, remained at their stations heedless of the opportunities proffered them outside for salaries far in excess of what the Navy Department has ever paid, and these men formed the nucleus around which the largely increased but inexperienced personnel was built.

So, as I have said, the foregoing represent but a portion of the advancements it is desired and necessary to have made. Necessary, because to keep them in our employ we must satisfy, as far as possible, reasonable demands for compensation commensurate with their duties and capabilities, for I feel that with the termination of the war those concerns which have been doing business with the various branches of the Navy will be more than desirous of securing the assistance of departmental experts in the management and adjustment of their governmental business.

(From Annual Reports for 1918.)

HON. WILLIAM C. REDFIELD, SECRETARY OF COMMERCE

Travel Allowance.—The unjust practice continues requiring some of our employees on small salaries who travel on government business to pay, in large part, their own expenses. I renew my request that the law be changed to permit paying the necessary expenses of employees when required to travel on government work.

Representatives to Meetings and Conventions.—By special provision of law the Bureau of Standards may and does send representatives to meetings and conventions at public expense. This privilege should be extended to all other bureaus of the Department.

The Secretary recommends as urgent "larger clerical force in the field service of the Steamboat-Inspection Service and in the office of the Coast and Geodetic Survey, together with more draftsmen and com-

United States Mail--Pneumatic Tube Service

Report of Joint Congressional Commission Appointed to Investigate

THE VALUE OF PNEUMATIC-TUBE MAIL SERVICE

CONCLUSIONS (IN PART)

"Letter mail pays for and warrants the highest grade of service."

"The Tubes carry a large portion of the first class mail in the cities where established."

"Delays in the delivery of large quantities of mail would result from the substitution of automobiles for Pneumatic-tubes."

"The records of the Post Office Department indicate that from three to five million letters are advanced in delivery each day by the Tubes which otherwise would be delayed."

"The additional cost for providing expedition for this mail is fully justified."

"No number of automobiles even at a cost exceeding that of the best combined automobile and Tube Service could obtain all the advantages of a combined service."

MEMBERS OF THE COMMISSION

Senator JOHN H. BANKHEAD
Senator THOMAS W. HARDWICK
Senator JOHN W. WEEKS
Representative THOMAS M. BELL
Representative HALVOR STEENERSON
Representative ARTHUR B. ROUSE, dissenting

SUCH A PHOTOGRAPH AS THIS TELLS BETTER THAN WORDS THE STORY OF CURTISS PROGRESS AND MANUFACTURING CAPABILITIES

puters at more adequate salaries in the latter service."

It is the aim of the Department to encourage its employees to acquire in pursuance of their duties as thorough a knowledge of the operations of the various services as possible in order that whenever vacancies occur in higher grade positions they may be filled by promotion. This policy leads to efficiency. By having competent employees ready to assume the duties of higher positions under present extraordinary conditions the Department has been able to prevent a serious demoralization of the work owing to the unusually heavy drain on its trained force by separations. This serious drain is shown by the fact that 1,615 out of a total force of 6,398 regularly appointed employees, over 25 per cent left the service during the year.

Before the war we could secure clerks at the low entrance salary of $900; we can not do so now. These positions are needed for our work and to have them vacant means that the work is done at the expense of clerks in the higher grades whose duties have been increased because of the war.

The remedy for this situation is a higher entrance salary, but we cannot provide this without congressional authority. The Government work must go on, but if it is to be done well it will be necessary to make the entrance salary $1,200 per annum, eliminating the $900 and $1,000 salaries for first-class clerks. A certain number of minor clerical positions, carrying a $1,000 salary, should continue and can be filled by persons whose services can be utilized for work of a minor character.

The cost of living bears cruelly now upon those who fill the lower salaried positions. It is hardly too much to say that a clerk paid $1,800 has had his salary cut in half within the last two years by the advance in prices, and for all practical purposes of living he stands where he would have stood two years ago had be then received $900 per annum. The facts are too well known to require argument. A spirit of humanity alone should lead to a radical readjustment of the entrance salaries.

The 5 and 10 per cent increase for the fiscal year 1918 has been replaced by a straight $120 per annum increase (with certain exceptions) for all those filling what may be considered permanent positions. While this is more equitable to those receiving small salaries, it is only a slight and temporary palliative of the hardship resulting from the constantly increasing cost of living. The average salary of the Government employee is estimated to be less than $1,200 per annum, and with the $120 per annum increase his earnings are augmented approximately 10 per cent over a standard which has remained practically unchanged for decades. In the last 10 years the cost of living has increased almost two-fold, for, considering the standard of prices in 1907 at 100 per cent; the same on June 30, 1917, would be represented by 197 per cent.

I renew my approval, mentioned in previous reports, of continuing the Saturday half holiday throughout the year.

Bureau of Foreign and Domestic Commerce.—The Chief of this Bureau makes mention of the Bureau's utter inability to secure employees in competition with other Government commissions and private concerns. In order to meet the increased cost of living, particularly at Washington, and to retain desirable men for whom there is a growing demand in every direction

Digitized by Google

liberal increases in salaries have come about automatically wherever it was necessary to hold organizations together. The Bureau's disability in this respect has cost it many a valuable employee during the year and has prevented men of the highest qualifications from entering the service.

Bureau of the Census.—The numbers of positions in the various salary classes have been readjusted so as to provide a somewhat better average salary scale than heretofore. This readjustment will, it is hoped, diminish the tendency of the census force to seek employment elsewhere, although the salary scale is still unduly low as compared with those existing in other branches of the Government. The greatest difficulty which the Bureau now experiences is in inducing eligibles on the civil service registers to accept employment at the entrance salary of $900. During the 14 months' period from July 1, 1917, to August 31, 1918, inclusive, offers of appointment were tendered to 569 eligibles on the registers of the Civil Service Commission. Of these eligibles 299 declined, 79 failed to reply, and 191 accepted appointment.

Coast and Geodetic Survey.—Because of the high attainments required of those engaged on this work [referring to cartography], the salaries should be higher than at present, especially in the lower grades. Indeed, if the positions are to be filled and conditions continue as at present these salaries must be increased, because candidates cannot be found to fill them. Some of the lower paid positions have been vacant for months.

Frequent changes in the clerical force not only hinder the prompt answering of the inquiries of the public but retard the technical work of the Bureau.

Owing to the disparity between the statutory salaries in this service and those paid in other branches of the Government, the changes in the clerical personnel are in excess of the average in other government services. The statutory salary of half of the clerical force of the Bureau is not in excess of $1,000 per annum. There are 42 clerks in the Bureau. The statutory salaries of 21 of these are as follows:

Six at $720 per annum.
Ten at $900 per annum.
Five at $1,000 per annum.

The result was that during the fiscal years no less than 27 persons occupied 5 of the statutory places at $720 per annum and 33 persons occupied the 10 statutory places for clerks at $900 per annum. The general average has been that these positions have been held less than three month, there being many intervals when candidates could not be found willing to accept such salaries.

While the Government has thus really paid from its salary rolls a minimum price for clerical help, it has lost an immense amount of time of highly skilled technical employees who have instructed during one year each of these 60 different incumbents of different clerical positions, and the net result has been a financial loss far in excess of salaries that would retain a permanent force.

After referring to the need of specially skilled men as instrument makers, the report states that "the entrance salary of $1,200 does not attract men of the requisite experience to fill these positions. One of these positions was created July 1, 1917. It was only after a solicitation by correspondence and personal inquiry covering nearly six months that an incumbent was found. Another of the $1,200 positions has been vacant for months. The Bureau is

unable to induce anyone with mechanical ability to accept an appointment to fill the vacancy."

In earlier reports mention has been made of the need of some system of retirement in order to bring about the maximum of results with the greatest economy. The Coast and Geodetic Survey is the oldest scientific bureau of the Federal Government, and naturally the defects attendant on superannuation are quite apparent.

The commissioned officers in the Coast and Geodetic Survey now number 124. To retire those above 64 years of age on three-fourths pay would have required an appropriation of but $16,650 for the current year, and would have enabled us to bring into the service 10 new field officers who are sorely needed.

The fact that the pay of these officers during their long service has been too small to permit laying aside a competence for old age is not however the principal consideration in urging retirement for them. The stronger reason is the privations they have to endure and the risks incident to the service.

Steamboat-Inspection Service.—Prompt action should now be taken with reference to increasing the pay of the clerks of the Steamboat-Inspection Service. The persons who do this work have to be peculiarly qualified, and it is believed that unless prompt relief is given the machinery of the service will be much impaired by the loss of competent clerks and the inability of the officers of the service to obtain competent persons to take their places.

The Steamboat-Inspection Service does things. In time of war or during crises men look for practical results. In such times men tie to leaders who act. Vessels have to be inspected, and that promptly, and men must be licensed without delay. With this service it is not a question of finding how not to do things, but how to do things. The time of day or night does not matter, nor do the hours of work. The clerks in the Steamboat-Inspection Service have responded splendidly to the unusual demands made upon them, because certificates of inspection have to be prepared and licenses have to be written out, not at convenience or several days after, but immediately when the necessity arises. An enormous amount of work has had to be done in the compilation of reports and data for other branches of the Government, and this has been done without delay. There has been no complaining, but there has been a cheerful response on the part of everyone to the unusual demands that have been made upon them.

HON. WILLIAM B. WILSON, *Secretary of Labor*

Retirement.—Previous recommendations of the department for an equitable system of retirement (Fifth Annual Report, p. 151), one that will best subserve the interests of efficiency and economy and at the same time insure fair financial provision for the old age of government employees who by long and faithful service have deserved this consideration, are again repeated.

Increase in Subsistence Allowance.—I also desire to call attention to certain hardships laid upon many persons engaged in travel for the department. Under the terms of the appropriations granted to the department, the total amount which can be allowed outright for subsistence is $4 per diem. The limit was fixed upon, originally, August 1, 1914. At that time the limitation was quite reasonable and no doubt necessary in order to limit unnecessary extravagance and waste of public funds. Since

then, however, there has been a marked increase in the cost of living, and in particular of the two principal items (food and lodging), embraced within the meaning of the term subsistence. The figures of the Bureau of Labor Statistics which are most conservative, indicate that the cost of foodstuffs during the period since the adoption of the limitation has advanced *63 per cent.* Thus the purchasing power, represented by $4 today, is equivalent to only $2.46 at the time of the adoption of the rule. In consequence, faithful employees of the department find themselves forced to draw upon their own means to make up the deficit between their actual expenditure and the permitted sum. The greater number of these persons are those who are serving the Government at modest salaries, which have not kept pace with the cost of living. They can least afford further drains upon their means. I therefore feel that an increase in the amount allotted for subsistence is imperative and recommend that it be advanced from $4 to $6 per diem.

Profiteering.—Directly related to the question of wage stabilization is the problem of the steadily increasing cost of living. The department realized that to regulate wages without at the same time meeting the question of the rising costs of the services and materials which the worker purchases with his wages would be dealing in half measures. Accordingly the question of price control has been referred to the War Industries Board, the Food Administration, and the Department of Agriculture, with the request that they proceed as rapidly as possible with the formulation and enforcement of plans for the increase of production and the stabilization of the prices of the necessaries of life and the elimination of profiteering through the equitable limitations of profits.

At the present statutory salaries it is almost impossible to secure competent help, since commercial establishments, not being held by law to stated salaries, are outbidding the Government for this class of labor. What is true of the clerical force is doubly true of the labor force necessary to man the department buildings. Common laborers are now paid by commercial establishments higher salaries than it is possible for the Department to pay for skilled labor. Unless there is some action by Congress, raising the scale of pay for common and skilled laborers, it is certain that the departments will not be able to man their buildings with comfort or safety.

Owing to the depletion of the clerical force by calls to the armed forces of the United States or to supply experienced men to the newer activities, it has been necessary to replace male clerks with women, and it has been demonstrated that given the same opportunities and experience the work of the women employees in certain lines is generally as satisfactory as that of the men they displace.

Appointment Division.—Some of the more important registers of eligibles of the Civil Service Commission (notably that for stenographer and typist) were in a depleted condition throughout the year. From 50 to 75 per cent of the eligibles certified by the commission usually declined appointment and this percentage of declinations appears to have risen as high as 90 per cent at times. The qualifications and experience of those who remained on certificates were often so inadequate for the work required that the bureau or division chiefs were unwilling to recommend them for appointment.

Bureau of Immigration.—The entrance salary offered immigrant inspectors is very low in comparison with the salaries offered

by other public services and in private establishments. Even the horizontal increases allowed by Congress have not served to overcome the disparity mentioned, and it has been increasingly difficult to obtain the right kind of persons at the compensation offered.

Children's Bureau.—The greatly increased cost of living, especially in Washington, has led to a scale of salaries in the new war services much beyond those allowed by law for similar work in older bureaus. From the Children's Bureau some transfers to services in this and other departments, at higher salaries, have been requested and permitted. Others have been made because appointees had taken civil service examinations for more responsible positions carrying higher salaries and were entitled to accept the advance when offered. In addition, various members of the staff have obtained positions in private employment at better pay than the bureau can offer. Every unnecessary transfer means a double cost to the Government, since two places must be filled instead of one and two persons instead of one adjusted to a new position.

Thus the bureau has suffered from the loss of a considerable number of valuable experienced appointees. While readjustments have been made and excellent candidates are constantly offering themselves, there is naturally a spirit of restlessness and dissatisfaction which will continue to result in changes and waste of effort and resignations from the bureau until the permanent statutory salaries are made commensurate with those now obtainable in private employment or in the new Government services. The increased living cost bears heavily upon salaried people. Many of the members of the bureau staff have heavy family burdens, greatly increased by war conditions. Their duties, necessary to national welfare at all times, are now in the highest degree patriotic war service, as the President's letter in regard to Children's Year fully recognizes. It would be unfair to fail to state that overtime work is given unstintedly and in the most patriotic spirit by the members of the bureau.

In no respect has the justice of the department's position been so amply shown as in the case of its policies with regard to the right of wage earners to organize and with regard to the corollary right of collective bargaining. In the past the right of wage earners to organize has been conceded by some employers, but vigorously denied by others. In the case of many very large employers of labor the organization of trade unions on the part of wage earners was a cause for dismissal. It was feared by employers who opposed labor organizations that if such organizations were permitted in their establishments, unreasonable and excessive demands upon the employer would follow. On the other hand, the experience of the department indicates that in the past the most disastrous and long-continued strikes had occurred in trades and in plants where there was practically no organization.

The fixed policy of the department has always been to acknowledge the right of both employers and wage earners to organize and to use its influence against abuse of organization by either side. Upon this theory the Conciliation Service of the department has always operated. Where both sides to a controversy have attained such a form of organization that they can send responsible delegates to confer with each other, there has always been not only a possibility, but almost a certainty of agreement. On the other hand, when wage

earners are unorganized and there is no one to whom authority to speak for them can be delegated, it is evident that they can neither bargain nor be bargained with. Almost insuperable obstacles arise in such cases. The absence of organization means the absence of a medium through which the workers en masse can discuss their problems with their employers. The denial of this organization is the demand of the only means of peaceable settlement they have. Whether or not so intended, the result of refusal on the part of the employing interest to recognize the right of labor to organize is to force the development of labor organizations of a revolutionary or even of a lawless type.

It is felt, however, that the rights of organization and of collective bargaining are no longer in dispute, since they have been formally adopted both by employers and by wage earners through the National War Labor Board. This agreement between two hitherto conflicting elements is presumably temporary in nature, but there is no good reason why it should not be regarded as permanent. If the principles upon which that agreement was founded can endure the stress of war, it is fair to suppose that even greater success will attend their application during the calmer periods of peace.

The war has demonstrated that American patriotism is not restricted to any section of the country nor to any class or group of individuals nor to any stratum of society. The great need for sacrifice for the common good engendered by the war has impelled both employers and wage earners to lay aside old prejudices, old suspicions, and old hatreds. Both laborer and employer have done this in supreme measure during the past year. In continuance of that spirit of cooperation lies hope for a further attainment and development during the days of peace of that democracy for which we have taken up arms.

During the brief period of its existence the War Labor Board has been one of the most effective instruments of the department in producing historic and desirable changes in the relations of employers and wage earners in the United States. Probably the most important of these changes is that involving the right of workers to organize and to deal collectively. This subject has been dealt with in past reports. While the department is charged with the duty of promoting the interest of wage earners, it has always taken the position that such promotion shall not be to the detriment of any other class. In the conciliation of disputes it has been found, however, that the greatest barrier to agreement between the parties to a controversy lies in the fact that, while the employing interest is frequently represented by a single person, the interests of the employees are not organized, and that consequently they cannot so effectively bargain or be bargained with. Therefore, the conclusion arrived at in the Western Union case—that no employer should insist upon deciding whether his employees should or should not be members of a union—was in full accord with the policies of the department for many years. The question of discrimination against workers who are members of unions has led in the past to industrial conflicts entailing vast losses in wages and materials. I regard it as a distinct industrial advance that such a reasonable principle as that of the War Labor Board has been adopted and so generally accepted by employers.

recognition of the right to organize is the recognition of the principle of collective bargaining. For many years the law has been making it easier, and properly so, for employing interests to deal collectively. The copartnership, the stock company, and the corporation are, from the standpoint of the wage earners, means by which employers may pool their interests as employers and collectively hire workers. The department has recognized the necessity and the desirability for such organization on the part of employers. It has also felt that such organization is desirable on the part of wage earners, for without it the wage earner is at a tremendous disadvantage. His employer is granted a normal and orderly method of dealing, and is encouraged to so deal by the law. Fairness demands that like facilities be at the disposal of wage earners. The War Labor Board has therefore tried to abolish the so-called individual contract, by which the employer exacts from the worker a signed agreement not to join a trade-union during the period of his employment. In all cases where workers have been dismissed because of their union affiliations the board has ordered their reinstatement with full pay for all time lost by reason of the dismissal.

In further application of the principle, the War Labor Board has, in every case in which this right was involved, provided that the employer shall recognize the right of his workers to collective representation, either through trade-unions or through committees democratically chosen in elections fairly conducted under rules guaranteeing freedom from any ulterior influences. Through its administrative officers, the War Labor Board has, with the approval and sanction of the department, established a method of shop elections by which the workers may be represented in determining their rates of pay and the conditions under which they work.

The Minimum Wage.—Originally committed to the premise that the worker is entitled to a wage sufficient to maintain his family and himself in health and reasonable comfort, the War Labor Board has found it necessary to make extensive studies of the cost of living and to avail itself of the data on that subject gathered by the Bureau of Labor Statistics. Upon the basis of such information, it has established certain rates varying according to local conditions below which no worker shall be paid.

The War Labor Board has conceived it to be its duty to protect the worker in his right to a living wage, regardless of the financial condition of the employing corporations. It has decided that, so far as its functions are concerned, consideration of the workers claim is paramount to consideration of the employers' ability to meet it. At the same time, the board has felt that it must consider the possibility of financial injury to an employer from equitable and necessary wage readjustments, and has, therefore, adopted as its policy the principle that where conformity with its decisions affects an employer's ability to continue effective operation of his plant, the properly constituted rate or contract-making agency shall be requested to give consideration to the action of the War Labor Board in application for increased revenues. Such recommendations have been made in the cases of street railway corporations and other public utilities regulated by state laws or city ordinances, and in the cases of manufacturing establishments under obligation to furnish material to the Government at fixed contract prices.

It has also been recognized by the board that we are in a period when rapid changes are taking place and that the conditions upon which an award or finding is based may be so altered or modified within a short period that the award itself is no longer equitable. To correct this it has been provided that awards and findings may be reviewed at six-month intervals to meet any changes in fundamental conditions.

With respect to the question of recognition of trade-unions by employers, the War Labor Board has maintained the status quo ante, sustaining the right of the employer to refuse to deal with trade unions during the period of the war in cases where he has not dealt with them before the war and upholding the right of the union to continued recognition by employers who have recognized and dealt with it in the past.

Women in Industry.—The rights of women in industry have been rigidly protected by the War Labor Board with respect to questions of wages, health, and general welfare. In all cases where women perform the same work as men they shall, according to the policy of the War Labor Board, receive precisely the same rate of pay, and in no case be allotted tasks disproportionate to their strength.

Wage Stabilization.—One of the chief obstacles to the proper distribution of labor has been the variations in wages paid by different contractors for the Government. These differences were frequently of considerable magnitude even within the same city and for the same trades. This resulted in a tremendous turnover of labor which seriously interfered with productive efficiency. It was the individualistic strike. It represented the individual workman dissatisfied with conditions, who was either unwilling or unable to enlist his fellow workmen in a collective protest. It was much larger in the aggregate than all of our strikes. Something had to be done to reduce it to a minimum if our war-industry effectiveness was to be maintained. It was apparent that only some system of standardization of wage rates would accomplish the desired results.

Every collective wage agreement entered into between employers and employees establishes standard wages for the period of its existence and to that extent has a stabilizing effect. It reduces unrest to a minimum because employers and employees are alike parties to the agreement. Any policy of standardization determined upon by the Government to reach its highest effectiveness must give to the employer and employee a voice in determining the wage standards that are to be introduced. This policy has been pursued in the creation of the various wage-adjustment boards. These have not covered all of the field, with the exception of the War Labor Board, and its jurisdiction did not begin until the spirit of unrest amongst the workers had reached the stage of creating a labor dispute. Standardization with a view to preventing the unrest had not been undertaken in the general field of industry. To that end the board perfected plans for the formation of a Building Trades Board and a Metal Trades Board, composed of representatives of employers, employees, and the Government, to deal with problems that have arisen outside the jurisdiction of the Shipbuilding Adjustment Board and the Railroad Board of Wages and Working Conditions. Plans are being worked out for the creation of additional boards in other essential industries.

Profiteering.—Directly related to the question of wage stabilization is the problem of the steadily increasing cost of living. The department realized that to regulate wages without at the same time meeting the question of the rising costs of the services and materials which the worker purchases with his wages would be dealing in half measures. Accordingly the question of price control has been referred to the War Industries Board, the Food Administration, and the Department of Agriculture, with the request that they proceed as rapidly as possible with the formation and enforcement of plans for the increase of production and the stabilization of the prices of the necessaries of life and the elimination of profiteering through the equitable limitations of profits.

Birds of a Feather

A young man from New York who had been to Boston had gone broke in that city. Not knowing how else to get back to New York he took a chance and boarded a train bound for the city. When the conductor came through he told him that he was a reporter for a certain metropolitan newspaper who had been sent to Boston on an assignment. He declared that he had inadvertently mislaid his pass and that his money had given out. However, if the conductor would take him through he would repay him the money as soon as they arrived in New York.

"I guess that will be all right," said the conductor. "But, by the way, your editor is in the parlor car. Come up with me, and if he says you are a member of his staff I will take you through."

They went up to the parlor car, and, to the young man's surprise, the editor vouched for him and assured the conductor that everything was correct and legitimate. As soon as the official was out of hearing the young man thanked the editor for his kindness, and said:

"Of course, you know I'm not connected with your paper, and I was fearfully afraid you'd give me away."

"Young man," said the other, "I am not the editor. I'm only traveling on his pass."—*Ladies' Home Journal.*

While the Going Was Good

A darky was ushered into the employment bureau of the duPont Powder Works and plied with the usual questions put to all new hands taken on at the works.

The old darky stood the examination pretty well, but was beginning to feel just a little bit "oneasy" when one of the men suddenly asked:

"And who would you like to be notified in case of a serious accident?"

The darky paused and scratched his head a bit at this unexpected blow at his morale, but after a little while he thought of two persons who might like to know of his misfortune. Their names were written down.

"And now," said one of the examiners, "where would you like your remains shipped?"

"Where would I like my remains shipped?" repeated the darky in a groggy sort of voice. "Boss, Ise gwine to take 'em away from here right now!"—*Selected.*

Sergeant (out of patience with awkward recruit)—Never approach the 'osses from be'ind without speaking to 'em. If you do, that thick 'ead of yours'll get so kicked we shan't 'ave nothing but lame 'osses in the stable.—*Punch.*

THE OPEN FORUM

(*Continued from page* 36)

sign; we can bring thousands of young women here to replace them who would be glad of their good salaries." But it is to be noticed that the new war workers are more eager after "more money" than the older clerks, and their entrance salary—$1,100, with an increase to $1,200 after three months of service—is "one over" on the older clerks. In fact, many of these war workers have been increased to $1,400 and $1,600 in less than a year's service, and are still inquiring if it is possible to get another promotion soon "on the quiet"; while the older clerks have worked years, giving faithful, even overtime service (without compensation), as much as eight and ten years, at $900, $1,000, $1,200—$1,400 and $1,600 salaries were "moon high," seldom attained by any older employees, only, perhaps, after they had become gray-haired, or at times these heights might be reached by one or two clerks in twelve years of service. However, many chiefs, if not headed off, would now push out these older, faithful workers to make places for the women, and Congressmen opposing the Retirement bill would gladly cooperate with them.

As there are but 35,000 older employees and 90,000 war workers, should one of the Congressmen draft a bill to replace the older employees with the new and give them the increase due us as the retirement fund relief, this would be, of course, a serious thing for the older employees.

All employees in this city have responsibilities and depend upon their salaries as a means of support. Many of them have grown old in the service, while the war workers left good positions and, in the majority of cases, good homes, to come here, and do not really need the positions, as they can return and resume their positions at any time.

Another phase of the situation is this: Though a war worker may perform the work equally as well as an older employee (which I doubt is the case in many instances, judging from those coming under my own observation), the fact is, in justice, no excuse or reason why the older clerk should be pushed out. Congress appropriated money to bring the workers here for duration of the war only, not to supplant the older employees.

Should not the union rally the Retirement bill's friends and discuss and study the situation, especially from the standpoint of possible harm that may result to the older employees in the civil service?

"Single Tax" Defended

To the Editors:

Mr. Jul Johnson, in his letter in the November issue, states that, as a wage earner and landowner, he is "qualified to speak on the subject from both sides," and then proceeds with his attempt to demolish the single-tax philosophy.

Now, Henry George never attacked the personal character of landlords, but the system of private ownership of the earth's surface, which is the common heritage of all and not the monopoly of the few who hold it by paper titles, all of which Herbert Spencer once said were founded on either force or fraud.

The great lawyer Blackstone said that "no acts of lawmakers, though engrossed on parchment, sanctioned by public sentiment and hallowed by the passage of time, could ever create a real title to land." At best, a title deed is only a lease, renewable each year, with five years' grace before the Government closes the lessee out for nonpayment of what is generally called taxes. The present vicious and iniquitous system of land ownership is the tool that pries the worker loose from his earnings, and 90 per cent of the land is owned by 10 per cent of the people.

Henry George taught that the earth is large enough and rich enough for all, and that whoever wants a monopoly of some part of its surface should pay into the public treasury each year a rent fixed by public assessment.

The fact that many good men hold man-made title to some of God's earth no more justifies private ownership of land than did the fact that many slaveholders were good men justify slavery. Personalities are never good arguments.

Mr. Johnson summarily debars the single tax from the columns of THE FEDERAL EMPLOYEE and the labor press generally, yet eight out of twelve resolutions passed by the Chicago convention deal directly with matters increasing the governmental expenditures. We submit that the one great obstacle to the adoption of the N. F. F. E. program is the lack of funds in the public treasury, and that it is useless to go before Congress continually, asking for higher pay, shorter hours, and better conditions, unless we have a real answer to the ever-present question, "Where is the money coming from?" It follows that any suggestion shedding light on the source of governmental income—that is, taxes—should have a prominent place in THE FEDERAL EMPLOYEE.

—W. G. TALBOTT, *Engineer, U. S Mint, San Francisco, Cal.*

Digitized by Google

Join the Union

By "NEW THOUGHT"

One of our brethren who has made a careful study of the entire genus Federal Employee here attempts to dissect and classify all his fellows. You will be interested in his grouping whether you agree with it or not. Is he right or wrong? What are your views on the subject?

When men in any class or occupation have the necessary wisdom and common sense to join their fellows in a compact organization and make a strong and vigorous fight for their own interests, they may reasonably hope that at least their inherent rights will be respected, and that their condition will be gradually improved. It was with this in mind that the Federal Employees Union was formed.

WHY CIVIL SERVICE EMPLOYEES HAVE NOT MADE GREATER PROGRESS

It is obvious that in a country as large as ours, with so many clashing interests at stake, the members of the various Congressional committees are bound to be so importuned and even harassed that they naturally become impatient and often suspicious. In addition to this, the methods heretofore used in placing our needs before Congress were so clumsy that the voice of the individual could not be heard above the din and clamor. Power always respects power, and so when the leader of an organization representing the organized strength of thousands speaks, he is entitled to a respectful hearing.

Our misfortune is that not all government employees have had sufficient intelligence, judgment, and vision to see that the interest of one is the interest of all; nor to see that if even a majority of them joined the union, then we should have power enough not only to protect our own interests, but also to give the help essential to establish efficiency in government.

Men are so largely governed by their preconceived notions and prejudices that they rarely see their own interests clearly. This is true of men both in and out of the government service. It is a part of the work of the members of the union to overcome these prejudices and erroneous impressions.

THE VARIOUS TYPES OF EMPLOYEES AS SEEN BY THE AUTHOR

We have many types of government employees to deal with, but a few are so well marked that they can readily be described; they are as follows:

BLISS POWER PRESSES

Manufacturers of all grades of heavy and light-weight webbing for governmental and other use

1. *The progressive employee,* numerous in all bureaus and in all grades, generally efficient, has the common instincts of humanity well developed—even overdeveloped at times—underpaid as a rule, has all the qualities of fraternity, and is found in large numbers in this organization. He is already with us unless there are special reasons keeping him out. He naturally belongs to us and due effort should be made to have him join—he is "worth while."

2. The *employee bound by inertia.* This is the most common type found outside the union. He means well, realizes his relationship with his coworkers, and sympathizes with them. He intends to join ultimately, but puts it off, is not quite certain that he can spare the money or that it will be well spent if he joins the union. He will come in when the organization is big and powerful. He always has some excuse when approached, but his objection is never valid. There is only one thing to do to get this man, and that is to get him fully awake. Pray for him earnestly, also light a fire cracker under him occasionally.

3. The *employee who has his.* This class is composed almost wholly of employees in the upper grades. They are satisfied. A few of them remind one of the story of Mazzini, the great Italian patriot, who tells about one big fellow who shouted for freedom loudly and often, but finally the opposition gave him a fine pair of red-topped boots. After that there were no more problems to solve, no further struggle for freedom was necessary; "he had his." Many of the men in this class have climbed the mountain of life and are descending the western slope; but they do not seem to realize that they must sooner or later become inefficient, if not already partly so. It is not an encouraging lesson in common humanity to have some of these high-priced men, who have enjoyed good salaries for many years, oppose retirement when they themselves will be the beneficiaries, while the main burden will be borne by the young and strong who may never enjoy a dollar of their own contributions. It is well never to forget that the war has changed the thought of the world, and while in the past some have been practically pensioned on these high salaries, the future is not rosy for the continuance of such practice. It should not be overlooked, either, that many in this class have received their promotions as the result of political or personal favoritism, sometimes over others more deserving.

4. The *aristocratic employee* somewhat numerous in the higher grades. In his own view he is a "salaried

Digitized by Google

man," not a "wage earner." Sometimes he thanks God that he is not like the "ordinary" clerk; the union is all right for the rank and file, but not for him—he has nothing in common with labor generally. This employee is generally efficient and often of fine character, but he feels himself above his class and does not recognize the vital fact that all of us are only Uncle Sam's "hired men." As a rule he is so prejudiced that it is useless to talk to him, for he is blinded by his inherent aristocracy, often unconsciously. In time this species will become extinct.

5. The *prejudiced employee*, more or less numerous, has some "mossback" qualities, doesn't know that the world is progressing, has ideas of union labor discarded by thinking people a full quarter of a century ago, just naturally hates Sam Gompers, thinks American Federation of Labor a bolshevistic institution. When told it costs each member of our union just nine cents a year to get the help of Mr. Gompers and the A. F. of L., he has no answer, but merely mumbles and grumbles. His case is more or less hopeless, as he is hypnotized by his prejudice; he may recover from his obsession if not too old; ridicule is the proper medicine. Some of the best men in the service belong to this type. Such sinners make good saints if fully converted.

6. The *profiteering employee*. This fellow shouts loudest about all kinds of profiteering of which he is the victim, but "soft-pedals" every kind of profiteering of which he is the beneficiary. When close pressed, though, he admits that it is not necessary for him to join the union and pay dues, for whatever benefits the union gets for its members he will share. This class is not large, but it exists, much to our shame and humiliation.

7. The *"tight-wad" employee*. This fellow is an own blood cousin to the profiteer. But why describe him? His name is known to all, and he is found in every bureau. He can give you four hundred reasons for not joining the union, but never gives you the right one—stinginess. He should be turned over to the prayerful consideration of the good-looking sisters.

8. The *timid employee*. This man's condition is really pitiful; he was born afraid. He thinks he is discreet, but he merely lacks courage; he is too negative to be of much use as a worker even if he joins, as he is hypnotized by the "fear thought." He should be handled tenderly and lovingly and told over and over that the goblins won't get him if he does "jine" the union.

As the Railroad Employees See It

Director-General McAdoo says railroad employees are government employees, and General Crowder says they are not. According to our best judgment both are right, for we are under government regulation in the deferred class as employees and subject to the draft because we are not Government employees by order of General Crowder. Our status having been positively fixed, it follows that whatever interests other Federal employees, interests us.

The National Federation of Federal Employees will ask for a wage increase of $1.00 a day, and a bill to cover this demand will be introduced at once to meet the difference in the going pay rate between Federal and private employment. The Government has laborers working for as low as $2.00 a day, a minimum wage of $3.00 is requested, Federal employees were granted an increase of only $120.00 a year flat, and are justified in asking for the additional wage.

The Federation makes a point of declaring that "for years the skilled trades have commanded wages far better than the wages paid trained clerical and professional workers." That is quite true as it is true that unskilled workers who are organized always will receive higher pay than unorganized clerks and professors. . . .

The Federation of Federal Employees has filed a protest against the circular of the Secretary of the Navy, forbidding employees to resign from the Navy Department. A typist, employed at the Navy Yard, Portsmouth, Va., resigned to accept a better job. The resignation was accepted with the statement, over the signature of the Secretary that "a notation has been made of your unpatriotic action for future reference." The Federation explains its protest by saying: "The order is equivalent in our opinion to industrial conscription, which although rejected by the law-making body of the United States, is here imposed by administrative order. This institutes an actual blacklist, penalizing Government workers for the sole reason that they have exercised their civil rights." . . .

All employees of the Government are barred from active participation in politics and railroad employees are included in this regulation, which is not at all pleasing to any of us. We can join with the French in saying, "This is war," and with the military commander who said, "War is hell."
—*The Railroad Trainman.*

A Few Automatic Advantages of the Burroughs Ledger Posting Machine

Except for the depression of the proper keys and the operating bar, the action of the machine is automatic. Dates and amounts are automatically printed in their respective columns. Date keys may be set in the morning and the dates will repeat all day. All computations—adding, subtracting and non-adding—are automatic. The daily balance is figured and printed automatically as debits and credits are posted. Thus the accounts are always in balance, and the trial balance becomes mere routine.

816 Fourteenth Street N. W.

Secretary McAdoo Urges Higher Customs Salaries

The Treasury head here tells the familiar story of men held in the government service on less than living wages by appeals to their patriotism in war time. Present conditions are maintained, the Secretary states, in violation of humanity, efficiency, and economy.

I have the honor to refer to the estimate recently submitted by this Department to Congress for defraying the cost of collecting the customs revenues for the fiscal year 1920 in the sum of $10,000,000, which estimate was based solely on the normal expenditures of the present fiscal year without providing for any increases in the compensations of the personnel. In view, however, of the greatly increased cost in living with the resultant difficulty experienced by this Department in retaining trained men of proven capabilities in the customs service at their present salaries as well as the inability to secure competent employees from civil service registers who are willing to enter the service at the inadequate salaries provided, I have deemed it expedient to revise the estimate as originally presented and to submit an amended one calling for an appropriation of $11,385,464. I cannot too strongly urge that the same be given favorable consideration.

It is perhaps unnecessary for me to refer to the diminishing purchasing power of the dollar at the present time, nor to the utter inability on the part of employees working on salaries fixed by statute many years since, to cope with the situation thus confronted. The increased cost of living and the humanitarian as well as the business necessity for raising the wage scale of employees in proportion to such increase has been recognized by practically every non-government concern in this country and prompt measures have been taken by them toward ameliorating the conditions which exist in this regard. This raising of the standard wage scale by commercial concerns has resulted in an increasing number of customs men of highly technical training and of many years' experience in the service resigning to accept more lucrative employment in commercial life. During the period of the war it has been possible in some instances, through appeals made to the men on purely patriotic grounds, to prevail upon them to remain at their posts, though at a great personal sacrifice on their part. Now that the war contingency has passed and patriotism can no longer be used as a wedge to keep them in government employ, there is every likelihood that unless some inducement is offered to retain employees who by reason of their special qualifications have made themselves almost indispensable in certain branches of the customs machinery, the customs service will be so seriously crippled by reason of their separation therefrom that it will be some time before the service has again reached that standard of efficiency and economy that at present obtains.

In the revised estimate, I have provided for a minimum salary for Inspectors of Customs at $5 per diem and have also provided for increased grades among the low salaried Examiners of Merchandise, Customs Guards, Openers and Packers, Weighers, Deputy Collectors and laborers and other employees. These recommended increases have been confined to employees in the lower and intermediate grades and

in no instances have been made applicable to employees at present receiving salaries considered sufficiently large to make both ends meet.

In the above connection I may state that it is quite doubtful whether there has existed in any other branch of the Government Service a more consistent and systematic effort directed toward retrenchment in expenditures than in the customs service during recent years. In substantiation of this statement there is given below a table showing the customs expenditures just prior and for four years subsequent to the customs reorganization of July 1, 1913, at which time 160 customs districts and independent ports were consolidated into but 49 districts, viz:

Fiscal year	*Expenditures*	*Saving from preceding yr.*
1913.....	$10,931,432	.....
1914.....	10,441,178	$490,254
1915.....	9,930,261	510,917
1916.....	9,813,085	117,176
1917.....	9,774,881	38,204

It will be noted from the above table that the original estimate submitted for 1920 was $441,000 less than the actual expenditures during the fiscal year 1914, immediately preceding the outbreak of the European War, when normal conditions obtained throughout the country, and that the revised estimate submitted herewith based on present abnormal conditions, though providing for increase in compensation aggregating $1,385,464 is but $454,032 in excess of the actual customs expenditures for the fiscal year 1913. I trust therefore that in determining the merits of the recommendations for increases in compensations involved in the revised estimate herewith submitted, due weight and consideration will be given to the achievements made along the lines of economy in the administration of the customs service as shown by the figures submitted above.

"It is, perhaps, unnecessary for me to refer to the diminishing purchasing power of the dollar at the present time, nor to the utter inability on the part of employees working on salaries fixed by statute many years since to cope with the situation thus confronted. The increased cost of living and the humanitarian as well as the business necessity for raising the wage scale of employees in proportion to such increase has been recognized by practically every non-government concern in this country, and prompt measures have been taken by them toward ameliorating the conditions which exist in this regard."

New Year Bits

New Year's Day is not January 1 all over the world yet. In Russia and Greece it is still January 13, which was the beginning of the year according to the Julian calendar. The Greeks once celebrated December 21 as the year's first day and then later June 21, the summer's solstice. The Jews still begin their civil year with what approximates to our September 1, while their ecclesiastical year begins on March 21, the vernal equinox. It was not until 1751 that England would acknowledge January 1 as the year's beginning.

The finest New Year's celebration in the world is in Japan and China, where, before the clock strikes midnight on New Year's Eve, every debt and account must be paid. No good Chinaman or Jap ever thinks of entering the new year with an unpaid bill. Would that we might emulate that form of celebration!

Proposed Salary Legislation

There is given below the draft of general salary-increase section of Legislative, Executive, and Judicial Appropriation Bill for fiscal year 1920 proposed by National Federation of Federal Employees. An explanation of this section appears on another page.

Sec. 6. That all civilian employees of the governments of the United States and the District of Columbia, except as otherwise provided in this section, shall receive, during the fiscal year ending June thirtieth, nineteen hundred and twenty, additional compensation at the rate of $360 per annum: *Provided,* That no employee under the age of eighteen years shall receive additional compensation under this section at a rate which is more than fifty per centum of the rate of the total annual compensation received by such employee on June thirtieth, nineteen hundred and nineteen: *Provided, further,* That the increased compensation at the rate of $120 per annum for the fiscal year ending June thirtieth, nineteen hundred and nineteen, shall not be computed as salary in construing this section: *Provided, further,* That where an employee in the service on June thirtieth, nineteen hundred and nineteen, has received during that fiscal year or shall receive during the fiscal year nineteen hundred and twenty an increase of salary at a rate equal to or in excess of $360 per annum, such employee shall be granted the increased compensation provided herein only when and upon the certification of the person in the legislative branch or the head of the department or establishment employing such person of the ability and qualifications personal to such employee as would justify such increased compensation: *Provided, further,* That the increased compensation provided in this section to employees whose pay is adjusted from time to time through wage boards or similar authority shall be taken into consideration by such wage boards or similar authority in adjusting the pay of such employees.

The provisions of this section shall not apply to the following: Employees paid from the postal revenues and sums which may be advanced from the Treasury to meet deficiencies in the postal revenues; employees of the Panama Canal on the Canal Zone; employees of the Alaskan Engineering Commission in Alaska; employees whose duties require only a portion of their time, except charwomen, who shall be included; employees whose services are utilized for brief periods at intervals; persons employed by or through corporations, firms, or individuals acting for or on behalf of or as agents of the United States or any department or independent establishment of the Government of the United States in connection with construction work or the operation of plants; employees who receive a part of their pay from any outside sources under cooperative arrangement with the Government of the United States or the District of Columbia; employees who serve voluntarily or receive only a nominal compensation, and employees who may be provided with special allowances because of their service in foreign countries. The provisions of this section shall not apply to employees of the railroads taken over by the United States, and nothing contained herein shall be deemed a recognition of the employees of such railroads as employees of the United States.

Section 6 of the Legislative, Executive, and Judicial Appropriation Act approved May tenth, nineteen hundred and sixteen, as amended by the Naval Appropriation Act approved August twenty-ninth, nineteen hundred and sixteen, shall not operate to prevent anyone from receiving the additional compensation provided in this section who otherwise is entitled to receive the same.

Such employees as are engaged on piecework, by the hour or at per diem rates, if otherwise entitled to receive the additional compensation, shall receive the same at the rate to which they are entitled in this section.

So much as may be necessary to pay the additional compensation provided in this section to employees of the Government of the United States is appropriated out of any money in the Treasury not otherwise appropriated.

So much as may be necessary to pay the increased compensation provided in this section to employees of the government of the District of Columbia is appropriated, one-half out of any money in the Treasury not otherwise appropriated and one-half out of the revenues of the District of Columbia except to employees of the Washington Aqueduct and Water Department, which shall be paid entirely from the revenues of the water department.

So much as may be necessary to pay the increased compensation provided in this section to persons employed under trust funds who may be construed to be employees of the Government of the United States of the District of Columbia, is authorized to be paid, respectively, from such trust funds.

Reports shall be submitted to Congress on the first day of the next regular session showing for the first four months of the fiscal year the average number of employees in each department, bureau, office, or establishment receiving the increased compensation at the rate of $360 per annum and the average number by grades receiving the same at each other rate.

The "Bugle" Grows Cautious

"My boy," said the editor of the Billsville *Bugle* to the new reporter, "you lack caution. You must learn not to state things as facts until they are proved facts—otherwise you are very apt to get us into libel suits. Do not say, 'the cashier who stole the funds'; say 'the cashier who is alleged to have stolen the funds.' That's all now, and—ah—turn in a stickful about that Second Ward social last night."

Owing to an influx of visitors, it was late in the afternoon before the genial editor of the *Bugle* caught a glimpse of the great family daily. Halfway down the social column his eyes lit on the following cautious paragraph:

"It is rumored that a card party was given last evening to a number of reputed ladies of the Second Ward. Mrs. Smith, gossip says, was the hostess, and the festivities are reported to have continued until 10.30 in the evening. It is alleged that the affair was a social function given to the ladies of the Second Ward Cinch Club, and that, with the exception of Mrs. James Bilwiliger, who says she comes from Leavits Junction, none but members were present. The reputed hostess insists that coffee and wafers alone were served as refreshments. The Smith woman claims to be the wife of John Smith, the so-called 'Honest Shoe Man' of 315 East State Street."

Shortly afterwards a whirling mass, claiming to be a reporter on the *Bugle*, flew 15 feet into the street and landed with what bystanders assert was a dull, sickening thud.—*Selected.*

Pomerene Retirement Bill

The full text of the measure substituted recently by the Senate for the McKellar-Keating "fifty-fifty" bill. Under the terms of the Pomerene bill the whole cost of retirement is put on the employees. The Government may retain as much as 8 per cent of an employee's salary for the retirement fund.

Be it enacted, etc.—

That beginning with the first day of July next following the passage of this act there shall be deducted and withheld from the monthly salary, pay, or compensation of every officer or employee of the United States to whom this act applies an amount computed to the nearest tenth of a dollar that will be sufficient, with interest thereon at 4 per centum per annum, compounded annually, to purchase from the United States an annuity, payable quarterly throughout life, for every such employee on arrival at the age of retirement, as herein provided. The deductions herein provided for shall, in the case of employees who are in the service of the Government at the time this act goes into effect, not exceed 8 per centum of the said salary, pay, or compensation; and shall be based on such annuity tables as the Secretary of the Treasury may direct, and interest at the rate of 4 per centum per annum, compounded annually, and shall be varied to correspond to any change in the rate of salary, pay, or compensation of the employee: *Provided, however,* That the deductions made from the salary, pay, or compensation of persons hereafter entering the service shall not exceed 8 per cent thereof, and such persons shall be entitled to such annuities only as said deductions with accumulations of interest thereon will purchase.

Sec. 2. That the amounts so deducted and withheld shall be deposited in the Treasury of the United States and credited, with interest thereon, to an individual account of the officer or employee from whose salary, pay, or compensation the deduction is made, and the Secretary of the Treasury is hereby directed to invest and reinvest such funds or any portion of such funds in any of the following securities, namely: Bonds of the United States, bonds issued under the provisions of the Federal Farm Loan Act, bonds or other interest-bearing obligations of any State of the United States, or any county or municipal bonds which may be approved by the board of investments hereinafter provided for.

The moneys deducted from salaries and the income derived therefrom shall be held and invested, as above described, by the Secretary of the Treasury until paid, as is hereafter provided. Any deficiency in the fund hereby created to carry out the provisions of this Act shall be paid out of any money in the Treasury not otherwise appropriated.

For the purpose of aiding the Secretary of the Treasury in investing the funds and enforcing the provisions of this Act, a Board of Investment is hereby created, composed of the Treasurer of the United States, one person to be appointed by the Secretary of the Treasury from his department, and one person to be designated by the President from among the employees of the classified civil service. The members of the Board of Investment shall be sworn and shall hold office until others are appointed and qualified in their stead.

Sec. 3. That all those engaged in the classified civil service shall be retired at

EASTON, PENNSYLVANIA, U. S. A.

seventy years of age and shall be entitled to the annuities and benefits herein defined: *Provided, however,* That if within thirty days before an officer or employee reaches the retirement age, the head of the department or independent office in which he is employed certifies to the Secretary of the Treasury that by reason of his efficiency and willingness to remain in the service the further continuance of such officer or employee would be advantageous to the public service, he may be retained for a further period not exceeding two years, and at the end of two years, by similar certification, he may be continued for another period not exceeding two years. Upon the failure of the head of the department or independent office to make the above-described certificates, it shall be the duty of the Secretary of the Treasury to place such employee upon the retired list.

Sec. 4. That upon absolute separation from the classified civil service prior to the age of sixty years, and only upon such separation, the officer or employee may withdraw his savings then credited to his account, with the accumulations thereon, in one sum. In case of the death of an officer or employee while in the service, the amount of his savings and accumulations thereon shall be paid to his legal representatives.

Sec. 5. That upon separation from the classified civil service at any time within ten years prior to the age of retirement the officer or employee shall receive such life annuity as his accumulated earnings, including the interest credited thereon, may purchase: *Provided, however,* That if said employee should die before receiving in annuities a sum equal to his accumulated savings, including the interest credited thereon, together with the compound interest thereon as herein provided, then the balance remaining to his credit over and above the annuities received by him shall be paid to his legal representatives.

Sec. 6. That in case of reinstatement in the classified civil service of any person who, at the time of his separation therefrom received a refund under section 4 of this act, he shall be deemed to be a new entrant to the service, and the monthly deductions from his salary shall be computed from his age at the date of such reinstatement unless he shall within ninety days after reinstatement pay to the Treasurer of the United States the amount refunded to him, which shall be applied toward the purchase of the annuity herein provided for and the deductions from his salary thereafter shall be only for such sums as may be necessary to pay for the balance of said annuity.

Sec. 7. That beginning with the first day of July next following the passage of this Act, every officer or employee then or thereafter in the classified civil service who at that time or thereafter shall have reached the retirement age shall be retired, and if in the service of the United States for twenty years or more shall receive from the United States during the remainder of his life an annuity, payable quarterly, equal to one-half of the average annual salary, pay, or compensation received during his entire period of service after July first, 1912, such annuity not to exceed a maximum of $600, and to cease at his death. Those who have served less than twenty years shall be entitled to one-twentieth of such annuity for each year of said service: *Provided, however,* That if such officer or employee at his death shall not have received annuities equal to the amount of the savings and deductions from his salary, pay, or compensation, with compound interest, as hereinbefore provided, the United States shall pay to his legal representatives the balance remaining to his credit.

Sec. 8. Upon the retirement of officers and employees as herein provided during any fiscal year, the funds appropriated for their salaries which remain unexpended shall be applied as follows:

First. To the payment of their annuities;

Second. Ten per centum thereof shall be covered back into the Treasury; and

Third. The balance shall be available in the department or independent office from which said employees are retired, for the appointment of other officers or employees in the lower grades. Except as herein provided, all annuities shall be paid out of appropriations specially made for that purpose.

Sec. 9. That every officer and employee in the classified civil service after this Act takes effect shall be deemed to consent and agree to the deductions made and provided for herein and shall receipt in full for the salary, pay, or compensation which may be paid monthly or at any other time, and such payment shall be a full and complete discharge and acquittance of all claims and demands whatsoever for all services rendered by such person during the period covered by such payment, except his claim for the benefits to which he may be entitled under the provisions of this Act, notwithstanding the provisions of sections 167, 168 and 169 of the Revised Statutes of the United States and of any other law, rule, or regulation affecting the salary, pay, or compensation of any person or persons employed in the classified civil service to whom this Act applies.

Sec. 10. That the Secretary of the Treasury shall prepare and keep all needful tables, records, and accounts required for carrying out the provisions of this Act, including data showing the mortality experience of the officers and employees in the service and the rate of withdrawal from such service, and any other information that may serve as a guide for future valuations and adjustments of the plan for the retirement of officers and employees. The Secretary of the Treasury shall make a detailed comparative report annually to Congress showing all receipts and disbursements, together with the total number of persons receiving annuities and the amounts paid them.

Sec. 11. That this Act shall apply only to persons in the competitive classified civil service of the United States, including the District of Columbia, the Canal Zone, and the island possessions, whose salaries, pay, or compensation is paid from moneys of the United States and shall not apply to postmasters or to persons serving in positions excepted from examination, as defined in the civil-service rules. Whenever any person shall become separated from the classified civil service by reason of appointment in the unclassified service, such separation shall operate to take him out of the provisions of this Act, except as to payment of any amount that may be due him. The President shall have power, in his discretion, to exclude from the operation of this Act any group of employees whose tenure of office is intermittent or of uncertain duration.

Sec. 12. That none of the moneys mentioned by this Act shall be assignable either in law or equity, or be subject to execution or levy by attachment, garnishment, or other legal process or to the payment of taxes, local, State, or Federal; nor shall any money paid to any employee or to the legal representatives of a deceased employee be subject to the payment of the debts of such employee.

Sec. 13. That for the clerical and other service and all other expenses necessary for carrying out the provisions of this Act during the fiscal year nineteen hundred and seventeen, including salaries and rent in the District of Columbia, there is hereby

appropriated the sum of $20,000 out of any money in the Treasury not otherwise appropriated. No officer or employee receiving a regular salary or compensation from the Government shall receive any additional salary or compensation for any service rendered in connection with the system of retiring employees provided for by this Act.

Sec. 14. That the Secretary of the Treasury is hereby authorized to perform or cause to be performed any or all acts and to make such rules and regulations as may be necessary and proper for the purpose of carrying the provisions of this Act into full force and effect; and his decision as to the amount to be deducted, the amount of interest to be credited, the amount of an annuity or refund to be paid, in any case, shall be final and conclusive and shall not be subject to review by any officer or authority.

Modern Apartment House Rules

FIRST. After Jan. 1 no Dogs or Cats
Will be permitted in these Flats.

SECOND. Pianos must be boxed or crated,
And Singing won't be tolerated.

THIRD. All Parrots must be left behind—
No Birds allowed of any kind.

FOURTH. No Cooking is allowed at present,
As kitchen odors are unpleasant.

FIFTH. No Servants, Babies, Girls or Boys,
No Conversation, Laughter, Noise.

SIXTH. You cannot Entertain in these
Apartments—Rule applies to Teas.

SEVENTH. To call the Janitor, don't yell
Or ring the Elevator Bell.

EIGHTH. Unless your business is known,
You're not allowed to Telephone.

NINTH. From August to September, please
Don't raise the Windows, Cough or Sneeze.

TENTH. Don't hang your Pictures on the walls,
Or talk or whistle in the Halls.

ELEVENTH. Don't nail down Carpets to the Floors,
Smoke Cigarettes or lock the Doors.

TWELFTH. Unless these Rules are well respected,
Your lease will be at once rejected.

THIRTEENTH. But if you show a humble mind
And Human Instincts leave behind,

FOURTEENTH. The Management will make your stay
A pleasant one in every way.

—*Life.*

We'll All Be Scotch Soon

The Scotchman had tipped his hat to a pretty girl on the other side of the car, the young lady having responded with a smile.

"Do you know her?" his friend inquired.

"Oh, yes," replied Sandy.

"Well," replied his friend, "let's go over and sit down beside her; there's plenty of room."

"Wait a weel; she hasna paid her fare yet."—*Macboston.*

FEDERAL EMPLOYEES

The up-to-the-last-minute management in non-public industries finds it pays to provide employees with sanitary lunch rooms in which are used tables with pure white enameled iron bases and snow white glass-like tops, especially the variety with the raised rim (SANI-ONYX) and white enameled iron stools and SANI-ONYX Serving Counters.

Instead of losing money in providing employees with sanitary furniture and wholesome food, actual profits result through increased efficiency and a contented mind in a healthy body.

It is a good business venture and not philanthropy or charity, because loyalty and enthusiasm result to those who try to serve the welfare of employees.

Whatever you are getting is up to you

SIMPLER Dalton FASTER

"No Expert Operator is Required

Any one of you can operate a Dalton immediately"

The simple Dalton keyboard

Only 10-Keys—one for each numeral. To write $123.45 depress the 1-2-3-4-5 keys in order mentioned.

In large manufacturing or mercantile concerns, the simplicity of operation of the 10-key Dalton means reduced pay-roll costs and greater office efficiency.

In the retail store, it means a machine which anyone can use immediately. During its years of service the Dalton pays for itself many times over through saving in operative cost alone.

A Simpler Adding Machine

The retailer adding his sales, the manufacturer's assistant checking invoices, the wholesaler taking inventory, finds in the Dalton a new efficiency in adding machine operation.

Only 10 Keys—one for each numeral. The Dalton mechanism automatically puts each figure in its proper column. No lost motion, no **lost time.**

A Faster Adding Machine

With the ease of locating figures comes an opportunity for speed and accuracy that is almost unbelievable.

The 10-key Dalton keyboard is scientifically arranged for Touch Operation. One hand covers it. Eye reference to keys is unnecessary. The results are 35% to 50% more work with less fatigue.

A Versatile Calculating Machine

The Senior Traveling Auditor of the American Writing Paper Co., Holyoke, Mass., said: "One of the great features of the Dalton is that it combines listing with multiplication."

The Dalton mutiplies as easily as it adds. Make a test yourself for speed in adding-listing, in handling multiplications.

The Dalton adds, subtracts, multiplies, divides, figures interest, makes statements, multiplies fractions, adds two totals at once, crossfoots, etc.

Have a Demonstration

Our agents in a hundred leading cities will bring a Dalton to your office, without obligation. Look for "Dalton" in your phone book or write us for descriptive catalog.

THE

FEDERAL EMPLOYEE

Vol. IV FEBRUARY, 1919 No. 2

Recent N. F. F. E. Activities

This is a season when the culminating work of months must be crowded into days. Congress is dealing with big problems, from constantly shifting angles. Many of these touch closely the daily lives of civilian government workers as such. You will recognize some of them here.

AT THIS WRITING (February 4) the legislative mill is running full blast in a vain attempt to keep abreast of the mass of proposed laws that have accumulated in such quantities as to threaten to clog the wheels. The four big problems on the program of our National Federation, acting in the interest of the civil service employees of the country, are all involved in one way or another in the congressional jam.

The Senate now has under discussion the salary increase to be allowed for the next fiscal year, the Legislative, Executive and Judicial Appropriation Bill carrying the sum of $240 for this purpose, the amount allowed by the House and recommended by the enate Appropriations Committee. Every effort is being made by the National Federation to induce the Senate to grant the full amount asked for, namely, a dollar a day, or $360 a year.

In the House, it will be recalled, the provision creating a joint commission of five Senators and five Members to investigate and report on a reclassification of government salaries in the District of Columbia was eliminated on a point of order as being new legislation on an appropriation bill, in violation of the rules. The Senate Appropriations Committee restored this provision with some modifications. The proposed commission differs materially from that asked for by our National Federation, which contemplated a membership composed of three high executive officials, three civil service employees to be selected by the collective action of their fellow employees and three persons representing the public at large. Provision was made for the appointment of women on this commission. The National Federation's draft of the section of the bill relative to the commission will be found on page 74.

It is now expected that the Johnson-Nolan Three-Dollar-a-Day Minimum Wage bill will be laid before the Senate at an early day by the Committee on Education and Labor, of which Senator Hoke Smith of Georgia is chairman. On January 28 the subcommittee in charge of the bill, consisting of Senator Jones of New Mexico (chairman), Borah of Idaho and Hollis of New Hampshire, held a hearing which, it is believed, removed any lingering doubts, if such existed, in the minds of the members as to the urgent necessity for the establishment throughout the government service of the minimum wage above mentioned.

A strenuous attempt is being made to bring the McKellar-Keating Retirement bill to a vote in the House. The Committee on Rules has just declined to bring in rules for the consideration of various measures, including the Retirement bill, while the appropriation bills are pending. Without a rule making it in order for the House to act on the Retirement bill, it is difficult to see how it can be brought up in view of the congested state of legislation. The friends of the McKellar-Keating bill are still hopeful, however, of finding a solution for the problem which confronts them and are watching the situation from day to day. There is no change in the situation in the Senate, where the motion to reconsider the vote by which the Pomerene bill was substituted for the McKellar bill is still pending.

AMENDMENTS TO LEGISLATIVE BILL ASKED OF SENATE

The following letter, which speaks for itself, sets forth so clearly the position of our National Federation with respect to vital matters in connection with the Legislative bill that it is given in full in all its essential features. A copy of this letter, bearing President Steward's signature, was sent to each Senator under date of January 29.

(1) We respectfully ask the Senate to amend the Legislative, Executive and Judicial Appropriation Bill, as passed by the House, so that it shall provide for a salary increase for employees of the United States Government and the District of Columbia in the amount of $1 per day, or $360 per year, instead of the $240 increase which was granted by the House.

We call to your attention the facts (*a*) that the average salary in the government service is, and has been for many years, about $1,100 per year, although this sum is now equal to but

Digitized by Google

$550 as compared with its purchasing power five years ago; (*b*) that official statistics show that the average family in the District of Columbia on an income of $1,100 in 1916 was in debt; and (*c*) that expert statisticians of the government and other institutions agree that the minimum subsistence wage for the average family in 1919 is about $1,500 per year.

We call attention also to the wage increases in private industry, which, although not keeping pace with the increasing cost of living, have averaged an advance of 39 per cent since the war began. Government agencies, such as the National War Labor Board and the Labor Adjustment Board of the Emergency Fleet Corporation have fixed the pay of common labor at $3.68 per day, which is more than the average pay of the government clerk. The skilled mechanic's average wage is $6.40 per day, while the skilled government clerical worker receives, as a rule, $2.88 to $4 per day.

As a result of the inadequate government salary scale the Civil Service Commission is, in many instances, unable to obtain competent workers and the turnover in government service is very high. In one bureau alone 70,000 appointments have been made since March 1, 1918, and the separations have numbered 40,000. The Board of Education in Washington calls attention to an increase of 162 per cent in the number of employment certificates issued to children who should be in the public schools.

In view of the present cost of living, which authorities tell us will not diminish for several years to come, and in view of the wage increases in private employ, we feel that our request for an increase of a dollar a day for government employees is the merest justice.

(2) We ask, further, that the restriction upon the salary increase as passed by the House be so changed as to grant the increase to employees of the bureaus established since January 1, 1916. We call attention to the fact that by the time this increase would become effective (July 1, 1919) the bureaus or divisions which are of temporary character will presumably have been eliminated, and the bill as at present drawn excludes from the benefits of the increase such bureaus as the War Risk Insurance Bureau, the Tariff Commission and others where the salary scale is low and where the work is of a permanent character.

(3) The third amendment which we ask the Senate to incorporate in the bill is in many respects the most important of all. It provides for a Commission on Standardization and Reclassification of the civil service. The salary increase of $360 flat rate we ask for as relief for an immediate and critical need, which cannot be postponed. But we recognize that a flat increase is unscientific and we resort to it as a palliative only. As a permanent and fundamental remedy for intolerable conditions in the civil service we are seeking a thorough reorganization of that service upon a business-like basis.

We know that you are familiar with the multitude of inequalities and inconsistencies in the United States civil service now existing. In order to obtain consistency, justice and business-like administration, we believe it is necessary to inaugurate radical changes in the present system of management and wage-fixing in the service. We urge, therefore, for the government establishments, a system similar to those which are in operation in well-conducted private industry, and which are advocated by the Government itself for private industry—namely, a system which shall take into consideration the character of the job, the value of the job and the proper compensation to the employee who performs it.

As the first step to the end we have in view, we are asking Congress to establish a commission composed of representatives of the management of the civil service, *i.e.*, administrative officials, representatives of the employees and representatives of the public, which commission shall investigate and recommend to Congress such measures as it finds necessary to bring about the desired reorganization.

We have embodied our proposal on this subject in the enclosed draft [appears on page 74] of an amendment to the Legislative bill and urgently ask for it your favorable consideration.

TRAINING RETURNED SOLDIERS FOR THE CIVIL SERVICE

No subject lies closer to the heart and conscience of our people than the welfare of our "boys" who have returned and are returning from "over there" to be absorbed again into the great army of peace. Several measures designed to open the civil service ranks to them have been introduced into Congress. After careful consideration the following bill has been drafted on the part of our National Federation and will be laid before Congress at an early day. THE FEDERAL EMPLOYEE will be glad to have the views of its readers interested in this matter, vital at once to the soldiers and to the civilian employees and the government service.

A BILL

To provide, free of charge, to persons honorably discharged from the Army, Navy, or Marine Corps of the United States, courses of instruction designed to fit them for positions in the United States Civil Service.

Be it enacted, etc., That the Federal Board of Vocational Education (hereinafter called the board) shall have the power, and it shall be its duty as soon after the passage of this act as is found practicable, to prescribe, prepare and conduct courses of instruction designed to equip those taking them to meet the examination requirements prescribed by the United States Civil Service Commission for entrance to positions in the national civil service.

Sec. 2. That such courses of instruction shall, so far as practicable and under such conditions as the board may prescribe, be made available, without cost for instruction, to persons honorably discharged from the Army, Navy, or Marine Corps of the United States, upon their application approved by the board.

Sec. 3. That said courses of instruction shall not include those of such advanced character as are not reached in the curriculum of the average American high school, or manual training school, subject to such exceptions as the board may prescribe, and the board shall be the exclusive judge of the subjects of such courses, their scope, and the manner of conducting them. Instruction shall in no case be granted for a period exceeding two years, except upon express authorization of the board previously obtained.

Sec. 4. That the board shall have the power and it shall be its duty to provide such facilities, instructors and courses as may be necessary to insure proper training for such persons as elect to follow the courses herein provided.

Sec. 5. That the board shall have the power to make such rules and regulations as may be necessary for the proper performance of its duties, as prescribed by this act.

Sec. 6. That the board is hereby authorized and empowered, in carrying out the purposes of this act, to utilize, in its discretion and with the approval of the respective heads thereof, the facilities and services of the various departments and independent establishments of the Government, and, in its discretion, to cooperate with such public or private agencies as it may deem advisable in performing its duties imposed upon it by this act.

Sec. 7. That the board shall make an annual report to Congress, on or before December first, of its doings under this act, and shall include in such report an itemized statement of expenditures, the courses of instruction given, and the number of persons who have during the year availed themselves thereof.

Sec. 8. That there is hereby appropriated, out of any money in the Treasury of the United States, not otherwise appropriated, available immediately and until expended, the sum of $500,000, or so much thereof as may be necessary, to carry into effect the provisions of this act.

ATTITUDE OF WAR DEPARTMENT TOWARD REMOVALS

To go or stay is the question that is agitating, as it has been for weeks, the souls of thousands of government employees in Washington and elsewhere, to a greater extent perhaps in the War Department than in any other

Digitized by Google

branch of the service. In this connection the statement which appears below, taken from a communication, dated January 11, received at our national headquarters from Mr. John C. Scofield, Assistant and Chief Clerk of the War Department, throws light on the subject.

Referring to "the demobilization of the civilian forces incident to the approaching termination of the present national emergency," the statement is made that this will no doubt result in the elimination of a large number of classified civil service employees. It will be the policy of this office to discharge, first the temporary employees who have no civil service status, and to eliminate next the least efficient among those who have attained a probational or permanent status under civil service rules."

As to the employment and release of enlisted men during the war emergency, Mr. Scofield says that they "have been utilized wherever possible in repair shops, at posts, such as Fort Sheridan, where quarters and messing facilities are available. It is the policy of the department, at this time, however, to discharge enlisted men upon their own application when there is sickness or other distress in the soldier's family and when he is needed to resume employment in industrial occupation in which there is urgent need of his service, provided that such discharge will not disturb or cripple an existing organization and that the soldier's services can be spared."

CONDITIONS IN IMMIGRATION SERVICE ALONG CANADIAN BORDER

The employees in the Immigration Service along the Canadian border are required to work the greater part of the time seven days in the week, and ten, twelve and fourteen hours per day, resulting in a great excess of overtime during the year. The conditions have been brought by the National Federation to the attention of the Department of Labor, with the result that recently an official from that department visited Montreal and made a thorough investigation of the conditions of employment and compensation of employees in the Immigration Service. The findings of this official have not yet been made public, but it is understood that he was much impressed by the contention of the employees that they should be allowed one day's rest in seven and pay for overtime work in excess of eight hours per day, or, in lieu thereof, that they be granted compensatory time. That the department will take steps in the near future to bring about better working conditions for these employees is confidently anticipated.

SECRETARY REDFIELD DISCUSSES VACATIONS FOR LIGHTHOUSE KEEPERS

In response to representations regarding adequate vacations for lighthouse keepers which have been made by our National Federation, the attitude of the Department of Commerce is set forth in the following expressions from Secretary Redfield in a letter addressed to Executive Secretary Beach under date of January 4:

> Under the Regulations for the Lighthouse Service keepers of lighthouses at isolated stations where families do not reside, and in exceptional cases of unusual remoteness or unhealthfulness of location of certain stations, are allowed not to exceed 96 days shore liberty (which includes annual and sick leave, Sundays and holidays), or at the average rate of 8 days per month for stations located on the Atlantic and Pacific Oceans and on the Gulf of Mexico, and stations located on the Great Lakes in operation throughout the year. Not to exceed at the average of 3 days per month are allowed for lake stations not in operation during the closed season of navigation. At shore stations, where quarters for families are provided, except stations unusually remote or unhealthful of location, keepers may be granted 30 days' leave per annum, exclusive of Sundays and holidays, but inclusive of sick leave. At certain isolated stations, keepers are allowed not to exceed one day as actual and necessary time of transit each way in addition to the shore liberty and annual leave allowed under the regulations. Special regulations regarding leave have been authorized by the department for certain distant light stations in Alaska and the Navassa Light Stations, West Indies.

With regard to lighthouse stations where two keepers are authorized, Secretary Redfield states that—

> neither keeper is permitted to be absent more than four days without providing a substitute at his own expense, but, wherever practicable a government relief keeper is assigned to duty during the absence of the regular incumbent. Stations having no assistant keeper are usually provided with family quarters, and it is customary for members of a keeper's family to care for the station during his absence, so that the furnishing of a substitute in such cases is not necessary. A substitute is not required at stations having three or more keepers.

SUBSISTENCE FOR DEPUTY MARSHALS IN DEPARTMENT OF JUSTICE

It has been brought to the attention of the National Federation that United States Deputy Marshals employed in the Department of Justice are receiving but $3 per diem for subsistence. On investigation it developed that this per diem is allowed to the Deputy Marshals and other lower salaried employees, whereas officials who are receiving greater compensation are allowed $4 per diem for subsistence. It is beyond the power of the Department of Justice to remedy these conditions, as the subsistence allowed the various officials is fixed by act of Congress. It remains to convince that body that the necessary legislation must be enacted.

PRAISE FOR EMPLOYEES OF STATE DEPARTMENT

We had the pleasure of printing in our last issue the deserved tribute paid by Assistant Secretary of the Treasury Leffingwell to the faithful and competent workers who, day in and day out, carry on the vast operations of that department, many of whom receive but niggardly compensation from the Government which they serve so well.

Mr. Leffingwell is not the only high public official who openly acknowledges and praises the services of the men and women whose efficiency and fidelity alone make possible the successful careers of those "higher up," including in large measure many in the legislative as well as in the executive branch of the Government. There has just come to the notice of THE FEDERAL EMPLOYEE the following just and appropriate tribute to the "officers and employees of the State Department," issued on the last day of 1918 by Acting Secretary Polk:

> As the year 1918 draws to its close, I wish, in the absence of the Secretary, to take this opportunity of wishing you a Happy New Year and also expressing the pride we who are charged with directing the various activities of the Department of State feel in the work that has been done during the period of the war by the men and women of the department. It was a temptation to many to leave and seek places in the public eye more spectacular and better paid, but you realized that there was no more essential nor more important service for the country than the service in this department and you labored on faithfully in cramped quarters, knowing no hours and making financial sacrifices, doing your duty as patriotic men and women where you knew your duty lay. I congratulate you on your splendid record. The officers of the department appreciate what you have done and are deeply grateful to you, but above all you have the personal satisfaction of knowing your work was well done.

Woman Vice-President of N. F. P. E.

Miss Ethel E. Tulloch of San Diego, Cal., has been appointed Fifth Vice-President of the National Federation of Postal Employees. This is the first time in the history of postal trade unionism that a federation of postal employees has placed a woman in an executive position in a national organization.

"Miss Tulloch's appointment," said Secretary-Treasurer Flaherty of the Federation of Postal Employees, "is a recognition of the fact that the large number of women clerks now in the postal service are entitled to direct representation in the management of their organization."

Doings in the Field

Here are reports of many and varied activities of our brethren (not forgetting the "sisters" too), north, east, south, west. Soon the sun will never set on federal employees unions. *Nota bene*—When you do things or plan things, tell THE FEDERAL EMPLOYEE, that the news may be passed around.

THREE ADDITIONAL LOCALS FORMED IN AS MANY SECTIONS

Since our last issue went to press three new unions have come into the fold, as follows:

MALTA, MONT. (No. 113).—The members of this new local are all employees of the Reclamation Service of the Department of the Interior, engaged in work on a project 170 miles in length—such are distances in the Great West. Mr. I. M. Williams is looking after the interests of the union as temporary president, and Mr. J. T. M. Culbertson as temporary secretary.

EVANSVILLE, IND. (No. 114).—Organizer Peabody, who has brought about the formation of this local, writes that its membership is composed of workers in the United States Marine Hospital, Employment, Steamboat Inspection, and Custodian Services. The officers selected temporarily are Mr. C. M. Calahan of the Marine Hospital Service, president, and Mr. Edward P. Kramer of the United States Employment Service, secretary.

SALT LAKE CITY, UTAH (No. 115).—Through the interest and activity of Mr. Gideon J. Pillow, who is pleasantly remembered by many Washington friends, a considerable number of employees of the General Land Office and the United States Surveyor General's Office in Salt Lake City have organized a local of our national organization. Even before organization these employees had become active in looking after their interests as government workers, and it is anticipated that they will not allow matters to lag for lack of intelligent and prompt attention. The names of the officers of this new union will be announced as soon as received.

SANDY HOOK (N. J.) EMPLOYEES FORM ORGANIZATION

Governmental red tape preventing the employees at Sandy Hook from organizing has been cut at last. Early last August Vice-President Junker endeavored to organize these civil service workers, but was informed that he would first have to get the permission of the commanding officer. After a lapse of almost five months, he was advised that there was no official objection, and on December 27 a temporary organization was formed. Committees were appointed to round up every man eligible employed at the post, and an organization meeting was held at Red Bank on January 11. About seventy-five enthusiastic workers were present, who listened attentively to what Vice-President Junker had to say as to the aims and purposes of the N. F. F. E. It was then unanimously voted to petition for a charter and form a federal employees union. The following were elected officers for the ensuing year: Walter V. Stanton, president; Robert Hunter, vice-president; Harold D. Willett, recording and corresponding secretary; James T. Davies, financial secretary; George A. Roger, treasurer; William McKinney, guardian. It was voted to keep the charter list open until the next meeting, when, it is predicted, more than 100 members will be enrolled.

FEDERAL EMPLOYEES OF WILMINGTON (N. C.) AND VICINITY ORGANIZE

A meeting was held in this city yesterday afternoon [January 19] at 3 o'clock to organize the federal civil service employees of the eastern district of North Carolina into the National Federation of Federal Employees, and after organizing, elected H. H. Ford, of this city, as president, and Raymond Wheatley, of Beaufort, N. C., as secretary.

This is an organization of the federal employees of the various departments except the Postoffice Department, which is covered by the Federation of Postoffice Clerks and the Association of Railway Mail Clerks, and includes those employed in the Engineer Department, Weather Bureau, Customs Service, Labor Department, Treasury Department, etc.

Although the national body is only two years old it has now some 115 organizations, covering every state in the Union. North Carolina employees had an organization in 1917, but during the war it was suspended, and was recently reorganized. Its aims are for the general betterment of the civil service employee, retirement plans, etc. The official organ, THE FEDERAL EMPLOYEE, a monthly magazine, is printed in Washington, D. C. —*Wilmington (N. C.) Morning Star.*

OUR PEORIA BRETHREN HOLD INSTALLATION AND SMOKER

The recent smoker of Peoria Local No. 96, N. F. F. E., was a big event in the history of the union. The following capable officers were installed by Walter S. Bush, editor of the Peoria *Labor Gazette:*

President, John McKiernan; first vice-president, Daniel J. Gorman; second vice-president, Chas. Brant; third vice-president, D. Godby; fourth vice-president, W. C. Tobias; fifth vice-president, T. P. Chell; recording secretary, Paul A. Hankins; financial secretary, Joe O. Huber.

The reports show that the organization is in a very flourishing condition, and that the men in the employ of the Government appreciate the benefits of being part of the labor movement.

After the installation ceremony, President McKiernan called an old friend and war horse in the labor movement, Daniel J. Gorman, to the chair, who presided during the smoker and speaking.

The first talk of the evening was by Walter S. Bush, who gave the members words of cheer and his experiences along labor lines.

Lyle T. McArthur, former president of the Trades Assembly, was next called and made one of his usual good talks, which was highly appreciated.

John D. Lonergan, president of the Trades Assembly, who is also rated as one of the best speakers labor commands, made a rousing good talk.

The evening was voted by all present a very pleasant and profitable occasion.

BOSTON LOCAL (NO. 25) ELECTS OFFICERS FOR THE YEAR

The election of officers of the Boston Local (No. 25) was held January 16 at a largely attended meeting. Mr. Percy A. Harrison was elected Vice-President, and Messrs. Daniel Lyon of the Employment Service, Harry E. Rice of the Customs Service and James H. Tansey of the Navy Yard Service were elected Trustees. The other officers, all of whom were re-elected, are as follows: President, William J. Burke; Secretary, William J. Sleep; Financial Secretary, William H. Nitz; Treasurer, George A. Copeland; Guide, Christopher F. Gayler, and Guardian, James K. Kealey.

Fifty-three applications for membership were received.

DRIVE FOR NEW MEMBERS IN NEW YORK CITY

New York is experiencing a good old-fashioned revival among the federal employees. In a general way the public has thought of the pampered government employee as immune from the ills which have afflicted the rest of the community. There have been loud cries of pain from other people suffering from the high cost of living and, in a fairly uniform way, adjustments have been made. But the United States employee, with his salary of two generations back, based upon conditions long since past, starves or takes on an extra job to make ends meet—and this statement is not overdrawn. He has now, however, received conviction of sin—the sin of having no press agent, no friends at court and no adequate organization to secure equitable adjustments of wage and other conditions. Hence the highly energetic membership drive which is on. Numbers first; later, counsel and action.

The activities of Uncle Sam, more diversified than any other, cover many crafts, trades, and professions, some general and some peculiar to the government service alone; the interest of each, however, is subordinate to that of the whole. The advantages of the Civil Service are offset by the inflexibility of the service, the lack of opportunity, and the special obligation and devotion to our Government, which are essential.

Meetings have been held in many sections of the city, and the membership is increasing by leaps and bounds. A typical meeting was held during the holidays, in Waverly Hall, Brooklyn, under the auspices of the Navy Yard Branch of Federal Employees Union No. 4. Despite the weather handicap, the Brooklyn Rapid Transit, and the holiday season, there was a fair attndance. The primary purpose of the meeting was to hear Brother Quinn from the national headquarters at Washington. Mr. Quinn's remarks were received with enthusiasm and he was given assurances of cooperation and assistance in the membership drive. Apart from the special purpose of the drive, the speech of Brother Quinn reached the heart of the audience. Miss Mary Scully recounted in an interesting way her adventures in and around Kingston and her view of the labor problem based on her extensive experience. The meeting was also addressed by President Fitzgerald of Local No. 4.

A NOTEWORTHY FEATURE OF THE SAN FRANCISCO LOCAL

Among other features which show that the San Francisco Local is a "live" union is the plan of having a conference committee, which is composed of representatives of F. E. U. No. 1, Branch 214 of the National Association of Letter Carriers, Local No. 2 of the National Federation of Postal Employes and the San Francisco Branch of the Railway Mail Association. This seems to be an excellent way to secure concert of action on the part of the federal employees.

In Memoriam

WHEREAS, It has pleased Almighty God to remove from our midst our worthy and esteemed brother, Frederick Stanley:

Therefore, Be It Resolved, That while bowing in humble submission to the will of our Heavenly Father, we, the members of Federal Employees Union No. 1 of the National Federation of Federal Employees, deeply mourn the loss of our brother, and hereby express our heartfelt and sincere sympathy to the bereaved family. May the healing influence of time ease their affliction and enable them to bear their great loss; and

Be It Further Resolved, That our charter be draped in mourning and that a copy of this resolution be spread upon our minutes and that a copy be sent to the bereaved family and also to the Federal Employees Magazine at Washington, D. C.

D. H. McCLURE,
President, San Francisco F. E. U. (No. 1).
A. BERRYESSA, *Secretary.*

Frederick Stanley was born in Detroit, Mich., January 24, 1847. He ran away from home at the age of 17 to serve in the Civil War, in the year 1864. He later served in Indian campaigns from 1871 to 1886 as sergeant of the 3d and 4th United States Cavalry, and in general service from 1886 to 1894. He was appointed a civilian employee in the Inspector General's Office in 1894 and served in this position until he passed away on December 1, 1918. He was buried in the Presidio National Cemetery with full military honors.

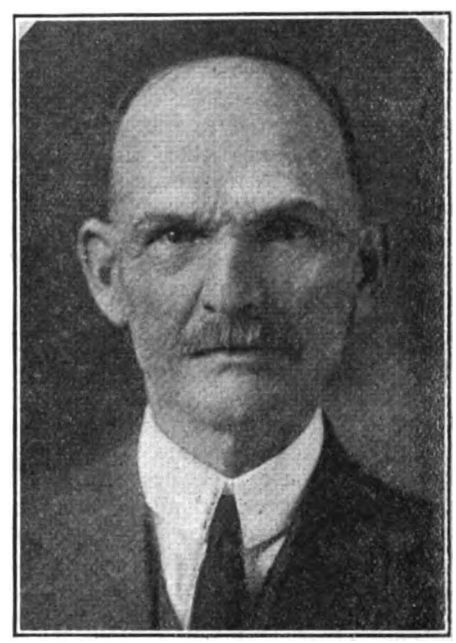
Brother Stanley was Past Commander of Lincoln Post No. 1, G. A. R.

In Memoriam

WHEREAS, It has pleased God, in His divine wisdom, to remove from our midst our beloved and esteemed brother and friend, Charles L. Brown, who for many years occupied a prominent position in the U. S. Customs Service at San Francisco, we mourn the loss of a friend whose fellowship was an honor and a pleasure to enjoy, always commanding the respect and admiration of all who knew him:

Therefore Be It Resolved, While bowing in humble submission to the will of our Heavenly Father, we, the members of Federal Employees Union No. 1, San Francisco, of the National Federation of Federal Employees, deeply mourn the loss of our brother, and hereby express our heartfelt and sincere sympathy to the bereaved family. May the healing influence of time ease their affliction and enable them to bear their great loss; and

Be It Further Resolved, That our charter be draped in mourning, this resolution be spread upon our minutes and a copy sent to the bereaved family and THE FEDERAL EMPLOYEE magazine at Washington, D. C.



CHARLES L. BROWN

Charles L. Brown, Deputy Collector of the Port of San Francisco, died January 10, 1919, after thirty-two years' faithful service work in the Customs Service. At the age of eighteen he became a school teacher and taught for a period of ten years. He read law during his spare time and was admitted to the bar in 1886, three years after entering the customs service. At the time of his death he had risen to the second highest post in the federal ranks on the Pacific coast. He was the head of the legal department, and as such was called on to decide many perplexing questions of the rights of the belligerents during the period of America's neutrality. Throughout life he was an indefatigable worker.

"Judge" Brown, as he was commonly known to his associates, was a man of lovable character, who will be sorely missed by the host of those who knew him.

NIAGARA FALLS LOCAL (NO. 18) HAS PROFITABLE MEETING

At the regular monthly meeting of Federal Employees Union No. 18, held recently at the home of H. C. Hustleby, J. G. Martin, Deputy Collector of Internal Revenue, was elected to membership in the organization.

Many letters of importance were read from President Luther C. Steward and Secretary E. J. Newmyer of the National Federation of Federal Employees at Washington, showing the many items of interest that are being furthered by the National as well as the work that they are doing in Congress toward promoting the welfare of the government work and the bettering of the conditions of the civil employees.

Letters were also read from Congressman Dempsey and Senators Wadsworth and Calder showing that they are interested in the welfare of the employees and that they stand ready to help them in every way possible.

A new constitution was drafted and read and ordered sent to the National organization for approval.

President J. R. Riorden was unanimously elected a delegate to the Trades and Labor Council.

Secretary Hustleby was instructed to write to Congressman Dempsey and Senators Wadsworth and Calder urging them to use their best efforts to persuade Congress to adopt the recommendation made by Secretary of the Treasury McAdoo to increase the pay of the customs officers as well as some of the other lowly paid civil employees so that their pay will be in keeping with that received by the ordinary mechanic, tradesman and railroad employees.

The following officers were elected and installed: President, J. E. Riorden; Vice-President, H. F. Garwood; Recording Secretary, H. C. Hustleby; Financial Secretary, Roy Van Wagoner; Treasurer, Wm. McConnell; Guardian, Wm. Latta.

WICHITA (KANS.) LOCAL PROMPTLY AFFILIATES TO LABOR BODIES

It is gratifying to note that one of our new locals, that formed recently at Wichita, Kans., promptly took action for affiliation to the Wichita Trades and Labor Assembly, and also to the State Federation of Labor. Delegates to both of these bodies were elected by the local. Still closer relations with organized labor exist because of the fact that Brother C. E. Grove, President of the Wichita Local, is also vice-president of District No. 5 of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers.

Proposed Commission on Standardization

FOLLOWING is the draft of a section for the Legislative, Executive and Judicial Appropriation bill proposed by our National Federation to take the place of the corresponding section of the same bill which was stricken out on a point of order when the measure was before the House of Representatives. (See page 69.)

SEC. —. That a commission is hereby created and established, to be known as the "Commission on Standardization and Reclassification of the Civil Service," hereinafter referred to as the commission, which shall have authority to make investigations concerning the duties, titles, wages, salaries, hours, efficiency ratings, conditions of employment, etc., of all employees in the civil establishments of the United States Government (except the Postal Service) and the government of the District of Columbia, with a view to their standardization and appropriate classification, and submit recommendations to Congress concerning the same. The commission (in the membership of which women shall have representation) shall be appointed by the President by and with the advice and consent of the Senate, and shall be composed as follows: Three members to represent the executive management of the civil service; three to represent the public, such members not to be officially connected with the United States Government, and three members to represent the employees, such members to be employees of the civil service who shall be nominated by the collective action of the employees under such regulations as the President may prescribe.

Vacancies occurring in the membership of the commission shall be filled in the same manner as the original appointments.

There shall be equal representation of the three classes above mentioned, in point of numbers, in the composition of all committees and subcommittees.

That the commission shall choose a chairman from its own membership. A vacancy in the commission shall not impair the right of the remaining members to exercise all the powers of the commission.

That each member of the commission shall receive a salary of $7,500 a year. The commission shall appoint a secretary, who shall receive a salary of $5,000 a year, and it shall have authority to employ and fix the compensation of such employees and expert assistants as it may from time to time find necessary for the proper performance of its duties.

That the provisions of the act approved May 10, 1916, providing that no person in the executive civil service shall be permitted to receive more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum, shall not apply to such employees who shall be members of this commission.

That all the expenses of the commission, including all necessary expense for transportation incurred by its members or by their employees under their orders, in any other places than the city of Washington, shall be allowed and paid for on presentation of itemized vouchers therefor approved by the commission.

That the heads of the various governmental services and the Commissioners of the District of Columbia shall furnish office space and equipment, detail officers and employees, and furnish data and information, when requested by the commission, in connection with the purposes of this section.

The commission shall make a preliminary report to Congress of its doings under this section not later than December 1, 1919, and a final report not later than December 1, 1920.

For payment of the expenses incurred by said commission there is appropriated $100,000, or so much thereof as may be necessary, to be immediately available.

Our Third Vice-President Commended Officially

In the last annual report of Commissioner of Indian Affairs Cato Sells appears a reference to Miss Florence Etheridge, Third Vice-President of our national organization, from which is taken the excerpt found below.

Before leaving Washington for her present post of duty in Oklahoma, Miss Etheridge was, it will be remembered, Treasurer and one of the leading spirits of Local No. 2.

Under the title, "A Woman Probate Attorney," Commissioner Sells says:

It may be of interest that during the war a woman was appointed probate attorney. There was general approval of the appointment, and I have reason to believe that this innovation will prove entirely satisfactory. Concerning it and reflecting many similar experiences, the Fort Worth (Tex.) *Record*, in an editorial, said:

"Commissioner of Indian Affairs Cato Sells has appointed Miss Florence Etheridge of Miami, Okla, probate attorney, with headquarters at Vinita. Her appointment, it is said, is in line with Commissioner Sells' policy of appointing women to responsible positions in the Indian Service. The duties of probate attorney involve the protection of the property of minors and incompetent Indians and the prosecution of wrongdoers in the same connection. Miss Etheridge was for several years employed in the Probate Division of the Indian Office at Washington, where she demonstrated unusual ability as a lawyer, and made a vigorous fight before Congress to prevent the passage of the Borland amendment."

Favor Child Labor Tax

The Senate recently approved a bill assessing a tax of 10 per cent on child labor by a vote of 50 to 12. The minority vote was cast by southern democrats. The new amendment was drawn after the decision of the Supreme Court invalidating the previous law and has the approval of the President. It provides that those who employ child labor "shall pay for each taxable year, in addition to all other taxes imposed by law, an excise tax equivalent to 10 per centum of the entire net profits received or accrued for such year from the sale of the products of such labor." The labor of children is prohibited in certain industries under 16 years and in others as low as 14. The revenue from the tax may be slight. The main purpose of this legislation is to stop a very great evil.

Our Brethren of the Golden Gate

To San Francisco belongs the credit of being the pioneer in the movement for the organization of federal employees in general. The life story of the San Francisco Local from its inception six years ago is here briefly sketched by one of its leaders.

By **W. J. VARNES,** ***First Vice-President***

SHORTLY after the passage of the Lloyd-La Follette bill, which repealed the so-called "gag law," about November, 1912, a small group of low-paid government employees, representing for the greater part the Customs Service, under the leadership of John T. F. Burns, taking advantage of their newly-found freedom, obtained, January 7, 1913, from the American Federation of Labor a charter, under the name of Federal Labor Union No. 14374, though the by-laws and records of the union bore the name of "Federation of Federal Civil Service Employees, Port of San Francisco." The following signed their names to this charter: John T. F. Burns, W. J. Varnes, William P. Graham, R. P. Hollenbeck, William Hamburg, T. H. O'Connor, Thomas P. McGinn, James P. Cronan.

The union was organized under the above-mentioned charter January 16, 1913, by John O. Walsh, organizer of the American Federation of Labor, with the following officers:

John T. F. Burns, Customs Service, President.

Walter Redwood, Quartermaster's Department, First Vice-President.

F. H. Ainsworth, Immigration Service, Second Vice-President.

W. J. VARNES
First Vice-President

C. F. HUTCHINSON
Second Vice-President

Miss Lela E. Dinklage, Immigration Service, Third Vice-President.

C. F. Hutchinson, Customs Service, Corresponding Secretary.

James P. Cronin, Customs Service, Financial Secretary.

C. F. Bonds, Customs Service, Treasurer.

The many proposed plans of the new union to improve the conditions of the government employees finally crystalized into the Minimum Wage bill, written by Second Vice-President Ainsworth. This was introduced into both the Senate and the House of Representatives, receiving the active and enthusiastic support of Congressman John I. Nolan, of the Fifth California district.

On December 18, 1914, the union sustained a loss in the death of its President, John T. F. Burns, who was succeeded by F. H. Ainsworth, under whose leadership interest in the Minimum Wage bill was enthusiastically maintained by requesting labor unions, central labor bodies, and other progressive organizations to urge their Congressmen and Senators to support this measure. That success attended the union's efforts is attested by the fact that the conventions of the American Federation of Labor and the National Federation of Federal Employee indorsed the bill, with the result that it was passed by the House of Representatives in October, 1918, and is now awaiting action by the Senate. On two occasions the union sent its president to Washington to represent the membership in the hearings on this bill before the subcommittee of the Committee on Labor of the House of Representatives. During the hearings in March, 1916, the low-paid employees, with the able assistance of Congressman Nolan, succeeded in getting their story before the committee and Congress in such a way that, in the language of the press representatives, caused a sensation, the report of the hearings soon receiving the designation "Heart Throbs."

Since its organization the union has maintained an office in the Pacific Building, which until very recently was kept open during the day and evening. Members were thus able to report their difficulties to the president, who, on account of his familiarity with the rules of the various departments of the Government and the civil service law, was able to give them much-needed counsel and assistance. This in time built up an *esprit de corps* which greatly assisted in carrying the union through a period

MRS. O. F. RITTER
Third Vice-President

Digitized by Google

of fluctuating membership, caused principally by continued low wages and expectation of too great results from its activities, which had promised so much at the start. After this period the membership began to grow slowly but very steadily, being composed of those who had become members because they were in open sympathy with the labor movement, or who, being progressively inclined, recognized that the union afforded practically the only avenue through which any efforts they might be able to make in their own behalf could possibly become effective.

In our endeavor to increase our membership we have found that a large number of government employees prefer to maintain an attitude of neutrality toward all forces, real or imaginary, that might possibly, in some mysterious way, injure their opportunities for promotion. When it is pointed out that our activities, with those of our associated unions, have resulted in many improvements and increased wages; that "the powers that be" of our Government—Congressmen, executive officials, and others—prefer to hear from the employees regarding their aims and desires through the present independent organizations rather than in the old way, when employees were represented (or in many cases misrepresented) only by their official superiors, many employees still maintain that the improved conditions and increased wages that the unions have succeeded

A. BERRYESSA
Secretary

in obtaining would have been granted anyway, even without asking for them, and that therefore the unions are entitled to no credit whatever.

Before the formation of the National Federation, the San Francisco

DANIEL S. LOONEY
Delegate to San Francisco Labor Council

Union, acting in cooperation with the other locals, rendered efficient service toward securing the 5 and 10 per cent increases in salaries and wages for the fiscal year 1918.

The union, through its president, has succeeded in presenting claims of various groups of employees to the departments in Washington in such a way as to secure better conditions of employment, including reduced hours of labor and increased wages.

The union has maintained a lively interest in the subject of retirement. Shortly after its organization, in 1913, the Hamill bill, a noncontributory plan, was indorsed, but in 1915 W. A. Sprague submitted to the union for indorsement a proposed contributory plan similar to the present McKellar-Keating bill. This brought the pension question squarely before the union, and it was kept there through several meetings. Finally, the genuine retirement sentiment crystallized to such an extent that the proposed bill was adopted by the union and introduced in both houses of Congress.

On October 11, 1918, a conference committee was formed for the purpose of rendering whatever assistance might be possible toward securing the passage of the McKellar-Keating Retirement bill, now before Congress. The committee consists of representatives from the following unions:

Federal Employees Union, No. 1, National Federation of Federal Employees; Branch 214, National Association of Letter Carriers; Local No. 2, National Federation of Postal Employees; San Francisco Branch, Railway Mail Association.

The committee has met each week since the above-mentioned date, and has sent out more than two hundred letters on the subject of retirement.

While great credit is due our first pilot, John T. F. Burns and his associates for organizing the first union of miscellaneous government employees to be affiliated to the American Federation of Labor, we feel it only just to say that the inspiration and initiative displayed by them were made possible by the pioneers in the independent organization line—the postal clerks—who secured the revocation of the "gag rule" by placing in the statutes the right of government employees to organize without interference from their official superiors.

The officers of the union at this time are: D. H. McClure, President; W. J. Varnes, First Vice-President; C. F. Hutchinson, Second Vice-President; Mrs. O. F. Ritter, Third Vice-President; A. Berryessa, Secretary; L. W. Harless, Treasurer.

THOS. R. HARRISON
Inspector of Customs and an active member of the Membership Committee

Pinching Economy

"Now dear," said her mother, "take this money and get me a bag of plums from that fruit stand across the street. And you'd better make sure that they are ripe by pinching one or two."

In due course of time "dear" returned bearing the plums; also the money.

"Where did you get that money?" asked her mother. "Didn't you pay for the plums?"

"Why no," answered the angel child, "you told me to pinch one or two, and so while the man wasn't looking, I thought I might as well pinch them all!"

House Votes $240 Salary Increase

Why is it so hard for the civilian employees of the richest nation in the world to obtain even living salaries? This question is being asked with increasing frequency in these days of stress and need. As government salaries are fixed by Congress, it is only right and proper to give the floor to our national legislators to explain their votes. Below will be found the debate in the House on the salary-increase provisions of the Legislative bill, slightly reduced in verbiage but not altered in substance.

ON JANUARY 18 the House of Representatives on a record vote (202 to 79) raised the current temporary salary increase of $120 to $240 for the fiscal year 1920. The Legislative, Executive and Judicial bill as reported by the House Appropriations Committee included only the former amount, the committee having refused to grant the request of our National Federation for an increase of a dollar a day, or $360 a year. The fight in behalf of the employees was thereupon carried to the floor of the House. Before the House took the action above noted, the Committee of the Whole (in which no record vote can be had) voted on several amendments affecting the amount of the increase (see page 120).

The cause of the employees was ably championed by a number of members, conspicuous among whom were Representatives Mann, Keating, Nolan, Wood of Indiana (a member of the Appropriations Committee), Mason and Austin. Any increase over and above the present allowance of $120 was strongly opposed by Representatives Byrnes of Tennessee, Sherley, Stafford, Sisson and Good (all members of the Appropriations Committee), and Black.

The clerk read as follows:

SEC. 2. That the pay of telephone-switchboard operators, assistant messengers, firemen, watchmen, laborers, and charwomen provided for in this act, except those employed in mints and assay offices, unless otherwise specially stated, shall be as follows: For telephone-switchboard operators, assistant messengers, firemen, and watchmen, at the rate of $720 per annum each; for laborers, at the rate of $660 per annum each; assistant telephone-switchboard operators, at the rate of $600 each, and for charwomen, at the rate of $240 per annum each.

Mr. DYER. I should like to ask the gentleman from Tennessee [Mr. Byrns] if the $120 increase proposed in this bill will apply to those employees mentioned in Section 2, which has just been read?

Mr. BYRNS of Tennessee. Yes.

Mr. DYER. Does it include the charwomen?

Mr. BYRNS of Tennessee. They get the increase up to 30 per cent of the salary which they receive.

Mr. DYER. The telephone operators and others will get the full amount?

Mr. BYRNS of Tennessee. They will get the full amount.

The Clerk read as follows:

SEC. 6. That all civilian employees of the Governments of the United States and the District of Columbia who receive a total of compensation at the rate of $2,500 per annum or less, except as otherwise provided in this section, shall receive, during the fiscal year ending June 30, 1920, additional compensation at the rate of $120 [*amended to read* "$240"] per annum: *Provided*, That such employees as receive a total of annual compensation at a rate more than $2,500 and less than $2,620 [*amended to read* "$2,740"] shall receive additional compensation at such rate per annum as may be necessary to make their salaries, plus their additional compensation, at the rate of $2,620 [*amended to read* "$2,740"] per annum, and no employee shall receive additional compensation under this section at a rate which is more than 30 [*amended to read* "60"] per cent of the rate of the total annual compensation received by such employee: *Provided further*, That the increased compensation at the rate of $120 [*amended to read* "$240"] per annum for the fiscal year ending June 30, 1919, shall not be computed as salary in construing this section: *Provided further*, That where an employee in the service on June 30, 1918, has received during the fiscal year 1919, or shall receive during the fiscal year 1920 an increase of salary at a rate in excess of $200 per annum, or where an employee whether previously in the service or not has entered the service since June 30, 1918, whether such employee has received an increase in salary or not, such employees shall be granted the increased compensation provided herein only when and upon the certification of the person in the legislative branch or the head of the department or establishment employing such persons of the ability and qualifications personal to such employees as would justify such increased compensation: *Provided further*, That the increased compensation provided in this section to employees whose pay is adjusted from time to time through wage boards or similar authority shall be taken into consideration by such wage boards or similar authority in adjusting the pay of such employees.

The provisions of this section shall not apply to the following: Employees paid from the postal revenues and sums which may be advanced from the Treasury to meet deficiencies in the postal revenues; employees of the Panama Canal on the Canal Zone; employees of the Alaskan Engineering Commission in Alaska; employees paid from lump-sum appropriations in bureaus, divisions, commissions, or any other governmental agencies or employments created by law since January 1, 1916; employees whose duties require only a portion of their time, except charwomen, who shall be included; employees whose services are utilized for brief periods at intervals; persons employed by or through corporations, firms, or individuals acting for or on behalf of or as agents of the United States or any department or independent establishment of the Government of the United States in connection with construction work or the operation of plants; employees who receive a part of their pay from any outside sources under cooperative arrangements with the Government of the United States or the District of Columbia; employees who serve voluntarily or receive only a nominal compensation, and employees who may be provided with special allowances because of their service in foreign countries. The provisions of this section shall not apply to employees of the railroads taken over by the United States, and nothing contained herein shall be deemed a recognition of the employees of such railroads as employees of the United States.

Section 6 of the legislative, executive, and judicial appropriation act approved May 10, 1916, as amended by the Naval Appropriation Act approved August 20, 1916, shall not operate to prevent anyone from receiving the additional compensation provided in this section who otherwise is entitled to receive the same.

Such employees as are engaged on piecework, by the hour, or at per diem rates, if otherwise entitled to receive the additional compensation, shall receive the same at the rate to which they are entitled in this section when their fixed rate of pay for the regular working hours and on the basis of 313 days in the said fiscal year would amount to $2,500 or less: *Provided*, That this method of computation shall not apply to any per diem employees regularly paid a per diem for every day in the year.

So much as may be necessary to pay the additional compensation provided in this section to employees of the Government of the United States is appropriated out of any money in the Treasury not otherwise appropriated.

So much as may be necessary to pay the increased compensation provided in this section to employees of the government of the District of Columbia is appropriated, one-half out of any money in the Treasury not otherwise appropriated and one-half out of the revenues of the District of Columbia, except to employees of the Washington Aqueduct and the Water Department, which shall be paid entirely from the revenues of the Water Department.

So much as may be necessary to pay the increased compensation provided in this section to persons employed under trust funds who may be construed to be employees of the Government of the United States or of the District of Columbia is authorized to be paid, respectively, from such trust funds.

Reports shall be submitted to Congress on the first day of the next regular session showing for the first four months of the

Digitized by Google

fiscal year the average number of employees in each department, bureau, office, or establishment receiving the increased compensation at the rate of $120 [*amended to read* "$240"] per annum and the average number by grades receiving the same at each other rate.

Mr. KEATING. Mr. Chairman, on page 146, line 18, I move to strike out "$120" and insert "$360."

Mr. MASON. Mr. Chairman, I desire to speak of the particular locality where I live and the amount of money that is paid to federal employees there. The pay of the charwomen and the laborers, the elevator men and watchmen in the federal building in the city of Chicago is so low as to amount to an absolute disgrace to the Government of the United States. Case after case of charity is found among the people who are employed by the United States Government. The assistant custodian of the building has been obliged to advertise, and to do it at his own expense, for help, so many of the employees have left. Sometimes fifteen or twenty people reply, but none will take the employment. The charwomen are getting as low as about $27 a month.

I have here before me a petition, which, with the permission of the committee, I shall insert at this point in my remarks:

To the United States Senate and House of Representatives:

We, the undersigned, desire to call the attention of your honorable body to the condition of salaries in the custodian service of the Federal Building, Chicago.

Elevator men are receiving only a paltry $60 per month, and as a result most of the former reliable force has left and now the personnel is constantly changing—a dangerous and annoying condition. For $60 a month watchhmen guarding the building are expected to work seven days a week and buy their uniforms. The laborers and charwomen are in a similar, deplorable condition.

There is now a resolution before the House to grant an increase of $1 per day to these employees pending the reorganization of the federal service, and it is our earnest plea that such increase be given, in order to meet in part the very great increase in the cost of necessities, and that federal employees may enjoy at least a 'living wage."

Respectfully submitted,

Kenesaw M. Landis, Arthur L. Sanborn, Geo. A. Carpenter, judges of the District Court; Peter Newton, secretary Civil Service Commission; Chas. Schirmer, examiner Railway Mail Service; J. E. Mansfield, examiner Railway Mail Service; Ed. M. Hodgetts, inspector railway mail cars; C. H. Otis, chief examiner Railway Mail Service; Thomas I. Porter, chief United States Secret Service; Read Hanna, chief Pension Examiner; Frank Shoenfield, chief clerk Railway Mail Service; Benj. F. Carle, chief clerk Railway Mail Service; W. H. Wagner, chief examiner Naturalization Service, *etc., etc.*

Think of a man having to support a family, buying his own uniform, trying to educate a family on $60 a month! The condition of that building is simply a disgrace to the Government of the United States because of niggardly, miserable salaries that are being paid there. A comparison with the pay for the same sort of labor in the City Hall in Chicago would show a very great difference in the wages paid by the city and those paid by the Government. I do not want to encumber the *Record* by inserting all of the letters which I hold in my hand, but my colleagues can see what a number I have. They are letters of men who have resigned from the work simply because they could not live upon the wages paid. To be an employee of the Government of the United States should add some dignity to the employment; but just think of the conditions, when in some cases they are dependent upon the county agents to eke out a living while doing service for the Government of the United States.

Mr. Chairman, I hold in my hand 150 letters addressed to Rivers McNeill, custodian, most of them resigning their positions, each one giving as a reason that they could not live on their pay, some of them saying they declined the appointment, and in every case do so on account of poor pay. I insert here rates paid by the custodian of the City Hall, Chicago.

Rates of Pay Prevailing in the Custodian Service of the City Hall, Chicago, Ill.

Designation.	*Compensation for month.*	*Number of hours worked.*	*Remarks.*
Charwomen	$80.00	5½	No Sunday work.
Laborers or janitors:			
First year	80.00	7	Do.
After 2 years	85.00	7	Do.
Window washers	90.00	8	Do.
Elevator conductors	100.00	8	And are furnished 2 suits and
Elevator starters	125.00	8	2 shirts every year.
Coal passers	105.60	...	Also furnished suits.
Firemen	120.00	...	
Assistant engineers, 2d class	150.00	...	

[Continuing, Mr. Mason said that the low wages in the Custodian Service in the 1200 Federal Buildings all over the country (shown in the appended table) had prompted the introduction of resolution No. 87 by delegates Charles F. Nagl, Luther C. Steward and E. J. Newmyer of the National Federation of Federal Employees at the Convention of the American Federation of Labor held at St. Paul, Minn., in June, 1918:

	Per month
Charwomen	$27.08
Laborers	55.00
Window washers	55.00
Elevator conductors	60.00
Marble cleaners	60.00
Watchmen	60.00
Cabinetmakers	65.00
Oilers	70.00
Stenographers	75.00
Engineer helpers	83.33
Foremen	83.33

The fact was also brought out that this is virtually the only department of the government in which there has been no readjustment of wages, and that the service is being injured through dissatisfaction and inefficiency on the part of employees who are finding it harder every day to support their families. The resolution has been approved by the executive council of the American Federation of Labor.—EDITORS.]

Mr. AUSTIN. Mr. Chairman, for ten years I have been an advocate in this House for readjustment, reclassification, and equalization of salaries. I had hoped to see the time come before my departure when these inequalities which have stood for half a century or more would be removed. In the last appropriation bill an increase of $10 a month was added. The Committee on Appropriations' proposition now is to continue for another year the $120 and create a commission to study the question and report legislation to the next Congress. I know that the membership of the House has an open mind upon this question. All seek and desire to do right and justice, not only to the Government but to every employee from the humblest to the highest. In no section of the republic are living conditions more trying or more expensive than they are in the city of Washington. We require and expect of the government officials that they will be a credit, not only to themselves but to the great Government they are serving so well and so faithfully.

In the daily *Times* of this city two days ago appeared an editorial carrying a letter from a mother whose husband is an employee of this Government. I desire to have the Clerk read that letter in my time. It is an appeal which ought to reach the heart and conscience of every man who sits on the floor of this House. All that I ask of my colleagues in the consideration of this proposition and in casting this vote is to place themselves in the position of the government employee in the city of Washington. This is an appeal from those who render the highest possible clerical service in all this country. Every one of us is a daily witness to the creditable and efficient manner in which the public business is transacted. It is done so thoroughly, so efficiently, it is certainly worthy of the most careful consideration when we are to pass upon a just and fair compensation for those who perform it.

THE OPEN FORUM

THE FEDERAL EMPLOYEE invites letters from its readers on subjects which properly come within the scope and purpose of the magazine. Particularly desired are suggestions which place the emphasis on the constructive side of things, looking toward the improvement of the United States Civil Service and of the condition of its employees.

Communications should be written concisely and should not exceed 300 words in length, otherwise the editorial blue pencil may have to be used. Please write on one side of the paper only. Typewritten manuscript, OPEN-SPACED, will be greatly appreciated by the editors. Each correspondent should retain a copy of his contribution. Every communication must be accompanied by the writer's name and address, which will be withheld from publication on request.

THE FEDERAL EMPLOYEE assumes no responsibility for expressions of either fact or opinion by correspondents.

PRIZE ANNOUNCEMENT

Beginning with our March issue, THE FEDERAL EMPLOYEE will pay the sum of five dollars for the letter published in the OPEN FORUM which shall be adjudged the best in the number of the magazine in which it appears.

For the Good of the Order

Man steadily progressing toward social altruism, but still the victim of snobbishness and intolerance.

To the Editors:

When the worker in this age pauses in his labor, and looks back along the paths of progress made by man in his evolution from the abysmal brute, he sees as milestones along the way the words SELF PRESERVATION. It has become one of our trite sayings that "self-preservation is the first law of nature." In the infancy of the race it was, indeed, Nature's first law. When primeval man glided through the jungle seeking what he might devour, he must of necessity have been aware of those forest denizens abroad on a similar mission, those that were seeking him, to make of him their next meal. With him truly self-preservation was the first law of nature; and self and selfishness became firmly rooted in human nature.

In that far-distant era the family constituted the largest human group and found itself inadequate for its own protection. Then the younger males brought home their wives, and the Patriarchal period in history began, and with it the first idea of mutuality came to him. Any danger which threatened a single member of the clan threatened the very life of the clan itself; consequently all sprang to the aid of the endangered one. A natural development from this condition was a leader, and immediately pride of place rose in men's midst.

Coming down through the ages, pride of place—position in life—has become the greatest evil the race has known. From it have sprung arrogance, imitation of the great by the lowly, snobbishness, intolerance; and directly attributable to it are many of our worst vices. It is a sad commentary on our nature, but it is true, that material advancement has become a fetich. As we strive for place, we congregate in groups, and in our vanity look down on those we conceive to occupy a lower step on society's scale. The clerk deems himself superior to the artisan, the artisan prides himself on not being a laborer, and the laborer feels that life has not dealt justly with him.

Stop and consider for a moment, Mr. Clerk and Miss Stenographer, how helpless you would be in your struggle for existence did you not have brought to you the finished product of the artisan. The pen you use, the typewriter which lightens your labor, must come from the hands of those you feel beneath you. You, Mr. Artisan, who take such pride in not being a laborer, how would you fare without the materials the laborer digs from the earth or gathers from its surface: the iron for your tools, the fuel for your engines—all the result of labor's toil. Take pride in your achievements if you must, but give due credit to your youthful environment, which placed opportunity within your grasp.

Stoop down to help those whose lot in life is not as happy as is your own. Consider your place in life to be high, if you will, but know that if you reach down to lift your less fortunate brother, you must of necessity raise yourself as well. All who work are in one great class, and he who works for the advancement of that class, works most truly for himself. When the subdivisions of the great working class lay aside their snobbishness and realize that all are dependent one upon another, then and not till then, will the motto of our organization really mean that we are ALL FOR ONE, ONE FOR ALL.

JOHN D. CLOUD,
Philadelphia F. E. U.

Some "Urgent Deficiencies" in the Civil Service

A "sister" in the Washington (D. C.) local suggests collection of certain data for use with Congress. Points out conditions in Civil Service which, in her judgment, make this imperative.

To the Editors:

I would like to suggest to the Federal Employees Union the collection of certain data relative to government employees which would give us the advantage of being able to place the facts before Congress as well as before the executive branches of the Government tending to show some of the "urgent deficiencies" in the service.

CIVIL SERVICE RULES VIOLATED—NO POWER TO ENFORCE

For instance, the President of the United States, from time to time, has issued various orders and regulations supposed to govern the civil service. A few months ago Mr. Wilson issued an order nullifying the rule which forbade more than one member of one family to hold a position in the civil service. At the very time this order went forth there were several hundred families already represented in the service by two or more members.

To the initiated this order had the effect of putting the President of the United States in a ridiculous position. Of course, the President, virtual head of the executive branch of the service, is not unaware that there exists no person or office vested with the power of enforcing any of these rules or provisions, though he must have been ignorant that the names of many whole families were already on the government rolls.

The same situation exists with regard to the rule of apportionment, which also was waived by executive order for the period of the war, in order to allow appointments to be made from the District of Columbia. As a matter of fact, very few such appointments were made following this order, for the reason that every available person in the District of Columbia had already obtained a government position.

WHY DATA ON VIOLATIONS SHOULD BE COLLECTED

These are only two examples of the anomalous situation. There are others, but the only way to obtain all the facts is to collect all these orders and then by examination of the records, find how many violations of each order have occurred. It would be interesting and valuable to

Digitized by Google

know just how many persons entered the service by examination and appointment through the Civil Service Commission by original classification or by executive order and the schedule of salaries paid to each of these three classes. In this way could be determined whether or not experience is a real asset to the clerk as far as concerns his salary; whether or not those clerks who complied with all requirements as to examination, fitness, etc., are paid as well as those who evaded this requirement.

Something like this must be done before Congress will be roused to the fact that the Civil Service Commission has no power whatever to enforce its orders and regulations, that the President is being humbugged, and that even the statutes passed by Congress may be broken with impunity by any official who sees fit to do so. For it has been done, is being done, and will so continue until the eyes of the legislators are opened to the many ills and defects in the service.

It has been proposed that the whole civil service of the Government be reorganized, the positions standardized according to grades of work, with salaries apportioned to the character of work and bonuses for length of service, etc. But this reorganization cannot be carried out successfully until the faults in the present system are clearly set forth and understood, so they may be avoided in the future.

Above all, it is necessary that the heads should know all these things. They have been deceived long enough. Once these authorities are alive to the facts, it will not be so difficult to convince the legislative branch of the Government. M. G. A.

Washington, D. C.

Living Conditions in Halifax

The hardships of an underpaid United States government employee in "the most expensive city on the continent for a man to live with a family."

To the Editors:

As a member of Montreal Local, No. 26, I take the liberty of setting forth my convictions upon the subject of salaries. The flat increase of $120 per annum is absolutely inadequate to meet the situation. In dealing with the rise in prices, I write from personal experience and knowledge of the conditions prevailing at Halifax, Nova Scotia, where I have been stationed since several years before the war.

FOOD, CLOTHING, AND SHELTER PROBLEMS ACUTE

The first essential problem encountered is to obtain a rented flat, and you may consider yourself fortunate to secure any kind of roof over your head at whatever price the landlords care to exact. The housing problem in this city is a particularly acute one. From $30 to $45 is paid for accommodations far inferior to those at the same price in the United States. Stoves and furnaces must be kept going for seven months in the year. Hard coal, which in years past was $6.50 per ton, has in recent years increased until it now reaches the total of $19.75 per ton for a quality of ungraded fuel that would not be salable in the United States. Soft coal, once $4 per ton, is now $12.

Another essential problem with which the householder is faced is that of clothing. A good suit of blue serge for office use could formerly be obtained for from $25 to $30. Today the price for an inferior suit, which soon turns to the color of ashes, is from $50 to $60. Wool is not to be had, and what is sold for wool does not deserve the name. The prices, however, are three or four times what they ever were before.

Now as to food costs: Flour before the war was from $5 to $6 per barrel, and it is now at a minimum of $14 per barrel; sugar, formerly 5 cents a pound, is now 11 cents; good butter, which was 25 to 30 cents per pound, is now 60 to 68 cents; the best eggs, which used to be available in winter at a price running from 35 to 50 cents, now command from 90 cents to $1 per dozen; good stew meat was once 8 to 12 cents a pound, and the same article is now from 25 to 30 cents. The same increases are to be observed with practically everything required in the household, including medical attendance.

MOST EXPENSIVE CITY ON CONTINENT FOR MAN WITH FAMILY

In the foregoing I have mentioned only those articles and items absolutely necessary for the maintenance of a family, luxuries having been altogether left out, as well as many things that before the war were considered necessities. The prices quoted are fairly representative. They are not maximum prices, and no effort has been made to overdraw the picture. They clearly show that in this locality 100 per cent does not represent the actual increase in the cost of living. I quote a man of wide influence and observation in this part of Canada, a man who has had more than anyone else to do with the growth of the organized labor movement, Mr. John T. Joy, Commissioner of the Province of Nova Scotia Workmen's Compensation Board, to the effect that this city of Halifax is the most expensive city on the continent for a man to live with a family. It can be readily seen from the figures presented and from the opinion of Mr. Joy how utterly inadequate the $120 increase provided the past year has proved itself to be. The proposed increase of $360 per annum is better, but not near enough to the mark. Either the Government in its treatment of its employees should handle the situation by keeping prices to a certain level or else the figures representing our salary should be proportionately increased, both of which the Government has failed to do.

The officers of the United States Immigration Service at Canadian seaports and at other Canadian points removed from the border are placed on the same basis as if we were in our own country, which is far from being the case. We are strangers in a strange land and far from our normal home surroundings. We have to bring our families and household goods here at our own expense, and we are hundreds of miles from the conditions under which we have always lived. Here at Halifax we are approximately twelve hours' ride by rail from the nearest point on the international border. As United States government officials, we have a certain dignity and certain standard of living to maintain. From the very nature of our position here we are precluded from mixing up in any other business or forming any commercial connections even if the opportunity should be offered. Whatever remnants of American standards we retain after long residence here work upon us a positive hardship, for that means we must send down across the line for our shoes, clothing, etc., and pay a prohibitive duty in order to get possession of the goods here. Our Government has made no arrangement with the Canadian government by which the privileges accorded the consular and other officials in this respect may be extended to ourselves.

FURLOUGHED FOR WHOLE MONTH WITHOUT PAY

On top of conditions as cited, our bureau furloughed each of the inspectors in this district one month without pay in 1915, which amount has never been restored to us. Had we been thus treated when on duty in the United States in familiar surroundings we would have been able to get out and hustle around for temporary employment and possibly work into something else. Here we simply had to remain passive victims of the procedure.

That part of the United States Immigration Service in foreign service should by rights have similar treatment to that accorded our consular service. Contrast the treatment of our local consular office by our Government under the recent conditions.

Digitized by Google

The salary of the post of American Consul General at this port appears in the Blue Book as $4,500 per annum. It has been increased to $5,500 per annum recently. In addition to and quite apart from these figures, a year ago our Government awarded "a post allowance" of $1,500 to meet present conditions, and the present year the amount considered proper to adjust local insufficiency of this fairly respectable salary was $1,800. Naturally enough, while we are not interested in the salaries of other officials, we feel that we have a right to make comparisons. Many of our men are running behind in the matter of necessary expenses, and such conditions cannot go on indefinitely. Failure to make some reasonable provision for them can result only in impairing the enforcement of our laws and lowering the standards of our service. I often wonder at the loyalty and conscientious sense of duty that regularly characterize our men in the face of the conditions above cited. What is going to be done?

HERMAN AKERLUND,
Montreal F. E. U. (No. 26).

Retirement Problems—Lighthouse and General

Brother Ross, Secretary of the Sault Ste. Marie (Mich.) Local, draws attention to what he considers shortcomings in the Lighthouse Service retirement plan, also in the McKellar-Keating bill.

To the Editors:

We have quite a number of lighthouse keepers and assistant keepers in our union and they have asked me to point out to the members of the Lighthouse Service generally what they regard as an unfair provision in section six of the Lighthouse Retirement Bill now enacted into law. That section states that all officers and employees engaged in the field service or on vessels of the service, except persons continuously employed in district offices or shops, who shall have reached the age of sixty-five years, after having been thirty years in the active service of the Government, may, at their option, be retired on thirty-fortieths of their average annual pay for the last five years.

The point objected to by men in this district is that, although they may have been thirty years in the service, they cannot be retired unless they have reached the age of sixty-five years, and could be dismissed from the service for some mistake, real or fancied, which is very apt to happen, and they would thereupon lose all their rights to a pension. There are several men in this district who, when they reach the age of sixty-five years, will have been in the Lighthouse Service nearly forty years, and who could be dismissed at any time prior to that time. Should there not be an amendment to the law providing that if charges are brought against an employee in the Lighthouse Service who has served thirty years, although not yet sixty-five years of age, instead of his being arbitrarily dismissed from the service for some slight fault, he be retired on his pension? Is not this only simple justice? The employee has served his thirty years. Why not then give him a fair chance and retire him instead of dismissing him? I would be pleased to hear from others on this matter.

Now, as to retirement for government employees in general. As the question is a live one and is before Congress, and being thought about by federal employees at large, I bring a case to your attention which shows the particular iniquity of the present system. Joseph Campbell, Sr., one of the lockmasters at the Sault Ste. Marie Falls of this city, entered the service of the State of Michigan in 1865, when the first lock was established here, and remained in the employment of the state until 1881, when the lock was taken over by the Federal Government, and continued on duty at the locks until December 10, 1918, when he was temporarily separated from the service by reason of sickness. Mr. Campbell was seventy-five years of age on December 10, 1918, and had thus served the State of Michigan and the United States Government for fifty-three years continuously, thirty-seven of which were spent in the employ of the Federal Government. He was separated from the service without any annual leave being granted him, and after he had been sick the department sent a notice to him asking him to resign. In bringing this case to the attention of the public generally and federal employees in particular, we have no desire to criticise the lock management of the canal, because we believe that the officers in charge of it feel very kindly about Mr. Campbell and would be glad to do anything they could for him, but they are confronted with a situation that apparently leaves them no alternative but to separate this veteran from his work. He has been most faithful in his work, and has time and again injured his health in his strict attention to duty through long hours and tempestuous weather. This is a concrete case to which the Retirement bill would apply and which is certainly much needed. Is there any private employer in the United States employing a man like Mr. Campbell who would discharge such a man after fifty-three years of consecutive service, most of that time on small pay? His relatives have not informed him of the action taken, because they fear it would hasten his end. Surely something should be done at once to relieve and lighten the declining years of a man like this, who has spent his entire strength in the service of his government.

THOMAS M. ROSS,
Secretary, Local No. 32, Soo, Mich.

A Prize Offer

In accordance with the expressed wishes of a number of members of various locals, and encouraged by the helpful results of the recent "Ideas Competition," THE FEDERAL EMPLOYEE will give each month "until further notice," beginning with the March issue, the following prizes:

A cash prize of twenty dollars ($20) for the best article on the subject "My Day's Work," dealing with a typical day's work of a civilian government employee—perchance a stenographer and typewriter at a departmental desk in Washington, a forest ranger in the woods of Maine or Oregon, a coast guard on the Atlantic, an immigration inspector on the Canadian border, or any one of the legion of employees working for Uncle Sam in this country or in any other part of the world. The articles submitted should tell the story, true to fact, in an interesting way, in 1,500 to 2,000 words. Several photographs suitable for reproduction, which have real "human interest," would add materially to the value of the narrative.

A prize of five dollars ($5.00) each month for the letter contributed to the OPEN FORUM which shall be adjudged to be the best. In this connection read the caption of OPEN FORUM section.

A prize of five dollars ($5.00) each month for the best suggestion regarding methods of organizing new locals, and conducting existing locals. Among the questions which might well be dealt with under this head are: Increasing membership, retaining members when once secured, collecting dues, developing publicity work, making our meetings more helpful, and educating our membership in the special problems of civil-service employees and the broader problems of organized labor and citizenship as well. Suggestions submitted should be clear-cut and practical, and expressed as concisely as possible, and should be plainly marked, "Suggestions for Organization and Conduct of Locals."

A Great Journal on Retirement

This bill [the McKellar-Keating bill], which was introduced last June —in the Senate by Senator McKellar of Tennessee and in the House by Representative Keating of Colorado— in substance provides for the retirement of superannuated civil service employees on a basis of continuous remuneration that will enable them to live the balance of their lives on the deferred fruits of their service to the Government during the years of their ability to work. Under the plan of the bill the civil service pension, or retirement, fund will be maintained jointly and in equal parts by the Government and the active employees who later are to be beneficiaries of it.

There are sundry arguments in favor of it, and so far not one valid reason why it should not be enacted into law has been advanced. [Italics throughout are ours.—EDITORS.]

Among the former is the declaration that such a policy on the part of the Government would insure more efficient service by substituting young and vigorous employees for superannuated men; that the salaries ordinarily paid by the Government are not sufficient to enable the employees to live and maintain their families and at the same time accumulate a surplus to provide against need in old age; that it would act as an incentive to retain in the service the most competent employees, and not encourage permanency of tenure to incompetents and disqualified "time servers"; that it would prevent the present practice of removing employees whose efficiency and usefulness have become impaired by old age; that it would attract to the federal service a class of men and women that would keep its efficiency at a high standard, forming, as it would, an inducement for employees to make such service their life work.

It is argued further that *the United States is the only civilized government that has not made provision for the retirement* of its superannuated employees; and what this bill calls for embodies nothing more than a policy that has been generally adopted by private corporations throughout the country.

Private employers universally have found its principles to be not only fair, just and humane, but eminently profitable; and without doubt they will prove the same if adopted by the Federal Government.

There are no more loyal or faithful workers to be found in any branch of industry than the civil service employees of Uncle Sam have long since proven themselves to be; and the Government cannot well go too far in its desire to accord them fair treatment and justice.

Those two things are all that the McKellar-Keating bill contemplates; and . . . it is to be hoped, for the welfare of the country and its faithful public servants, that some means may be found whereby this act can be put through to enactment. . . .

It can and will be if the Senators and Representatives are fully alive to their whole duty to the men and women who are daily giving their best efforts in the civil service of their country.—*Atlanta Constitution.*

Lincoln's Gettysburg Address

Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But, in a larger sense, we cannot dedicate—we cannot consecrate—we can not hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this nation under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth.

Ah, great it is to believe the dream
As we stand in youth by the starry stream;
But a greater thing is to fight life through
And say at the end, "The dream is true!"

—*Edwin Markham.*

Abraham Lincoln Walks at Midnight

(In Springfield, Illinois)

It is portentous, and a thing of state,
That here, at midnight, in our little town,
A mourning figure walks, and will not rest,
Near the old courthouse pacing up and down.

. . .

His head, is bowed. He thinks on men and kings.
Yea, when the sick world cries, how can he sleep?
Too many peasants fight, they know not why;
Too many homesteads in black terror weep.

The sins of all the war-lords burn his heart.
He sees the dreadnoughts scouring every main.
He carries on his shawl-wrapt shoulders now
The bitterness, the folly, and the pain.

He cannot rest until a spirit-dawn
Shall come—the shining hope of Europe free:
The league of sober folk, the Workers' Earth,
Bringing long peace to Cornland, Alp and Sea.

It breaks his heart that kings must murder still,
That all his hours of travail here for men
Seem yet in vain. And who will bring white peace
That he may sleep upon his hill again?

—VACHEL LINDSAY in
The Advocate of Peace.

"In Flanders' Fields"—America's Answer

Rest ye in peace, ye Flanders dead,
The fight that ye so bravely led
We've taken up. And we will keep
True faith with you who lie asleep
With each a cross to mark his bed,
And poppies blooming overhead,
Where once his lifeblood ran red.
So let your rest be sweet and deep
In Flanders fields.

Fear not that ye have died for naught,
The torch ye threw to us we caught.
Ten million hands will hold it high,
And freedom's light shall never die!
We've learned the lesson that ye taught
In Flanders fields.

Your flaming torch aloft we bear,
With burning heart our oath we swear
To keep the faith, to fight it through,
To crush the foe or sleep with you
In Flanders fields.

Why a Dollar a Day More?

President Steward of the National Federation of Federal Employees presents the case of the government employees, showing the vital necessity for at least a dollar-a-day increase for the next fiscal year. Salary and living problems are discussed at length from various angles.

THE hearing granted the National Federation of Federal Employees by the subcommittee of the Appropriations Committee of the House of Representatives on the Legislative, Executive, and Judicial Appropriation Bill, in connection with the question of the emergency salary increase for 1920, brought out much of interest in the way of facts and bearing on the attitude of the members of the subcommittee toward various problems confronting the government workers. Besides the chairman, Representative J. W. Byrns (Tenn.), there were present the other members of the subcommittee: Representatives John M. Evans (Mont.), James P. Buchanan (Texas), James W. Good (Iowa), and William H. Stafford (Wis.).

National President Steward, who appeared in behalf of the employees, laid stress on the fact that the temporary increase asked for by the Federation is very moderate under existing conditions.

The proceedings before the subcommittee are here given in slightly abridged form.

As is told elsewhere, the bill as reported to the Committee on Appropriations and subsequently to the House carried only the current salary increase, $120, but this amount was raised by the House on a yea and nay vote to $240.

Mr. Steward. In line with the action of the Appropriations Committee last year, and the suggestion of Chairman Sherley, that the matter of salary increases should be handled by one committee and to avoid the confusion incident to temporary increases in previous years, we have prepared our request and recommendation in the form of a substitute, or, rather, as a new section to take the place of section 6 of the legislative, executive, and judicial act for the current year. With the permission of the chairman of the committee I will read the proposed section which contains some changes from the existing section 6, and I will note them at the conclusion of the reading:

SALARY-INCREASE PROVISIONS ASKED FOR BY N. F. F. E.

"SEC. 6. That all civilian employees of the Government of the United States and the District of Columbia, except as otherwise provided in this section, shall receive, during the fiscal year ending June 30, 1920, additional compensation at the rate of $360 per annum: *Provided,* That no employee under the age of 18 shall receive additional compensation under this section at a rate which is more than 50 per centum of the rate of the total annual compensation received by such employee on June 30, 1919: *Provided further,* That the increased compensation at the rate of $120 per annum for the fiscal year ending June 30, 1919, shall not be computed as salary in construing this section: *Provided further,* That where an employee in the service on June 30, 1919, has received during that fiscal year or shall receive during the fiscal year 1920 an increase of salary at a rate equal to or in excess of $360 per annum, such employee shall be granted the increased compensation provided herein only when and upon the certification of the person in the legislative branch or the head of the department or establishment employing such person of the ability and qualifications personal to such employee as would justify such increased compensation: *Provided further,* That the increased compensation provided in this section to employees whose pay is adjusted from time to time through wage boards or similar authority shall be taken into consideration by such wage board or similar authority in adjusting the pay of such employees.

The provisions of this section shall not apply to the following: Employees paid from the postal revenues and sums which may be advanced from the Treasury to meet deficiencies in the postal revenues; employees of the Panama Canal on the Canal Zone; employees of the Alaskan Engineering Commission in Alaska; employees whose duties require only a portion of their time, except charwomen, who shall be included; employees whose services are utilized for brief periods at intervals; persons employed by or through corporations, firms, or individuals acting for or on behalf of or as agents of the United States or any department or independent establishment of the Government of the United States in connection with construction work or the operation of plants; employees who receive a part of their pay from any outside sources under cooperative arrangement with the Government of the United States or the District of Columbia; employees who serve voluntarily or receive only a nominal compensation; and employees who may be provided with special allowances because of their service in foreign countries. The provisions of this section shall not apply to employees of railroads taken over by the United States, and nothing contained herein shall be deemed a recognition of the employees of such railroads as employees of the United States.

"Section 6 of the legislative, executive, and judicial appropriation act approved May 10, 1916, as amended by the naval appropriation act approved August 29, 1916, shall not operate to prevent anyone from receiving the additional compensation provided in this section who otherwise is entitled to receive the same.

"Such employees as are engaged on piecework, by the hour, or at per diem rates, if otherwise entitled to receive the additional compensation, shall receive the same at the rate to which they are entitled in this section."

Then follow the other provisos contained in the present appropriation act in which there is no change, and I will not read them. [For text of Section 6 as adopted by House of Representatives see page 77—EDITORS.]

Mr. Byrns. Would you let that provision apply to employees receiving $6,000, $7,000, $8,000, or $10,000.

Mr. Steward. We place no maximum on that.

Mr. Byrns. Do you think, as a matter of fairness and justice, that those who get $7,500, $10,000, or $12,000 a year should receive this $360 as a bonus?

Mr. Steward. If it were considered from the standpoint of a living wage, no, sir. If it were to be considered from the standpoint of remuneration for service, some of the highest salaried men in the employ of the Government are the poorest paid, and have a most difficult time to get along.

Mr. Buchanan. And perhaps some of them are the best paid, too.

Mr. Steward. That also follows.

Mr. Stafford. Are you an employee of the Government?

Mr. Steward. Yes, sir; I have been an employee of the Government for twenty-two years.

Digitized by Google

LIMITATION ON WAGES TO BE PAID CHARWOMEN

Mr. Good. You remove the limitation so far as charwomen are concerned?

Mr. Steward. Yes, sir.

Mr. Good. You would pay them the $360 a year irrespective of the number of hours they put in?

Mr. Steward. The section applicable to them reads:

> Such employees as are engaged on piece work, by the hour, or at per diem rates, if otherwise entitled to receive the additional compensation, shall receive the same at the rate to which they are entitled in this section.

Mr. Stafford. They are not paid by the hour, but they are paid by the year.

Mr. Steward. As to annual salaries, the limit is 50 per cent of the total annual compensation, as stated in the first part of the proposed act.

Mr. Good. The statutory salary of charwomen is $240 a year, and, as I understand it, they give about two hours service a day. But that is their salary.

Mr. Steward. In some instances it is $420.

Mr. Good. That is only in a few departments. I think that in the Bureau of Engraving and Printing they perform double work. Now, you would increase that from $240 to $560.

Mr. Steward (reading):

> *Provided*, That no employee under the age of eighteen shall receive additional compensation under this section at a rate which is more than 50 per centum of the total annual compensation received by such employee on June thirtieth, nineteen hundred and nineteen.

That is to eliminate junior employees, such as messenger boys, but it would apply to charwomen.

Mr. Good. And it would give them $600 a year instead of $240, because they would get the $360.

Mr. Steward. Yes, sir.

Mr. Stafford. How would you differentiate in the case of charwomen? A charwoman is employed by one department and gets $240 for two hours' work a day and she would get the $360; she would then work for another department in the evening, getting $240 for two hours' work, and getting another $360, so that she would be getting $1,200 a year.

Mr. Steward. That is on the assumption that charwomen are employed at two places.

Mr. Stafford. There are such instances.

Mr. Good. In the Bureau of Engraving and Printing that is quite general.

Mr. Steward. If such cases existed they could be handled by a restriction as to the double amount.

Mr. Good. Do you want the committee to understand that you insist that charwomen in the employ of the Government, giving two hours' service a day, should receive $600 a year?

Mr. Steward. Our information is that two hours is not the correct time, but that in many instances it is in excess of that.

Mr. Good. But suppose it is three hours' work. Do you contend that that class of employees should receive $600 a year from the Government?

Mr. Steward. Applying that to the charwomen we are basing it on what is a living wage at which they can exist under present prices.

Mr. Good. Of course, nobody can live on $240 a year, but I understand that as to a great many of them this is only a small part of their income; I understand that a great many of them work in homes, that a great many take in washings, and that this is a small part of their income.

Mr. Steward. In many instances that are called to our attention it is their only source of income.

Mr. Byrns. But as they do their work early in the morning or late in the evening it is, of course, a question for them to decide as to whether they will do any other work, because they certainly have the time if they want to do it. They only work two hours out of the twenty-four hours, and they certainly have time to devote to other occupations.

Mr. Good. I only brought this to your attention because of information given to this committee, and if I am not mistaken, the men from the bureaus testified that their services were required for only two hours a day.

Mr. Steward. But this must be said in reference to partial timework or swing employees, that they lose considerable time, and that the actual time of employment on a part-time job does not represent the total lost time. It is an inefficient way of securing employment, so that it is impossible for them to secure full time, and it really represents much more in lost time than actual time spent in employment.

THE $120 INCREASE IS ENTIRELY INADEQUATE—LIVING COSTS

We insist that the present $120 increase, granted for the current fiscal year, is wholly inadequate as an offset and temporary remedy for the existing high prices. We do not for one minute contend that any flat increase is a scientific way of adjusting government salaries. The thing we are hoping and working for is a scientific reclassification of the whole government salary schedule, based upon fitness and the value of the services rendered. But in the absence of that, and pending any such legislation, some remedial legislation is necessary, imperative, in fact, to give the federal employees an opportunity to meet the tremendously increased prices of everything.

There have been, as you gentlemen of course are aware, a good many investigations conducted in the last two months as to what constitutes a living wage. I have before me the result of an investigation conducted by the Canadian Department of Labor. These estimates are based upon the budgetary requirements of the normal family of the wage earner. The Canadian Department of Labor finds that the requirements of the normal family in Canada is $1,518 per year. The Department of Health, New York City, found it was $1,682 per annum. The average of twenty-four principal cities in the United States was $1,650 per annum; the Seattle Street Railway Arbitration Board found it was $1,506 per annum, and an investigation conducted by Dr. Peixotto, of the University of California, resulted in a finding that it was $1,476 per annum.

Mr. Byrns. When were those investigations made?

Mr. Steward. Within the past twelve months. The Wage Arbitration Board in the street railway dispute in Seattle fixed the minimum in December, 1917, at $1,505.60 for motormen and conductors in Seattle and Tacoma. As the cost of living is not unusually high in these North Pacific Coast cities that was not an award that had any particular local application but general application.

Mr. Stafford. For how many hours work?

LABOR TURNOVER MEANS A GREAT LOSS TO THE GOVERNMENT

Mr. Steward. I have not that figure before me, but I presume that it was on a basic eight-hour day. Another feature, and a very important one in connection with the consideration of the adjustment of salaries of federal employees, is the tremendous economic loss to the Government from labor turnover. When the labor turnover in private employment becomes excessive, it is an indication of a sick business, because all labor turnover in any business is considered as waste and loss. The separation from the employment of the Government of its skilled and trained employees results in a tremendous monetary loss to the Government, because the constant placing of new and inexperienced people in the positions occupied by competent and trained people necessitates the payment of a much higher price than would be required by the retention of those who have experience.

The last annual report of the Civil Service Commission shows that the turnover in Washington alone has reached 5,000 a month, which means that in spite of the constant influx of

Digitized by Google

additional employees, 5,000 are leaving every month. That means, that if they are replaced at all they must be replaced by inexperienced people and the Government pays for their official training and for their education along the lines of their respective occupations.

Mr. Byrns. On what period of time was that based?

Mr. Steward. That is contained in the last annual report of the Civil Service Commission, which was published a few days ago.

Mr. Byrns. That was based upon a 300 or 400 per cent increase in the number of employees in the District of Columbia owing to war conditions.

Mr. Steward. But as the figures relate to a period prior to the signing of the armistice, they do not include any subsequent reductions in force.

Mr. Byrns. I understand, but you say the turnover has been 5,000 a month. Of course since the war began the number of employees in the District of Columbia has increased from about 30,000 to over 90,000, and the 60,000 are what are known as temporary employees. In other words, they came here with no assurance that they would be retained for any definite length of time. Therefore I do not think that is a fair comparison to make in support of your proposition.

Mr. Steward. It is true that the separations have been larger among these newcomers, the temporary war employees, than they have been in some of the older services, for one reason, because since the passage of the act of October 6, 1917, prohibiting transfers from one department to another at an increased compensation, the opportunities for securing positions at an increased compensation have been denied to federal employees, unless they secured them in their own department or service.

Mr. Byrns. What I wanted to know was whether or not you have any figures showing the turnover among those who may be classed as permanent clerks in the District as distinguished from the temporary clerks.

Mr. Steward. I was just coming to that. In some of the departments resignations have been forbidden, and orders have been issued, applicable to the employees of certain departments, to the effect that resignations would not be accepted, either for the purpose of accepting better positions in other departments, in outside employment, or to accept commissions in the Army, Navy, or Marine Corps. If, in spite of such an order, an employee saw fit to separate himself from the service, a notation would be filed with his record to the effect that he was unpatriotic and that would result in blacklisting him for employment with the Government. So that with such an order in existence the turnover would not be excessive, except where a person, by reason of the necessities of his own case, would be willing to have that stigma placed upon him in order to secure employment at a living wage. That, of course, has, to a certain extent, kept down the turnover in some of the older departments, if that is to be considered scientific employment management.

Mr. Stafford. You have no statistics as to the turnover in the Washington Navy Yard?

Mr. Steward. The situation in the Washington Navy Yard, of course, largely relates to mechanics and skilled workmen. Their compensation is handled through wage boards and they have received an average increase in their basic pay of $1.50 per day, so that naturally the turnover in an institution of that sort, where a wage adjustment has been made and an equitable relation established, has not been large.

Mr. Buchanan. Suppose the turnover has been quite large in recent years and continues to be quite large—do you condemn the small cost or big cost to the Government of educating a lot of employees who may later go out into private employment?

Mr. Steward. I would condemn any system which, after educating young and inexperienced employees and training them to a point where they could render valuable service in more responsible executive capacities, would let them go merely for a want of proper compensation, which is the condition that exists.

Mr. Buchanan. They will sever their connection with the Government, after getting the training you mention, in order to go into private employment and, possibly, get better pay, but do you not think the Government should be willing to do that, even if it is done at some expense?

Mr. Steward. That may be true; but there is such a thing as a desire for service, and such a thing as enthusiasm for the work one is in, and in that case those who work for the Government have the feeling that they should be given a compensation which would permit them to remain in the service. But conditions are such that many people in the service find that the margin between income and necessary outlay is so small that they are practically forced out of the government service and to accept offers received from private concerns and in much better places. The result is that we find some of the best material in the Federal Government going out every year, and some of the departments of the Government are merely training schools, and we find private employers who are glad to snap up these employees.

Mr. Buchanan. Do you condemn the policy of the Government taking young men and young women and training them to such a point that they are desirable employees in private life?

Mr. Steward. I do not condemn the policy, but it should be a natural one rather than a forced one.

Mr. Buchanan. If that were not done in the government service, then the private employers would not receive any benefit from that public education.

Mr. Steward. But I think it is rather unfortunate to benefit the public at large at the expense of the employee who does not receive adequate compensation.

Mr. Buchanan. Of course, I would condemn the blacklist to which you referred in normal times, but I can not see any objection to any man doing the best he can for himself, and under such circumstances the nation at large gets the benefit of the experience and training he has received at the hands of the Government, even if that training and experience are given to him at a loss.

Mr. Steward. And, of course, it will be a loss under those circumstances.

Mr. Buchanan. Of course, we all condemn such a blacklist in normal times, and there is no question but that it is wrong.

WHAT IS TO BE THE GENERAL COURSE OF PRICES?

Mr. Steward. As to the actual increase in the cost of commodities to those who are forced to buy the necessities of life, the last thing we have on the subject is the monthly labor review of the Bureau of Labor Statistics of the Department of Labor, showing the cost of commodities for the years 1913 to 1918, that is, as of August 15 of each year. I merely offer that to show that in the past year, that is, 1917 to 1918, since the present $10 a month increase was granted at the last session, there has been an increase of 15 per cent in the standard list of commodities.

Mr. Stafford. What is your estimate as to the reduction which will take place from now on, or rather during the next fiscal year?

Mr. Steward. I can only quote probably the two best authorities in the world on the question of cost; they not only know something about it but they have an opportunity to control it, and they are Louis F. Swift and J. Ogden Armour; they have been quoted within the past month as saying that while prices are not apt to go higher there is no reason to expect

Digitized by Google

that in the next five years there will be reduction in the price of necessities. Any speculation, of course, as to the probable drop in prices is naturally a wild one and must of necessity be.

Mr. Stafford. Will you not agree that the top notch has been reached?

Mr. Steward. We can all hope so, but there is nothing in the past, of course, to justify any prediction as to the future.

Mr. Stafford. There is something in the past to justify our analysis of the future, and that is the fact that the Government is going to be relieved of these large purchases of food for millions and millions of men.

Mr. Steward. Except in that connection that we are called upon now to feed several million more, according to Mr. Hoover. I would like to call the attention of the committee to the fact that in any legislation or regulation that has taken place in the past two or three years, especially since the war began, in price regulation and in wage regulation, the federal employees have been singled out and they are in a class by themselves. That is to say, where the Government has seen fit to regulate prices of commodities, consideration has been given to the increased cost that went into the production of those commodities, that where wages have been fixed by private employers, or through the instrumentality of various government boards, attention has been given to the increased cost of living, and that the federal employees, both on the lump-sum roll and on the statutory roll, have been perfectly helpless; they have been between the upper and nether millstones in all that regulation, compelled to pay the increased cost without corresponding increase of compensation, and yet as a class they have stayed on the job while this period of inflation has gone on. Prices have gone up; prices have been regulated and wages have gone up in private employment, but they have received nothing, with the exception of these small temporary increases, granted during the past two years, until now their situation is well nigh intolerable. In comparison with the wage increases granted in outside employment, the one dollar a day that is asked for is very modest.

THE IMPORTANCE OF THE NOLAN MINIMUM WAGE BILL

Mr. Byrns. The House has passed what is known as the Nolan minimum-wage bill, which carries a minimum wage of $3 a day, and which, I understand, is indorsed by your organization?

Mr. Steward. Yes, sir.

Mr. Byrns. And very earnestly insisted upon by your organization.

Mr. Steward. Yes, sir.

Mr. Byrns. That bill is now pending in the Senate?

Mr. Steward. Yes, sir.

Mr. Byrns. That bill provides for charwomen at the rate of $3 a day on a seven-hour basis and $3 a day for all others in the government service who are getting under that amount. In the event that the Senate should pass that bill and it should become a law, do you think that the employees who are affected by it should receive in addition $360 for the next fiscal year?

Mr. Steward. No, sir; I do not. That would be permanent legislation and would automatically adjust itself to any temporary legislation which might be enacted at this session.

Mr. Byrns. But if that bill becomes a law and the provision that you have read should go in as you have indicated they would get the $360?

Mr. Steward. Naturally we could not assume that another pending piece of legislation would be enacted, so that we could not, in all fairness, tie up this temporary remedial measure with what is designed to be a permanent reclassification.

Mr. Byrns. That is true, but I think we can assume that since the House has acted upon it, practically unanimously, as I remember, that in all probability the Senate will pass it at this session of Congress.

Mr. Steward. I sincerely trust you are a good prophet, because we consider the Nolan bill the foundation stone of salary classification legislation.

Mr. Byrns. As I understand, you would not expect the $360 to apply to that class of employees?

Mr. Steward. No, sir; we would not.

Mr. Evans. Is this limited to the District of Columbia?

Mr. Steward. No; it would be generally applicable, except to the postal employees, who are handled in another way.

Mr. Byrns. Can you state how many government employees there were prior to the war, outside of the postal service?

Mr. Steward. I think I have that figure here. Four hundred and thirteen thousand in the entire civil service, and that is the estimate for June 30, 1919. That includes in the Postal Service more than 300,000.

Mr. Buchanan. What is that you are reading from?

Mr. Steward. It is the testimony of Mr. Herbert D. Brown, of the Bureau of Efficiency, given last year.

Mr. Buchanan. The chairman of the Civil Service Commission stated that there were over 500,000 in the classified service.

Mr. Steward. Of course, that is subject to such violent fluctuations that it is almost impossible to foretell.

Mr. Byrns. Is there anything else you desire to say, Mr. Steward?

STANDARDIZATION AND RECLASSIFICATION OF SERVICE A NECESSITY

Mr. Steward. I merely wish to reiterate the fact that the federal employees through this, their organization, wish to emphasize the necessity of reclassifying salaries in general along scientific lines. We are not attempting to make any salary raid and we are not attempting to secure something to which we are not entitled, but we are merely looking upon this as a temporary remedy until such time as Congress in its wisdom will pay us just what we are worth and nothing more. We stand ready to back to the limit any efforts that are made to increase the efficiency of the Federal service, and until that is done, many of these anomalous conditions will crop out that add to the difficulties of any salary legislation. But this is simply intended to be of temporary relief until such time as that can be brought about. We devoutly hope that it will be soon.

Now, I have a few specimen instances of local employees who present their own individual cases. I will occupy only a few moments in reading a few of these statements [quoted in *Congressional Record;* see page 113 of this issue of THE FEDERAL EMPLOYEE.—EDITORS].

CUSTODIAN FORCE IN THE PUBLIC BUILDINGS MISERABLY PAID

Mr. Stafford. Is it not generally understood and admitted that the custodian forces in the public buildings are the poorest and most outrageously paid employees in the government service?

Mr. Steward. Yes, sir; without exception. And it is a shame and disgrace.

Mr. Stafford. Have you taken that question up with Secretary McAdoo?

Mr. Steward. Yes, sir; our organization has repeatedly presented the matter to the proper officials of the Treasury Department.

Mr. Stafford. Has the Treasury Department made any estimate to Congress providing for a much larger sum so as to make possible an increase in the wages to those underpaid employees?

Mr. Steward. No, sir; we have not been able to meet adequately the necessities of the case.

Mr. Evans. Was the salary of the custodian force fixed by law?

Mr. Stafford. They are paid out of a lump-sum appropriation under the Treasury Department, and if the lump-sum appropriation was increased they could be paid on a fairer basis.

The Jester's Page

Well Packed

In their morning walk Jessie and her mother passed the home of a lady who was so ill that a large quantity of straw had been strewn over the street to deaden the noise. The straw aroused Jessie's curiosity, and she asked many questions about it.

"It has been put there," her mother explained, "because last week they brought a little girl baby to the lady who lives there."

Jessie cast one last contemplative look at the straw.

"Well, all I've got to say is that they brought her well packed," she remarked.—*New York Times.*

People That Jar Us

Some hunters that we know are
"beauts."
They couldn't even shoot the chutes.

Some blacksmiths are such stupid men
They couldn't rightly shoo a hen.

Some pressmen simply drive us wild.
They couldn't even feed a child.

Some dentists we would like to taunt.
They couldn't fill a long-felt want.

Some pianists as experts pose
Who couldn't play the garden hose.

Some landladies give us a pain.
They couldn't even board a train.

There are some cops—no names we
mention—
Who couldn't even arrest attention.

Some anglers in the lake we'd fling.
They couldn't cast a shoe, by jing!

Some printers we'd take down a peg.
They couldn't set a broken leg.

Some sleuths the public are deceivin'.
They couldn't find the Lost Chord
even.

—*Boston Transcript.*

The Coupon Fiend

"The doctor says I must quit smoking," announced John. "One lung is affected already."

"Oh, John"—his loved one hung upon the awful possibility—"can't you hold out till we get enough coupons for that dining-room rug?"—*Ladies' Home Journal.*

A Good Advertiser

A man in London wanted a job, and so he published the following advertisement:

"A hopelessly incompetent fool, with no qualifications, social or intellectual, totally devoid of knowledge on any conceivable subject, thoroughly indolent and untrustworthy, is desirous of obtaining a remunerative post in any capacity. Address I. F., 3 Maclise Road, West Kensington."

The singularity of it attracted a great deal of attention, and several people set out to look the individual up. When they found him, they discovered he was a man of 27 years, alert, intelligent, with an ordinary public school education. The result is that he has secured a good position with a responsible firm and he bids fair to rise in the world, all the result of advertising and of writing an ad so that it would attract attention because it was different from any other application for work that was ever written. The moral, therefore, of this tale is that if you would succeed by advertising, write so that the notice would attract you if you were in search of help.—*Muncie Star.*

Just Like Unorganized Labor

A squad of rookies, composed of various nationalities, mostly Italians, on being given the command "Mark time!" all executed the command with the exception of one small, dark-skinned son of Naples.

The sergeant asked him why he did not execute the movement, and he replied:

"Donna want to."

"Why not?" sharply demanded the sergeant.

"'Cause-a we walk-a like deuce and don't-a get-a no place!"

Came Out in the Postscript

Simpkins always was soft-hearted, and when it devolved upon him to break gently the news of the early spring-bather Jones' drowning to the bereaved Mrs. Jones it cost him much paper, ink, and perspiration before he sent the following:

"Dear Mrs. Jones: Your husband cannot come home today. His bathing suit was washed away in the surf.

"P. S.—Poor Jones was inside the suit."

A Slight Error

She took a course of first aid to the injured and, after long and anxious waiting the street accident she had earnestly wished for took place.

It was a bicycle accident; the man had broken his leg; she confiscated the walking-stick of a passer-by and broke it in three pieces for splints; she blushingly took off her underskirt for bandages and she was enthusiastically cheered by the crowd. When all was completed she summoned a cab and took her patient to the hospital.

"Who bandaged this limb so creditably?" inquired the surgeon.

"I did," she blushingly replied.

"Well, it is most beautifully done," said the surgeon, "but you have, I see, made one little mistake."

She felt terribly self-conscious.

"You have bandaged the wrong leg," he said quietly.—*Baltimore Sun.*

Conditional Forgiveness

Harry and James, brothers, were in their playroom for a little recreation after supper. Harry hit James with a stick. An argument followed, and in the midst of it the nurse happened in with the news that it was time for them to retire. James was put to bed first. The nurse said:

"You must forgive your brother before you go to bed. You might die in the night."

After a few minutes elapsed, James replied:

"Well, I'll forgive him tonight, but if I don't die he'd better look out in the morning."—*Selected.*

Needs Practice

"What are you studying now?" asked Mrs. Johnson.

"We have taken up the subject of molecules," answers her son.

"I hope you will be very attentive and practice constantly," said the mother. "I tried to get your father to wear one, but he could not keep it in his eye."—*Kansas City Star.*

"Oh, my friends! there are some spectacles that one never forgets!" said a lecturer, after giving a graphic description of a terrible accident he had witnessed.

"Ahem!" spoke up an old lady in the audience. "I'd like to know where they sells 'em."—*Selected.*

National Federation of Federal Employees

(Affiliated to the American Federation of Labor)

ITS OBJECTS, METHODS, AND ORGANIZATION

The NATIONAL FEDERATION OF FEDERAL EMPLOYEES is an active organization of civilian workers in the government service, composed of representatives from virtually all branches except the postal service, the employees of which have organizations of their own.

The *Objects* of the FEDERATION are: To advance the social and economic welfare and education of the employees and to aid in the perfection of systems which will make for greater efficiency in the various services of the United States.

The *Methods* for attaining these objects are petitioning Congress, creating and fostering public sentiment favorable to proposed reforms, cooperating with government officials and other employees, securing the enactment of appropriate legislation, and other lawful means. Under no circumstances is the FEDERATION to engage in or support strikes against the United States Government.

The FEDERATION now comprises 116 local unions, located in nearly as many cities and towns throughout the United States, in Canada, and the Panama Canal Zone. A list of these unions appears on pages 127 and 128. Additional unions are constantly being formed.

WHAT THE FEDERATION IS FIGHTING FOR

Adequate and proper salaries for the employees of the national civil service, including a minimum living wage.

Standardization and reclassification of the civil service, to the end that salaries and working conditions shall be fairly adjusted in the interest of the efficiency of the service and the well-being of the employees.

Retirement of superannuated employees under a system which shall be equitable and beneficial to both the employees and the Government.

The right of civil service employees to adequate representation in connection with the regulation of the essential conditions of their employment, as salaries and wages, hours of labor, promotions and demotions, transfers, removals, and sanitation.

WHAT THE FEDERATION HAS ACCOMPLISHED

Although the formation of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES dates back only to September, 1917, and the present movement for the organization of civil service employees is but little older, much has already been accomplished—more than had been accomplished in this direction by federal employees without organization during many decades of helpless dependence on others.

More specifically, organization has been instrumental in bringing about, during the very brief period mentioned, these results, among others:

Substantial increases in salaries and wages.

Redress of many grievances of employees in various services of the Government.

The defeat of an attempt, both unnecessary and unjust, to fasten on employees of the Government a longer workday.

The arousing and marked development among federal employees of a spirit of self-reliance and cooperation, and of closer affiliation and sympathy with the great mass of the nation's wage-earners.

GODSPEED TO THE CAUSE FROM "HIGHER UP"

PRESIDENT WILSON (*to the Washington, D. C., Union*).

"They [resolutions of the Washington, D. C., Union] have given me a great deal of genuine pleasure and I wish that I could convey to each member of the Union my most cordial wishes for the New Year."

HON. CHAMP CLARK, *Speaker of the House of Representatives.*

"It gives me pleasure to felicitate the Union on the progress it has made and to extend to it every good wish for the future."

HON. LOUIS F. POST, *Assistant Secretary of Labor.*

"It is really an advance that the people employed by the Government of the United States in such large numbers should have come to recognize their industrial relationship with the people out in the rest of the world who have been trying to organize what is called labor for its own protection during the last forty or fifty years—the period of the present labor organization movement. . . . I think that in respect to your organization and to what you are endeavoring to get I can bring you not only my personal sympathies with your work, but I may safely say that I bring the sympathies of the Department in which I am engaged, and I am sure that Secretary Wilson is thoroughly in sympathy with what you are trying to do."

HON. CARL VROOMAN, *Assistant Secretary of Agriculture.*

"I think it is not only the privilege but the duty of the employees of the Federal Government to organize themselves; to organize themselves not only to see to their own rights, not only to secure for themselves the best kind of treatment from the Federal Government, but in order to increase the efficiency of the civil service of these United States. The possibilities that lie before this great organization . . . are limitless . . . Organized, you can accomplish far more, not only for yourselves, but for the nation, than you have ever been able to accomplish in the past."

HON. SAMUEL J. ROSENSOHN, *formerly Assistant to the Secretary of War.*

"It is the definite policy of the War Department not to interfere in the slightest way with the right of the workers to organize in trade unions and to prohibit any person in the Department from discharging workers by reason of their membership in trade unions for legitimate trade union activities."

HON. CHAS. M. GALLOWAY, *U. S. Civil Service Commissioner.*

"The impression which appears to have been entertained that the Commission objected to its employees becoming members of the [Federal Employees] Union is wholly without foundation and must have arisen from some misapprehension. The Commission has no such objection and has not sought in any way to influence its employees in the matter."

HON. FELIX FRANKFURTER, *Chairman of the War Labor Policies Board.*

"Never before in history have the civilian employees of a government performed duties more vital to the continued well-being of the republic. . . . The chance which the national crisis presented has been wisely utilized by Federal employees. Of my own experience at Washington I can testify to the devotion which you have shown. . . . I take great pleasure in wishing well this valuable organization which represents so many. You are a conscious part of the world-wide labor movement. You are in your Federation endeavoring to make practical the faith that self-government is desirable even beyond the familiar bounds of politics. I congratulate you and the nation you are so faithfully and so successfully serving."

HON. EDWARD N. HURLEY, *Chairman of the United States Shipping Board.*

"I am in hearty accord with the good work that you are doing and I sincerely hope that you will continue working out your problems along sound practical lines."

A. F. of L. Reconstruction Plan

A carefully prepared outline, based on experience, dealing with various present-day problems, in the field of both legislation and industry; the formation of a political labor party strongly opposed.

THE RAPIDLY growing literature on Reconstruction has received a notable addition in the program just put forth by the American Federation of Labor, which, owing to its timeliness and importance, is here given in full. In sharp contrast with the well-known attitude of the Federation toward the organization of labor as a political force, emphatically reiterated in the program, is the recent action of the Chicago, New York, and Bridgeport labor men in voting with enthusiasm to enter the political field.

This program was drafted by the Committee on Reconstruction appointed pursuant to the instructions of the St. Paul convention of the American Federation held last June, and was unanimously endorsed by the executive council of the Federation.

THE PROGRAM

The world war has forced all free peoples to a fuller and deeper realization of the menace to civilization contained in autocratic control of the activities and destinies of mankind.

It has caused a world-wide determination to overthrow and eradicate all autocratic institutions, so that a full measure of freedom and justice can be established between man and man and nation and nation.

It has awakened more fully the consciousness that the principles of democracy should regulate the relationship of men in all their activities.

It has opened the doors of opportunity through which more sound and progressive policies may enter.

New conceptions of human liberty, justice and opportunity are to be applied.

The American Federation of Labor, the one organization representing labor in America, conscious that its responsibilities are now greater than before, presents a program for the guidance of labor, based upon experience and formulated with a full consciousness of the principles and policies which have successfully guided American trade unionism in the past.

DEMOCRACY IN INDUSTRY

Two codes of rules and regulations affect the workers: the law upon the statute books and the rules within industry.

The first determines their relationship as citizens to all other citizens and to property.

The second largely determines the relationship of employer and employee, the terms of employment, the conditions of labor, and the rules and regulations affecting the workers as employees. The first is secured through the application of the methods of democracy in the enactment of legislation, and is based upon the principle that the laws which govern a free people should exist only with their consent.

The second, except where effective trade unionism exists, is established by the arbitrary or autocratic whim, desire or opinion of the employer and is based upon the principle that industry and commerce cannot be successfully conducted unless the employer exercises the unquestioned right to establish such rules, regulations and provisions affecting the employees as self-interest prompts.

Both forms of law vitally affect the workers' opportunities in life and determine their standard of living. The rules, regulations and conditions within industry in many instances affect them more than legislative enactments. It is, therefore, essential that the workers should have a voice in determining the laws within industry and commerce which affect them, equivalent to the voice which they have as citizens in determining the legislative enactments which shall govern them.

It is as inconceivable that the workers as free citizens should remain under autocratically made law within industry and commerce as it is that the nation could remain a democracy which certain individuals or groups exercise autocratic powers.

It is, therefore, essential that the workers everywhere should insist upon their right to organize into trade unions, and that effective legislation should be enacted which would make it a criminal offense for any employer to interfere with or hamper the exercise of this right or to interfere with the legitimate activities of trade unions.

Status of Public Employees

The fixing of wages, hours and conditions of labor for public employees by legislation hampers the necessary exercise of organization and collective bargaining.

Public employees must not be denied the right of organization, free activities and collective bargaining, and must not be limited in the exercise of their rights as citizens.

UNEMPLOYMENT

Political economy of the old school, conceived by doctrinaires, was based upon unsound and false doctrines, and has since been used to blindfold, deceive and defeat the workers' demands for adequate wages, better living and working conditions, and a just share of the fruits of their labor.

We hold strictly to the trade-union philosophy and its developed political economy based upon demonstrated facts.

Unemployment is due to underconsumption. Underconsumption is caused by low or insufficient wages.

Just wages will prevent industrial stagnation and lessen periodical unemployment.

Give the workers just wages and their consuming capacity is correspondingly increased. A man's ability to consume is controlled by the wages received. Just wages will create a market at home which will far surpass any market that may exist elsewhere and will lessen unemployment.

The employment of idle workmen on public work will not permanently remove the cause of unemployment. It is an expedient at best.

There is no basis in fact for the claim that the so-called law of supply and demand is natural in its operations and impossible of control or regulation.

The trade-union movement has maintained standards, wages, hours and life in periods of industrial depression and idleness. These in themselves are a refutation of the declared immutability of the law of supply and demand.

There is, in fact, no such condition as an iron law of wages based upon a natural law of supply and demand. Conditions in commerce and industry,

Digitized by Google

methods of production, storing of commodities, regulation of the volume of production, banking systems, the flow and direction of enterprise influenced by combinations and trusts have effectively destroyed the theory of a natural law of supply and demand as had been formulated by doctrinaire economists.

WAGES

There are no means whereby the workers can obtain and maintain fair wages except through trade-union effort. Therefore, economic organization is paramount to all their other activities.

Organization of the workers leads to better wages, fewer working hours, improved working conditions; it develops independence, manhood and character; it fosters tolerance and real justice and makes for a constantly growing better economic, social and political life for the burden-bearing masses.

In countries where wages are best the greatest progress has been made in economic, social and political advancement in science, art, literature, education, and in the wealth of the people generally. All low-wage-paying countries contrasted with America are proof for this statement.

The American standard of life must be maintained and improved. The value of wages is determined by the purchasing power of the dollar. There is no such thing as good wages when the cost of living in decency and comfort equals or exceeds the wages received. There must be no reduction in wages; in many instances wages must be increased.

The workers of the nation demand a living wage for all wage-earners, skilled or unskilled—a wage which will enable the worker and his family to live in health and comfort, provide a competence for illness and old age, and afford to all the opportunity of cultivating the best that is within mankind.

HOURS OF LABOR

Reasonable hours of labor promote the economic and social well-being of the toiling masses. Their attainment should be one of labor's principal and essential activities. The shorter workday and a shorter work week make for a constantly growing, higher and better standard of productivity, health, longevity, morals and citizenship.

The right of labor to fix its hours of work must not be abrogated, abridged or interfered with.

The day's working time should be limited to not more than eight hours, with overtime prohibited, except under the most extraordinary emergencies. The week's working time should be limited to not more than five and one-half days.

WOMEN AS WAGE-EARNERS

Women should receive the same pay as men for equal work performed. Women workers must not be permitted to perform tasks disproportionate to their physical strength or which tend to impair their potential motherhood and prevent the continuation of a nation of strong, healthy, sturdy and intelligent men and women.

CHILD LABOR

The children constitute the nation's most valuable asset. The full responsibility of the Government should be recognized by such measures as will protect the health of every child at birth and during its immature years.

It must be one of the chief functions of the nation through effective legislation to put an immediate end to the exploitation of children under 16 years of age.

State legislatures should protect children of immature years by prohibiting their employment, for gain, under 16 years of age and restricting the employment of children of less than 18 years of age to not more than twenty hours within any one week and with not less than twenty hours at school during the same period.

Exploitation of child life for private gain must not be permitted.

STATUS OF PUBLIC EMPLOYEES

The fixing of wages, hours and conditions of labor for public employees by legislation hampers the necessary exercise of organization and collective bargaining.

Public employees must not be denied the right of organization, free activities and collective bargaining and must not be limited in the exercise of their rights as citizens.

COOPERATION

To attain the greatest possible development of civilization, it is essential, among other things, that the people should never delegate to others those activities and responsibilities which they are capable of assuming for themselves. Democracy can function best with the least interference by the state compatible with due protection to the rights of all citizens.

There are many problems arising from production, transportation and distribution, which would be readily solved by applying the methods of cooperation. Unnecessary middlemen who exact a tax from the community without rendering any useful service can be eliminated.

The farmers through cooperative dairies, canneries, packing houses, grain elevators, distributing houses, and other cooperative enterprises, can secure higher prices for their products and yet place these in the consumer's hands at lower prices than would otherwise be paid. There is an almost limitless field for the consumers in which to establish cooperative buying and selling, and in this most necessary development the trade unionists should take an immediate and active part.

Trade unions secure fair wages. Cooperation protects the wage-earner from the profiteer.

Participation in these cooperative agencies must of necessity prepare the mass of the people to participate more effectively in the solution of the industrial, commercial, social and political problems which continually arise.

THE PEOPLE'S FINAL VOICE IN LEGISLATION

It is manifestly evident that a people are not self-governing unless they enjoy the unquestioned power to determine the form and substance of the laws which shall govern them. Self-government cannot adequately function if there exists within the nation a superior power or authority which can finally determine what legislation enacted by the people, or their duly elected representatives, shall be placed upon the statute books and what shall be declared null and void.

An insuperable obstacle to self-government in the United States exists in the power which has been gradually assumed by the Supreme Courts of the Federal and State governments, to declare legislation null and void upon the ground that, in the court's opinion, it is unconstitutional.

It is essential that the people, acting directly or through Congress or state legislatures, should have final authority in determining which laws shall be enacted. Adequate steps must be taken, therefore, which will provide that in the event of a supreme court declaring an act of Congress or of a state legislature unconstitutional, and the people acting directly or through Congress or a state legislature should reenact the measure, it shall then become the law without being subject to annulment by any court.

POLITICAL POLICY

In the political efforts, arising from the workers' necessity to secure legislation covering those conditions and provisions of life not subject to collective bargaining with employers, organized labor has followed two methods; one by organizing political parties the other by the determination to place in public office representatives from their ranks; to elect those who favor and champion the legislation desired and to defeat those whose policy is opposed to labor's legislative de-

Digitized by Google

mands, regardless of partisan politics.

The disastrous experience of organized labor in America with political parties of its own amply justified the American Federation of Labor's non-partisan political policy. The results secured by labor parties in other countries never have been such as to warrant any deviation from this position. The rules and regulations of trade unionism should not be extended so that the action of a majority could force a minority to vote for or give financial support of any political candidate or party to whom they are opposed. Trade-union activities cannot receive the undivided attention of members and officers if the exigencies, burdens and responsibilities of a political party are bound up with their economic and industrial organizations.

The experiences and results attained through the non-partisan political policy of the American Federation of Labor cover a generation. They indicate that through its application the workers of America have secured a much larger measure of fundamental legislation, establishing their rights, safeguarding their interests, protecting their welfare and opening the doors of opportunity than have been secured by the workers of any other country.

The vital legislation now required can be more readily secured through education of the public mind and the appeal to its conscience, supplemented by energetic independent political activity on the part of trade unionists, than by any other method. This is and will continue to be the political policy of the American Federation of Labor if the lessons which Labor has learned in the bitter but practical school of experience are to be respected and applied.

It is, therefore, most essential that the officers of the American Federation of Labor, the officers of the affiliated organizations, state federations and central labor bodies and the entire membership of the trade-union movement should give the most vigorous application possible to the political policy of the A. F. of L. so that labor's friends and opponents may be more widely known, and the legislation most required readily secured. This phase of our movement is still in its infancy. It should be continued and developed to its logical conclusion.

GOVERNMENT OWNERSHIP

Public and semi-public utilities should be owned, operated or regulated by the Government in the interest of the public.

Whatever final disposition shall be made of the railroads of the country in ownership, management or regulation, we insist upon the right of the workers to organize for their common and mutual protection and the full exercise of the normal activities which come with organization. Any attempt at the denial by governmental authority of the rights of the workers to organize, to petition, to representation and to collective bargaining, or the denial of the exercise of their political rights is repugnant to the fundamental principles of free citizenship in a republic and is destructive of their best interest and welfare.

The Government should own and operate all wharves and docks connected with public harbors which are used for commerce or transportation.

The American Merchant Marine should be encouraged and developed under government control and so manned as to insure successful operation and protect in full the beneficent laws now on the statute books for the rights and welfare of seamen. The seamen must be accorded the same rights and privileges rightfully exercised by the workers in all other employments, public and private.

WATERWAYS AND WATER POWER

The lack of a practical development of our waterways and the inadequate extension of canals have seriously handicapped water traffic and created unnecessarily high cost for transportation. In many instances it has established artificial restrictions which have worked to the serious injury of communities, owing to the schemes of those controlling a monopoly of land transportation. Our navigable rivers and our great inland lakes should be connected with the sea by an adequate system of canals, so that inland production can be more effectively fostered, the costs of transportation reduced, the private monopoly of transportation overcome and imports and exports shipped at lower costs.

The nation is possessed of enormous water power. Legislation should be enacted providing that the governments, federal and state, should own, develop and operate all water power over which they have jurisdiction. The power thus generated should be supplied to all citizens at rates based upon cost. The water power of the nation, created by nature, must not be permitted to pass into private hands for private exploitation.

REGULATION OF LAND OWNERSHIP

Agriculture and stock-raising are essential to national safety and well-being. The history of all countries, at all times, indicates that the conditions which create a tenant class of agriculturists work increasing injury to the tillers of the soil. While increasing the price of the product to the consumer these conditions at the same time develop a class of large land owners who contribute little, if anything, to the welfare of the community but who exact a continually increasing share of the wealth produced by the tenant. The private ownership of large tracts of usable land is not conducive to the best interests of a democratic people.

Legislation should be enacted placing a graduated tax upon all usable lands above the acreage which is cultivated by the owner. This should include provisions through which the tenant farmer, or others, may purchase land upon the lowest rate of interest and most favorable terms consistent with safety, and so safeguarded by governmental supervision and regulation as to give the fullest and freest opportunity for the development of land-owning agriculturists.

Special assistance should be given in the direction of allotments of lands and the establishment of homes on the public domain.

Establishment of governmental experimental farms, measures for stock-raising instruction, the irrigation of arid lands and reclamation of swamp and cut-over lands should be undertaken upon a larger scale under direction of the Federal Government.

Municipalities and states should be empowered to acquire lands for cultivation or the erection of residential buildings which they may use or dispose of under equitable terms.

FEDERAL AND STATE REGULATION OF CORPORATIONS

The creation by legislative enactment of corporations, without sufficient definition of the powers and scope of activities conferred upon them and without provisions for their adequate supervision, regulation and control by the creative body, has led to the development of far-reaching abuses which have seriously affected commerce, industry and the masses of the people through their influence upon social, industrial, commercial and political development. Legislation is required which will so limit, define and regulate the powers, privileges and activities of corporations that their methods cannot become detrimental to the welfare of the people. It is, therefore, essential that legislation should provide for the federal licensing of all corporations organized for profit. Furthermore, federal supervision and control should include the increasing of capital stock and the incurring of bonded indebtedness with the provision that the books of all corporations shall be kept open at all times to federal examiners.

Digitized by Google

FREEDOM OF EXPRESSION AND ASSOCIATION

The very life and perpetuity of free and democratic institutions are dependent upon freedom of speech, of the press and assemblage and association. We insist that all restrictions of freedom of speech, press, public assembly, association and travel be completely removed, individual and groups being responsible for their utterances. These fundamental rights must be set out with clearness and must not be denied or abridged in any manner.

WORKMEN'S COMPENSATION

Workmen's compensation laws should be amended to provide more adequately for those incapacitated by industrial accidents or occupational diseases. To assure that the insurance fund derived from commerce and industry will be paid in full to injured workers, state insurance must supplant, and prohibit the existence of, employers' liability insurance operated for profit.

IMMIGRATION

Americanization of those coming from foreign lands, as well as our standards of education and living, are vitally affected by the volume and character of the immigration.

It is essential that additional legislation regulating immigration should be enacted based upon two fundamental propositions, namely, that the flow of immigration must not at any time exceed the nation's ability to assimilate and Americanize the foreigners coming to our shores, and that at no time shall immigration be permitted when there exists an abnormal degree of unemployment.

By reason of existing conditions we urge that immigration into the United States should be prohibited for a period of at least two years after peace has been declared.

TAXATION

One of the nation's most valuable assets is the initiative, energetic, constructive and inventive genius of its people. These qualities when properly applied should be fostered and protected instead of being hampered by legislation, for they constitute an invaluable element of progress and material development. Taxation should, therefore, rest as lightly as possible upon constructive enterprise. Taxation should provide for full contribution from wealth by a tax upon profits which will not discourage industrial or commercial enterprise. There should be provided a progressive increase in taxes upon incomes, inheritances, and upon land values of such a nature as to render it unprofitable to hold land without putting it to use, to afford a transition to greater economic quality and to supply means of liquidating the national indebtedness growing out of the war.

EDUCATION

It is impossible to estimate the influence of education upon the world's civilization. Education must not stifle thought and inquiry, but must awaken the mind concerning the application of natural laws and to a conception of independence and progress.

Education must not be for a few but for all our people. While there is an advanced form of public education in many states, there still remains a lack of adequate educational facilities in several states and communities. The welfare of the republic demands that public education should be elevated to the highest degree possible. The Government should exercise advisory supervision over public education and where necessary maintain adequate public education through subsidies without giving to the Government power to hamper or interfere with the free development of public education by the several states. It is essential that our system of public education should offer the wage-earners' children the opportunity for the fullest possible development. To attain this end state colleges and universities should be developed.

It is also important that the industrial education which is being fostered and developed should have for its purpose not so much training for efficiency in industry as training for life in an industrial society. A full understanding must be had of those principles and activities that are the foundation of all productive efforts. Children should not only become familiar with tools and materials, but they should also receive a thorough knowledge of the principles of human control, of force and matter underlying our industrial relations and sciences. The danger that certain commercial and industrial interests may dominate the character of education must be averted by insisting that the workers shall have equal representation on all boards of education or committees having control over vocational studies and training.

To elevate and advance the interests of the teaching profession and to promote popular and democratic education, the right of the teachers to organize and to affiliate with the movement of the organized workers must be recognized.

PRIVATE EMPLOYMENT AGENCIES

Essentials in industry and commerce are employee and employer, labor and capital. No one questions the right of organized capital to supply capital to employers. No one should question the right of organized labor to furnish workers. Private employment agencies abridge this right of organized labor.

Where federal, state and municipal employment agencies are maintained they should operate under the supervision of joint committees of trade unionists and employers, equally represented.

Private employment agencies operated for profit should not be permitted to exist.

HOUSING

Child life, the workers' physical condition and public health demand that the wage-earner and his family shall be given a full opportunity to live under wholesome conditions. It is not only necessary that there shall be sanitary and appropriate houses to live in, but that a sufficient number of dwellings shall be available to free the people from high rents and overcrowding.

The ownership of homes, free from the grasp of exploitive and speculative interests, will make for more efficient workers, more contented families, and better citizens. The Government should, therefore, inaugurate a plan to build model homes and establish a system of credits whereby the workers may borrow money at a low rate of interest and under favorable terms to build their own homes. Credit should also be extended to voluntary nonprofit-making housing and joint tenancy associations. States and municipalities should be freed from the restrictions preventing their undertaking proper housing projects and should be permitted to engage in other necessary enterprises relating thereto. The erection and maintenance of dwellings, where migratory workers may find lodging and nourishing food during periods of unemployment, should be encouraged and supported by municipalities.

If need should arise to expend public funds to relieve unemployment the building of wholesome houses would best serve the public interests.

MILITARISM

The trade-union movement is unalterably and emphatically opposed to "militarism" or a large standing army. "Militarism" is a system fostered and developed by tyrants in the hope of supporting their arbitrary authority. It is utilized by those whose selfish ambitions for power and worldly glory lead them to invade and subdue other peoples and nations, to destroy their liberties, to acquire their wealth and to fasten the yoke of bondage upon them. The trade-union movement is convinced by the experience of mankind that "militarism" brutalizes those influenced by the spirit of the institu-

Digitized by Google

tion. The finer elements of humanity are strangled. Under "militarism" a deceptive patriotism is established in the people's minds, where men believe that there are nobility of spirit and heroism in dying for the glory of a dynasty or the maintenance of institutions which are inimical to human progress and democracy. "Militarism" is the application of arbitrary and irresponsible forces as opposed to reason and justice. Resistance to injustice and tyranny is that virile quality which has given purpose and effect to ennobling causes in all countries and at all times. The free institutions of our country and the liberties won by its founders would have been impossible had they been unwilling to take arms and if necessary die in the defense of their liberties. Only a people willing to maintain their rights and defend their liberties are guaranteed free institutions.

Conditions foreign to the institutions of our country have prevented the entire abolition of organized bodies of men trained to carry arms. A voluntary citizen soldiery supplies what would otherwise take its place —a large standing army. To the latter we are unalterably opposed as tending to establish the evils of "militarism." Large standing armies threaten the existence of civil liberty. The history of every nation demonstrates that as standing armies are enlarged the rule of democracy is lessened or extinguished. Our experience has been that even this citizen soldiery, the militia of our states, has given cause at times for grave apprehension. Their ranks have not always been free from undesirable elements, particularly the tools of corporations involved in industrial disputes. During industrial disputes the militia has at times been called upon to support the authority of those who, through selfish interests, desired to enforce martial law while the courts were open and the civil authorities competent to maintain supremacy of civil law. We insist that the militia of our several states should be wholly organized and controlled by democratic principles, so that this voluntary force of soldiery may never be diverted from its true purpose and used to jeopardize or infringe upon the rights and liberties of our people. The right to bear arms is a fundamental principle of our Government, a principle accepted at all times by free people as essential to the maintenance of their liberties and institutions. We demand that this right shall remain inviolate.

SOLDIERS AND SAILORS

Soldiers and sailors, those who entered the service in the nation's defense, are entitled to the generous reward of a grateful republic.

The necessities of war called upon millions of workmen to leave their positions in industry and commerce to defend, upon the battlefields, the nation's safety and its free institutions. These defenders are now returning. It is advisable that they should be discharged from military service at the earliest possible moment; that as civilians they may return to their respective homes and families and take up their peace-time pursuits. The nation stands morally obligated to assist them in securing employment.

Industry has undergone great changes due to the dislocation caused by war production and transportation. Further readjustments in industry and commerce must follow the rehabilitation of business under peaceful conditions. Many positions which our citizen soldiers and sailors filled previous to enlistment do not exist today.

It would be manifestly unjust for the Government after having removed the worker from his position in industry and placed him in military service to discharge him from the Army or Navy without having made adequate provision to assist him in procuring employment and providing sustenance until employment has been secured. The returned citizen soldier or sailor should not be forced by the bitter urgent necessity of securing food and clothing to place himself at a disadvantage when seeking employment.

Upon their discharge, transportation and meals should be supplied to their places of residence. The monthly salary previously paid should be continued for a period not to exceed twelve months if employment is not secured within that period.

The federal and state employment bureaus should be directed to cooperate with trade-union agencies in securing employment for discharged soldiers and sailors. In assisting the discharged soldier and sailor to secure employment, government agencies should not expect them to accept employment for less than the prevailing rate of wages being paid in the industry. Neither should any government agency request or require such discharged men to accept employment where a trade dispute exists or is threatened. Nor should the refusal on the part of any of these discharged soldiers or sailors to accept employment where trade disputes exist or are threatened, or when less than the prevailing wage rate is offered, deprive them of a continuance of their monthly pay.

Legislation also should be enacted which will give the nation's defenders the opportunity for easy and ready access to the land. Favorable inducements should be provided for them to enter agriculture and husbandry. The Government should assume the responsibility for the allotment of such lands, and supply the necessary capital for its development and cultivation, with such safeguards as will protect both the Government and the discharged soldier and sailor.

CONCLUSION

No element in our nation is more vitally concerned with the problems of making for a permanent peace between all nations than the working people. The opportunities now before us are without precedent. It is of paramount importance that labor shall be free and unhampered in shaping the principles and agencies affecting the wage-earners' condition of life and work.

By the light that has been given to it, the American Federation of Labor has attracted to its fold over three millions of wage-earners, and its sphere of influence and helpfulness is growing by leaps and bounds. By having followed safe and sound fundamental principles and policies, founded on freedom, justice and democracy, the American trade-union movement has achieved successes of an inestimable value to the masses of toilers of our country. By adhering to these principles and policies we can meet all problems of readjustment, however grave in importance and difficult of solution, with a feeling of assurance that our efforts will be rewarded by a still greater success than that achieved in the past.

Given the whole-hearted support of all men and women of labor, our organized labor movement, with its constructive program, its love for freedom, justice and democracy, will prove the most potent factor in protecting, safeguarding and promoting the general welfare of the great mass of our people during this trying period of reconstruction and all times thereafter.

The American Federation of Labor has attained its present position of dignity and splendid influence because of its adherence to one common cause and purpose; that purpose is to protect the rights and interests of the masses of the workers and to secure for them a better and a brighter day. Let us therefore strive on and on to bring into our organizations the yet unorganized. Let us concentrate our efforts to organize all the forces of wage-earners. Let the nation hear the united demand from the laboring voice. Now is the time for the workers of America to come to the stand of their unions and to organize as thoroughly and completely and compactly as is possible. Let each worker bear in mind the words of Longfellow:

"In the world's broad field of battle,
In the bivouac of Life,
Be not like dumb, driven cattle!
Be a hero in the strife!"

WHAT IS PERNICIOUS POLITICAL ACTIVITY?

The opportunities for government employees to exercise the ordinary rights of citizens in a democracy are necessarily dependent upon the interpretation given by the Civil Service rule forbidding "pernicious political activity." No conscientious employee desires to use his office for political ends; and on the other hand, no self-respecting employee would knowingly sacrifice his fundamental right to work, outside of office hours, for any good cause in which he is interested.

It is possible, however, for the rule against political activity to be so narrowly interpreted as to reduce the government employee to civic helplessness. The rule has even been applied to nonpartisan activity in behalf of worthy causes, on the theory, as expressed recently in a letter from the President of the Civil Service Commission (printed in this issue), that "Any question presented to the voters at an election becomes, by the very fact of such submission, a political question." It is because of interpretations of this sort that the convention of the National Federation of Federal Employees, in September, 1918, adopted resolutions urging a modification of the rule so as to permit the exercise by federal employees of their rights in so far as nonpartisan political activities are concerned.

In his letter replying to the recommendations of the Federation, Mr. McIlhenny reminds us that "office-holders are the agents of the people, not their masters. Not only is their time and labor due to the Government, but they should scrupulously avoid, in their political action, as well as in the discharge of their official duties, offending by display of obtrusive partisanship their neighbors who have relations with them as public officials."

With this principle of service to all the people federal employees are completely in accord. They have fought for it in their organizations, and their daily service testifies that they know no parties or factions in doing the public work. But to ask them to take no part in the active duties of citizenship, to isolate themselves deliberately from the current of community progress merely because in their working hours they serve the Government and people of the United States, is to discourage the very thing the nation needs most of all today—active participation by all its citizens in the everyday tasks of democracy.

Practically applied, this theory that all activity involving elections is prohibited would mean that a government employee could not express himself publicly in favor of a bond issue for a needed public school for his children, merely because the matter would be submitted at an election; and no government employee could speak openly in favor of recognized principles of social reform because from time to time these principles are submitted to the democratic device of an election.

To be sure, the President of the Civil Service Commission offers a crumb of comfort. The government employee may "vote, think and speak privately as he chooses," says Mr. McIlhenny. In other words, he is encouraged to eschew the honest method of stating plainly, where all may hear, what he thinks, and is bidden to go whispering about among his fellows the thoughts he is allowed by a gracious Government to think and utter *privately.*

As between the government employee who honestly tells the public where he stands on current questions and the wishy-washy nimble-toed fellow who is afraid somebody may hear him express an opinion aloud, the public is quite able to judge; and public sentiment will not tolerate a gag-rule that, if rigidly applied, would result in only nonentities being allowed to hold government positions.—W. Carson Ryan, Jr., *Washington (D. C.) F. E. U. (No. 2).*

SELF-HELP—AND OTHERWISE

It is fortunate indeed for the civil service employees that the National Federation of Federal Employees has conducted in their behalf so strenuous a campaign for the desperately needed dollar-a-day emergency salary increase, assuming, as seems very probable at this time, that the amount secured will be at least double the current allowance. The only other prospect of relief lay in the Supplemental Estimates submitted by the heads of the departments and other governmental establishments. When these, inadequate as they were found to be, were unceremoniously hustled by Congress into "outer darkness," the sole hope of the employees centered on the drive for decent consideration which is being carried on with vigor by our National Federation.

In the long run it is SELF-HELP that counts every time.—J. G. G.

———NFFE———

THE A. F. OF L. RECONSTRUCTION PROGRAM

The carefully thought-out Reconstruction Program just put forth by the American Federation of Labor should receive the earnest consideration to which it is entitled as coming from the representative body of the great industrial army of the Nation. Especially should it be earnestly weighed and studied by the organized civilian forces of the Government. It is significant as showing the steady progress of the wage-earners of the country toward unity of purpose and action that the Program recognizes no line of demarcation, at least so far as certain fundamentals are concerned, between those who serve the Government and those who are in the employ of private interests. "Public employees must not be denied," reads this latest pronouncement of Labor's spokesmen, "the right of organization, free activities and collective bargaining, and must not be limited in the exercise of their rights as citizens." Herein the American Federation of Labor stands squarely in line with our own National Federation, indeed with all organized federal employees, including the railroad men, as to whom the proverbial lawyer from the Quaker City would be puzzled to say whether or not they are government employees. The Program goes beyond this position, contending against "the fixing of wages, hours and conditions of labor for public employees by legislation," on the ground that this "hampers the necessary exercise of organization and collective bargaining."

In the general field of social and economic adjustment the A. F. of L. Program contains much that touches vitally the well-being of our membership. The principles of taxation enunciated run closely parallel with those set forth in the program outlined by President Steward shortly before the Chicago Convention. The so-called law of Supply and Demand, which has been elevated into a sort of fetish, is relegated, as it should be, to the scrap-heap of an unenlightened era. All in all, the Labor Reconstruction Program is an educational document which may well form the basis for many a profitable discussion in our unions, whether all of its provisions be adopted or not.—J. G. G.

———NFFE———

The pages of our contemporary, the *Congressional Record,* contain expressions of tender solicitude lest government employees be led astray from the homely virtues of the simple life by fat salary increases which may perchance fall to their lot. This brings back to mind an incident of the famous Hughes investigation some years ago, when the president of one of the great companies assigned as a reason for not distributing dividends annually among the stockholders that the beneficiaries would not know how to spend the money wisely. Thereupon the New York *Sun* was moved to ponder seriously on the demoralization that would be caused in the household of a staid Connecticut clergyman by the sudden inpouring of a $7.49 insurance dividend!—J. G. G.

———NFFE———

The action of the House of Representatives on the temporary salary increase for 1920 is at once a partial recognition at least of the justice of the employees' claim to better compensation, and a tribute to the effectiveness of organization and teamwork within our ranks, national and local, and to the wholehearted support generously given by good friends in the House.—J. G. G.

With the Poets

They Lie in France Where Lilies Bloom

They lie in France
Where lilies bloom;
Those flowers pale
That guard each tomb
Are saintly souls
That smiling stand
Close by them in
That martyred land,
And mutely there the long night shadows creep
From quiet hills to mourn for them who sleep,
While o'er them through the dusk so silently
The grieving clouds that slowly drift to sea,
And lately round them moaned the Winter wind
Whose voice, lamenting, sounds so coldly kind,
Yet in their faith those waiting hearts abide
The time when turns forever that false tide.
In France they lie
Where lilies bloom,
Those flowers fair
For them made room.
Not vainly placed
The crosses stand
Within that brave
And stricken land;
Their honor lives,
Their love endures,
Their noble death
The right assures,
For they shall have their hearts' desire
They who, unflinching, braved the fire,
Across the fields their eyes at last shall see
Through clouds and mist the hosts of victory.

—Percival Allen in *The New York Times.*

The Lizard-Bird

Yes, a bird, if a creature of wings be that,
But a bird the most famous the world ever knew;
A strange, prehistoric, leviathan bat,
Which through forests of cycad and pandanus flew.

Elongated legs of a lizard were spread
Upon pinions of leathery crocodile skin,
And the ugly-toothed jaws of its satanic head
Were always agape in a cavernous grin.

No feather shafts grew from its umbrella wings;
No long plumes, nor down, decked its saurian tail;
And the harshest-toned bird of the air that now sings
Never uttered so hideous croakings avale.

And that was the pterodactylus of old,
A-swing through the tropical air of the time;
The shark of the sea that encircled the mold;
The dragon devouring of story and rhyme.

And the croak of its warsong was heard through the land,
Till the seas, Mesozoic, outrang with the cry;
While the terrible lizards, upreared in the sand,
Roared back the wild challenge in sport to the sky.

Little wonder we dream of the miracles fled,
And among them the dawn of our sweet-singing bird,
From the fierce lizard monsters of years, millions sped,
To the daintiest creature e'er seen, ever heard.

—Willis Edwin Hurd, *Weather Bureau, Washington D. C. (F. E. U. No. 2).*

Yanks

O'Leary, from Chicago, and a first-class fightin' man,
Born in County Clare or Kerry, where the gentle art began;
Sergeant Dennis P. O'Leary, from somewhere on Archie Road,
Dodgin' shells and smellin' powder while the battle ebbed and flowed.

And the captain says: "O'Leary, from your fightin' company
Pick a dozen fightin' Yankees and come skirmishin' with me;
Pick a dozen fightin' devils, and I know it's you who can."
And O'Leary, he saluted like a first-class fightin' man.

O'Leary's eye was piercin' and O'Leary's voice was clear:
"Dimitri Georgeoupoulos!" And Dimitri answered "Here!"
Then "Vladimir Slaminsky! Step three paces to the front,
For we're wantin' you to join us in a little Heinie hunt!"

"Garibaldi Ravioli!" Garibaldi was to share;
And "Ole Axel Kettelson!" and "Thomas Scalp-the-Bear!"
Who was Choctaw by inheritance, bred in the blood and bones,
But set down in army records by the name of Thomas Jones.

"Van Winkle Schuyler Stuyvesant!" Van Winkle was a bud
From the ancient tree of Stuyvesant and had it in his blood;
"Don Miguel de Colombo!" Don Miguel's next kin
Were across the Rio Grande when Don Miguel went in.

"Ulysses Grant O'Sheridan!" Ulysses' sire, you see,
Had been at Appomattox near the famous apple tree;
And "Patrick Michael Casey!" Patrick Michael, you can tell,
Was a fightin' man by nature with three fightin' names as well.

"Joe Wheeler Lee!" And Joseph had a pair of fightin' eyes;
And his granddad was a Johnny, as perhaps you might surmise;
Then "Robert Bruce MacPherson!" And the Yankee squad was done
With "Isaac Abie Cohen!" once a light-weight champion.

Then O'Leary paced 'em forward, and says he: "You Yanks, fall in!"
And he marched 'em to the captain. "Let the skirmishin' begin,"
Says he. "The Yanks are comin', and you beat 'em if you can!"
And saluted like a soldier and a first-class fightin' man!

—James W. Foley, *in Saturday Evening Post.*

Since the beginning of the world, classes and people have won power as they have proved themselves to be worthy of power.

Those of us who do the most toward a peaceful change will receive the most in benefits after the readjustment is over.

A Poet Enlists

And all the songs that I might sing—
  Madness to risk them so, you say?
How is it such a certain thing
  That I can sing them if I stay?

The winds of God are past control,
  They answer to no human call,
And if I lose my living soul
  That is, for me, the end of all.

Better to shout one last great song,
  Dying myself, to dying men,
Than crawl the bitter years along
  And never sing again.

—AMELIA JOSEPHINE BURR in *The Outlook*.

Of Peace

There is a righteousness that owns
  To every race its birthright to be free
From base aggression, and the force of thrones
  That throttle liberty.

There is a peace of tyranny that brands
  The brows of those who bend beneath the yoke
Of Might, that bows the stricken conquered lands
  With its imperious yoke.

Now the stern day of reckoning has come,
  And the ensanguined carnival's surcease;
After the conflict's mad delirium
  Be ours the righteous peace!

—CLINTON SCOLLARD in *Life*.

Song for Heroes

A song for the heroes who saw the sign
And took their place in the battle line;
They were walls of granite and gates of brass;
And they cried out to God, "They shall not pass!"
And they hurled them back in a storm of cheers,
And the sound will echo on over the years.

And a song for the end, for the glorious end,
And the soldiers marching up over the bend
Of the broken road in gallant France,
The homing heroes who took the chance,
Who looked on life, and with even breath
Faced the winds from the gulfs of death.
Their hearts are running on over the graves—
Over the battle-wrecks—over the foam—
On to America—on to home!

And a song for the others, the heroes slain
In Argonne forest—in St. Gobain—
In the flowery meadows of Picardy—
In Belgium—in Italy,
From brave Montello to the sea.

A song for the heroes gone on ahead
To join the hosts of the marching dead—
A song for the souls that could lightly fling
Sweet life away as a little thing
For the sake of the mighty need of earth,
The need of the ages coming to birth.

All praise for the daring God who gave
Heroic souls that could dare the grave.
Praise for the power He laid on youth
To challenge disaster and die for truth.
What greater gift can the high God give,
Than the power to die that the truth may live!

Glory to the Lord, the hero of Heaven,
He whose wounds in His side are seven—
Glory that He gathers the heroes home,
Out of the red fields, out of the foam—
Gathers them out of everywhere,
Into the camp that is over there.

—EDWIN MARKHAM
in *The New Church Messenger*.

Afternoon in February

The day is ending,
The night is descending,
The marsh is frozen,
  The river dead.

Through clouds like ashes,
The red sun flashes,
On village windows,
  That glimmer red.

The snow recommences,
The buried fences
Mark no longer
  The road o'er the plain.

While through the meadows
Like fearful shadows,
Slowly passes
  A funeral train.

The bell is pealing,
And every feeling
Within me responds
  To the dismal knell.

Shadows are trailing,
My heart is bewailing
And tolling within
  Like a funeral bell.

—*Henry W. Longfellow.*

Who Killed Cock Robin?

Who started the war?
  "Not I," says J. Bull,
  "But of it I'm full.
Go ask Kaiser Bill."

Who started the war?
  "Not I," says the Kaiser;
  "'Twas some other geezer.
Why? Who wants to know?"

Who started the war?
  "Not us," shouted France;
  "We hadn't a chance;
But, believe us, we're in it."

Who started the war?
  "Not I," says Czar Nick,
  "But I got out of it slick;
Count me out of it."

Who started the war?
  "Not I," says the Greek;
  "'Twas that dirty sneak,
Kaiser Bill."

Who started the war?
  "I did," says the Hun,
  "But I'm a son-of-a-gun
If I can finish it."

Who started the war?
  "Not I," says Uncle Sam;
  "And I don't care a (deleted),
But watch me finish it."

—M. M. BROWER in *The Field Review*.

He fails who climbs to power and place
Up the pathway of disgrace.
He fails not who makes truth his cause,
Nor bends to win the crowd's applause.
He fails not who stakes his all
Upon the right and dares to fall;—
What though the living bless or blame?
For him the long success of fame.

—*Richard Watson Gilder.*

A Tribute to Government Workers

Assistant Secretary Leffingwell, of the Treasury Department, tells how his prejudice against the civil-service employees speedily vanished after he had made their acquaintance.

IN view of statements derogatory to government workers which make their appearance from time to time, frequently from the pens of those who do, or at least should, know better, the testimony given below from an exceptionally well qualified witness is of more than passing interest. This tribute to efficient, faithful and underpaid employees daily under his observation comes from Assistant Secretary R. C. Leffingwell of the Treasury Department, forming part of the statement submitted by him to the subcommittee of the House Appropriations Committee in charge of the preparation of the Legislative bill for the next fiscal year.

"I came down here to Washington," said Mr. Leffingwell, "as a war worker and spent six months as a volunteer in the Treasury, and was appointed Assistant Secretary when it became necessary for Mr. Crosby to go abroad. Before that appointment I became very familiar in an informal way with the operation of the Treasury bureaus and of the Division of Loans and Currency, particularly, because my work was connected primarily with the liberty loans. Having come from private life, I arrived with a prejudice which too many people have, that government departments were the refuge of loafers who came to Washington from all parts of the country to live in idleness except for a period between 10 and 4, during which time they ran a reluctant pen over a piece of embossed stationery.

FOUND THE FINEST SORT OF MEN PAID MERE PITTANCES

"The first thing I discovered was that I did not know anything about what happened in government departments, if the Treasury was a specimen of government departments. Instead of that situation, here were men who were working for the merest pittance, according to any standards of living with which I was familiar, and they were working hard. I am hoping soon to follow my great chief into private life, and I cannot do less than tell you gentlemen that to my mind the public servant, if he is to be judged by those I have found in the Treasury, is the finest sort of man, doing the finest sort of work on the merest pittance; and, broadly speaking, you can do no

(Continued on page 90)

The Supplemental Estimates

Concluding the story begun in our January issue, the recommendations recently laid before Congress by department heads and other officials, for increases in certain statutory salaries for the next fiscal year are summarized below for the Department of the Interior, the Post Office Department, and the Library of Congress.

IT WAS explained in our last issue that a carefully planned schedule of higher salaries for a number of statutory positions was recently submitted to Congress by heads of departments and other executive officials, and the data for the Treasury, Navy, Commerce and Labor Departments, with other data, were given. Unfortunately for the prospective beneficiaries, the supplemental estimates met with a chilling reception at the outset, being wholly ignored in the framing of the great appropriation bills.

Study of the figures presented will enable anyone interested to get a clear idea of the character of the estimates referred to, both in the large and as bearing on the salaries of employees of various grades and branches of the government service.

DEPARTMENT OF THE INTERIOR

	Present salary	*Proposed salary*	*Increase*
First Assistant Secretary	$5,000	$7,500	$2,500
Assistant Secretary	4,500	7,000	2,500

20 elevator conductors, each	1,000
2 electricians (in lieu of 2 assistant electricians), each	1,680

A Tribute to Government Workers

(*Continued from page 98*)

greater act of justice than to recognize some of these men here whom I can name, who could step out into private life and get salaries of $10,000 a year. I assure you they are staying here now in the face of the knowledge that they could get that $10,000 a year, just because they are too fine and patriotic to injure the Government, and it would be greatly injured without their services. These men know the technique; they know the infinitely difficult laws which govern things. . . .

THE SQUARE DEAL FOR EMPLOYEES
ENLIGHTENED SELF-INTEREST

"The men I have spoken of are all civil-service men. I do not believe there is one man I have mentioned, and there is not one man in the group I have in mind, who has not been here in the Treasury since before the present administration. I imagine most of them have been there longer than one or two administrations. They are purely government men and the war has called upon them to do a great service and they have done it and they have done it without thought of their health or personal advantage. But there are many who know what they have done and what is in them to do, and they are going to be presented with opportunities to go out into private life and make themselves financially independent. Unless the Government is prepared to offer them at least that sum which will enable them to live in reasonable comfort and with the reasonable assurance that their families will be properly educated and brought up, it is not right to expect them to continue to reject the opportunities for advancement which I for one think they will be free to accept when peace comes about and these operations are finished. So I say it is just enlightened self-interest on the part of the Government to give them a square deal."

Ex-President Taft on Labor Unions

"I am very much in favor of the organization of labor. I am in favor of it not only because of what it has effected and is effecting in the interests of those who earn their living by manual labor, skilled and unskilled, but also because of the advantages it brings to the community at large.

"Can any one deny the real benefit that has been brought to wage-earners and society through the legislation influenced directly by the activity of labor organizations?

"I have therefore said, 'that were I a wage-earner, I would feel it my duty to join a labor organization.'"—*William H. Taft.*

Digitized by Google

3 carpenters, each	1,680
1 painter	1,680
2 plumbers (1 in lieu of 1 assistant plumber), each	1,680
78 laborers, each	1,000

The rates of compensation enumerated above are in conformity with the recommendation of the Secretary of Labor made recently as a result of a study and comparison of salaries paid by private establishments and the Federal Government in the various positions set forth.

The positions enumerated below are not covered by the recommendation of the Secretary of Labor, with the exception of two engineers. He recommended that engineers be paid the salary of $1,800 per annum. However, the duties of the two engineers in this department are such that it is believed that the salary of $1,680 per annum will be adequate.

1 typewriter repairer	$1,400
3 telephone switchboard operators, each	1,000
2 messengers in charge of mails, each	1,200
1 captain of the watch	1,400
2 engineers, each	1,680
2 blacksmiths or steamfitters, each	1,500
3 oilers, each	1,300
1 chief engineer	1,800
3 assistant electricians, each	1,400
2 dynamo tenders, each	1,300
1 head carpenter (in lieu of 1 carpenter)	1,800
1 awningmaker	1,680
1 foreman of laborers	1,200
1 assistant foreman of laborers	1,100
4 female laborers (in lieu of 4 laborers at $660), each	800
12 female laborers (in lieu of 1 female laborer at $540, 3 female laborers at $500, and 8 female laborers at $480), each	600

"Increases in the salaries of the positions hereinbefore set forth are," Postmaster General Burleson says, "urgently necessary not only to enable the department to maintain an adequate force but to provide a just compensation to the employees as well."

LIBRARY OF CONGRESS

Librarian Putnam submitted "the following list of positions in the Library proper, the Copyright Office, and the Card Division for which an increase in salary is earnestly recommended:"

All positions (42) at $420-$580 (inclusive) to be increased to	$600
All positions (30) at $600 and $720 to be increased to	780
All positions (74) at $780-$860 (inclusive) to be increased to	900
All positions (7) at $900 and $920 to be increased to	1,000
Certain positions (45) at $960 to be increased to	1,000
Certain positions (14) at $960 (Catalogue Division) to be increased to	1,200
All positions (32) at $1,000-$1,100 (inclusive) to be increased to	1,200
All positions (41) at $1,200 to be increased to	1,400
All positions (19) at $1,400 to be increased to	1,500
Certain positions (11) at $1,500 to be increased to	1,600
Certain positions (14) at $1,500 to be increased to	1,800
All positions (10) at $1,600 to be increased to	1,800
Certain positions (11) at $1,800 to be increased to	2,000
Certain positions (4) at $2,000 to be increased to	2,200
Certain positions (3) at $2,000 to be increased to	2,500

A total increase of $50,600.

"The Library is facing a serious situation. Since January, 1917, it has lost heavily by resignation; and it has been found almost impossible to secure, or having secured, to hold, at the existing salaries, persons who possess the proper qualifications for the work to be done.

"In lower grades, appointees continue for only a few weeks and then leave to take positions elsewhere at greatly increased compensation.

"The positions, at $1,100 and less (277), constitute 66 per cent of the entire staff (419).

"In the 22 months, there have been 428 resignations, exclusive of the terminations of temporary engagements, and the force today numbers only 400.

"And the character of the personnel has changed greatly.

"In January, 1917, there were 245 men and 179 women in the staff. In November, 1918, there are 184 men and 216 women and 19 vacancies.

"Of the 139 assistants in 1917 who had entered the service at $660 and less, 109 had had a high-school education and 28 had attended college.

"Of the 72 members of the present staff, at $660 and less, 35 (9 of them colored) have attended high school and 3 have attended college.

"Of the 93 assistants in January, 1917, who had entered the service at $720-$1,100, 50 had had a college education.

"Of the 73 members of the present staff, at the same salaries, who have entered the service since January, 1917, 10 have had a college education."

HOW MUCH DEMOCRACY?

The matter of democracy in industry, of permitting workmen to determine in large measure for themselves the conditions of their employment (not merely permitting them to choose between the employer's conditions and starvation) is a matter that is before us for action. In England the question is being answered rather generally in the affirmative. In America the movement has not developed so rapidly, because in this country class consciousness has in the past been pretty largely restricted to the immigrant population. Yet the question now being agitated of the right of civil servants to organize is fundamentally a question of the democratization of the public service.

Of course it is possible that we should not answer a question about government employment in the same way that we should answer a similar question about private employment. We might say the Government is a privileged employer. Democratic as regards the people at large, it may be autocratic toward that section of the people that accepts its emoluments. But if we take that view we are obliged to found it on something besides theory. We must take it not because it corresponds with our preconceived notions about the nature of the State, but because it serves an end that is admittedly desirable.

Now the advocates of self-government in industry base their arguments not alone, nor even chiefly, on the humanistic ideal, the ideal of justice. They go further, and say that democratized industry is more productive and more efficient than industry autocratically controlled. They say men work harder and produce more when they are working for themselves, in ways that they themselves determine. If this is true, can we afford to neglect its lesson for the civil service? Can we afford to impose an arbitrary rule on civil employees if it diminishes their value as servants of the public?

That is the point from which we ought to approach the question. Whether or not the self-determinists are right—whether or not democracy is a good thing that we can't have too much of—is a question of fact. Let us examine the facts, and then not hesitate to draw the appropriate conclusion, whether it fits our theories or not.—*Good Government.*

Political Activity of Employees

The United States Civil Service Commission, defining its position in connection with the resolutions adopted at the N. F. F. E. Chicago convention regarding political activity on the part of federal employees, declares it impracticable to make a distinction between partisan and nonpartisan activity. The Commission does not favor the action proposed by our National Federation.

RENEWED interest in the question of the right of civilian employees of the Government to engage actively in politics has been aroused by the announcement of the United States Civil Service Commission of its attitude in this important matter. This is set forth in the appended communication addressed to Executive Secretary Beach, of our National Federation, "by direction of the commission," under date of January 11, 1919, signed by President J. A. McIlhenny:

"The commission acknowledges receipt of your letter of December 16, 1918, transmitting a copy of certain resolutions adopted at the second annual convention of the National Federation of Federal Employees. A similar letter, addressed to the President, has been received by reference from the White House.

"In these resolutions the Federation indicates its objections to the restrictions imposed upon classified employees by the civil service rule which forbids activity in political affairs, and recommends that it be modified to permit the exercise by federal employees of their rights in so far as nonpartisan political activities are concerned.

"The political activity rule is the result of a series of executive orders and instructions, the first of which was promulgated during the administration of President Jefferson. It was designed to prevent the active interference of federal employees in political matters and the control of party machinery by the use of such employees. Such restrictions were also promulgated by Presidents Harrison, Hayes, and Cleveland. In 1907 the restrictions, as far as they apply to competitive employees, were made a part of the civil service rules by executive order. It was provided that persons in the competitive classified service, while retaining the right to vote as they please and to express privately their opinions on all political subjects, shall take no active part in political management or in political campaigns.

"The resolution of the Federation contemplates that a distinction be made between partisan and nonpartisan issues. The commission holds that the fact that a campaign may not mean affiliation with any of the great national political parties is not material, because one of the underlying principles of the rule is that a federal employee, who is a servant of all the people, shall not actively array himself with one group against another group upon political questions concerning which public opinion is divided. As was declared in an executive order issued July 14, 1886, officeholders are the agents of the people, not their masters; not only are their time and labor due to the Government, but they should scrupulously avoid, in their political action as well as in the discharge of their official duties, offending by display of obtrusive partisanship their neighbors who have relations with them as public officials.

"Any question presented to the voters at an election becomes, by the mere fact of such submission, a political question, and one in the solution of which a competitive employee may not actively participate. One employee could not, of course, be permitted to support a political issue, and another forbidden to oppose it, and the activity of one, while pleasing to some persons, would be offensive to others. The rule preserves to the employee freedom of opinion and the full enjoyment of the right of suffrage. He may vote, think, and speak privately as he chooses, but the rule prevents him, while in the service of the whole public, from turning his official position to the benefit of one of the parties into which that whole public is divided.

"There is no more hardship in requiring a competitive employee to refrain from active participation in political affairs than there is in placing the same restrictions, for obvious reasons, upon the judiciary, the Army, the Navy, and the police force. The regulations concerning political activity have long existed, and any person entering the service voluntarily assumes the duty of observing such regulations.

"The rule does not authorize the commission to discriminate between the different kinds of political activity, and the proposed amendment, which would require the rescinding of the rule in so far as it prohibits nonpartisan opposition on the part of federal employees to the election or candidacy of those who vilify and abuse them, does not seem to be practicable. It would be extremely difficult to make a distinction between partisan and nonpartisan activity in connection with the candidacy of a representative of a certain party. It is well known that many so-called nonpartisan campaigns are more bitterly contested and stir up more strife and ill-feeling in a community than campaigns conducted on strictly partisan lines, and the reasons which render necessary in the interests of the service regulations forbidding activity in partisan campaigns, apply equally to activity in nonpartisan campaigns.

"The commission does not, therefore, favor the amendment proposed in the resolutions of the Federation."

RESOLUTIONS OF N. F. F. E. ON NONPARTISAN POLITICAL ACTIVITY

The resolutions referred to in the letter of the commission are given below. These were offered by Miss Etheridge, who was a delegate from Local No. 46, Chilocco, Oklahoma, to the Chicago convention last September, and were adopted by that body without opposition:

WHEREAS, The Constitution of the United States guarantees to all citizens thereof the equal protection of the laws; and

WHEREAS, By a construction of a rule of the United States Civil Service Commission, That employees of the Civil Service shall not engage in pernicious political activity, and public participation in elections or nominations of public officials has been held to constitute such pernicious political activity; and

WHEREAS, Certain individuals holding elective offices under the United States Government have wantonly attacked the employees of its Civil Service, branding them as "loafers" and "slackers," and have through them assailed the dignity and honor of the entire Civil Service establishment; and

WHEREAS, The federal employees who have thus been subjected to contumely and contempt, have been denied by the rule and construction of the Civil Service Commission aforesaid any opportunity to defend themselves against their attackers; therefore, be it

Resolved, By the National Federation of Federal Employees, in convention assembled, That the construction of the rule against pernicious political activity which prohibits non-partisan opposition on the part of the federal employees to the

election or candidacy of those who vilify and abuse them should be rescinded, and that a construction should be adopted which will permit the exercise by federal employees of their rights as citizens in so far as non-partisan political activities are concerned; and, be it further

Resolved, That a copy of this resolution be transmitted to the Civil Service Commission, the President of the American Federation of Labor, and the President of the United States.

Since the days of our Chicago convention the question of political activity on the part of government employees has assumed new importance, owing largely to the order issued by former Director General of Railroads McAdoo, which restricted, or at least sought to restrict, the political sphere of the employees of the railroads taken over by the Government. That this view is not accepted by the railroad men is clearly shown by the statement which appeared recently in the official organ of the "Big Four" brotherhoods, *The Railroad Trainman,* from which the following excerpt is taken:

It is not our idea of democracy to deny the right to hold office on the ground that a man out of office enjoys a greater degree of self-government than he will if he becomes an active legislative or official part of that government. We accept no such doctrine now or at any other time. We don't propose to give up our political rights any more than we do to surrender our industrial rights. We don't propose to let anybody lead us up an alley simply because he believes it is a good place for us to be. We belong on Political Main street and we propose to stay there.

The Reconstruction program of the American Federation of Labor, just published, which appears elsewhere in this number, is directly in line with the contention of the railroad employees, declaring that public employees "must not be limited in the exercise of their rights as citizens."

Although it is recognized that the abstaining of government workers from the full exercise of their rights as citizens might lead in some cases to the more gentle and ladylike conduct of political contests, there are many who still maintain that the gain in social amenities would be more than offset in the loss to virile democracy. It is safe to say that the end is not yet, and that much water will run under the bridges before the organized workers of the country, in whose ranks federal employees are to be found in ever-increasing numbers, will consent to forego free exercise of the political rights enjoyed by other citizens.

GUIDE TO OFFICIAL PUBLICATIONS

Bulletin No. 2, 1918 Series, of the Bureau of Education, Department of the Interior, compiled by W. I. Swanton of the United States Reclamation Service. For sale by Superintendent of Documents, Washington, D. C. Price, 20 cents.

A complete description of the executive departments and the numerous independent establishments and war bureaus in the midst of their war-time activities is included in this interesting publication, which is the only bulletin so far issued by any government department describing in a comprehensive way all of the various government activities and the organization of the same with respect to the central Executive—the President.

Washington is the home of the biggest printing office and bookstore in the world. In addition to printing billions of cards and business forms for the Government there are printed each year about a hundred million publications for Congress and the executive departments. In order to meet a demand for a reasonably concise description of the scope of these numerous publications this bulletin has been compiled.

The book is divided into 11 parts, 1 for each of the 10 executive departments and 1 for the independent establishments, including the war boards and bureaus.

The part devoted to each bureau or office in general gives the information in the following order: Titles of principal administrative officials, general information and duties, general publications, methods of distribution, annual and other periodical publications, indices, mailing lists, and maps.

The appendix includes a list of the depositary libraries in each city of the United States where government publications may be found, a table of the number of employees in the various departments, and a list of government libraries in the District of Columbia.

Every person who desires to know of the organization of the Government at Washington will want a copy of this book and it should be in the library of every person who desires to keep in touch with what is being done in the capital of the nation.

It is hoped, now that a book of this kind has been issued, that it will be revised at intervals and new editions issued to keep it abreast with the growth and development of the National Government and its increasing activities.—*Reclamation Record.*

House Discusses Salaries

(*Continued from page 98*)

Mr. Chairman, I ask the Clerk to read the letter carried in the editorial which I send to the desk.

The Clerk read as follows:

I am the wife of a Federal employee who receives the large sum of $720 per annum, and also the mother of seven dependent children.

I would like to rear my children to be honest and respectable citizens, but how in the name of God can I do it with such starvation wages? As a rule, the poor man has a large family, and it is the poor man that contributes the majority of soldiers and sailors to his country. Uncle Sam expects his soldiers to be strong and brave, but I would like to ask some of those Congressmen how they expect the future soldiers and sailors to be strong and brave when in their infancy they are underfed and deprived of the necessities of life.

Mr. BLACK. Mr. Chairman, I expect to support the recommendation of the committee, as it is already written in this bill to grant salary increases of $120 to all of those government employees who receive $2,500 or less, except certain enumerated exceptions which have been provided for in other bills, such as postal employees. At the present session I voted against the proposition to increase the salaries of the federal judges. I did not do so because of any lack of respect for the federal judiciary, nor because of any undervaluing of their work, but I voted against the proposed increases because I believed the salary which they now receive is a good one and is ample to support themselves and their families in comfort. And I want to pause right here long enough to speak about a matter of criticism which I have recently observed in the press and elsewhere with reference to the salary of $12,000 paid to our Cabinet officers. Most of the printed discussion which I have seen in the papers was in advocacy of increasing the amount.

I do not agree to that proposition. I think that one of the things most needed in the United States today among our rich and well-to-do is to get back to the old-fashioned simplicity of living which used to be the rule to a much greater extent than it is today.

It is one of the laws of economics that in a period of war inflation prices of commodities rise much more rapidly than do wages and salaries, and when that period of war inflation has passed the reverse is true and the prices of commodities fall more rapidly than wages and salaries. Of course, there are some exceptions, but

Digitized by Google

this is undoubtedly the rule. Now, every sensible man knows that we have been passing through a period of unprecedented war inflation. The prices of commodities have risen rapidly and many of them to very high figures. But it is also undoubtedly true that the period of war inflation has reached its crest, and that there will be a fall in the prices of commodities, and this fall will increase the purchasing power of the dollar and thereby increase the value of the wage. This will within itself amount to an increase in wages in so far as its effect is concerned. Therefore, in view of the facts, present and prospective, and in view of the need for at least a reasonable amount of economy in government expenditures, I will support the recommendation of the committee to increase these salaries $120 per annum rather than the amendment now proposed to make the increase $360 per annum.

Mr. NOLAN. Mr. Chairman, my colleague from Idaho [Mr. Smith], if he were here, would be in favor of this amendment. Unfortunately he has been sick for the last two days, and he asked me to have incorporated in the *Record* a letter received from the president of the United States Civil Service Commission and some statistics which he received from the Housing and Health Division of the War Department regarding the appointments and separations from the civil service from the month of March, 1918, to the month of December, inclusive, showing a total of 75,588 appointments and 40,718 separations. Out of the 75,588 employees who came here, 40,718 were dissatisfied and returned to their homes, or approximately that number, figuring those who had been here prior to March of last year, who had separated themselves also. I desire to have that incorporated in the *Record* along with the letter to Mr. Smith, who would have supported this amendment.

The letter and statement referred to are as follows:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., January 15, 1919.
Hon. ADDISON T. SMITH,
House of Representatives.

MY DEAR MR. SMITH: I inclose herewith a statement showing by months the number of appointments to and separations from the government service in Washington from March to December, 1918, inclusive. This information was prepared by the Housing and Health Division of the War Department from reports of the several departments and independent establishments. The information was not prepared for the earlier months of the year.

There has been much discussion of the inadequacy of salaries paid by the Government, but dissatisfaction with pay received is only one of a number of reasons for resignation from the government service.

Very respectfully,
JOHN A. MCILHENNY, *President.*

December...	3,276	4,993	.....	1,717
	75,588	40,718	.....	.....

Mr. NOLAN. Now, Mr. Chairman, I want to call the attention of the Congress to the way we have been treating the employees under our care, compared with the way that the employees of the Government under the care and jurisdiction of the various boards created by Congress, who have jurisdiction over wages and salaries, are treated. The Railroad Wage Board, the Wage Adjustment Board, and the War Labor Board have been active in taking up the question of wages of the employees of the Government of the United States, and those employed by contractors on contracts with the Government of the United States, and in many instances the War Labor Board has adjudicated disputes between the employer and the employee in private industry. Now, take the case of the Railroad Wage Board. The Railroad Wage Board gave exhaustive study to the condition of the railroad wages of this country and gave an increase to every man in the employ of the railroads of this country receiving $3,000 a year and less, giving the largest increase to the poorest-paid employee. The Wage Adjustment Board, the Emergency Fleet Corporation, adjusted wages, and in this instance and in the case of the War Labor Board they based their findings upon the increased cost of living. Now look at the difference between the boards, the institutions created by Congress to deal with employees, and Congress itself. You give a flat increase of $10 per month to both the lowest-paid employee and those receiving salaries up to and including $2,500 per annum.

This committee has given no consideration whatever to the actual increase in cost of living of government employees, whereas the increases allowed by the Wage Adjustment Board, the Railroad Wage Board, and the War Labor Board have been based on increased prices. This is the only fair way to treat this wage and salary question, and if we were as just as our wage boards and commissioners we would be paying a great deal more money to the government workers than the amendment of the gentleman from Colorado provides for.

Mr. SISSON. Mr. Chairman, I wish the members of the committee would stop and consider one minute what this amendment means. This bill carries in round figures about $90,000,000. This amendment will add in the neighborhood of $40,000,000 to this bill, making the legislative, executive, and judicial appropriation bill about $136,000,000 instead of $90,000,000. Now, the next session you gentlemen are going to have control of the House. This is a most radical increase in salaries. The purpose of the committee a year ago in putting the $120 increase into the bill was for the purpose of taking care of the physical increase in the cost of food.

Mr. MOORE of Pennsylvania. I want to know if the gentleman referred to the $120 amendment or the $360 amendment.

Mr. SISSON. The $360 amendment.

Mr. MOORE of Pennsylvania. And that carried $40,000,000 increase?

Mr. SISSON. Yes; more than the present bill. Now, there is objection made to the fact that everybody gets the $120 increase, but the percentage of the increase on the lower-paid salaries is very much greater than on the higher-paid salaries. Now, it is a most difficult matter to adjust salaries. If you were to undertake to adjust salaries in all the departments of the Government you have got a man's job for at least a year; and the great difficulty in adjusting salaries is, first, to determine the character of the work done by the employee, and even then you ought to know something about the efficiency of the employee. We have no proper efficiency system in this Government. Now, this $120 is a gratuity.

I am going to call your attention to one fact: This bill will carry $360 increase for the teachers of the District of Columbia, and yet the basic salary of the teachers' pay in the bill that just passed the House is higher—the basic salary of the teachers in the graded school—than in any other city in the United States. And when you add to it the longevity pay, they are the best paid school-teachers in the United States, irrespective of whether you complain about low-paid or high-paid teachers. I have now in my office reports on 20 or 30 cities and from the State Superintendents in which they give the basic salary. The city of Philadelphia, in the high-school grades, pays a little better salary than the District of Columbia. In the city of Chicago, in the higher grades they pay a little better salary than in the District of Columbia; but in what is the graded-school districts the higher salary, irrespective of the regular longevity increase, is paid in the District of Columbia. And if you take

the employees in the District of Columbia and compare them with like employees of all the city governments in the United States, the average pay and the base pay are higher for like work than in any city in the United States. You may take the clerk hire here and the clerk hire in the city of New York, and in the city of Philadelphia, and in the city of Chicago, and for like work we are paying a higher wage in the District of Columbia now than they pay there; and this committee, in view of the fact that there was a congested condition of population here, in view of the fact that there was a condition here which did not prevail in other cities, notwithstanding the fact that they were getting a higher average pay than other cities, added $120, which would cost some $17,000,000 for the employees of this Government. Gentlemen, you had best think before you thoughtlessly adopt the $360. I hope you will vote it down.

Mr. GALLAGHER. Mr. Chairman, before it is decided that what the gentleman says is a fact I think it would be well to look up a few of the statistics regarding not only the pay of teachers but the pay of government employees everywhere——

Mr. SISSON. I have.

Mr. GALLAGHER. Of government employees particularly. Now, we were very charitably disposed in the early part of this week, and we voted $100,000,000 to take care of the poor in the Old World, and I was in favor of it. Now, I am one of those who believe that charity should begin at home just the same, and if it is anywhere necessary to do charity I think it is among the poorly paid government employees of the United States, regardless of what they get or what you propose to give them.

My colleague from Illinois [Mr. Mason] referred to a condition in Chicago. How can a man in a big city, who has a family and gets only $60 a month, live upon that amount and support his family? And I would like to know by what kind of reasoning they can be said to be getting good pay. Now, I have a copy of the petition that the gentleman from Illinois [Mr. Mason] called your attention to, and I wish to say that they are having the most difficult time to retain people in the government service in order to do the work that is necessary in the Federal Building at Chicago. It is one of the greatest government buildings in the country—not the kind of a building that it ought to be; it is a makeshift. The conditions in that building under which these people work are simply deplorable. Now, I

am in favor of being half decent, at least, with the employees of the Government. We passed a bill here the other day for $27,000,000 for the improvement of rivers and harbors—rivers where there is no commerce at all. I did not hear any very great amount of opposition to that bill. That is a waste of money. But whenever there is a proposition here to raise the pay of an employee, I have noticed ever since I have been a Member of Congress, when we want to raise wages, there are always people anxious for the time to oppose any such proposition. I hope the amendment will pass.

Mr. MANN. Mr. Chairman, governments, as a rule, rarely pay high salaries, and ought not to do so. The pay is certain. There is no danger of bankruptcy. But while the government ought not to pay high salaries, a government which can exist at all ought to be able to do justice to its employees, to the men who work for it. We have been lavish in expenditures of money in many directions, frequently when I was in opposition to the proposition. Can we now afford not to increase the salary, but to refuse to do justice, to the employees of the Government? Everywhere throughout the land in private employment men and women have received an advance in pay much more in proportion than is proposed by the pending amendment—a demand that came and a demand that was conceded because of the great increase in the cost of actual living. It would not perhaps be the best time now to fix permanent salaries of government employees, because we all hope that the cost of living will be reduced, though I do not apprehend that it will go back to where it was before the war in years to come, if it ever does. We can afford, inasmuch as we are a great Government, to pay living wages to the men and women who work for the Government. We can not afford to pay starving wages to them. It is not right to ask it. It is not right to expect it. It is no answer to say that these men can leave the employ of the Government. The question is, Can the Government itself afford to be just in its dealings with those who work for it? I think the Government can afford to be just, as I think private employers are forced and compelled by circumstances to be just. These people will not lay up great supplies of money even with the increase that is proposed here. But they ought to receive pay enough to give them decent living, allow them to have children, and provide some education for their children. I think we can afford to be economical in many directions, but not by starvation wages to those who work

for and really maintain the work of the Government itself. [Applause.]

Mr. WOOD of Indiana. Mr. Chairman and gentlemen, the gentleman from Texas [Mr. Black] said the thing to do was to go back to the simple life. I dare say, the government employees that are receiving $60 or $75 a month would like to see the gentleman from Texas or some one else with mighty power, wave his magic wand and bring them back to the simple life. Take the things that the poor man has to buy—the man who is working for the Government at $60 or $75 a month to keep his soul and body together and to keep the soul and body of his family together. He has to pay 85 cents a dozen for eggs. All character of vegetables have increased in price from 200 to 400 per cent. Take the case of a family such as that spoken of by the gentleman from Tennessee, consisting of a wife with seven little children, where the wife cannot get enough for one day's wage of her husband to enable her to give to each of her children a bit of meat.

That is the condition that is confronting us now, a condition not brought about by these men and women working for these wages, which would seem ample in ordinary times when we were back in the simple life. Yet we see this spectacle today in the case of people working on salary, clerks and people under government employ, who are the poorest paid people in all the United States. The average section hand on a railroad today is getting $90 a month. A car knocker, whose business it is to sound the wheels when the train rolls into the station to see whether the wheels are safe or not, gets $150 a month. The average jack-leg carpenter gets $8 a day. Your government clerks get only $60 a month—the same as they got before we entered into this war, and before the present high prices of commodities obtained. Something must be done in common justice, in common humanity, to relieve this situation. [Applause.]

Mr. SNYDER. Mr. Chairman, in my judgment there is justification for this increase from $120 to $360 which has been asked for. I have in mind an increase that has taken place in a manufactory which manufactured during the war period a semi-essential. The average wage rate in that factory, including men, women, and children, during April, 1917, was $17.71 per week, some getting more and some less, or $930.92 per annum, whereas in December last, December 28 of last year, 1918, the average weekly rate for every man, woman, and child was $27.61, or $1,425.72, or an average increase per annum of $494.80.

This proposed increase here, in my judgment, is not more than any employee of the Government should have had to compensate for the difference between the high cost of living at this time and the cost of living previous to the war.

Of course, I am in hope, as every one else is, that during the period that we are now legislating for the necessities will decrease in cost to some extent, and while I shall support the $360 proposition, yet, in view of the great possibility, in my judgment, of a decrease in the cost of living during the period that we are legislating for, I would prefer to vote for an amendment that would provide for an increase of $240 instead of $360.

Mr. STAFFORD. Mr. Chairman, there is no question but that there are some inequalities in the pay of some of our government employees, but a survey had a year ago as to the comparative salaries of those in civil employment with those in public employment, so far as the clerical force was concerned, showed that, notwithstanding the shortage of labor and the mounting prices in civil employment, which were at the peak, yet the government salaries were greater than those paid in private employment. Yet on top of that the committee came in here and recommended an appropriation of $120. Now it is sought, because of this organized effort on the part of federal employees throughout the country, to raise that to $360.

The commissioner of internal revenue has at his disposal in this bill $21,000,000 for the collection of internal revenue. In the last year, under the authority vested in him, he has revised the pay of all those officials, ranging from $1,400 up to $2,500 and above. You plan to give the stenographers in the District here, who are receiving $1,200 or $1,400, more than is being paid in private employment, where they are obliged to work with greater intensity and where they are not allowed thirty days' leave, an increase of salary of $360, amounting to a total drain on the Treasury of $28,000,000.

Oh, it is easy enough to come and ask for this great increase, but if you vote it you will never withdraw from it, because it will be there always to haunt you.

Now, we are providing for a commission here to equalize salaries. For years in the Committee on Appropriations I have been seeking to raise the salaries of the lower-paid officials, those receiving $720 and $840, but my efforts have been unavailing. This year the effort failed by a tie vote. I want to see *those salaries raised, but I protest against the unfair method that is being adopted by the organized*

employees of the country in trying to raid the Treasury now by asking for a higher allowance, when it is admitted that the cost of living will go down. No one who has studied this question can deny but that the Government is a better employer than private employers. No one can deny that in these clerical positions we pay more than private employers.

Oh, true, we pay the charwomen $240 or $320 for two hours' work a day. They have other employment. True, we voted to the postal employees $200 increase. Those employees are persons employed out in the field, who are, in most cases, married; but the great majority of the employees provided for in this bill are single persons, receiving on an average $1,200 a year, and now you propose in one fell swoop to *raid the Treasury to the extent of $28,000,000 just because they have become organized. If we are going into government ownership of railroads and other public utilities, let us here and now establish the record that we will not be stampeded by raids on the Treasury by organizations of federal employees merely writing to us and asking increased salaries* when they are being paid more than private employees, and who are only too glad to retain their government positions because they are easier and better paid than those in private employment. They do not resign from the government service [*note report on page 106 of 40,718 separations from government service, March to December, 1918.*—EDITORS] and there is no better proof of the fact that their salaries are better than those in private employment, when there were plenty of opportunities for employment under private employment, than the fact that they did not resign.

Mr. MASON. I want to say to the gentleman that he is mistaken and that these government employees do resign, and that I hold in my hand here a pile of letters written by men working for $60 a month who left those places to get $5 and $6 a day. They do resign; and their resignations impair not only the credit and good standing of your Government but they impair the service; they impair the sanitation; they impair the care of the public buildings of this country.

Mr. STAFFORD. Is there an official who states that they impair the government efficiency? Can the gentleman cite one instance where any government official makes that charge?

Mr. MASON. I can if you will give me the time; I cannot in a minute and a half. But I say that in the city of Chicago the federal building there is not being properly cared for. I do not intend to burden the *Record* with all these letters of resignation, but I

Digitized by Google

ask leave to make a synopsis of them. It is not true that for the same service the Government is paying as much as private employers in the city of Chicago. Elevator men there in private employment are getting from 50 to 75 and 100 per cent more than they are getting from the Government of the United States and they do resign, and in a way that throws discredit upon the Government of the United States. I understood that the charwomen worked more than two hours a day for $27 a month; but in the great City of Chicago they have got to pay their carfare, they have got to go at a particular time to do that work, and it is a fact that we are impairing the service and discrediting the good name of the Government of the United States.

PERSONAL EXPERIENCE LETTERS, CUSTODIAN SERVICE

[Extracts.]

"I am employed at a salary of $55 per month. I have a wife and two children dependent upon me for support and am compelled to deprive myself and family of all amusements or recreation. My wife is compelled to work in order to make both ends meet."

—

"I have a wife, three children, and a mother to support. I have to work after office hours, because $60 per month is not enough to keep my family in health. When I think of what we passed through last winter, I could wish that God would take my children out of their suffering rather than stand by helpless."

—

"The salary which I am receiving as charwoman does not bear my expenses, and therefore I am compelled to do other work to support myself and three children."

—

"I am employed at a salary of $660 per annum. I am compelled to seek work on the outside in order to make both ends meet. Amusements are out of the question. Should I become ill I do not know what would become of my family, because it is absolutely impossible for me to lay aside one cent for any contingency."

—

"I am employed at a salary of $60.60 per month and have to do outside work in order to meet my expenses, and they are getting worse. And my wife has to work in order that she may help clothe herself and our child."

—

"I am a single man endeavoring to take care of my parents, who are becoming feeble with age, and I am unable to live off my present salary of $60 per month. I am, therefore, forced to seek evening employment, which prevents me from taking rest after the completion of one job."

—

"I only get $60.50 a month and have five in the family. My wife has to do laundry work to help when she is able, and after putting in a day's work at the postoffice I have to hunt other work in order to get by."

—

"My small salary of $840 per annum is not sufficient to support my family. In order to make both ends meet I have been compelled to work from 4.30 a. m. to 8.30 p. m. I am compelled to live in the country at a disadvantage in order to cultivate a few

acres of land and raise some chickens. This all means hardship, and even using these means it is a struggle to live. I never know what a day's pleasure or holiday is, for it is work all the time to meet the necessities of life."

—

"During the last three years I have rented a small farm and begin the day at 4.30 and work until about 7 a. m. and then leave my home, for the city, and on returning home in the evening I begin again and work until about 9 o'clock and sometimes 10 o'clock at night, and take all of my 14 days' holiday to work on the farm."

—

"Employed as messenger at $840 per annum. I have a wife and five little children, and find the compensation inadequate for the support of my family, even with the utmost economy, and am obliged to seek work at night. Our compensation has not been increased for many years."

—

"My salary as charwoman is $25 a month. I have to seek employment outside in order to take care of myself and blind daughter."

—

(Another employee in the same service writes that his salary being insufficient to support himself and his wife and children, he is obliged to gather rags after office hours when he should be resting.)

—

I am employed in the United States public stores, and have not only been forced to do outside work at night in order to live but I have been compelled to take my 15-year-old boy out of school in an effort to keep up, and then I am unable to do so on my present salary of $70 per month, with a bonus of $10 for this year only. I have a wife and three children under 16 years of age, and in keeping with American citizenship it is necessary that I keep my children looking decent and respectable, have a comfortable home, keep them comfortably clad during the winter, and give them an education, if for no other purposes than becoming good American citizens, that they may not of necessity become a burden on us or our country. Could you do this with the above salary? Furthermore, I was compelled to utilize the 14 days given me this year as annual leave to work in a packing house at $4 per day. Is it possible that an individual who works for the United States Government has to go outside to take extra work because of the inadequate salary paid by the Government, and also keep his children out of school (which in itself is a disgrace to the Government) in order to earn the necessaries of life?

Gentlemen, can you tell me how the standard of American citizenship can be attained at the present cost of commodities on a wage of $70 per month? And how I am to call in a doctor in case of necessity at $3 or $5 a visit?

Mr. LANGLEY. Mr. Chairman, I am glad to have the privilege of casting my vote for such a just and righteous measure as this is. I know from my own experience as a former employee of the executive branch of the Government what conditions in the departments have been and what they are today. I would vote even for a larger increase than is proposed in the cases of persons who are in the lower salary grades. There is where the privation really exists.

Mr. SHERLEY. Mr. Chairman and gentlemen of the House, I think it is well not to be swept off our feet

Digitized by Google

touching certain conditions that may need pronounced remedying, to which the gentleman from Illinois [Mr. Mason] has referred, and in order to deal with such a situation we ought not to deal with a great many others that do not present anything like the equities that may exist in regard to the cases he speaks of. Now, if you want to increase the compensation of the employees of public buildings over the country, the place to do that is in the sundry civil bill, when you get to the item that makes provision for the care and maintenance of those buildings; but a desire to deal with that situation is no reason why you should now vote to increase the pay of a great many clerical people who are getting more money than is being paid for the same sort of work out in civil life; and it is not wise for us here to be swept off our feet at the expense of the Treasury to the extent of something like $30,000,000 or more by these special pleas. [Applause.]

Mr. KEATING. Mr. Chairman, I am sure the members of the House will not be swept off their feet either by the arguments for or against this amendment. They will not be swept off their feet by the charge that these government positions are so desirable that no one ever resigns a government job, when the gentleman from California [Mr. Nolan] has just quoted figures to show that here in the city of Washington there were 75,000 appointments and 40,000 resignations in the period of a year.

Mr. NOLAN. In less than a year.

Mr. KEATING. In less than a year. That shows how desirable these government jobs are considered. And yet gentlemen tell you that there is a great scramble for these places.

Now, my friends, this bonus is asked to compensate government employees for a condition that we know exists, to wit, an increase in the cost of living. It is not necessary to submit statistics. Every man within the sound of my voice knows that since the beginning of the European war there has been an increase in the cost of the necessaries of life of at least 100 per cent, and that the government clerk who was getting $1,200 a year at the beginning of the European war is now, so far as purchasing power is concerned, receiving only $600 a year. Within the last year there has been an increase of 81 per cent in the cost of living, and prices are still going up.

It is also true that the Government of the United States, dealing with other employees, with those who are on the railroads of this country and in the shipyards of the country, through the War Labor Board, has granted awards on account of the increase in the cost of living that make

this proposal seem small indeed. All we are asking you to do is to treat the clerical employees of this Government with the same generosity and the same justice that has been accorded to other employees of the Government.

I hope, Mr. Chairman, that the amendment will be adopted, because it only does substantial justice to the employees of this Government, and it will add immeasurably to the efficiency of our service.

Mr. GOOD. Mr. Chairman, I am sure we do not want to do injustice to the men and women who are engaged in the government service. Neither do we want to do injustice to the Treasury of the United States. Let us stop a minute and see what it is contemplated to do. We have passed an appropriation bill for the Post Office Department, and in that have given an increase of $200 to the men who work outside of the city of Washington, but for the 90,000 government employees in Washington you propose to give an increase of $360 a year. The statute fixes the pay of common laborers at $660 a year. We give them seven legal holidays with pay. We give them sixty days' vacation every year with pay. In addition to Sundays and these vacations, you propose now to fix the standard here for common laborers, the commonest laborer, at $1,020 a year. I say that any man who votes for that and then hires a man in his own employment and pays less than that is a different kind of individual than I think sits on the floor of the House. You propose to pay charwomen by this measure $440 a year for three hours' work, at a maximum, per day; and any member of the House who will vote for this proposition and then employ in his own home one of these same charwomen and pay her less than that is unworthy to sit here on the floor of the House. Let us be fair. Let us treat the Treasury with the same consideration that we treat our own pocketbooks. The standard we fix today must be the standard that the business men of the country must adopt. When the committee was considering this matter a girl from one of the congressional districts represented by one of the members of the subcommittee, who came here at $1,200 a year, paid out of a lump-sum appropriation in the War Department, and whose salary was increased to $1,400 a year, was notified that her services were no longer necessary. She came and asked this member to get her a job in Washington, and said she would take $1,000 a year, for that was more than she was getting at home; and yet this amendment would give her and thousands similarly situated $1,750 per year. Let us think of the Treasury. The Agricultural Department says that

Digitized by Google

next year the guaranteed price on wheat will cost the Treasury $1,000,000,000, which means, if they are to be relied upon, that the price of all food must come down during the period for which we are making this appropriation. Let us make this appropriation in fairness to the employee, but for God's sake let us think something of the Treasury of the United States at the same time, and let us remember that you and your constituents will be called upon to supply with funds, to buy bonds, to make good the amount that you are voting out today. Let us be fair to all of them. I wish we could go into this matter; I wish we might take the time to consider it, so that we could see that the committee has been fair, absolutely fair, to these employees of the Government; and in order to be sure that we were fair we provided for a commission that would go into this whole question and then in a broad way, without taking dictation from any source, determine what was a fair wage for all of these employees in the various departments, and upon that report base legislation that would be absolutely fair to all our people, both the Government and those who work for it.

Mr. GORDON. When does the increase provided for in this bill go into effect?

Mr. GOOD. It is for the fiscal year beginning July 1 next.

Mr. BYRNS of Tennessee. Mr. Chairman, I hope we will look at the proposition presented to the committee in a fair way, with regard not only to the employees of the Federal Government, but also the taxpayers who have to foot the bills. I have noticed that in the remarks of these gentlemen who have appeared in support of this amendment not a single reference has been made to the taxpayer whom they represent on the floor of this House. Here is a proposition that contemplates adding $50,000,000 to the expenses of the Government by way of a bonus to the federal employees at a time when the people of this country are being taxed billions of dollars to pay the expenses of the war in which we have been engaged, and the interest upon the bonds which have been issued during that war. We are asked to add $50,000,000 to this bill as a bonus at a time when the revenue bill is now pending in conference, which proposes to tax the people $6,000,000,000 for the next fiscal year in order to meet the expenses of your Government. and in addition to that we are confronted with the necessity of issuing four or five billion dollars in bonds to make up the deficiency. It is time to call a halt; it is time to take into consideration those back home, who will be required to pay the appropria-

tion you are proposing to make. The question is going to be asked of you when you get back home whether or not you gave them due consideration in these matters.

What are the facts? A year ago this proposition was before the House. It was given a thorough consideration. There was thorough argument upon the proposition, and the House by vote during war times fixed the bonus at $120 a year. That, I repeat, was during war times, at a time when the expense of living was certainly higher than it can possibly be during the next fiscal year. You are now asked to fix the bonus at $360 a year, or three times the former amount, in peace times, during the fiscal year 1920, during which no man on the floor of this House will say the cost of living will be greater than it has been during the present year.

What are you going to tell the people you represent back home when you are confronted with the proposition that you voted to increase that bonus during peace times? How can you explain such a position when you declined to make any such increase during war times? How, under such circumstances, can you justify your action in increasing the government expenditures $50,000,000? Now, gentlemen have referred to the fact, and they have commented upon the small amount paid to certain employees of the Federal Government. I am in favor of this Government giving a fair compensation and a living wage to everyone whom it employs. I want the United States Government to be a model employer, and I believe the facts will show that in many respects it is a model employer.

Gentlemen have spoken of the $60 and $70 employee. I want to say to you that this amendment offered by the gentleman from Colorado does not take care of him. It takes care of the man who gets $1,200 and more, for he is the only employee under this amendment who will draw the whole $360. The man who gets $2,500 will get $2,860 if this amendment be adopted; the man who gets $1,800 will get $2,160; but the little man, the man whom you and I would like to see helped, does not get the $360 under this amendment offered by the gentleman from Colorado.

Mr. MASON. I ask for information. It does include charwomen who get $27 a month now?

Mr. BYRNS of Tennessee. They do not get the whole amount of $360 under this amendment that is before the committee.

Mr. MADDEN. Will the gentleman yield? Does not this bill provide that no person under this clause shall get

more than 30 per cent in addition to their present salary?

Mr. BYRNS of Tennessee. That is the provision to which I alluded.

Mr. MADDEN. So that a charwoman who gets $240 now will only get 30 per cent of that $240, or $72 additional?

Mr. BYRNS of Tennessee. Or $6 a month, just what she is getting today and will continue to get during the next fiscal year.

Mr. MASON. Then it does include charwomen?

Mr. MANN. Under the form of the bill would it not be necessary to make first an amendment to the amendment offered by the gentleman from Colorado before amending the other provision?

Mr. BYRNS of Tennessee. I do not know what is in the mind of the gentleman from Colorado; I only know what he has offered here to this committee, and I know that he could have included charwomen and the man getting $60 or $70 a month in the same amendment if he had desired to do so; but what I am calling attention now to is the fact that if we adopt this amendment you are voting to give the man who gets $2,000 and $2,500 $360 extra and you are not taking care of the smaller paid employee to whom the gentleman from Tennessee and others have alluded.

I want to say, Mr. Chairman, that you committee gave this matter very serious consideration. We had hearings upon it, we considered it from every angle, and we felt for the reasons which have been stated here upon this floor, and the fact that during the next fiscal year the cost of living cannot possibly be more than it has been during war times, that we would not be justified in reporting to this House a flat provision greater than that which has been carried in war times and which would increase the expenditure of the people $50,000,000. Now, your committee realize that there are many inequalities in the salaries paid by the Federal Government. Your committee realize that some of these salaries may be too small, but I want to ask whether you are going to give this proposed increase and raise those who are getting the larger salaries on the plea that you are trying to help the little fellow. What your committee propose, and what I hope will be adopted by this House, is a joint commission which will take into consideration this whole proposition and after giving it full consideration report to the House as to what salaries should be allowed these employees, not only to those getting these larger sums, but particularly to those who are getting the smaller amounts.

Mr. AUSTIN. Does not the gentleman think in all fairness that a mem-

ber of this House who voted to increase his own secretary's salary $1,200 should vote for this amendment?

Mr. BYRNS of Tennessee. I can only say to the gentleman that I did not vote to increase my secretary——

Mr. AUSTIN. The gentleman did not answer my question.

Mr. BYRNS of Tennessee. And more than that, I want to say that those gentlemen who voted to increase the compensation for clerk hire did not do so, as I understand them, with a view of increasing the secretary they have now, but they did so with a view of providing for an additional stenographer. And they say that $1,200 a year is sufficient for a stenographer, and if $1,200 is sufficient to pay for a busy stenographer, who works all hours of the day here at the Capitol, then I want to ask the gentleman why they think stenographers in the departments, who get, as the gentleman from Iowa said, seven days' holiday, sixty days' leave on full pay, and Sundays, are entitled to more. [Applause.]

Mr. O'SHAUNESSY. Mr. Chairman, I desire to offer an amendment to the amendment, if it is now in order, by substituting the figures "$240" for "$360."

[The Committee of the Whole then defeated (ayes 33, noes 91) the O'Shaunessy amendment, thus refusing to substitute $240 for $360, the latter being the amount fixed by the Keating amendment. The question recurring on the Keating amendment, substituting $360 for $120, the amount named in the bill, it was voted down (ayes 67, noes 93). By a vote of 94 to 79 the Committee of the Whole agreed to an amendment offered by Representative Nolan, substituting $240 for $120. Chairman Sherley of the Appropriations Committee then offered an amendment, explained below.—EDITORS.]

Mr. SHERLEY. Mr. Chairman, with the permission of the committee, I wish to say that the effect of this amendment is simply to make consistent the paragraph so as not to penalize the poorer-paid employees. The committee has just voted to give to the employees a bonus of $240, speaking by and large. As the act was presented by the committee, it would have prohibited any bonus that was in excess of 30 per cent, so that, although the total amount for the higher-paid employees had been doubled, the effect for the lower-paid employees would be to leave them in just the same situation as they were in. I believe the House, if it wants to increase the pay, wants particularly to increase the pay of the poorer and lower-paid people. Therefore I offer this amendment.

Digitized by Google

Mr. MANN. I am glad the committee has waked up.

Mr. NOLAN. Would it not have suited better if you had inserted on line 24 the words "who is receiving in excess of $1,000?"

Mr. SHERLEY. No; because there are some instances in which you would not want to make the total increase $240, due to the fact that the employees do not devote their entire time to the work. If this is agreed to, in order not to break the curve, where the figures "$2,620" occur, I wish to offer an amendment to make it appear "$2,740."

The amendment was agreed to.

Mr. BLACK. Mr. Chairman, I have an amendment which I send to the Clerk's desk.

The Clerk read as follows:

Amendment offered by Mr. Black: Page 148, line 21, after the word "railroads," insert the following language: "telegraph, telephone, marine cable, or radio system or systems," and on line 23 of the same page after the word "railroads," insert the following language "telegraph, telephone, marine cable, or radio system or systems," so that the provision as amended will read:

"The provisions of this section shall not apply to the employees of the railroads, telegraph, telephone, marine cable, or radio system or systems taken over by the United States, and nothing contained herein shall be deemed a recognition of the employees of such railroads, telegraphs, telephone, marine cable or radio system or systems as employees of the United States."

After being modified to include express companies, the amendment was agreed to.

The Clerk then proceeded with the reading of the bill, as follows:

SEC. 8. That a joint commission is created to be known as the "joint commision on reclassification of salaries," which shall consist of five Senators, who will be Members of the Sixty-sixth Congress, to be appointed by the President of the Senate, and five Representatives who will be Members of the Sixty-sixth Congress, to be appointed by the Speaker. Vacancies occurring in the membership of the commission shall be filled in the same manner as the original appointments.

Mr. BYRNS of Tennessee. Mr. Chairman, a similar provision to this was adopted on the Post Office Appropriation bill with reference to postal employees. It went through without a point of order being made against it. I hope the gentleman [Mr. WALSH] will not make the point of order now, because it has been stated here on the floor of the House, and it is true, that there are a number of employees here in the District of Columbia who are getting very small salaries, while there are other employees who are getting salaries that are larger than is being paid for similar clerical services in other departments. In short, there is the greatest inequity, the greatest want of uniformity, running through all of the

departments with reference to salaries. I think the next Congress can, after a report is made by a commission consisting of five Senators and five Representatives, pass through here some legislation which will correct these inequalities and do justice to these employees. Members have said on the floor that government employees are not receiving now the amount of money that is being paid in private employment. That I do not admit; but if it is true, then it can be corrected upon a proper report. I trust the gentleman will not make the point of order, but will permit it to go through, just as he did with reference to the Post Office Appropriation bill. I regard this as very important. Let us get the facts and then do the right thing both by the Government and its employees.

Mr. WALSH. Mr. Chairman, I agree with the gentleman that the next Congress, I think, will be able to correct inequities much better than the present Congress, but it will not need a joint commission to furnish information in order that it may do so. The gentleman refers to the Post Office Appropriation bill. No one could make a point of order on that bill. One afternoon here when there were very few people present, before any of us knew what was in the Post Office Appropriation bill, unanimous consent was granted that everything in the bill should be considered in order notwithstanding the rules of the House. We have just corrected inequities in salaries, at least that was the argument made by those advocating the $240 increase, and we are not going to further correct those inequities by having a joint commission comprised of five members of the House and five members of the other body to report during the next Congress. For all we know, before they get a chance to organize we may be back here at work on the regular work of the Sixty-sixth Congress. I submit to the gentleman that to expend $50,000 in addition to the great amount of money that will have to be appropriated to carry this $240 increase will not be worth the candle. I make the point of order.

Section 8, as above, providing for a "joint commission on reclassification of salaries," was then ruled out by the Chairman, who sustained the point of order.

On the Committee of the Whole reporting the bill to the House, a yea and nay vote was ordered on the Nolan amendment, substituting a $240 salary increase for $120, which was agreed to—yeas, 202, nays, 79, "present" 3, not voting 146, as follows:

Yeas — 202. — Anderson, Anthony, Aswell, Austin, Baer, Bankhead, Birch, Bland (Ind.), Browne, Burroughs, Campbell (Kans.), Campbell (Pa.),

WAR-SAVINGS SERVICE
The Government wishes to enlist every man, woman and child of the Nation in war-savings service. When an individual buys war-savings stamps he enlists in the production division of the Nation, thereby supporting and backing up the fighting division which is in France and on the seas.

Put the Nation First

The fruits of victory would turn bitter if we failed to harvest them now. United effort is needed as much in the work of reconstruction as in winning the war. So let us continue to work together in the spirit that we should not put our own interests above the interests of the nation.

Price Scale Fixed by Organized Employees

New York City photo-engravers' union lays down minimum price scale to be charged for work, so that the business can pay adequate wages. Employers accept the situation.

IT USED to be thought that employees, like children, "should be seen and not heard," but that this idea is passing, along with other medieval conceptions, is indicated by the recent action of the Photo-Engravers' Union in New York City in making their particular line of industry safe for democracy. Competition may be the life of trade in theory, but its practice had resulted in a cut-throat system of under-bidding which had reduced wages to a point below that of unskilled labor in the steel mills.

Accordingly, a committee was appointed last May which, five months later, after careful consultation with employers, presented a new minimum price scale intended to insure fair dealing all around. In October E. J. Volz, president of the union, issued a letter enclosing the "minimum selling base for photo-engravings as adopted by the members of this union for their protection, the disregard of which will result in our requesting the withdrawal of our members from your employ." And the employers "kameraded."

Three factors contributed to make this possible—first, all but about 75 of New York's 1,400 or more photo-engravers are union members; second, the trade conditions are simple, the product distinctive work for individual customers who come into personal contact with the workers; and, third, a reciprocal agreement binding the employers against non-union labor, and pledging the union to work for none but the employers' association—the Photo Engravers' Board of Trade.

Of course, the new scale will drive some orders to other cities, but the engravers say they prefer to do less and better work, and may be trusted, no doubt, not to commit industrial suicide by prohibitive prices.

If this venture proves finally successful, the example will probably be followed where conditions are such as to justify a trial.

Or Twenty Dollars' Worth of Coal!

Mother.—Baby is so cute! Today she went to the delicatessen and tried to buy a 3-cent loaf of bread.

Father.—Some day that child will go into a jeweler's and try to buy a nickel's worth of diamonds.—*Cartoons Magazine.*

Comptroller's Decisions

Mileage—Naval Officer Proceeding to Place Where Vessel May Be Located

Where an officer of the Navy who was ordered to proceed to the port in which a certain vessel might be and report to the commanding officer thereof neglected to ascertain from official sources the exact location of said vessel but traveled to various places in pursuance of verbal orders or advice, such travel without definite knowledge was not contemplated in his orders and the officer is not entitled to mileage except by way of the shortest usually traveled route to the location indicated.—*Decision by Acting Comptroller Foree, November 6, 1918.*

Insurance on Law Books Loaned to Officer of Government

Where certain law books were loaned by the publishers to an officer of the Food Administration upon his personal request and responsibility for use as a working library for that establishment, a premium of insurance on said books is not a proper charge against the Government either as part of the consideration under the agreement, since the Government was not a party thereto, or on a quantum meruit basis for the use of the books.—*Decision by Acting Comptroller Foree, November 6, 1918.*

Mileage of Army Officers

An officer of the Army retired for disability and ordered to his home is not entitled to mileage under said order unless the travel contemplated thereby is actually performed.

An officer of the Army sent under escort to St. Elizabeth's Hospital for observation and treatment is not traveling under orders within the meaning of the mileage law and therefore is not entitled to the allowance for such travel.—*Decision by Acting Comptroller Foree, November 6, 1918.*

Bonds—Pay Clerks, Naval Reserve Force

The promotion of a pay clerk, Naval Reserve Force, to the position of assistant paymaster therein, being an original entry into the Pay Corps proper, under section 1560, Revised Statutes, such an officer may not receive pay and allowances of the higher grade prior to the date of approval of his new bond.

The official bond of a pay clerk, Naval Reserve Force, given and approved while holding that appointment, does not remain in effect upon promotion to assistant paymaster, or apply to such new appointment and commission.—*Acting Comptroller Foree to Lieut. F. D. Foley, United States Navy, November 7, 1918.*

Pay of Reserve Officer Relieved From Active Duty

An officer of the Reserve Corps of the Army who is relieved from active duty and placed on an inactive-duty status by competent authority is not entitled to active-duty pay for the period elapsing between that date and the date of honorable discharge.—*Decision by Acting Comptroller Foree, November 9, 1918.*

Retired Naval Officers on Active Duty

The temporary appointment of an officer of the Navy, if made according to seniority, is a promotion "in due course" within the meaning of the act of August 29, 1916, and, accordingly, such temporary appointment may be used to determine the promotion to which a retired officer next above that officer in lineal rank would have attained had he remained on the active list.—*Decision by Acting Comptroller Foree, November 12, 1918.*

Stoppages of Pay of Enlisted Men, Army

Savings deposits of enlisted men of the Army and interest thereon are exempt under the act of June 12, 1906, from liability for debts due to individuals, to meet a sentence of court-martial imposing forfeiture of pay or allowances, and for the soldier's private debts, but are not exempt from liability for debts due the United States. Allotments of all classes and war-risk insurance premiums should be deducted from the soldier's pay, clothing money, and deposits on final statements in cases where such allotments, etc., are clearly shown to be debts due the Government.—*Acting Comptroller Foree to the Secretary of War, November 12, 1918.*

Expenses Incurred at Post of Duty

Where an employee of the Navy Department was in fact transferred to a new station under orders which purported to place him in a travel status while en route and for 10 days after arrival thereat, and at a later date further orders were issued purporting to give to the employee a temporary status for the period of service at the new station, the original orders having been acted upon with full understanding that they effected a transfer to a new post of duty, the orders subsequently issued which in no way affected the employee's course of procedure may not be given a retroactive effect so as to authorize reimbursement of expenses incurred at a regular post of duty.—*Decision by Acting Comptroller Foree, November 16, 1918.*

Retainer Pay, Marine Corps Reserve

In computing retainer pay of enrolled members in enlisted ratings of the Marine Corps Reserve under the provisions of the act of July 1, 1918, all service should be counted as if served continuously in the Marine Corps and divided by four into periods of four years corresponding to periods of enrollment in the Naval Reserve Force. (25 Comp. Dec., 247, overruled.)—*Comptroller Warwick to the Secretary of the Navy, November 20, 1918.*

Printing for Field Service

The printing of tags to be used in the investigations of the Bureau of Biological Survey, Department of Agriculture, is printing for the use of a field service of an executive department and, accordingly, is not within the restriction of section 87 of the act of January 12, 1895. Such tags when blank may be purchased through the General Supply Committee and authority be obtained for their printing elsewhere than at the Government Printing Office.—*Comptroller Warwick to the Secretary of Agriculture, November 18, 1918.*

Allowances for Assistant Postmasters and Clerical Services

The proviso in the act of July 2, 1918, authorizing the employment at third-class post offices of assistant postmasters at a maximum salary is an authorization given to the Postmaster General and is distinct from the provision in said act for an allowance to postmasters at such offices for clerical services.—*Comptroller Warwick to the Postmaster General, November 20, 1918.*

Flying Pay of Officer on Duty Where Flying is Not Required

Flights made by an officer of the Army detailed to duty involving actual flying in aircraft which are made after receiving orders to duty where flying is not required do not entitle said officer to the additional pay provided for such service.—*Comptroller Warwick to Capt. Jerome Clark, Quartermaster Corps, United States Army, November 22, 1918.*

CHICAGO, ILLINOIS

FEDERAL EMPLOYEES

The up-to-the-last-minute management in non-public industries finds it pays to provide employees with sanitary lunch rooms in which are used tables with pure white enameled iron bases and snow white glass-like tops, especially the variety with the raised rim (SANI-ONYX) and white enameled iron stools and SANI-ONYX Serving Counters.

Instead of losing money in providing employees with sanitary furniture and wholesome food, actual profits result through increased efficiency and a contented mind in a healthy body.

It is a good business venture and not philanthropy or charity, because loyalty and enthusiasm result to those who try to serve the welfare of employees.

Whatever you are getting is up to you

HOW CAN I HELP?

Members of our organization often say to the editors: "I am greatly interested in the magazine. What can I do to help?"

This is an admirable spirit, a spirit which, if translated into action, will go further than anything else toward making THE FEDERAL EMPLOYEE what we all wish it to be—OUR MAGAZINE, the magazine of each and every member of the N.F.F.E.

Members CAN DO MUCH toward this end. Among other things they can—

Let the editors know often what features of the magazine they like or do not like, giving reasons for their preferences, and, if possible, constructive suggestions in the way of betterment.

Contribute articles, letters, poems, and magazine and newspaper clippings on topics of general interest to our readers. Especially desirable are items regarding the personnel, doings, needs, and plans of our locals; suggestions as to improved methods of transacting government business, and means by which employees can increase their own efficiency; and letters discussing briefly and pointedly the various questions in which federal employees in general, as such, are most vitally interested.

Do not forget pictures. THE FEDERAL EMPLOYEE can use to advantage a large number of pictures, particularly those illustrating government buildings of note and government activities. You may happen to run across, for instance, the picture of a famous building that has figured in the history of the civil service; a group of employees engaged in carrying on some special kind of work, etc.

When in doubt as to the availability of any material, why not send it to the editors or make inquiry of them regarding it?

In this connection you should read our current prize offer on page 144, and on the same page the notice of the time for closing our forms.

THE FEDERAL EMPLOYEE

Vol. IV MARCH, 1919 No. 3

"On the Hill"

A kaleidoscopic situation in which the combinations change almost hourly is the order of the day. By the time this is read the grist will have run through the mill. Whatever the results, government employees will have the satisfaction of knowing that everything possible was done for the promotion of their just and proper interests.

AS THE fateful fourth of March, the date on which the present Congress will expire by constitutional limitation, steadily draws nearer the condition of things "on the Hill," speaking in a legislative sense, goes from bad to worse. There is a constantly increasing pressure from day to day in both Houses for the consideration of a large number of important measures, many of them of great moment to the entire nation, yet it is certain that many of these, not to mention hundreds of other measures scarcely less deserving, are doomed to failure for lack of attention.

To attempt a statement of any length at this time (February 19) regarding the outlook for the principal matters before Congress in which federal employees are particularly interested would be useless, as the situation with respect to any or all of these may change overnight. Suffice it to say that the officers of our National Federation charged with the duty of guarding the interests of our membership are following the policy of "watchful waiting" (with emphasis on *watchful*), not omitting every opportunity to cause the desired thing to "turn up" even unwillingly. By the time this issue of THE FEDERAL EMPLOYEE shall have reached its readers they will know what the future now holds in store for them and their fellows in the way of legislation on salaries (including the minimum wage), retirement, standardization and reclassification and many other matters of vital concern to those who serve Uncle Sam in civilian capacities. Regretting that circumstances do not permit a more satisfactory treatment of the subject, THE FEDERAL EMPLOYEE can only express the hope that it will find our readers in at least a fairly well satisfied state of mind when it shall find its way to them.

$240 Increase Assured

The Senate on February 20 agreed to the $240 emergency salary increase for 1920 voted by the House, with $120 for the employees of the War Risk Insurance Bureau. An amendment raising the amount to $360 *was ruled out on a point of order.*

The Senate adopted an amendment providing for a commission on reclassification of salaries, to be composed of three Senators and three Members from among those whose service is to expire March 4, 1919, *the investigations of such commission to be confined to federal employees on duty in the District of Columbia and employees of the government of said District.*

The need for reclassification and standardization of duties and salaries in the government service outside of Washington is believed to be as urgent as it is at the seat of the National Government. It is certainly very urgent, as testimony before congressional committees abundantly shows. Just why, therefore, Congress should "make fish of one and flesh of the other" is not apparent. It is almost common knowledge that the entire government service is rife with amazing discrepancies and inconsistencies with regard to salaries, hours of labor, duties, and other conditions.

The Federation will make earnest protest too against the limitation of membership upon the commission to members of the present Congress. It is feared that, in practice, this will confine the choice to members who fail of reelection, with the result that, as the class from which selection must be made is by the action of the Senate sharply limited as to number, there would be but little room, relatively speaking, for the exercise of selection.

Readers of THE FEDERAL EMPLOYEE will recall that the plan urged by the Federation was a commission on which the public, the Government, and the federal employees should have equal representation, and that in the membership of such a commission women should have representation.

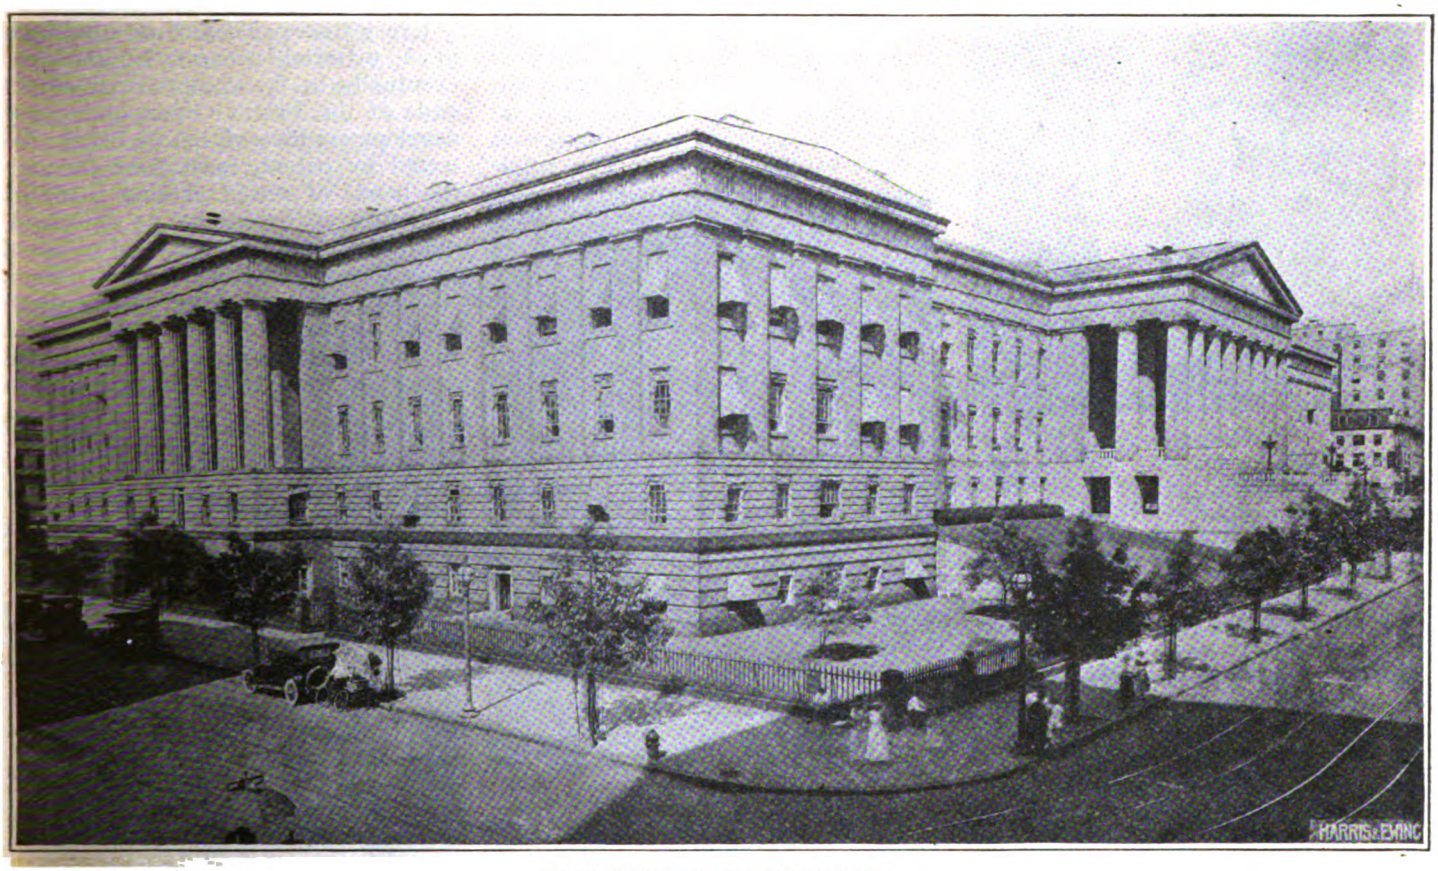
The Story of the Patent Office

The word "Patented" on the multitude of articles around us conceals three hundred years of history. In this article Brother Wyman traces the growth of the Patent System, showing clearly the important part played by our Patent Office, despite handicaps past and present, in organizing the system and adapting it to American requirements, with the result that today our country stands preeminent in this field of achievement. The influence of invention, wisely fostered, on our national development is emphasized.

By WM. I. WYMAN

Member of the Examining Corps, United States Patent Office, and of the Washington (D. C.) Federal Employees Union



UNITED STATES PATENT OFFICE

THE PATENT system, by which a limited monopoly was granted to an inventor as a reward for his services to the community, originated in England. The famous "Statute of Monopolies," enacted in 1623, abolished all exclusive economic privileges but established the right of an inventor to receive as a reward from the state a grant commensurate with the services rendered. Thus the very act which first recognized the reprehensible character of private monopoly was the means for establishing, for the first time in history, the right of patent protection.

EARLY DAYS OF THE PATENT SYSTEM IN AMERICA

The first patent granted on this continent was to Samuel Winslow, by the General Court of Massachusetts in 1641, for a novel method of making salt. Connecticut also was early active in encouraging invention and required, as the basis of a patent grant, that the invention "shall be judged profitable to the country." The spirit of the "Statute of Monopolies" was thus promptly carried over to this side of the water and was followed more faithfully in some of the colonies than in the mother country, where it originated.

The basis of the patent system in the United States is a provision in the Constitution giving Congress the power to secure to inventors for limited times an exclusive right to their respective discoveries. Madison was mainly instrumental in introducing this provision into the Constitution. The first legislative enactment was the law of 1790, which was placed on the statute book after Washington had addressed Congress in its favor. Under it, the Secretary of State, the Secretary of War, and the Attorney-General constituted a board for the examination of applications and grant of patents. The first Secretary of State was Thomas Jefferson, and as he was, through his office, the keeper of the records, he became in fact the first administrator of the patent system in this country. He was exceedingly interested in this duty and was the most active member of the board, examining personally every application filed during his term.

ESTABLISHMENT OF PRESENT PATENT SYSTEM BY CONGRESS

In 1793 the Patent Act was changed so as to permit anyone to obtain a patent, whether or not he was the original inventor and whether or not his con-

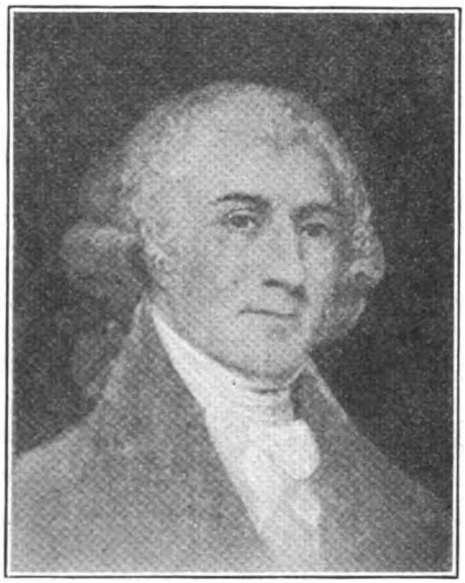
JOHN RUGGLES

tribution was useful or novel. In 1836 the present system was established by an act passed through the efforts of Senator Ruggles of Maine. This law instituted the so-called American method of granting patents only after a thorough examination into the utility, operativeness, and novelty of the inventions, and provided the machinery and the procedure for carrying out the purpose of the act. It created a revolution in the methods of granting patents comparable in effect with the institution of the patent system itself. It is under the system so inaugurated that the Patent Office is now operating, and so superior is this method over any other that every civilized and progressive country in the world, with but one exception, has adopted it.

BUILDINGS OCCUPIED BY PATENT OFFICE, PAST AND PRESENT

In 1810 Congress authorized "the purchase of a building for the accommodation of the general post office and of the office of the keeper of patents." The building purchased had been known as Blodgett's Hotel, situated on E Street between Seventh and Eighth Streets northwest, and in 1811 the business of the Patent Office was moved from a house on Eighth Street, just below F Street, to the second floor of the new building, where it remained under the superintendence of Dr. Wm. Thornton until his death, which took place in 1828. Dr. Thornton was the first superintendent of the Patent Office, the position having been created for him by President Madison. In 1836 these quarters were destroyed by fire and Congress then authorized the erection of the present building. The original, or F Street wing, was finished in 1840, the east wing in 1852, the west wing in 1856, and the north wing in 1867. The total cost of the building has been about $3,000,000. In 1877 a disastrous fire broke out on the third floor of the G and Ninth Street wings, destroying many records and models.

The Patent Office building is 403 feet long by 274 feet wide; it surrounds a court approximately 264 by 106 feet. The portico in the center of the F street front, copied from the architecture of the Parthenon at Athens, is a noble and impressive feature of the building. The whole



DR. WM. THORNTON
First Superintendent of Patents.

structure, viewed from any angle, presents an artistic and dignified appearance, and is an ornament to the city and a worthy monument to the designer and its projectors.

GROWTH, ORGANIZATION, AND METHODS OF GRANTING PATENTS

Since 1836 more than a million and a quarter patents have been issued. The Patent Office began its existence with a commissioner, one examiner, a clerk and two other clerks having the necessary qualifications of draftsmen. The office force now includes a commissioner, two assistant commissioners, five law examiners, a board of appeals of five members, forty-eight examiners having the rank of principals, about 360 assistant examiners, and a clerical force numbering approximately 525.

There are forty-five examining divisions, each in charge of a principal, who has under him six to eight assistant examiners. Each division passes on distinct subjects of invention, representing the entire range of human endeavor in tangible effort. Whether the invention pertains to a hairpin or a cantilever bridge, a perfume or a deadly gas, a process for mounting jewels or for extracting and refining metals, a new toy or a new engine of destruction; whether it is mechanical, chemical, or electrical, as simple as a pin or as complex as a newspaper printing press; there will be found in the Patent Office experts possessed of the requisite knowledge to understand the invention, its operation, and the field occupied by similar attempts.

Every material device or operation in a material process is disclosed eventually in the comprehensive records of the Patent Office, and every development thereof, before being protected by patent, must pass through the hands of the examining force of the office, to be critically scrutinized, subjected to amendment, and rejected or accepted. Virtually all the members of the examining force are college graduates, most of whom hold degrees in both law and science, such combined education and training being found to

HALL OF THE ASSIGNMENT AND RECORDING DIVISIONS
(Formerly G Street Model Hall)

make for efficiency in the discharge of their important duties.

The assistant examiner, by whom applications for patents are originally dealt with, must know the "art" relating to the invention disclosed. He

Digitized by Google

must be at least tolerably familiar with the patents and literature in various languages covering similar inventions, must understand the principles, both scientific and technical, of the devices he is examining, and must be acquainted with related devices scattered throughout the office. He must be able, of course, to read drawings and must have so detailed a knowledge of the principles of, and decisions in, patent law as to be able to correspond intelligently and to hold his own in controversy with the alertest attorneys, many of whom represent the largest manufacturing interests in the country.

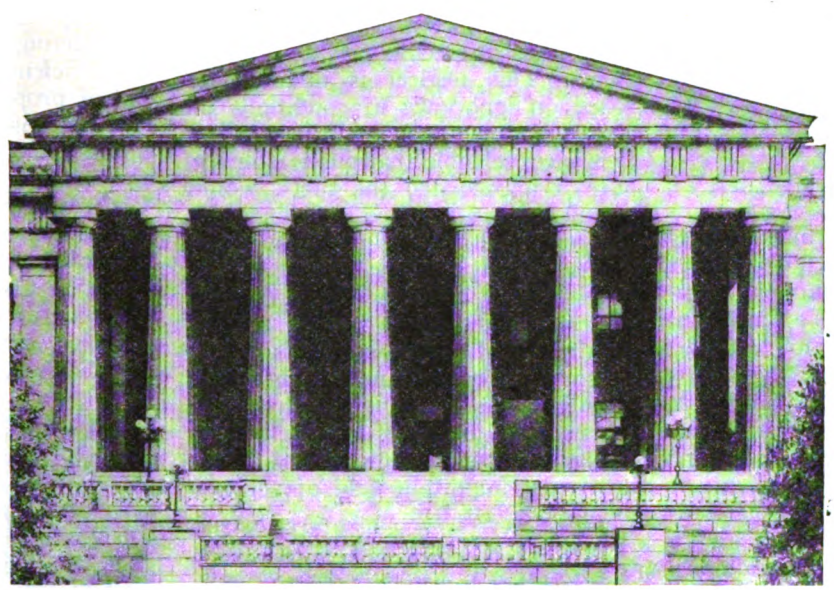
The primary examiners are the immediate superiors of the assistant examiners. Each of them is in charge of several classes of inventions, and his decision, if in favor of an application, is final. It is estimated that the adjudications of the primary examiners involve property rights reaching into hundreds of millions annually. A single invention — the Bessemer converter process —has been held by one authority to have doubled the wealth of the world.

In addition to the examining corps, the technical and legal organization of the Patent Office consists of interference examiners, a trade-mark examiner, a classification examiner, a board of examiners-in-chief, a staff of law examiners, and a commissioner and assistant commissioners. The interference examiners decide who is the earliest of several inventors having conflicting claims for the same invention; the board is an appellate tribunal, which hears and decides cases passed on adversely by a lower tribunal; while the commissioner has still further appellate jurisdiction. From the commissioner a final appeal lies to the Court of Appeals of the District of Columbia.

The work of the classification examiner and his assistants is probably the most involved in the office. As before stated, more than a million and a quarter patents have been granted in this country. Probably upward of a billion facts are disclosed in these patents, each more or less concrete and all more or less associated in different combinations, involving several more billion arrangements of a greater or less number of units. The effectiveness of the search of the examiner is wholly dependent on the character of this classification, consequently the importance of a scientific classification is evident. The office has wrestled with this problem for about twenty years, at an expense of more than half a million dollars, and hopes to secure eventually a complete and workable scheme.

BEGINNINGS OF THE MERIT SYSTEM IN THE CIVIL SERVICE

An interesting historical fact is the institution by Commissioner of Patents Fisher, in 1869, of the competitive examination system for entrance into the examining corps, thus anticipating by many years the general introduction of the merit system for government appointments. This is believed to be the first appearance of this feature in the history of our civil service. The requirements of the position of examiner were such as to make it dangerous to the rights of inventors and manufacturers to place in control of the technical and legal administration of the work untrained men selected by haphazard appointment through favoritism. Thus, force of circumstances compelled the establishment and retention in the Patent Office of the merit system long in advance of its endorsement by public sentiment and its general adoption through legislation.



PORTICO OF F STREET FRONT OF PATENT OFFICE

INFLUENCE OF INVENTIONS ON HISTORY OF UNITED STATES

Apart from her material resources the United States owes her commanding position in the economic sphere more to the inventive genius of her people than to any other single factor. The development of those material resources is due mostly to the processes and mechanisms which have resulted from invention. Unaided labor, that is, primal human energy, would have been of but little avail in extracting the enormous wealth from the bowels of the earth, in gathering the immense crops, in producing the stupendous output of steel and other metals in the mills and refineries, in fabricating the huge quantities of manufactured articles that come from the factory and shop, and in transporting the raw and finished materials that make up our almost unlimited tonnage of rail and shipping. Without the influence of invention we could not conceive of the modern world as developed from the old world of manual operations. Without such inventions as the steam engine, the locomotive, the steamship, the telegraph, the telephone, the automobile, the trolley car, the electric light, the dynamo, the motor, the reaper, the cotton gin, the printing press, the smelting furnace, our present civilization could not exist. To invention alone do we owe vastly increased production of the fruits of the earth and of the materials of manufacture; to invention alone must we look for such further increment of wealth that the reasonable aspirations of every civilized being may be provided for.

As the world must depend on the solution of social and economic problems for the proper and equitable distribution of the products of labor, so it must be through the agency of invention that sufficient wealth in the aggregate shall be produced to make possible a high average of comfort and well-being. Not only is invention the means by which the increased productivity necessary for the betterment of the economic state must be accomplished, but it is the medium through which the worker may express his ideas in the way of improving processes and machines. Invention is the direct means for advancing the worker's state, and many of the greatest inventors have come up from the ranks at the bench, the lathe, in the shop and the laboratory. It is the most democratic of opportunities, and its rewards (where the intent of the system is attained) are the most equitable.

Of all the countries in the world the United States has benefited most by invention. Her inventors form the most notable list in the sphere of applied science, and their contributions

Digitized by Google

are the wonder and the envy of her competitors for industrial supremacy. To the cotton gin the South largely owes her prosperity, and the Northern textile mills a sufficient supply of raw

THOMAS EWING
Former Commissioner of Patents.

material; to the McCormick reaper the West owes in no small degree her development and the country a plentitude of food products. To the patent system as instituted in this country, which has most encouraged and protected and thus stimulated invention, do we owe this advantage primarily. In a recent address by Sir Robert A. Hadfield of Sheffield, England, one of the world's greatest inventors, a leading authority on metallurgy, and a steel manufacturer of world-wide reputation, he said:

As showing how Patents for Inventions strike a "new" nation, it may be mentioned that the Japanese Government, when considering the establishment of a patent system on the lines of that created by the American Patent Act of March 1, 1899, appointed Mr. Takanashi their special commissioner to Washington, D. C. On being asked why the people of Japan desired to have a patent system, he replied: "It is only since Commodore Perry in 1854 opened the ports of Japan to foreign commerce that the Japanese have been trying to become a great nation, and we have looked about us to see what nations are the greatest, so that we can be like them, and we said: "There is the United States not much more than 100 years old, and America not discovered by Columbus until 400 years ago.' We said, 'What is it that makes the United States such a great nation?' and we investigated and found that it was patents, and we will have patents.'" The writer in every way agrees with this wise statement by the Japanese representative, and wishes his countrymen would insist upon a British Parliament giving to the British empire a patent law as liberal and as equitable as that of the United States of America.

PATENT SYSTEM SUFFERS FROM LACK OF PROPER SUPPORT

This is the opinion of a disinterested and most discriminating critic and no more valuable and conclusive testimony could be offered. Yet the system that has done so much for America has not had the support of American public opinion. Like all effective organisms the patent system must grow or wither. Although the American patent system is the best ever devised, it has been so neglected by Congress that it is almost "run down at the heel." Its facilities and equipment are with few exceptions the poorest of those of the government bureaus in Washington; its personnel is inadequate in numbers to cope with its duties; and the methods of promotion and the compensation awarded its technical corps are so antiquated that the force is in a continuous state of flux owing to numerous resignations resulting from vastly better opportunities offered in private employment. This neglect is undoubtedly based on ignorance of conditions in, and requirements of, the Patent Office. It is inconceivable that public opinion, once it appreciated the facts, would permit an institution so identified with the progress, the industrial welfare, and the genius of this country, to grow stale through indifference. It is hardly imaginable that the country of Eli Whitney, Fulton, Howe, Morse, Bell, Edison, McCormick and Wright would repudiate the system which has been the peculiar incentive for the display of America's signal intellectual efforts in a most important field of achievement.

EFFECT OF COURT DECISIONS IN PRICE-FIXING CASES

In former days patent cases in litigation could be carried upon appeal to the Supreme Court of the United States. For some time, however, the final adjudication of these cases, with rare exceptions, has rested with the several circuit courts of appeal, resulting in divergencies in practice, unsettlement in principles, and uncertainty in the status of patent rights. The judges in these courts find patent cases intricate, and, through admitted lack of technical training, are somewhat reluctant to consider them. The Supreme Court, however, still interprets the law involving fundamental rights, as illustrated in the decision of the Boston Store of Chicago *v.* American Graphophone Co. et al. This decisive and comprehensive opinion, reversing the law laid down in the Dick mimeograph case, affirms views of the same tenor just previously announced, to the effect that a patent grant confers on its beneficiaries no greater right of price-fixing, as the term is generally understood, than is possessed by the owner of an unpatented article. The general law gave no right to fix prices for resale, and it was held that the patent grant could not be extended to abrogate a privilege reserved to the public. This decision will effect economic changes of far-reaching importance and has already caused the Federal Trade Commission to rule that "when once an article has passed from a maker to a purchaser he owns it, and the owner of such article may sell it at any price that he chooses, provided he does not himself sell it at such price as to be below cost, and thus thereby enter into unfair competition with other retailers selling the same article."

THE PATENT OFFICE SOCIETY AND THE REFORM OF THE SYSTEM

The Patent Office Society has been formed with the main end in view of directing public attention to existing deficiencies in the patent system and of proposing methods of reform. It is composed of members of the examining and legal corps of the Office, and members of the patent bar; manufacturers and inventors are eligible to associate membership. The Society has enlisted the aid of the National Research Council, which has actively interested itself in furthering the constructive aims of the organization. The Council, with the concurrence of

JAMES T. NEWTON
Commissioner of Patents.

the Commissioner of Patents and the Secretary of the Interior, has investigated these questions. The Council has gone on record in favor of constituting the Patent Office a bureau independent of the Interior Depart-

Digitized by Google

ment, of the creation of a court of appeals in patent cases, and of a larger and more adequately compensated personnel. The independence of the bureau is deemed essential to induce the public to consider the needs of the Patent Office on its merits, while the institution of a court of appeals is regarded as necessary in order to provide uniform and intelligent consideration of the technical and legal questions that are special features of present litigation. Engineering and other scientific societies have already endorsed the report and will support by proper action the recommendations therein made.

The Patent Office Society was formed during the administration, and with the full acquiescence, of Commissioner Thomas Ewing. He signalized his occupancy of that position by many radical innovations tending toward uniformity and simplicity in the practice and more direct methods of applying justice in disputed cases. He was ably seconded by Assistant Commissioner Newton, who, since he has become the head of the Patent Office, has continued the policies thus inaugurated. Mr. Ewing has persisted in his interest in improving the Patent Office and always lends the weight of his experience and commanding influence to any effort that has that end in view.

The following is an excerpt from an address delivered recently by Mr. Ewing before the Atlantic City Conference, representing almost every organized commercial body in the country. It is authoritative and pregnant with significance and epitomizes the existing situation as accurately and comprehensively as could be covered in so few words:

The theory of the Patent Office is that patents will be granted only when they ought to be granted, and that the claims that are allowed will be only such as ought to be allowed; and in view of the fact that there are more than 400 men engaged constantly in the examination of applications, the courts give great weight to what the Patent Office concludes. They are frequently saying, "Why, there is a finding by the Patent Office; here is something which the experts at the Patent Office have held to be novel, over the other patents which are being presented to us," and the courts will therefore reject arguments for holding a patent invalid, or for limiting it. They rely upon what the Patent Office has decided and seek to give effect to its conclusions. With such an attitude, which is perfectly proper in view of the theory of the Patent Office, it is the worst sort of business to have a Patent Office that is insufficiently provided with men and facilities for making proper examinations. It becomes dangerous, because weight is given to patents which is not deserved, not that the Patent Office is not industrious, and not because its *esprit de corps* is not high, for the examiners are both industrious and of high character, but because the office is inadequately supplied with means and with men to make proper searches, and their conclusions are therefore, in many cases, erroneous.

I would like to impress upon you today that it is of the utmost importance to all of you, no matter whether you are interested in patenting inventions or are interested in going into new fields which are being developed by other people where you may have to meet hostile patents—it is to your interest and it is to the interest of every inventor as well, of course—that the office be efficiently and adequately provided with the means necessary to perform its great labor.

It would appear, therefore, that the continuous neglect of the institution which should be America's pride, and which is so clearly identified with the genius that is peculiarly American, is in fair way to be overcome, and that the stimulus so essential to further progress is to be applied and maintained.

The American Labor Party

In marked contrast with the attitude of the American Federation of Labor, as set forth in its reconstruction program (which appeared in our February issue) and in the pronouncement of President Gompers, herein, is the action of the trade unionists, or of large numbers of them at least, of New York City in lining up with their brethren of Chicago and Bridgeport under the banner of the newly formed American Labor Party. According to *The Survey*, "Socialist delegates attended in large numbers, and the outstanding feature of the convention was the cooperation of representative Socialists with non-Socialist leaders in shaping principles which all factions could accept.

"A complete severance from the dominant political parties is announced at the beginning of the organization plan. No candidate may accept the endorsement of either the Democratic or the Republican party, and the Labor party may not endorse any candidate of the others. This leaves the way open for a coalition with the Socialists, the Non-Partisan League, or any party which does not stand for the private ownership of public utilities.

"Any individual, whether a union member or not, who subscribes to the principles of the party, may enroll; membership may also be obtained through labor organizations. Individuals must enroll in their assembly districts and pay 25 cents a month dues, while a labor organization that decides to join the party by a majority vote has to pay dues of only 5 cents a month for each member. An organizing committee of five representatives from each central labor body and six additional members who were elected by the convention will head the party until the enrollment warrants the formation of a city central committee and the calling of a convention to draw up a constitution.

"The platform follows the general lines of Labor's Fourteen Points [see the December (1918) FEDERAL EMPLOYEE, page 1214] as formulated by the Chicago Federation of Labor, and some of the provisions of the Chicago platform are taken over outright. The influence of the radicals appears in some additions, notably in the demand for the application of the principle of self-determination to Ireland and the demand that our Government refrain from interfering in the internal affairs of Russia or any other country, and that the armed forces of the United States be immediately withdrawn from Russia. The provision that war shall not be declared prior to a referendum vote of all the voters of the country was a suggestion from the radicals that was unhesitatingly adopted by the convention. Other planks not appearing in the Chicago platform are the following: Unequivocal opposition to any form of compulsory military training; opposition to prohibition, as curtailing the personal liberty of the individual, and a recommendation that the power of the Supreme Court to declare acts of Congress unconstitutional be curbed."

A Scientific Salary Scheme

"In the fall of 1916," says the *Business Digest and Investment Weekly*, "Mr. Seward Prosser, President of the Bankers' Trust Company of New York, called upon five employees of that company to constitute themselves a committee to recommend an intelligent basis of distribution to employees to compensate them for the heavier drain upon their incomes because of the rising prices for the necessities of life."

The distribution that was recently declared gives to all its employees who were on its payrolls prior to July 1, 1916, a cash addition ranging from 30 to 40 per cent of their salaries. This cash distribution is proportionately less for employees who have gone on the payrolls at different periods since 1916, because of the fact that their salaries when they were engaged were accepted on the basis of living costs at that time. For the employees engaged during 1917 the percentage varies from 8 to 25 per cent, and for employees who have been engaged during the year 1918 the distribution totaled 5 per cent of their salaries. Salaries above $2,500 a year were increased in the same dollar amounts as those of $2,500. In calculating those percentages the committee recommended that those in receipt of salaries of $1,100 to $1,299 per year should receive the highest percentage of compensation, as it felt that this class carries the greatest burden.

Age Is a Good Purchase

To "scrap" men and women past forty-five is a crime against both Economics and Humanity—this is one of the vital lessons which the Great War has brought home to us with irresistible force. How this lesson has been put into practice for nearly two years, with splendid results, is convincingly told in this article.

By VICTOR T. J. GANNON

Of the Washington (D. C.) Federal Employees Union

JUST TWENTY MONTHS ago I became interested in finding positions for the gray-haired man, who, because the passing of time had placed its imprint upon his countenance, made his step less springy, and, mayhap, dimmed his vision, found it almost impossible to secure advantageous employment. Far too many such gentlemen roamed the streets vainly approaching the employer and listening to the oft-repeated "You don't suit." The tendency of the

VICTOR T. J. GANNON

employer was to engage only youth, not reckoning the ultimate cost.

A bureau was opened in Chicago for the purpose of finding jobs for worthy, needy men past 45 years of age. Twenty-six hundred applications of unemployed men were registered the first month. The distress of mind, the anguish of heart, the tales of destitution and desperation, the vast loss of valuable time, the all-too-evident presence of a grave fault within our civic entity were appalling.

I knew I had to sell a bulging warehouse full of worth, loyalty and hard-earned experience. I began immediately to interest the employer along new channels, for I realized that I must establish a market for the elderly man. With the aid of some kindly publicity, personal talks with large employers, and circular letters to the great majority of wage-payers, the small merchant, I built up an appreciation for the man beyond the prime of life. In twenty months I have placed in good positions, at more than living wages, more than 24,000 men, who possessed that paramount ambition—a keen desire to hold the position.

More than 97 per cent of these men have made good; more than $9,000,000 in salaries has been paid to these men and thousands of employers gladly acknowledge value received. The gratitude of the recipients of our service has been ample and intense. Not one cent was ever charged either applicant or employer. The per capita placement cost for the entire effort, covering all expense, was 89 cents. The funds were contributed by corporations and public-spirited citizens. The average age of applicants placed was 57 years. The number of dependents for food, clothing, and shelter was in excess of 48,000 wives, mothers, and children.

The youngest gray-haired man I put to work looked 60, but he was only 42. The dear old dean of our placements was 97 years of age, but he possessed the spirit of alertness, ambition and self-respect rarely found among men of only half his years.

More than 30,000 applicants have passed our way and been accorded a courtesy which made for new ambition and greater determination. The daily grind gave birth to an absolutely new psychology. The "why" for such a concourse of unused mental and physical power quickly wrote a standard catechism for direction of the bureau in its procedure.

Someone has said, "Human nature is the same the world over." Such is not the truth. I have met more than 30,000 human natures widely divergent, and am meeting them every day. Some are impossible. In this classification a vastly greater number, unfortunately so, are employers. If some employers were obliged to do the things they ask the wage-earner to perform there would be less labor unrest. A kindly word is far stronger than a curt command, and there never was and never will be need of language harsh, uncouth, or inciting anger.

It has been difficult to educate the employer along the lines of his own individual limitations. The pliable mind of the employee is ready to be taught the employer side, and the step necessary today is the employer's in-

Condensed Truths

"The tendency of the employer was to engage only youth, not reckoning the ultimate cost."

"I have met more than 30,000 human natures, widely divergent; a vastly greater number of the 'impossible' ones are employers."

"If some employers were obliged to do the things they ask the wage earner to perform there would be less labor unrest."

"A kindly word is far stronger than a curt command."

"It has been difficult to educate the employer along the lines of his own individual limitations."

"The use of the older man, bringing experience paid for by someone else, is God's own fresh air for that stuffy closet in which is kept the Labor Turnover Skeleton."

"The employer is urged to have a heart for his coworkers in like manner as he shows his inner self at his club or to the members of his family."

"The old men have 'come back' to stay, and they have proved that 'age is a good purchase.'"

"Age is but a memory."

"If common, horse sense were used quickly and without ponderous, slow-acting, and getting-nowhere conferences, the so-called and greatly magnified struggle between Capital and Labor would die a natural death."

Digitized by Google

terest in the individual employee.

The use of the older man, bringing experience paid for by someone else, is God's own fresh air for that stuffy closet in which is kept the Labor Turnover Skeleton.

Generally speaking, when a man has reached 50 he should have established himself financially and socially. Some of the reasons why our registrants have reached the late forties without a competency are extravagance, the common ills of humankind, marital troubles, making for an unhappy home-life, inability to keep abreast of the times, lack of vocational guidance, and the scourge of a timid heart. Greatest of all is the last named. Parents unwittingly break a son's spirit, and he carries through life a curse he cannot cast. Teachers often chide the learning mind and the shadow grows, clouding the future. Employer "general cussedness" and error of judgment of mentality have stifled employee ambition, which, if given scope, would have enriched both.

Many an applicant has come to me riding the Ass of Ego and jangling the discordant bells of pomposity. They acclaim worth in the $10,000 class, yet when shorn of the tinsel approach we find they cannot fill out an application blank intelligently. Hundreds who neither read nor write have proved to be stout-hearted and long-headed.

Thirty-five men whom I placed at moderate salaries a few months ago come back now, frequently, to hire some of the old boys. We have striven to establish a sort of common ground for the employer who knows of us and the less fortunate who only want a chance. One applicant, placed at $20 per week, quickly rose to $6,000 per annum. Another who possessed fine qualities and knew how to use them, but who, because discouraged by repeated turndowns, was absolutely pushed into an $18 job, and is today, after nine months' endeavor to overcome his false pride, earning $7,500 per annum. Thus do we uncover the latent possibilities of the oldish man whose only fault is lack of the opportune smile when trying to acquire that of which he is worthy.

We have never offered a married man a job paying less than $15 per week, and we always endeavor to sesure the highest rate for the applicant with wife and children.

No man should live more than 40 minutes' travel from his work. It is just as important that an applicant be pleased with his work and satisfied that he can live upon the salary offered, before sending him out, as it is that the employer get a man who is carefully selected according to the job analysis furnished us.

More than 90 per cent of the men we have sent out were put to work the same day.

We endeavor to make the applicant understand that who his relatives were or what he did for a living yesterday does not interest the employer. The employer wants to be assured that the applicant can perform the set task of tomorrow. The employer is urged to have a heart for his co-workers in like measure as he shows his inner self at his club, or to the members of his family.

The war was surely a cleansing fire. It made junk of old ideas, for surely the old men have "come back" to stay back; they have proved that "age is a good purchase."

The war brought about an amazingly good understanding between the employer and employee. Hundreds of community labor boards throughout the county have been the stabilizing influence. Upon these boards the employers of labor have been sitting for months, side by side with the emissaries of employees, sleeves rolled up, earnestly, honestly and with unprecedented sincerity; they have given their best for the ultimate glory of this wonder-country.

The fully realized and amply acclaimed satisfaction given by mature women and the older men will be recognized by the retention of these individuals in their present positions. The gray-haired man and the gray-haired woman are fixtures in industry, because the employing body now realizes the worth of experience and loyalty which age will bring, and the capacity and unusually high production which have been evidenced by the woman worker. Pessimistic propaganda must be stamped out as completely and promptly as we stamped out the varied propaganda of the Hun. The more quickly we face about and follow the bright, ascending star of reconstruction, the more quickly shall we realize the fruits and rewards of cooperation for the advancement of common weal.

Age is but a memory.

Those beyond the prime of life—and the "when" of such a period is ever a mooted question—generally bring the weight of experience gained through years of trials and successes. They are loyal to a degree the intensity of which cannot be measured by money. They require less tuition than youth, and posesss a satisfying adaptability. They are not speedy, but steady, which is preferable. They stabilize, particularly when placed with the younger element.

They constitute a safety-first factor of importance.

They are permanent, not migratory.

They lessen labor turnover.

They minimize wastage.

Their sobriety is unquestioned.

They talk less, produce more and generally are worthy of respect and appreciation.

My gratifying endeavor for men past forty-five years of age influenced my appointment by the Department of Labor to nationalize the Handicap Bureau. This endeavor in behalf of the elderly has placed me, fortunately, in a position to observe, from a most intimate point of vantage, the attitude of the employer and employee.

Through the experience of close contact with more than 3,000 employers of labor and ten times as many who were working or anxious to be working, I am impelled to feel that 90 per cent of the unrest and dissension, the trials and tribulations of capital and labor are conceived in the most trivial incidents, requiring no monumental foresight to encompass. If common, horse sense were used quickly and without ponderous, slow-acting and getting-nowhere conferences, the so-called and greatly magnified struggle between capital and labor would die a natural death. Capital is not the cloven-hoofed and two-horned devil the mind of the masses imagine, and labor is a reasonable concourse. We have learned that six out of ten employers of labor are, at first blush, guilty of snap judgment—lack the faculty of human interest in the human, and are prone to consider labor physical before mental. Can capital and labor "struggle" when there really exists a common ground? Before beginning all prize-fights the contenders shake hands. Capital and labor have been in the "ring" for years, and simply lose mind of the Golden Rule and make a mess of things. Each is continually "making mountains out of mole hills," and ever will unless they shake hands and go to it by eliminating discord through frank discussion. The unrest is due to an absence of good judgment on the part of both capital and labor in the selection of those upon whom devolves the matter of human relations.

There is a cure for every disease. Labor trouble is contagious. To cure a disease of the body we seek the cause. The why of labor unrest and dissension is ignorance, affecting both employee and the employer equally. The alleviation of dissension and acquirement of social peace are dependent upon education.

The panacea is threefold; a knowledge of individual limitations, a quick application of horse sense and the possession of real, honest-to-God brotherhood.

Notes from Our Locals

Items gathered here and there which show what some of our Locals are doing and thinking about and planning. The development of the locals in various lines of activity is very marked and constantly on the increase; and they have already become a tower of strength to the cause, which demands our best united effort.

Important Notice

THE FEDERAL EMPLOYEE *greatly desires to give each month as much news of the various Locals as can be secured. To this end the Editors ask the cooperation of the entire membership. Members in general, as well as publicity agents and other officers, are urged to send in whenever possible news items and other items of interest relating to the personnel and the activities and plans of their organizations. Material should reach the Editors by the tenth of the month in order to insure publication in the issue of the month next following.*

NEW YORK LOCAL ELECTS EXECUTIVE SECRETARY; DUES INCREASED

A letter just received from Brother Thomas J. Clines, a leading spirit in the New York City Local (No. 4), is so full of enthusiasm and the go-ahead notion that we quote it at length.

"Local No. 4, New York," writes Brother Clines, "recently took an important step in constructive organization policy. Drawing its membership from every department and bureau of the government service throughout the metropolitan district, administrative work has become such that no board of officers could do themselves and their branch full justice by trying to carry on their official duties in the few hours remaining after their day's work. Heretofore the margin remaining in the treasury, 6⅝ cents per member each month, after the obligations of the national body and the subordinate locals were met, was so small as to make further expenses a luxury entirely out of reach. This was the reason our delegates at the Chicago convention looked for what was thought a more equitable distribution of the dues with the national organization. However, the sentiment at the annual gathering being unfavorable to any change in this respect, New York was compelled to consider the alternative of raising its members' dues from 35 to 50 cents a month. This course has been decided upon.

"The next question was to obtain the services of a competent person to undertake, exclusive of any other duties, the executive work of the branch. This problem has been solved by the appointment of Mr. Thomas H. J. Quinn, until recently publicity agent of the National Federation of Federal Employees as executive secretary. It has also been proposed to hire a stenographer and secure more commodious office accommodations in the World Building in Park Row.

"Mr. Quinn, who needs no introduction to the federal workers, expects to accomplish great things in his new field of usefulness, and the officers and members of Branch 4 are equally enthusiastic over the present outlook. The men and women whose membership our splendid union needs, are within easy reach of Park Row, and we intend to go out and get them. This is to be done with a systematic thoroughness heretofore impossible, in spite of the fact that no board of officers has ever given more unselfishly of their time and energy to a good cause than those elected to conduct the affairs of Branch 4.

"It will readily be admitted by all forward-looking people that the need for renewed and sustained interest among organized federal workers was never more apparent than it is today. This being so, the things we have already accomplished should be an inspiration to us, who clearly see the benefits of organized effort, to go out and spread the light among those who at worst are only a little slower to grasp this great truth than we ourselves. The prospective member who offers the most irritating objections to our union often becomes the best worker once he sees the benefits of organization and his scruples are set at rest.

"And so it is to be hoped that each branch, both near and far, will emulate the plan of campaign mapped out by New York, which hereby pledges its best efforts never to take a vacation until its membership shall have been recruited to a point commensurate with the numerical strenth and importance of the great metropolis in which it is privileged to make its home."

WASHINGTON (D. C.) LOCAL ALSO CONSIDERING INCREASE IN DUES

The raising of dues from 35 to 50 cents a month is being urged by the officers of the Washington (D. C.) Local. In endorsing the plea of Treasurer Zahn, sent out with his annual report, President Ryan makes this statement:

> What Brother Zahn says about the need for an increase cannot be emphasized too strongly. In the few weeks I have been in the office I have had it brought home to me again and again that we need more of a permanent paid force than we now have—especially a well-paid executive assistant on full time who can direct the office force and carry on innumerable details that the treasurer, a volunteer worker, has hitherto had to struggle with alone.
>
> It is impossible for those of us who serve as volunteers to do the detailed work of the union, especially the way the union is growing and working now.

This is in line with the action of the New York Local, which has recently decided to increase the monthly dues from 35 to 50 cents. Many other locals have been on the 50-cent basis for varying periods.

BOSTON LOCAL (NO. 25) PROUD OF HER HONOR ROLL

To make this column a success it is desirable that every branch of the service affiliated with Local 25 appoint a representative through whom any item of interest for publication may be forwarded to the undersigned. If preferred, the representative authorized to receive dues may also act as news representative. It is also hoped to give in this column an account of what the Local is doing for the benefit or in the interests of the various branches, so that members who are unable to attend the regular meetings may keep informed of the progress of affairs.

A. W. STOCKWELL,
Foot of Long Wharf, Boston.

Local 25 was represented in active service during the great war by the thirty-six members named below, in whose honor a large service flag was unfurled with appropriate exercises at a regular meeting held in November last. Since the armistice was signed

Brothers Vito A. Luongo, John M. Lyons, John J. Sheehan and Joseph Nunes have returned to their former positions in civil life, and we cordially welcome them again into active membership. If there are other members who have seen service but whose names do not appear below, Secretary Sleep will be glad to be informed promptly of any omissions. Secretary Sleep further requests that "all brothers on Army or Navy list who later return may send in their names with present address."

From Brother Arthur G. Merchant of Gloucester, Mass., a member of the Boston Local, comes this comment, which seems much to the point:

"Enclosed is copy of *Fisheries Service Bulletin*, in which is explained the title by which the low paid men of the Bureau are known. The Bureau would have no trouble in getting men to enter the service if they paid a living wage. The *Bulletin* would give you the impression that the title laborer was keeping them out of the service, but the basic salary of $600 a year, or $1.67 a day, has not much drawing power."

[In the *Bulletin* referred to by our correspondent, the statement is made, with reference to "apprentice fish culturists," that—

for a number of years the Commissioner has recommended to the appropriation committees of Congress a change in the designation of the position of laborer in the field service. The recommendation has been based on the ground that the title is not accurate, in that the duties are fish cultural and candidates must pass a civil service examination as apprentice fish culturist. The further plea has been made that the title of laborer, while highly honorable, has the effect of repelling ambitious young men, of high-school or college education, who would be willing to enter at the lowest fish-cultural grade in the hope of eventual promotion to a superintendency.

On the foregoing Brother Merchant comments thus: "The title took effect June 30, 1917, but we did the same kind of work as we did as laborers while in the city they were receiving $3 a day—laborers' pay."—EDITORS.]

SAN FRANCISCO LOCAL'S GREAT STROKE ON RETIREMENT BILL

There seem to be few opportunities that escape the vigilance of the brethren who are "running" Local No. 1. A case in point lies on the editorial desk in the form of a resolution passed by the legislature of California at the behest of the workers of this local, declaring the legislature "to be in full sympathy and accord with the McKellar-Keating bill" and asking the Senators and Representatives from the State "to use all honorable means to secure the passage of said act." This is certainly fine work.

ROCK ISLAND'S LOSS IS HERE DENVER'S GAIN

Brother J. L. Foreman, until recently the hustling secretary of the Rock Island (Ill.) Local No. 15, is now a resident of Denver, Colo., where he moved on account of his wife's health. Brother Foreman, while changing his address, has not changed in his thoroughgoing unionism and will give his best efforts for the good of our common cause in his new home. Our Denver brethren are to be congratulated.

Executive Secretary Beach Resigns

The resignation of Executive Secretary John S. Beach, of the National Federation of Federal Employees, is announced, to take effect March 5, 1919.

Contributors, Please Take Notice

Matter intended for the pages of THE FEDERAL EMPLOYEE of a certain month should be in the hands of the Editors by the 10th of the month next preceding. Although "copy" received a few days later *may* be available for the desired issue, it stands a greater chance of being delayed in publication than if submitted by the date named.

A Prize Offer

IN accordance with the expressed wishes of a number of members of various locals, and encouraged by the helpful results of the recent "Ideas Competition," THE FEDERAL EMPLOYEE will give each month "until further notice," beginning with the March issue, the following prizes:

A cash prize of twenty dollars ($20) for the best article on the subject "My Day's Work," dealing with a typical day's work of a civilian government employee—perchance a stenographer and typewriter at a departmental desk in Washington, a forest ranger in the woods of Maine or Oregon, a coast guard on the Atlantic, an immigration inspector on the Canadian border, or any one of the legion of employees working for Uncle Sam in this country or in any other part of the world. The articles submitted should tell the story, true to fact, in an interesting way, in 1,500 to 2,000 words. Several photographs suitable for reproduction, which have real "human interest," would add materially to the value of the narrative.

A prize of five dollars ($5.00) each month for the letter contributed to the OPEN FORUM which shall be adjudged to be the best. In this connection read the caption of OPEN FORUM section.

A prize of five dollars ($5.00) each month for the best suggestion regarding methods of organizing new locals, and conducting existing locals. Among the questions which might well be dealt with under this head are: Increasing membership, retaining members when once secured, collecting dues, developing publicity work, making our meetings more helpful, and educating our membership in the special problems of civil-service employees and the broader problems of organized labor and citizenship as well. Suggestions submitted should be clear-cut and practical, and expressed as concisely as possible, and should be plainly marked, "Suggestions for Organization and Conduct of Locals."

A Modest Doctor

An unfortunate woman was run over by a street car. A crowd gathered around the victim. After some delay a celebrated doctor, who enjoys a national reputation, appeared on the scene. It was too late. The poor woman was dead even before the doctor had arrived.

"Oh, doctor, if you had only come a little sooner," said a voice in the crowd.

"Even if I had come sooner, what more could I have done for her?" replied the doctor, modestly, gazing at the placid features of the corpse.—*Texas Siftings.*

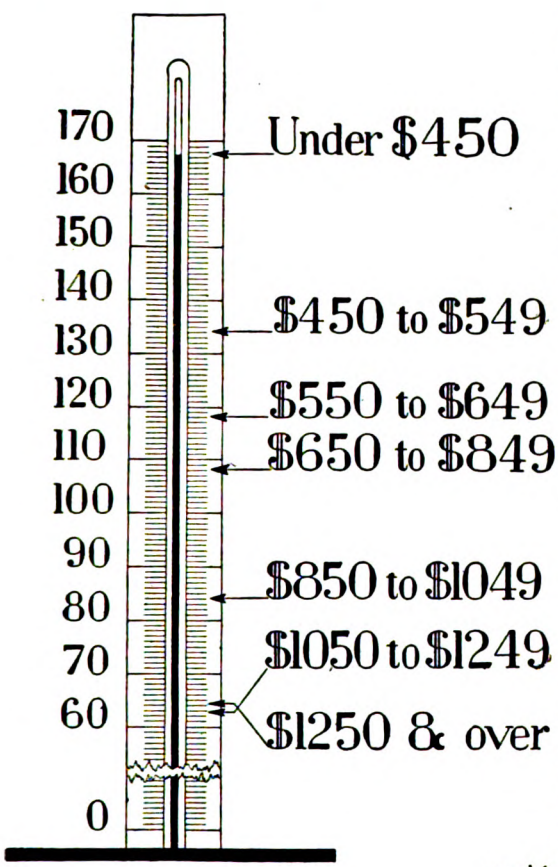
Wages and Infant Mortality

Low wages paid parents mean death to the little ones. This sad fact is brought home with startling directness in a graphic way as shown below, by the Children's Bureau of the United States Department of Labor.

A Question for Members and Senators?

Give a moment's study to the figures set forth below. Then remember that the Government of the United States—your Government and mine—has many, many thousand civilian workers on its rolls—adult, full-time workers—at from less than $550 a year to $1,049 a year. Get the ghastly meaning of this in terms of children's lives, and then answer the question, What is the responsibility of the United States Government, both directly and indirectly, for this condition?



A TELLING argument for living wages is furnished by the Children's Bureau of the Department of Labor in the accompanying chart "drawn in the form of a thermometer to illustrate the general relation between infant mortality and fathers' earnings, as shown by eight combined studies of infant mortality made in the following cities: Johnstown, Pa.; Manchester, N. H.; New Bedford and Brockton, Mass.; Saginaw, Mich.; Akron, Ohio; Waterbury, Conn.; Baltimore, Md. The chart sums up the result of six years' study in so far as infant welfare and income are jointly involved. It represents intensive field investigation based upon interviews with mothers of nearly 23,000 babies. The death rate for babies whose fathers earned less than $550 was 162.5, or 1 in every 6. When the fathers earned $1,250 or more the death rate for babies was 62.5, or 1 in 16. The lowest income group includes 25.8 per cent of the babies. The next group ($550 to $849) includes 37.2 per cent. In the group earning from $850 to $1,049 were 15.3 per cent of the babies. Only 19.2 per cent had fathers earning $1,050 and over, 6.1 per cent earning $1,050 to $1,249, and 13.1 per cent earning $1,250 or more.

At the present writing earnings probably are increased for all these income groups. These figures recently published by the Bureau of Labor Statistics of this department, however, showing general increases in cost of living afford no indication that the advantage to infant life can be at this time in proportion to the presumable increase in fathers' cash earnings. The conclusion is unavoidable that while poverty exists infant life and vigor will be needlessly wasted."

When it is borne in mind that our Government pays many thousands of its civilian employees less than the proposed minimum wage of $3 a day (which no one has the hardihood to contend is a *living* wage)—a considerable number much less than this minimum—the question naturally arises, To what extent is the Government responsible for the terrible death toll of children shown by the chart—directly, by reason of starvation wages paid many thousands of its own workers, and indirectly, owing to the example set to private employers, by which too many, unfortunately, are only too willing to profit?

It is a fine thing to endeavor to save one hundred thousand lives of infants and young children—the goal of the effort being made throughout the country under the inspiration and direction of the Children's Bureau and the Woman's Committee of the Council of National Defense. As President Wilson truly said, there could be "next to the duty of doing everything possible for the soldiers at the front . . . no more patriotic duty than that of protecting the children, who

MISS JULIA C. LATHROP
Chief of the Children's Bureau.

constitute one-third of our population."

The old, old question however, still comes to the front, Why, in this great movement as in many other things, should not the Government begin its best work within its own doors?

"Employees"—Not "Clerks"

THE FEDERAL EMPLOYEE has been asked to draw attention again to the following resolution, which was introduced by Brother M. J. Hines, the efficient secretary of the Leavenworth (Kans.) Local (No. 49) and unanimously adopted by our Chicago convention:

Resolved, That whenever there is anything to be issued for publication concerning the organization as a whole the words "federal employees" be used, and not "clerks" or any other crafts.

It is thought that the overuse of the term "clerks" has had, and still has, a tendency to narrow in the public estimation the character and scope of the duties performed by government workers in the various services, and that for this reason the use of the more comprehensive term "employees" should be encouraged in connection, as suggested, with our organization as a whole.

Problems and Activities of Women

An effort is in progress to have Congress investigate the Federal Wire Administration.—The League of Nations is enthusiastically endorsed by representative women.—British and French women are bitter about the demobilization situation with respect to women workers.

A PUBLIC appeal to stockholders in the telephone companies to call for a congressional investigation of the Federal Wire Administration has been issued and is being circulated throughout the United States by the Women's Trade Union League of Boston. This action follows

MISS JULIA O'CONNOR

the resignation of the national president of the telephone operators' unions, Miss Julia O'Connor, from the Wage Investigation Commission of the Wire Administration on the ground that under the conditions enforced by Mr. Burleson "to remain longer on that commission would be a betrayal of the interests of the workers."

Charging that Director Burleson has been "hopelessly autocratic and arbitrary," the Women's Trade Union League of Boston indicts him on three separate counts, namely:

First—He has not allowed the companies to negotiate with their employees on questions of wages and hours.

Second—The telephone operators' unions on the Pacific Coast have an agreement with the company to which the Government itself was a party. Mr. Burleson has allowed that agreement to be broken.

Third—He has relentlessly fought trade-union organization of the workers.

"For instance," states the league in this appeal, "the Boston Telephone Operators' Union for six years has had a working agreement with the telephone company. That agreement expired last December. Efforts of the union to renew its agreement have met with the answer that the company no longer had power to negotiate questions of wages and conditions."

As to the situation on the Pacific coast, where the strike of telephone operators in 1917 was settled by the President's Mediation Commission, the league states that "This agreement was officially signed by Secretary of Labor Wilson and guaranteed to either party the right to reopen negotiations before its expiration. This right has been denied by Mr. Burleson."

As showing Mr. Burleson's hostility to trade-union organization the following particular instances are cited:

In the New England district and on the Pacific coast he has refused to allow the unions to function.

In St. Paul he locked out 1,200 union employees who had reached an agreement with the company.

Throughout the country every method of discouraging organization has been practiced. Operators have been discharged and discriminated against to the point of persecution for union membership. In Wichita, Kans., a union supervisor was discharged. As she has two brothers in France and is the sole support of her widowed mother, the public-spirited citizens petitioned for a hearing of the case. The hearing has not been granted.

The statement concludes as follows: "Do not mistake this as an attack upon government ownership or control. It is not. We believe in government ownership, and we know that it is not inconsistent with representative government in industry."

Women Take Stand for League of Nations

SEVEN hundred and fifty women, from all parts of the United States and of every condition in life, in conference in Washington, February 12 and 13, to discuss the league of nations, rose to their feet and applauded in wildest enthusiasm the proposal "to get behind the President and help him to make the league of nations a fact."

Among the outstanding figures in the conference were Anna Howard Shaw, honorary president of the National Woman Suffrage Association; Catherine Breshkovakaya, "the little Grandmother of the Russian Revolution;" Jane Addams, of Hull House; Julia C. Lathrop, chief of the Children's Bureau; Melinda Scott and Mary McDowell, of the National Women's Trade Union League.

Resolutions adopted by the conference in addition to endorsement of the league nations, demanded representation for women upon all committees and advisory bodies in the peace negotiations.

The resolution endorsing the League of Nations is as follows:

As citizens of the American democracy we are assembled in conference in the city of Washington to pledge our allegiance to the great hope of the future, a democratic league of free nations. We indorse the principle that such a league is fundamental to the peace negotiations. And we affirm our earnest belief in the liberal and forward-looking program supported by the American delegates to the peace conference.

Lack of Demobilization Plan Condemned

CRITICAL times for the women workers of France and Great Britain are reported by Miss Mary McDowell, of Chicago, Vice-President of the Chicago Women's Trade Union League, to the conference of women just held in Washington to advocate the league of nations. Miss McDowell has just returned from Europe, where she was sent by the industrial department of the Y. W. C. A.

"During the war they called us heroines—but they throw us on the scrap-heap now," the women are saying, according to Miss McDowell, who adds that the situation is the more distressing because most of these women are workers who for the first time in their lives have had wages on

Digitized by Google

which they could live in reasonable comfort, and during the war they have set up a new standard of living for the French and British working people.

In France, Miss McDowell reports, when the armistice was signed the Government plants gave the women munition workers 30 days' notice "to go quietly away." The private plants simply closed down.

the pittance they received before the war."

"Nor is the feeling relieved," she continued, "by the attitude of the British ladies who complain of their inability to secure domestic servants. Ninety per cent of the people of Great Britain employ no servants, and of the remaining 10 per cent only 3 per cent employ more than one. According to

THE MUNITION MAKER

Bronze relief by Mrs. A. C. Ladd, Paris, 1918. Design suggested by Mary E. McDowell. **Photograph by courtesy of the Young Women's Christian Association.**

Great Britain also lacked a plan for the demobilization of the women workers, and finally dismissed them with "an out-of-work donation" of 25 shillings a week for 13 weeks. The phrase itself the women, of course, resent, she states, and the end of the 13 weeks, which will come in May, she thinks will be a crisis.

"The women are bitter about it," Miss McDowell says. "They know now what decent wages are, and they do not intend to go back to work for this little group of the well-to-do, the 'out-of-work donation' to working women is responsible for their lack of servants, and they will expect, no doubt, to recruit for their household when the 13-week period comes to an end.

"Meantime a movement is on foot to organize domestic service upon an eight-hour basis, with other long-desired privileges for the domestic workers."

War Work of Women

"IF THE WORK of their women should stop for twenty minutes the Allies would lose the war." This declaration, made by a French official at a critical stage of the great war, is eloquent testimony that the fighting is not all done at the front. We hear less today than formerly about "woman's place being in the home," or about her being "too delicate to stand the strain of the industrial world," and her inability to help her country in time of war is no longer so unanswerable an argument against her right to participate in her country's government. Even before the war French women had entered in large numbers what had formerly been considered to be exclusively the men's field, and a year ago 400,000 women were engaged in the manufacture of munitions alone.

MILLIONS OF WOMEN ENTER COMMERCIAL AND INDUSTRIAL FIELD

In England during three and a half years of war 1,400,000 women replaced men, not only in offices but on the farms and railroads and in shipyards and factories as well, while there were nearly twice as many women working in the munitions factories as in France.

The number of unemployed in America was such that our entrance into the struggle did not seriously affect labor conditions until the third draft. It is difficult to make accurate estimates regarding the replacement of men by women, due to the war, because, first, there were probably nearly 2,000,000 American women working in factories before the war; second, a large number of women simply exchanged other industries for war work, and third, many manufacturing concerns merely shifted their former production to that of munitions.

One hundred thousand women are said to have substituted clerical work for the poorly paid profession of teaching; another hundred thousand entered the machine shops of munitions factories, while more than a million and a quarter women were engaged in the same general line of work as formerly, the product being turned to war uses, as in the case of making clothes or canning foods.

The "work or fight" mandate caused a general shifting of women into the "nonessential" positions of clerks, waiters, ushers, etc., while more highly paid positions, as those in banks, laboratories and the professions opened their doors to them, and a fair quota was also furnished to the "land army" of 1918.

Digitized by Google

The steam railroads alone witnessed an increase of 40,000 women workers, who were mercilessly used on any work needed, from ticket selling to the handling of heavy freight, until the organization of the "Women's Service Section" in the Railroad Administration.

GROWTH OF PROTECTIVE MEASURES IN FAVOR OF WOMEN

Attempts to limit the hours of work for women have naturally had to run the gamut of "constitutional" objections, but these have been so successfully defeated during the past ten years that there is today little to fear from this source, and at the beginning of this year there were but five states in which such legislation is entirely lacking.

This protection generally includes women workers in stores and factories, and frequently those employed in printing offices, laundries, bakeries and even dressmaking establishments. The newness of a labor law can largely be determined by the number of industries included in its scope, the more recent measures covering hotels and restaurants, telegraph and telephone offices, express and transportation companies and places of amusement. The entrance of women into the war is reflected in the still further extension of the latest restrictive measures to include elevator operators, messengers and street car employees.

The most generally accepted working day is still ten hours, approved by the Supreme Court when it upheld the right of the state of Oregon to set this limit as a health measure, inasmuch as "the physical well-being of women becomes an object of public interest and care to preserve the strength and vigor of the race." Later the same court sustained the legality of the eight-hour day for women, which is now in force in six Western states, Porto Rico and the District of Columbia.

Thirteen states limit the hours of labor for women to nine, and five states have limits ranging from ten and a quarter to twelve hours. Two states have a ten-hour limit, but no rest day.

The tendency of recent legislation is against overtime work, although in some states it is allowed, provided a certain weekly maximum is not exceeded. Six states allow overtime work in stores either one day weekly or for a few days before Christmas. There are other restrictions in other states, but the most popular provision now is that for higher rates of pay for overtime work.

Another development of restrictive legislation is that regarding night work, which is prohibited in several parts of the country; in three states and Porto Rico this prohibition covers a wide range of industries. Good work along this line has been done through industrial commission rulings.

The Federal Government also has been giving attention to the women in its employ, as evidenced by "General Orders No. 13" issued by the Ordnance Department in November, 1917, prohibiting night work and the lifting of heavy weights, and recommending an eight-hour day and other progressive measures.

The war emergency naturally furnished a pretext for letting down the bars of labor legislation, which opportunity the exploiters of labor were not slow to seize upon; and the near success of the bill introduced into the New York Legislature to set aside any inconvenient legislation affecting women and children—a bill killed only through the governor's veto—conclusively demonstrated the need of organizations such as the "war emergency conference," called in Washington State last year, which recommended a weekly minimum wage of $13.20, equal pay for equal work regardless of sex, and went on record against the employment of women in occupations for which men are better suited, or in occupations unavoidably disfiguring or physically or morally injurious.

The significant stand taken by the Kansas War Board is stated in an open letter addressed to the employers of the state, containing the following among other noteworthy statements:

In the supreme test of the nation's strength and endurance, continuous production of war supplies is the great service which the workers are called upon to perform. This aim can be attained only by insuring the health and welfare of these workers. In order to secure the fullest working capacity, wage-earning women and minors must be assured proper hours, adequate remuneration and wholesome conditions of work. Moreover, all women workers must be protected against the bad effects of overwork and unwholesome conditions, not merely as workers whose efficiency is needed in the war, but as citizens upon whose well-being the future of the country largely depends. It will be our purpose to see that existing legal standards be rightly maintained, and where these standards do not justly meet the demands of the women workers, as above set out, we purpose fairly and impartially to raise these standards.

How It Happened

Once a year the newsboys of a certain district of London are taken for an outing up the Thames by a gentleman of the neighborhood, when they can bathe to their hearts' content.

As one little boy was getting into the water, a friend observed: "I say, Bill, ain't yer dirty?"

"Yes," replied Bill; "I missed the train larst year."—*Tid-Bits.*

Civil Service Ills

IN ASKING a horizontal increase of $360 a year for the federal payroll, the NATIONAL FEDERATION OF FEDERAL EMPLOYEES is seeking only a stop-gap solution of the salary problem. The Federation's program calls for a reclassification and standardization of duties and salaries on the basis of a scientific inquiry, and such an inquiry will take time. Congress seems disposed to create a congressional committee to investigate the matter, however, and there is a chance that something will be done. What seems to be needed is not so much a congressional investigation as the creation of an executive board with power to act. A great deal of the necessary regrading could actually be accomplished in less time than it would take to conduct a congressional inquiry that might produce nothing in tangible results.

Emphasis ought to be laid on the reclassification of *duties* as well as salary grades. The proper "functional organization" of an office is one of the largest factors in scientific personnel management. In the federal service such organization is practically nonexistent. Instead of taking advantage of the opportunities for economy offered by the great size of the units, those who dispose such things in Washington have divided, redivided and subdivided the large units until not only each small bureau and division is an entity to itself, but practically each minor executive has his complete and separate organization. This means inevitable waste. Twenty minor executives in a bureau have thirty stenographers—one or two specially attached to each—when a force of ten stenographers could probably do the work for all. Clerks toiling in adjoining rooms under separate direction duplicate each other's work. "Messengers" galore occupy chairs in the spacious corridors and spend their time reading the papers. Work that ought to be done by office boys is laboriously performed by higher-paid employees in "idle" moments. It is not surprising that the late Senator Aldrich estimated the Government's waste in bad management at a million dollars a day.—*Good Government.*

Somewhat Moody

The youth had been asked to write examples of the indicative, subjunctive and potential moods and an exclamatory sentence. This is what he produced:

"I am trying to pass an English examination. If I answer twenty questions I shall pass. If I answer twelve questions I may pass. Heaven help me!"

National Federation of Federal Employees

(Affiliated to the American Federation of Labor)

ITS OBJECTS, METHODS, AND ORGANIZATION

The NATIONAL FEDERATION OF FEDERAL EMPLOYEES is an active organization of civilian workers in the government service, composed of representatives from virtually all branches except the postal service, the employees of which have organizations of their own.

The *Objects* of the FEDERATION are: To advance the social and economic welfare and education of the employees and to aid in the perfection of systems which will make for greater efficiency in the various services of the United States.

The *Methods* for attaining these objects are petitioning Congress, creating and fostering public sentiment favorable to proposed reforms, cooperating with government officials and other employees, securing the enactment of appropriate legislation, and other lawful means. Under no circumstances is the FEDERATION to engage in or support strikes against the United States Government.

The FEDERATION now comprises 118 local unions, located in nearly as many cities and towns throughout the United States, in Canada, and the Panama Canal Zone. A list of these unions appears on pages 191 and 192. Additional unions are constantly being formed.

WHAT THE FEDERATION IS FIGHTING FOR

Adequate and proper salaries for the employees of the national civil service, including a minimum living wage.

Standardization and reclassification of the civil servce, to the end that salaries and working conditions shall be fairly adjusted in the interest of the efficiency of the service and the well-being of the employees.

Retirement of superannuated employees under a system which shall be equitable and beneficial to both the employees and the Government.

The right of civil service employees to adequate representation in connection with the regulation of the essential conditions of their employment, as salaries and wages, hours of labor, promotion and demotions, transfers, removals, and sanitation.

WHAT THE FEDERATION HAS ACCOMPLISHED

Although the formation of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES dates back only to September, 1917, and the present movement for the organization of civil service employees is but little older, much has already been accomplished—more than had been accomplished in this direction by federal employees without organization during many decades of helpless dependence on others.

More specifically, organization has been instrumental in bringing about, during the very brief period mentioned, these results, among others:

Substantial increases in salaries and wages.

Redress of many grievances of employees in various services of the Government.

The defeat of an attempt, both unnecessary and unjust, to fasten on employees of the Government a longer workday.

The arousing and marked development among federal employees of a spirit of self-reliance and cooperation, and of closer affiliation and sympathy with the great mass of the nation's wage-earners.

GODSPEED TO THE CAUSE FROM "HIGHER UP"

PRESIDENT WILSON (*to the Washington, D. C., Union*).

"They [resolutions of the Washington, D. C., Union] have given me a great deal of genuine pleasure and I wish that I could convey to each member of the Union my most cordial wishes for the New Year."

HON. CHAMP CLARK, *Speaker of the House of Representatives.*

"It gives me pleasure to felicitate the Union on the progress it has made and to extend to it every good wish for the future."

HON. LOUIS F. POST, *Assistant Secretary of Labor.*

"It is really an advance that the people employed by the Government of the United States in such large numbers should have come to recognize their industrial relationship with the people out in the rest of the world who have been trying to organize what is called labor for its own protection during the last forty or fifty years—the period of the present labor organization movement. . . . I think that in respect to your organization and to what you are endeavoring to get I can bring you not only my personal sympathies with your work, but I may safely say that I bring the sympathies of the Department in which I am engaged, and I am sure that Secretary Wilson is thoroughly in sympathy with what you are trying to do."

HON. CARL VROOMAN, *Assistant Secretary of Agriculture.*

"I think it is not only the privilege but the duty of the employees of the Federal Government to organize themselves; to organize themselves not only to see to their own rights, not only to secure for themselves the best kind of treatment from the Federal Government, but in order to increase the efficiency of the civil service of these United States. The possibilities that lie before this great organization . . . are limitless . . . Organized, you can accomplish far more, not only for yourselves, but for the nation, than you have ever been able to accomplish in the past."

HON. SAMUEL J. ROSENSOHN, *formerly Assistant to the Secretary of War.*

"It is the definite policy of the War Department not to interfere in the slightest way with the right of the workers to organize in trade unions and to prohibit any person in the Department from discharging workers by reason of their membership in trade unions for legitimate trade union activities."

HON. CHAS. M. GALLOWAY, *U. S. Civil Service Commissioner.*

"The impression which appears to have been entertained that the Commission objected to its employees becoming members of the [Federal Employees] Union is wholly without foundation and must have arisen from some misapprehension. The Commission has no such objection and has not sought in any way to influence its employees in the matter."

HON. FELIX FRANKFURTER, *Chairman of the War Labor Policies Board.*

"Never before in history have the civilian employees of a government performed duties more vital to the continued well-being of the republic. . . . The chance which the national crisis presented has been wisely utilized by Federal employees. Of my own experience at Washington I can testify to the devotion which you have shown. . . . I take great pleasure in wishing well this valuable organization which represents so many. You are a conscious part of the world-wide labor movement. You are in your Federation endeavoring to make practical the faith that self-government is desirable even beyond the familiar bounds of politics. I congratulate you and the nation you are so faithfully and so successfully serving."

HON. EDWARD N. HURLEY, *Chairman of the United States Shipping Board.*

"I am in hearty accord with the good work that you are doing and I sincerely hope that you will continue working out your problems along sound practical lines."

THE OPEN FORUM

THE FEDERAL EMPLOYEE invites letters from its readers on subjects which properly come within the scope and purpose of the magazine. Particularly desired are suggestions which place the emphasis on the constructive side of things, looking toward the improvement of the United States Civil Service and of the condition of its employees.

Communications should be written concisely and should not exceed 300 words in length, otherwise the editorial blue pencil may have to be used. Please write on one side of the paper only. Typewritten manuscript, OPEN-SPACED, will be greatly appreciated by the editors. Each correspondent should retain a copy of his contribution. Every communication must be accompanied by the writer's name and address, which will be withheld from publication on request.

THE FEDERAL EMPLOYEE assumes no responsibility for expressions of either fact or opinion by correspondents.

PRIZE ANNOUNCEMENT

Until otherwise announced, THE FEDERAL EMPLOYEE will pay the sum of five dollars for the letter published in the OPEN FORUM which shall be adjudged the best in the number of the magazine in which it appears. Contributors will please bear in mind that communications intended for publication in the OPEN FORUM of a certain month should be in the hands of the editors by the tenth of the month next preceding.

Are the Editors Guilty or Not Guilty?

Is the tone of THE FEDERAL EMPLOYEE *sufficiently altruistic? This brother, secretary of a local, thinks not. For the moment the editors, entering a pro forma plea of "not guilty" submit the question to their readers. What say you?*

To the Editors:

WE HAVE about 160 members of Local No. —. These men and women are all employed in District No. 1 of the ——— Service. From the beginning of the ——— Service, this district has been privileged to enjoy the loyal support of every employee and pride ourselves through the respect held for us by the community. The success of the ——— Service, in this district at least and I think likewise true of the other districts of the Service, is largely due to the devotion and loyalty of its members who have not sacrificed the public service for their own interests.

OPPOSITION OF EMPLOYEES TO AFFILIATION TO A. F. OF L.

When the proposition of forming an organization to be recognized as being affiliated with the American Federation of Labor was first presented a very large number of our employees were somewhat reluctant in joining, but after carefully considering the constitution of the national organization of federal employees and its objects being for mutual benefit and betterment to the Government as well as to the employees, we felt that this was what we wanted. Of course we were interested in salary increases, in reclassification of the Civil Service, which would be to our advantage, and reclassification of salaries, etc. These propositions appeal to all of us from the highest official to the lowly messenger boy. The better the working conditions and salaries for the employees the higher the standard of our work, it is true. When the call came for assistance in the various salary increase measures we did all we could and I believe our efforts met with success, judging from the replies received.

In reading THE FEDERAL EMPLOYEE quoting the various important measures pending and the articles written by our national representatives it has impressed us with the feeling that our organization was largely following in the footsteps of the ordinary labor union, ever eager to grab all we can for ourselves, banding ourselves together with hoops of steel and fortifying ourselves so that in time we would have sufficient power to command attention and, in a measure, force our demands. It seems to us that thus far we have been working one-sided, the same as the majority of our labor unions today. The spirit of cooperation has apparently been lost sight of to the individual personal interest involved.

NOT ENOUGH EFFORT TO IMPROVE GOVERNMENT SERVICE

Now what have we done to improve the service and efficiency of the government service? What have we done to merit confidence in us by our Senators and Representatives? What suggestions have we made to the various heads of the departments that would assist them in obtaining greater results and thus give us the unsolicited sympathy of the public and the support of Congress? The average citizen regards the federal employee with respect but entertains the idea that it is a life of ease. It appears to me that we should not work on selfish lines altogether, constantly plugging away for what is termed "our rights," endeavoring to organize the employees in sufficient force that the public and Congress will "of necessity" be *obliged* to give us recognition and grant our requests. THE FEDERAL EMPLOYEE of late has been literally filled with reading matter pertaining nearly altogether to matters regarding our own special and individual interests and to those of us who are loyal, take a pride and pleasure in our work and ever endeavoring to do our best for the public service, it appears that the other side of the situation has almost entirely been lost sight of, that the main thing is organization and make it of sufficient strength that in time we could *command* attention and action, rather than by encouraging better service, more devoted loyalty, higher pride in our calling and consequently giving the Government and the public the highest efficiency.

RESULTS MUST BE GOTTEN THROUGH COOPERATION AND SERVICE

During the past year our local has been rather inactive. We have suffered a severe season and have been doing our utmost to meet the situation and have not had the time to devote to organization matters, consequently I am simply giving you these remarks as representing in a large measure the general feeling existing among the government employees in this district of the ——— Service. I am of the opinion that our members would withdraw tomorrow if we were obliged to follow literally the footsteps of the ordinary labor union. We are situated differently from the ordinary laborer and citizen, and it appears to us that to secure results for ourselves, we must first give results to the Government and not endeavor to secure action through coercion and force, but rather by cooperation and service, produce a better and more intimate understanding between employee and official, developing higher efficiency and greater service and consequently more firm loyalty and devotion. If we do this Congress and the public would gladly give us recognition and the proper rewards.

These suggestions are given for your consideration. It is further recommended that a department in THE FEDERAL EMPLOYEE be established dealing especially along these lines and that we give publicity to results obtained by the federal employees for the public service.

Secretary, Local No. —.

Shortcomings of the Retirement Bill

The McKellar-Keating Retirement bill is inadequate, far behind our military retirement system, and analyzes the successful employees — so Brother Bond ably contends.

To the Editors:

The bill for the retirement of employees in the classified Civil Service

Digitized by Google

(H. R. 12352) puts a premium upon mediocrity, in that it offers no encouragement to the ambitious, the able, and the efficient to enter and rise in the public service. An adequate retirement law should encourage the entry into the classified service of the man with the ambition to rise, by promising that, after a lifetime of efficient service, his retirement annuity would in some degree be a measure of his well-earned success. H. R. 12352 offers no such inducement; on the contrary, it encourages inefficiency by limiting the maximum annuity to $600, which is practically fifty per centum of the present clerical entrance wage. This limitation is indefensible unless the annuity thus proposed shall be classed with unearned charities bestowed to alleviate misfortune. In an effort to increase efficiency in the classified service, and this should be the paramount motive behind all legislation affecting the salary of the government employee, provision should be made for encouraging entry into government work of men with ambition and mental equipment. To secure the services of such employees, two things are essential: The first is a wage fair for the service given during the active period, and the second is a retirement annuity measured by the success attained.

TREATMENT OF CIVIL AND MILITARY EMPLOYEES CONTRASTED

The higher grade civil employee, unlike the military, is not educated at the public expense, but must at private cost prepare himself for a service that is just as much beyond his reach without serious prior preparation as that of his coworker in uniform. Furthermore, his service to the Government is continuously essential, essential in peace as well as in war, and when finally retired, after reaching old age, with his powers exhausted, the few years left to him should not be years of dependency upon the charity of his friends or of the public.

If there is any good reason why a civil employee should receive treatment wholly different from that given to his military brother, especially in times of peace, it has not been satisfactorily explained. The military brother retires on three-quarters pay, no matter how great his salary may have become. The military employee these days, who enters the battle line, fights side by side with the civil employee selected because of his capabilities for effective military service. When, or if, the draftee survives the battle, he goes back to his old position in the Civil Service, rejoining those workers whose united effort keeps the intricate and delicate machinery of this great democracy functioning. There again he becomes the object of suspicion and contumely on the part of those who are ignorant or wilfully blind to the impressive fact that the trained and experienced civil employees alone furnish the force which keeps the great governmental machinery running smoothly. Should these employees suddenly retire from the public service the whole machinery of Government would collapse like an ignited observation balloon which had been fired probably by the courage and skill of the civil employee temporarily drafted into the military service.

EXPERT AND TRAINED EMPLOYEE IS PENALIZED FOR SUCCESS

In this connection it may not be impertinent to invite attention also to the injustice with which recent and pending legislation treats the expert and trained employee who under the Civil Service has risen to a position commanding a salary of more than $2,500 a year. Why penalize him for his success? This limitation, if it means anything, means that the measure of increase shall vary inversely with the individual responsibility and usefulness, and in effect penalizes those whom the Government is compelled to hold chiefly responsible for keeping the tremendous civil machinery oiled and in efficient operation.

FRANK BOND,
Washington (D. C.) F. E. U.

Railroad and Civil Service Employees

Why the discrimination in favor of the railroad men? Give government workers political rights and women the ballot.

To the Editors:

. . . For my part, and I am talking to the Union now through you, I can't see the justification of the discrepancy in wages for the two classes of workers as represented by the railroad man and the civil service man. I know something of the work of both sides, as I have worked for both, and the condition of present wages of the two in comparison is nothing short of disgraceful. I am glad the railroad men get what they do, and I hope they will never get less, but I can not see why those who give up all chance of success in a business way to work for the Government should not have the same consideration, and I can not see why they should be placed in a position wherein they can not help but feel that they are being discriminated against. I can see but one way for the Union, and that is for us all to work "tooth and claws" to have the political boycott removed in our case, and thus give us the privileges guaranteed us by the United States Constitution. Give the women the vote? Yes, by all means, as it is their right and should be their privilege, but at the same time remove the gag from the mouths of government employees and restore them to "citizenship" if we are to have a democracy in fact. Why do I insist on this? Because it is our right, and because of the make-up of the average politician who will act only when and where self-interest gives him the necessary impulse. A class of civil service employees with political privileges is no nearer a menace to good government than a class of railroad men under government control with the same privileges is a menace, and so I will stop by asking, Wherefore the discrimination?

CARROLL F. SCOTT,
Washington (D. C.) F. E. U.
Albuquerque,
N. Mex.

Retirement and Salaries

A plea for adequate salaries, the payment of which, the writer contends, would remove the necessity for a retirement system.

To the Editors:

We have heard much of late about a retirement and pension system for government employees. It has been a matter of great interest, though most of us looked on the matter as a sort of dream before the introduction of the McKellar-Keating bill.

Still, a pension may properly be described as a form of charity doled out to underpaid employees who have remained on the job. Obviously, the way to avoid pensions is to provide that the employees shall not be underpaid. With a just and adequate salary schedule there would be no talk of pensions. For my part, I prefer that Congress shall vote me an adequate increase, provide for the reclassification and standardization of salaries in the near future, and forget the pension business. No man or woman should be made the subject of charity, and that is what the pensioner is. Everyone is entitled to and should receive such a wage that he may live comfortably and provide for his future. If the government employee is paid a decent, just and proper wage he will be able to provide for his own future, just as the bricklayer or the bank clerk must do. He has a right to protest against paying taxes which go into a pension for me; I would do so in his place.

At this time there is an effort being made to secure for the government employees an increase of a dollar a day in salary—a flat increase of $360 per year instead of the $120 which was grudgingly awarded for the present year to offset an advance of nearly 70 per cent, after much begging and after the growing influence of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES was exerted. And it might be observed in passing that, so far as noticed, this increase has not been declined by any of those who have refused to join

Digitized by Google

the Federation because they "did not believe in unions," they "could not afford the 35 cents a month dues," their "boss was against it," etc., *ad nauseam*.

Let us look at some of the government salary schedules actually in effect. The average customs inspector in this part of the country receives $3.50 per day. It is but a short time since he received but $3 per day. Yet I expect it will be admitted that he must have at least as much brains as a first-class mechanic; he must wear better clothes at his work—a prescribed uniform for which he must pay; and he must be on the job or ready for call at all hours. As a matter of fact many of them never know an hour they may call their own. The mechanic puts in his 8 hours and is finished for the day. He gets a half-day off on Saturday and does no work on Sunday except at overtime rates. But trains and boats take no account of Sundays—the inspectors must be on hand every day in the week. The mechanic receives from $5 to $7 per day for his work; many trades here receive their $7 per day.

The Bureau of Animal Industry employs men as inspectors who are and must be above the general average of intelligence, yet very few of them receive as much as the street-sweepers in the city in which I live—$4 for 8 hours.

The custodian of the building in which I am employed has for years, and until very recently, been constantly on the lookout for male help at the princely wage of $55 a month. Think of it! able-bodied, honest, intelligent men to work for the United States Government at $55 a month! Men who may be trusted with the keys of the inner sanctums of the United States attorneys, the Land Offices, the Secret Service, and all the rest. I don't know when the wage schedule of the Custodian Service was born, but it surely is old enough to have a long gray beard. And at that it hasn't much on the wage schedule of the Customs Service which, I am told, was brought up to date—almost—*in 1873*. You may have noticed that the schedule of prices on those things which we eat and wear has no beard. It is the most up-to-date thing in the world. But, how does the one balance against the other?

As to the older employees: Many of these have put their whole life into the service. Some have in their day been well paid and some have not, but the fact that they may have at one time received a living wage does not help them now. As in the case of the customs inspectors, $3 per day in 1873 was as much as or perhaps more than good mechanics were then receiving—about half their present rates.

We are told that there are about 4,500 superannuated employees who would be included in the first year's pension roll. This, of course, might be called a surplus, the gathering of a goodly number of years, for many of them we are told have long outlived their usefulness as government employees. Heads of the departments hesitate to remove them; it seems inhuman, and they well know that dismissal in all too many cases means a call from a Representative or a Senator demanding that his constituent be replaced on the pay roll. And yet many of them are entirely useless to their employer and others are supplied with assistants, at $1,200 or $1,400, who actually do the work. If these 4,500 were placed on a pension roll it stands to reason that the number who would be eligible for a pension at the end of the next year would be comparatively small.

Suppose now, that the salary increase asked by the N. F. F. E. be granted. Proceed then to pension the 4,500, whose days of usefulness have passed, at the rate specified in the McKellar-Keating Bill, and at government expense—$600 per year. That would entail an expenditure of $2,700,000 for the first year. It should be remembered, however, that their salaries for the year amount to $6,750,000—and they do little work. Any way you figure it it would mean an annual saving to the Government of several million dollars. At the end of the second year a certain number of employees would have reached the retirement age but they would have received during the year the increased salary. Retire them, then, at a lesser pension, say $550. At the end of the next year there would be ready for retirement a certain number who would have received the increased compensation for two years. Retire them, then, at, say, $500. Continue this system and at the end of ten years the retiring employees would receive a pension of $150. From that time on there need be no pensions. Also, at the end of ten years many, very many of the first-year men would have ceased to need pensions and at the end of twenty years the amount thus required would be negligible.

Under such a system the departments would be able to secure and to *keep* first-class men. There would not be that everlasting and costly turnover of labor which every private concern is trying so hard to overcome. And the morale of the service would be improved 100 per cent. The morale of any body of employees cannot be good when they are constantly on the lookout for a better-paying position or complaining about the size of the pay check.

The "dollar-a-day" proposition is, however, only tentative. It might be absolutely fair at the time it went into effect, but in a year or in ten years be exceedingly unjust. Hence the need of a permanent Wage Board in which the employees are, of course, represented, to reclassify and standardize the salaries of government employees and to rearrange such salaries whenever the need arose. They should be kept up to the times just as are the salaries and wages of employees of private concerns. The concern that asked its employees to work for the scale of wages in effect even ten years ago would perforce shut down. "It isn't done, you know," except in the government service.

The first and most immediately important thing is to secure a living wage; then, to arrange for the future so that we may feel that we are to receive, so long as we continue in the service of the Government, a wage at least equal to that paid to private employees whose work requires similar ability, intelligence and experience.

A. F. RICHARDSON,
Spokane F. E. U. (No. 11).

Customs Guards—Salaries and Title

Urgent need for salary increase to $1,440 a year; further, the title "Customs Guard" should be changed to "Night Inspector."

To the Editors:

The Customs Guards of the Port of Philadelphia are striving hard for the recognition that belongs to them and are making every effort to get relief through legislation, with a fair chance of success. At the present time each port has a different rate of pay, while the duties of the Customs Guards are the same. Few realize this, and many think that all they have to do is to wear the uniform and look wise, while those in authority will tell you that it is an indispensable office, and that the requirements are so drastic that few seek the position. There are many reasons for this, the first being the small salary compared with the necessary expenses. Previous to the war a uniform could be purchased for $15 to $17; today the same uniform costs $25 to $30; then there is carfare to be paid by the guard, and in many cases this runs as high as 25 to 30 cents per day. There is also the expense of one meal for those who can not eat cold food, and if one's appetite is fairly good it is easy to see that carfare and the meal take one dollar of his salary each day.

Digitized by Google

Is it any wonder that these men are appealing to those in authority for an increase in salary? Would the outside world think it possible for these men to meet their obligations and have their families live like other people? No; if they knew it, they would protest, but still these are the facts. Congress knows this, and the House has just granted an additional increase, but the Honorable Senate up to this time has taken no action. Let us wait, however; the spirit may yet move them in the right direction and our prayers be answered.

We all feel that the national body is doing all it can for an advance in salary for all employees in the service. The Philadelphia Union has requested that the Customs Guards be paid $1,440 per annum, feeling that this is only a fair compensation for service rendered. From now on Customs Guards at every port should help push the movement. They should also urge that their title be changed from Customs Guards to Night Inspectors, because as the war is now over, the word "guard" sounds too much like "policeman," while "inspector" gives us the title which rightly belongs to us, as we are the relief of the Day Inspector, with the same duties to perform.

PAUL H. BERNDT,
Philadelphia F. E. U. (No. 23).
Collingswood, N. J.

Publicity for Unions

Brother Henry W. Walker, the wide-awake Secretary of the El Paso, Texas, Local, has been very successful in securing a great deal of valuable publicity for that organization. In this article he makes suggestions in this line well worth careful consideration.

THE subject of publicity for unions might appropriately be segregated into several classes —the daily newspaper, the weekly labor paper, and the monthly official magazine.

It is of paramount interest to the union to pay attention to the publicity end of its affairs, for nothing attracts like favorable publicity of the happenings of unions, the progress made and social features participated in by the members.

1. The daily newspaper has concern with the affairs of the union only in so far as the human interest affects individuals connected with it that may make friends for the paper. It follows, therefore, that items submitted for free publicity must be presented promptly after the occurrence of the events dealt with, be based upon facts, be of public interest, condensed in words, written with spicy lead, stating time and place, and mentioning as many names as possible, spelled correctly with proper initials.

2. The weekly labor paper is, as a rule, really anxious to have submitted the news of the organization's doings, as well as various "personals" about members and their families, such as marriages, births, arrivals and departures from the city of members, promotions, securing of new members, and, in fact, anything actually concerning the membership. The reason for this is that the editor is usually vitally interested in the welfare and progress of the various labor organizations of that particular city, especially so if the union subscribes for the paper for each member, a thing which each union ought to do.

3. The official monthly magazine of the national organization of the union is usually read by all members, for the reason that it is *their magazine,* one in which they are vitally interested. It should contain not only articles of general interest to organized labor but also news of special interest to its own membership, such as those mentioned above, and the action of Congress in matters of legislation pertaining to the material interests and future welfare of the membership. The magazine should be read promptly and passed on to some non-member, who might become interested and join the union. Members changing their addresses should promptly inform the secretary of such change, in order that they may not miss a single issue of their magazine.

It is to the interest of the union and its members that careful and consistent support should be given to the weekly labor paper and their official magazine by making especial mention to advertisers and business men whom they patronize; for it is those that give the sinews of war that make it possible for creditable papers and magazines to be published, which in turn are loyal supporters of their organization and its principles.

When patronizing an advertiser just say, "I saw your advertisement in our paper" (or magazine). It helps wonderfully, and convinces the advertiser that he is getting some return for the money he has spent with your paper. If it be a non-advertiser you are patronizing, just keep after him until he becomes an advertiser, thereby promoting the interest of your union and yourself.

[Brother Walker has embodied in the following epigrammatic suggestions some of the wisdom accumulated by him as the result of years spent in the school of experience. These are so much to the point that the editors are glad to pass them along for the benefit of brethren along the line who have organization problems to deal with.—EDITORS.]

"'The Lord helps those who help themselves,' applies especially with force to federal employees. Be a pusher—up and doing, all the time."

"Spend fifteen minutes a day urging the value of organization on your associates. You'll be surprised at the good results and quick returns."

"Don't neglect the social features of the Union. We all need recreation and amusement after the hours of toil."

"Don't you feel more self-respecting and independent since you joined our Union and feel that you are working with your associates in a common cause?"

"The Union is the worker's business institution. How much capital and time are you giving to your business institution?"

"How many new members have you secured for your Union during the past month? Persistent trying is practically applying the principle."

"It rests with you to do your share towards making Union meetings interesting. Don't expect the officers and a few enthusiastic souls to do it all. Your presence is a help, and your active cooperation in the work is still better. You should act your full part all the time."

"Favorable newspaper publicity, local and national, promotes unionism's welfare."

"Trade-unions are the natural, logical and commonsense method through which and by which the universal, vital, overshadowing problem of labor will be settled—and settled right, too."

"If you find yourself not thoroughly posted on unionism, spend a quarter of an hour every day for a couple of weeks reading THE FEDERAL EMPLOYEE. You'll be surprised how soon you'll grasp the meaning of our movement and its principles."

"Do you attend the meetings of your Union and hear the reports of your officers and delegates to the Central Labor Union? Are you showing to organized labor that the federal employees' movement is a valuable adjunct to the organized labor movement of this country? It is your duty to do your full part in the trade-union movement and prove that the National Federation of Federal Employees is worthy of the support of all trade-unionists."

"By the shorter workday we mean simply a longer living day. See? Think this over."

Digitized by Google

The Minimum Wage Hearing

Few, even among government employees, it is believed, have a keen realization of the living conditions of thousands of their fellows, who are victims of a starvation wage schedule. At this hearing, one of the most notable in many respects ever held before a congressional committee, the sordid facts were brought out once more into the open. The minimum wage question, from the standpoint of both theory and practice, especially in its bearing on the government service, was discussed from many angles.

IT MAY well be doubted whether there has ever been a congressional committee hearing more replete with real human interest than that on the Johnson-Nolan Three-dollar-a-day Minimum Wage bill, held on January 28 last before the subcommittee of the Senate Committee on Education and Labor. In addition to the members of the subcommittee, Senators Jones, of New Mexico (chairman), Hollis, and Borah, there were present Senator Hiram W. Johnson and representatives of many organizations of government and District of Columbia employees.

Among others present were: Luther C. Steward, president, National Federation of Federal Employees; Dr. John A. Ryan, professor of political science, Catholic University, Washington, D. C.; Henry Sterling, legislative representative, American Federation of Labor; W. F. Ogburn, statistical expert, National War Labor Board; Victor T. J. Gannon, former manager Employers' Association of Chicago; Peter J. Lydecker, Trenton, N. J., representing custodian service; John O'Brien, New York, N. Y., representing customhouse laborers; Frank A. Bush, Baltimore, Md., representing custodian service; M. Thompson, Baltimore, Md., representing messenger service; Edwin P. Baldwin, Baltimore, Md., representing watchmen; J. J. Flynn, Baltimore, Md., representing bonded warehouse laborers; Ethel M. Smith, executive secretary, Women's Trades Union League; George W. Fisher, Philadelphia, representing port laborers; Abraham L. Adler, Philadelphia, Pa., representing laborers in appraisers' stores; Jessie R. Haber, executive secretary, Consumers' League; Maude F. Aiton, representing School Teachers' Union; J. C. PRESIDENT STEWARD OF N. F. F. E. SPEAKS FOR EMPLOYEES IN GENERAL

President Luther C. Steward, of the National Federation of Federal Employees, in response to a question by the chairman, spoke of the noticeable difference in the readiness of government employees to appear at this hearing compared with their unwillingness to testify a couple of years ago, before the cost of living had increased so alarmingly as to overcome a natural personal pride in many cases. Mr. Steward declared that the Government is probably the only—

> large employer in the world that takes no consideration of the cost to the business of its turnover.
>
> Any private employer, who is able to keep out of the bankruptcy court, realizes that a skilled employee has cost the business a considerable amount of money for training and is an asset. In many businesses their chief assets are the experience of their employees. The Government alone gives that no consideration. The question which involves the Government in its dealings with its employees is the statutory amount or the custom of payment of a certain fixed sum, and regardless of the value of that employee, he or she is permitted to accept outside employment, without any attempt made to take advantage of that experience which has caused the Government large sums of money. That net loss to the Federal Government runs into the millions of dollars every year, and it is an economic waste.

The chairman then asked President Steward whether his study of the matter had led him to expect "any substantial decrease in the cost of living in the next four or five years." To this Mr. Steward replied by giving the published opinion of Messrs. Lewis F. Swift and J. Ogden Armour, both in the negative.

The chairman wished to have appear in the record of the proceedings what he considered an interesting fact, "that a very valuable witness before the Committee on Education and Labor last week, he being the employment manager of Hart Shaffner & Marx, wholesale ready-made clothing makers, said that he did not expect any decrease in the cost of living and that his company had made contracts with their labor for the next three years, assuming that the cost of living would not decrease."

Mr. Steward then submitted the following table:

Estimated number of employees in the Federal civil service who would benefit by the passage of the Johnson-Nolan minimum wage bill.

Department or independent establishment	*After receiving an increase of* $360 *per annum*	$240 *per annum*
Department of Commerce..	5,276	3,288
Navy Department.....	142	314
Government Printing Office	66	100
Post Office Department...	144	265
Treasury Department.....	7,066	7,929
Department of Labor.....	78	153
State Department.....	49	105
War Department.....	1,520	3,042
Department of Agriculture	1,015	1,576
Department of Justice....	47	90
Interior Department.....	1,481	4,290
Civil Service Commission.	24	33
Library of Congress.....	43	48
District of Columbia	676	2,446
Total.....	15,627	23,681

In connection with the foregoing table Mr. Steward estimated the cost of carrying out the Johnson-Nolan bill, on the basis of a $360 emergency salary increase, at $10,000,000, and at double that sum should the increase be but $240 a year. He drew attention to a proposed amendment making the bill effective from the date of its passage.

The witness further testified that a situation had come to the attention of the National Federation relative to a class of employees excluded from the benefits of the bill under discussion as it passed the House, namely, those who are receiving "quarters and subsistence in addition to their compensation. They are chiefly found in the lighthouses, the coast guard service, and in the Indian schools. These three services are notoriously poorly paid, and to exclude these people wholly from the provisions of this act would be to discriminate very materially against them as the greater portion of those employees with their compensation plus subsistence and quarters, at

Digitized by Google

a fixed valuation, would still be below the minimum rate."

He therefore offered this amendment:

That in the case of an employee receiving quarters and subsistence in addition to his compensation the value of such quarters shall be determined by the head of the department, and the compensation of such employees, plus the value of quarters and subsistence, shall in no event be less than the rate fixed by this act.

"This leaves it to the judgment of the appropriate head of the department to estimate or compute whatever the subsistence is worth so that the whole could be summed up in the aggregate and to that added sufficient compensation to make it as it is in this bill."

Then on line 8, page 2, in connection with the provision that this act shall apply only to those persons who have been continuously in the employ of the Government of the United States or in the employ of the Government of the District of Columbia for a period of not less than two years—

"We feel that that limitation should be stricken out for the reason that, as a minimum wage, this is designed to fix a point below which an employee cannot live in decency and maintain either himself or those dependent upon him. The pinch would fall just as heavily upon one who had not served that length of time as the employee of a longer tenure, and we feel that as this should be the basic wage from which all salary reclassification in the Federal service would begin, the restriction as to time should be eliminated.

"There is one further addition in order, that as this is a minimum wage, it should not work a hardship against any existing wage rate in the case of an employee, and a further proviso might be added at the bottom of the first section reading:

Provided further, That nothing in this bill shall be permitted to operate to reduce the rate of pay or compensation now received by any employee."

An inquiry from the chairman brought out the fact that in Mr. Steward's judgment all temporary employees of the Government, if on the federal payroll, should receive the benefits of the minimum wage bill. Those employed on contract work would not be included.

In conclusion, Mr. Steward referred to the question which had come up during the morning hearing as to whether or not so-called brain workers were organized in this country in connection with the trades-union movement. Some reference was made to the teachers, who have five locals in the District of Columbia and about forty locals throughout the country, and he wished to add that in the organization which he represents, the National Federation of Federal Employees, there were 116 branches throughout the United States, and it has within its membership all classes of government employees from the lowest paid up to the highest skilled technical and professional positions in every section of the country. So that it might be stated, without fear of contradiction, that the brain workers are fairly well represented in the organization.

SAD PLIGHT OF THE CUSTODIAN FORCE PLAINLY TOLD

Mr. Chas. F. Nagl, fifth vice-president of the National Federation of Federal Employees, employed as Assistant Custodian of the Federal Building in Chicago—the largest government building in the United States—presented a petition (printed in our February issue, page 78) signed by a large number of the employees of the Custodian Service and favorably endorsed by the judges of the United States Court, the District Attorney, and many other officials, stating in substance that they are the lowest paid employees in the government service; that they are for the greater part elevator conductors, watchmen, laborers, and charwomen; that it is impossible for them and their families to live on the wages paid them; that these wages are much less than paid in private employment for the same kind of work; and that about three-fourths of the custodian force are compelled to do additional work in order to live.

One of the $27-a-month employees, who had been living in one room and supporting her aged father, had died in the Oak Forest Tuberculosis Institution and the physician in charge had gone to Mr. Nagl's office and accused him of murdering the woman because he had not paid her proper wages, although it had not been his fault, as he had no authority to increase them.

Answering a question by the chairman as to resignations, Mr. Nagl stated that there had been more than 150 during the fiscal year, and that the Civil Service Commission having been unable to furnish employees, he had been compelled to advertise in the Chicago papers at his own expense, but without result; he had also appealed to the United States Employment Agency, but they could not furnish help on account of the low wages paid. Mr. Nagl's testimony developed the fact also that most of the watchmen and elevator men had left rather than work seven days a week and buy their uniforms out of their $60 a month wages, while an oiler had exchanged his $70 a month position in the Federal Building for an $8 a day one in the steel plant.

Mr. Peter J. Lydecker, president of the Trenton, N. J., Federal Employees Union, was also a witness in behalf of the Custodian force—speaking for the janitors, laborers, and charwomen employed in the federal buildings throughout the country. He said that their salaries range, for janitors, from $55 to $65 per month. Firemen receive $55 to $60 per month, and the watchmen the same. The laborers receive from $50 to $55 per month, and the charwomen $20 to 25 a month. A majority of the charwomen are widows with children, and have to seek outside employment in order to live. Asked why it was that charwomen, who have hard and disagreeable work to do, are so poorly paid, Mr. Lydecker replied that he could not tell except that it is a government rule to pay this amount, while similar positions on the outside pay $55 to $75 a month. The reason for the Government being able to get charwomen for less than is paid elsewhere the speaker explained by saying:

"Well, I will give you one instance why I think it is. A woman some three years ago lost her husband and when he died he left her with two small children. She had heard about office buildings and the women working there were able to get tips from the different tenants in the building. When she was appointed to work in this federal building she had an idea that while the salary was $25 a month she would be able to earn a little more because of the tips, and when afterwards she found out that she could not make any more than $25 a month, she went to work and solicited family washing from people around to do after her hours of labor. She has to report at 5 o'clock in the morning at the building and close up her work and finish it up by 10 o'clock, so as not to interfere with the office forces and the men working in the different offices. She does that day in and day out six days in the week."

On behalf of Federal Employees Union No. 80 Mr. Lydecker presented a detailed statement of a number of personal experiences of which the following are typical:

Another case is that of one of the laborers employed in one of the federal buildings who had the misfortune to lose his wife suddenly by death. His family consisted of himself, wife, and four children. His salary was only $50 per month; his wife had tried to assist him by doing work for private families, but owing to ill health was obliged to cease her work, so that when the grim reaper death entered that home it found them totally unprepared to receive him. This man by frugality had saved a dime at a time toward purchasing a suit of clothes to the amount of $20. This was all the money that he possessed and that was not sufficient to pay for the burial of his wife, and only for the kindness of an undertaker who knew of the position that he

Digitized by Google

held under the Government and who agreed to accept payments for the burial on monthly payments this woman would have had to be buried at the public expense.

In the federal building at Trenton, N. J., two of the men of the custodian's force resigned after a service of less than three months to accept like positions with private concerns, giving as their reasons for leaving the service that they could not live upon the salary they received. One has a position that pays him a salary of $25 per week, with rooms free, and the other has a position that gives him a salary of $21 per week, and extras, with no Sunday or holiday work.

In another federal building where charwomen are employed was a woman who was a widow with two small children, and there is no doubt that at the time of her appointment that she was all that a woman should be. Having lost her husband by death, she naturally sought for work to support herself and her little ones, and obtained the position of charwoman. Her salary of $25 per month not being sufficient to support her family, she engaged in other work until her health failed her. She could not stand the strain of the washtub every day, and when almost on the verge of starvation, the tempter came to her and she fell. And I believe that, if the facts were known, this is not an isolated case by any means.

But if, sirs, the living wage of the men in the custodian service is not sufficient what shall be said of the charwomen employed in the same buildings? All the positions in the custodian service need to be filled with men and women who are above reproach. They all have certain responsibilities resting upon them. From the janitor in charge to the charwoman there is at all times before them the opportunity to be dishonest, and yet there is not a more honest body of men anywhere than among the janitors, laborers, watchmen, firemen, and charwomen employed in the custodian service of the United States Treasury Department, nor a class of employees who render better service.

The witness laid before the subcommittee detailed data showing the greatly increased cost of living in a number of New Jersey cities since 1916; also a war schedule "of wages paid by municipalities, private individuals, and manufacturing plants" in various parts of the same state. This schedule shows that the average wage paid common labor in New Jersey is much higher than that paid by the Government to the custodian forces in the public buildings.

The Custodian Service was further represented by Frank A. Bush, a member of Federal Employees Union No. 21, of Baltimore, Md., who spoke from stern experience in that service in the Baltimore Postoffice. The conditions there, according to the witness, were much the same as pictured by other witnesses of the custodian force. Many vacancies cannot be filled owing to the low wages paid. The laborers in the postoffice are dissatisfied further because some taken from the civil service list receive $900 a year, while others, who do harder work, get but $660 and $720.

DR. JOHN A. RYAN DISCUSSES MINIMUM WAGE THEORIES

Dr. John A. Ryan, professor of political science in the Catholic University, appeared before the committee on behalf of both the National Federation of Federal Employees and the Monday Evening Club of Washington, which latter organization had asked him to present their resolutions endorsing the Nolan bill and offering their assistance in securing its passage.

In discussing the theory of the minimum wage, Dr. Ryan expressed his lack of faith in competition or rates in private employment as appropriate standards, inasmuch as such standards are themselves incorrect. From both ethical and economic considerations the lowest wage paid any employee, whether in private or public service, should be sufficient to maintain the worker in decent comfort. Ethically considered, the right to live decently is as important as the right to protection against thugs and burglars, and when society is so organized industrially that a great number of people, instead of having direct access to the resources of nature, are forced into the wage-earning class, their welfare should be considered to at least that extent; and even from an economic viewpoint, the cost of having any considerable class of people working for less than living wages is much greater to society than legislation to prevent employment on such a scale.

Asked whether he would make any difference between a man with a family and one who has not a family Dr. Ryan said he would not; that objection was often made to a minimum wage for women workers on the ground that the majority of women workers live at home with near relatives and the cost of living is cheaper for them and consequently that it is not quite fair to require the great majority of women employees to be paid wages sufficient to support those that live away from home, who are a minority. Now, if the wage is fixed at the cost of living of the woman who lives at home, then the other woman will not get enough wages, because competition will rule in her case. So in the same way, if the cost of living for an adult man is fixed at the cost of the man who has not a family, then the man who has a family will be discriminated against.

Another important consideration, Dr. Ryan contended, is the duty of the state to encourage marriage. Therefore the situation in which the wage is fixed at the cost of living of the unmarried man is bad socially, for it leaves the majority of the working class little or no opportunity of saving so as to provide for marriage at the proper time. The witness thought, moreover, that the living wage in the proper sense should be sufficient to provide not only for the present needs of the family under reasonable conditions but to provide as well for unfavorable changes in life, as sickness and old age.

Asked by the chairman how, in advocating a bill which proposed to change compensation from a competitive basis to a provision requiring a wage sufficient to furnish the comforts or luxuries of life, he could escape the suggestion that the condition of the individual employee should be taken into consideration, Dr. Ryan answered that theoretically he could not escape it, but as in the case of every other legislative enactment, the average situation had to be dealt with; and so the defenders of the present measure had come to the conclusion that they would have to accept arbitrarily the average family, which, in the working class, is between four and five, and adjust the wage to that, admitting that some are going to be gainers and others are not going to have quite enough, but that this was the best that could be done to meet a practical situation.

The wage of $3 a day carried by the Johnson-Nolan bill seemed rather low to Dr. Ryan, although he deemed it adequate three or four years ago when first proposed. This led the chairman to state that for a man with a family of three, for instance, $3 a day is certainly little enough. The question which had troubled him was whether a young man or woman, an apprentice, so to speak, should be given the same pay as the man who had been long in the service and was rearing a family. Further, in filling positions the Government appointing officers would naturally seek the best talent they could get for the salaries available. What would be the effect on the partially disabled?

Dr. Ryan declared himself of the opinion that the wage scale should take some account of the fact that a person is only a beginner. Regarding the second point just referred to he suggested that there should be special provision made for those below the scale of average efficiency.

The chairman expressed the fear that good salaries and the advantages of Washington combined might tend to draw here young men from all parts of the country, who would crowd out thousands of the older employees. To this Dr. Ryan replied that the result would doubtless depend on the operation and administration of the civil service law, but that in any event the efficiency of the government service in the long run would be improved.

Digitized by Google

What the effect of the minimum wage in the pending bill would be on the proposed retirement measure was another consideration advanced by the chairman, who announced his hearty sympathy with some such measure as the McKellar-Keating bill. He spoke of employees receiving a minimum of $1,080 a year, while under the retirement system as it now stands they could get not more than $600 a year.

To this Dr. Ryan responded that few men at, say, sixty-five, would have dependents other than wives and that the retirement allowance would enable the man and wife to live.

MINIMUM WAGE DISCUSSED FROM TRADE-UNION VIEWPOINT

Mr. Henry Sterling, legislative representative of the American Federation of Labor, declared the purpose and effect of the minimum wage is to protect the weak against the strong, to defend those who are economically defenseless against those who have the power to impose upon them. It is no new thing, but is the foundation of trade-union activity.

Answering a query of the chairman, Mr. Sterling said that the trade unions are spending thousands of dollars to bring unorganized workers into the union labor movement.

Mr. Sterling, in emphasizing his statement that the minimum wage is no new thing, said that cities, towns, counties, and states throughout the whole country have time and again set a minimum wage for laborers.

Regarding a point raised by the chairman, that a government minimum wage would deaden the ambition of many young men and keep them in a rut, Mr. Sterling took the ground that the defect would be found in the individual, not in the law, and that many persons would make use of the same opportunities to mount to higher levels. Senator Hollis thought the difficulty is that a man who has a sure salary seldom dares to try his wings out in the world.

Throughout this country and the world, urged Mr. Sterling, minimum wage adjustments and legislation have promoted the general welfare of the laboring people. He knew of no better service to the nation than to give to the children of the laboring class a better opportunity. *The Government here, one of the strongest nations on the face of the earth, chooses, through Congress, in nearly every department to underpay its servants, not only these particular clerks, but in nearly every department it chooses to pay less than the current and prevailing wage.*

As to the case of the single versus the married man, the witness said that discrimination against the former would discourage marriage and the rearing of families. The worth of a job, he thought, must necessarily be determined as with a barrel of potatoes, by competition in the market, and the man who does the work, whether married or single, is entitled to the pay for the service performed. He made this qualification, however, that wages must not be allowed to sink below the level at which the worker can marry and rear a family. There is not a place in the United States, in Mr. Sterling's opinion, where a man can rear a family on $3 a day as an American family should be reared.

After stating that the minimum wage law of Massachusetts has done much good despite the fact that it has been robbed of some of its effectiveness by the action of the employing class, the witness gave the following reasons for the adoption of a minimum wage law:

1. Minimum-wage legislation promotes the general welfare because it tends to protect the weaker workers from economic distress that leads to bad health and inefficiency.

2. The passage of this measure would be some evidence that Congress is rising to a realization of its public responsibilities and particularly its responsibility to its underpaid employees.

3. It will be the best means of insuring industrial peace so far as this class of employees is concerned, and would stimulate confidence in the intention of Congress to do the fair thing by public employees, in the minds of millions of workers.

4. It would stop some of the congressional exploitation of helpless workers.

5. It would develop capacity and efficiency.

6. It would keep together trained workers who have rendered loyal service for under wages during a critical emergency.

7. It would tend to heal the sense of grievance in employees, who would become in this manner better informed as to the exigencies of their trade and it would enable them to interpret more intelligently the meaning of the pay roll.

8. It would give the public some assurance that Congress does not intend to continue the industrial abuses which have been perpetrated upon public employees.

9. In many of the departments of the Federal Government are thousands of employees receiving less than current or prevailing rate of wages for their services.

(To be continued in our next issue)

Unto those who talk and talk
This proverb should appeal,
The steam that blows the whistle
Will never turn the wheel.

National Organizer Peabody's Activities

DURING the month beginning about the middle of January, National Organizer R. E. Peabody swung through quite a circle, from Indiana and Kentucky to Oklahoma. He was successful in organizing a new local in Evansville, Ind., composed largely of employees of the Marine Hospital Service, Bureau of Animal Industry, and United States Employment Service, for which a considerable increase in membership is anticipated.

With the cooperation of Third Vice-President Etheridge of the National Federation another local was formed among the employees of the Indian School at Wyandotte, Okla.

Brother Peabody devoted much time to organization work in conjunction with local union officers and others friendly to the cause, in Louisville and Indianapolis. In both cities he found the government employees favorably disposed toward our movement and looks for good results soon.

In addressing a meeting of the postal clerks in Louisville, Brother Peabody advocated the plan of having fraternal delegates among the various organizations of federal employees, with a sort of district council, a plan which seemed to meet with approval.

At Jeffersonville, Ind., Brother Peabody found an unsettled state of affairs, many employees having been laid off as the result of the signing of the armistice. The indications were that normal and more favorable conditions would soon prevail.

At Muskogee, Okla., a largely attended and enthusiastic mass meeting of the employees was held. This was addressed by Superintendent Gabe Parker of the Indian Service, who is a strong friend of our cause, and by Miss Etheridge and Brother Peabody. The officers of this local feel that much good will result.

Couldn't Find the Place

A very small man—not only small as to stature but lacking also in width of beam—sat in a street car until he became tightly wedged in from both sides. Then there entered the car a large, handsome woman, upholstered to the minute. She took the strap in front of the small man and was hanging to it in discomfort when the small man arose with a flourish of politeness and touched her on the arm.

"Take my seat, madam," he said, with a bow and a smile.

"Oh, thank you very much," she replied, and turned toward the seat.

Then, smiling genially, she asked:

"Where did you get up from?"—*Selected.*

A NATIONAL WAGE BOARD

If a lasting peace among the nations of the earth can be accomplished by the formation of a League of Nations, as urged by President Wilson, why not apply the same principles to the contending forces in the industrial world and thus bring about a lasting industrial peace, too?

During the stirring times of the last year our country has enjoyed an unprecedented era of industrial peace. There has been virtually no labor trouble, owing to the foresight of our Government in appointing a War Labor Board composed of representatives of the manufacturers, labor, and the public. All grievances that arose were quickly and satisfactorily adjusted by this board. It performed splendid service in settling disputes and the country has profited immensely by its experience. The war is over, and it is contemplated that with the conclusion of peace this board shall pass out of existence.

WHY? The War Labor Board has convincingly proved its topnotch efficiency in settling every industrial dispute that arose in times of war. Is there any reason in the world why it should not function equally well in times of peace? Positively not. Instead of abolishing its functions its power and scope should be enlarged. A nation-wide movement should be started for the establishment of a permanent National Wage Board. This board should have supervision of the adjusting of wages of all federal employees and employees engaged on work contracted for by the United States. It should be one of the functions of the board to establish by investigation the cost of living in every city or district in the United States as is now done by the Bureau of Labor Statistics. It should fix, by proclamation, annually or semi-annually, as may be found better, the minimum rates of pay that must be paid to each group of workers in each district or locality. And no employer of labor engaged on government work should be permitted to pay to his employees less than the standard minimum wage as fixed by the board.

General working conditions have greatly improved during the war. The eight-hour basic work day and the five-and-a-half-day week are accepted as "law" everywhere in the industrial field. Why should not all federal employees enjoy similar privileges? It is true that many civil employees of the government work but five and one-half days, but there are thousands, especially along the Canadian and Mexican borders, who are required to work fourteen to sixteen hours a day without even a single holiday in months. Such working conditions are out of keeping with the times. Let us petition Congress that *all* federal employees shall have at least one day's rest in seven.

There is no time for starting a movement for a permanent National Wage Board more appropriate than the present. Our country is now passing through the period of reconstruction. Autocracy is everywhere displaced by democracy. Oftentimes in the past it has been the practice of the autocratic manufacturer to fix the sale price of his product first and pay the workers a mere starvation wage. When the worker faced conditions that were unendurable and demanded an increase he was told that on account of the small margin of profit the employer could not possibly pay more. Let there be an end to such practice. Reverse things. Let some competent authority fix the cost of living of an average family, then fix the minimum wage that must be paid to the worker and let the manufacturer fix the price of his product accordingly.

The best solution of our vast and far-reaching labor problems is the establishment of a permanent National Wage Board. What has proven a success in war will prove a blessing in peace.—W. E. JUNKER.

"WHY ORGANIZE?"—AN ANSWER

"For years in the Committee on Appropriations I have been seeking to raise the salaries of the lower-paid officials, those receiving $720 and $840, but my efforts have been unavailing. This year the effort failed by a tie vote." Representative Stafford of Wisconsin, a member of the subcommittee of the House Committee on Appropriations which made up the Legislative bill, thus expressed himself in the recent debate on that measure.

This statement is assuredly both interesting and enlightening. Think of it! Years of effort required, including the lean, hungry years on which our lot of late has fallen, to rise to the height of a tie vote in the Appropriations Committee of the House of Representatives on the question of paying these government workers (on full time) more than the bare pittances of sixty and seventy dollars a month. Shades of the War Labor Board! If *these* employees, kept on starvation wages, could in years make no headway, what is the prospect, pray, for the permanent relief of the thousands of their fellow-workers who are somewhat more fortunate in the stipends drawn by them, except as by means of collective action they may be able effectually to bring before the country and Congress the justice and urgency of their cause?

Yet in the teeth of the situation thus revealed, some of our national lawmakers, including Mr. Stafford himself, profess inability to see any justification for organization on the part of federal employees! Does not Mr. Stafford's own confession furnish a complete answer to the question, Why should government employees organize?

Organization is the key to the door of hope, which for far too many government employees has been bolted and barred these many years. Organization means the opportunity of ascertaining authoritatively the needs and wishes of the great mass of the workers and, more than that, as has been clearly shown, the opportunity of transmuting the initiative and energy of thousands into effectual ACTION, action which is fully as essential today for the upbuilding of the civil service as for the benefit of the employees, if indeed the interests of service and employees can properly be separated.—J. G. G.

NFFE

OUR THIRD ANNIVERSARY

Before these words shall greet the eyes of our readers the third anniversary of the real beginning of the present movement for the organization of civilian federal employees along broad lines will have come and gone. It was on the first day of March, 1916, that a number of government workers in Washington, stirred by the effort to enact into law the Borland amendment, applied to the American Federation of Labor for a charter, which was subsequently granted. Several years earlier a small band of federal employees by the Golden Gate, blessed in an unusual degree with courage and foresight, had taken a similar course. Thus East and West joined hands to make common cause with the other organized wage-earners of the land.

The child of three years has grown in stature and strength beyond its age. The two unions, separated by the width of a continent, have increased nearly sixty fold. Much of progress and achievement has been crowded into this brief period and today the sun shines brighter than ever in augury of the things to come.—J. G. G.

NFFE

THE GAUNTLET THROWN DOWN

In this day of grace, when Democracy is on every lip, a bold note is sounded by the United States Patent Office, which challenges the attention of other government bureaus. In behalf of the Patent Office the claim is urged that the service throughout the technical and legal corps, from top to bottom, is democratized to a greater extent than in any other federal bureau. In support of this contention the facts are cited that the present Commissioner of Patents has filled at various times seven subordinate positions in the Office and the First Assistant Commissioner, three, while the Assistant Commissioner and all five members of the Board of Examiners-in-Chief have risen from the examining corps.

On the face of the record this seems to be a remarkable showing. Does any other bureau challenge the supremacy of the Patent Office in this respect?—J. G. G.

With the Poets

The Arsenal at Springfield

This is the Arsenal. From floor to ceiling,
Like a huge organ, rise the burnished arms;
But from their silent pipes no anthem pealing
Startles the villages with strange alarms.

Ah! what a sound will rise, how wild and dreary,
When the death-angel touches those swift keys!
What loud lament and dismal miserere
Will mingle with their awful symphonies!

I hear even now the infinite fierce chorus,
The cries of agony, the endless groan,
Which, through the ages that have gone before us,
In long reverberations reach our own.

The tumult of each sacked and burning village;
The shout that every prayer for mercy drowns;
The soldiers' revels in the midst of pillage;
The wail of famine in beleaguered towns;

The bursting shells, the gateway wrenched asunder,
The rattling musketry, the clashing blade;
And ever and anon, in tones of thunder,
The diapason of the cannonade.

Were half the power that fills the world with terror,
Were half the wealth, bestowed on camps and courts,
Given to redeem the human mind from error,
There were no need of arsenals or forts.

Down the dark future, through long generations,
The echoing sounds grow fainter and then cease;
And like a bell, with solemn, sweet vibrations,
I hear once more the voice of Christ say, "Peace!"

Peace! and no longer from its brazen portals
The blast of War's great organ shakes the skies!
But beautiful as songs of the immortals,
The holy melodies of love arise.

—LONGFELLOW.

Child Labor

Wherever little children toil for bread,
Through force, parental wantonness or need,
The country's veins and arteries must bleed
A[illegible]its vitality snap, thread by thread,
[illegible]follow. Where the child is laid
altars of your gain or greed
[illegible]ower of brain or hand can intercede
the doom such sacrifice has made
Jus[illegible]ribution? You who use the name
"A Christian nation," how you thus pursue
The heathen's course! Beneath your freedom true
How you continue these foul acts of shame
Which brand you faithless, void of heart and soul;
Dull-eyed to life and far perfection's goal!

Where little children toil in pain and woe
With poor, frail bodies; where their backs are bent
With sordid labor, tell me what is meant
By this great spectacle, this mighty show
Of costly edifice and towering spires?
This boasted mercy, love, intelligence?
This great devoutness, piety intense?
These high priced preachers, priests and vested choirs?
How do you call it? Is it truth or lies?
Is mine alone the courage to condemn?
Give freedom, health and happiness to them,
The little children—whom your acts despise!

—LAURANA SHELDON.

The Sun Never Sets on Red-Triangle War Workers

We have met 'em in the rest-camps, we have met 'em in the trench,
We met 'em on Gallipoli and when we joined the French.
In Suez and in Sinai we have fought, and everywhere
The chance of war has shifted us, the Y. M. blokes were there.
We have rather come to fancy when we occupy Berlin
The Y. M. blokes will met us with a steaming coffee tin.

—*Literary Digest.*

The Little Towns

Towns are set down in the casualty list
That few of us ever have known;
Hamlets that even geography missed—
Fulton and Maytown and Rhone.

Towns whose main street is a broad, dusty lane
Brought into print with a sigh;
Home of a soldier who weltered in pain—
Hydeville and Goshen and Nye.

Hamlets with only a store and a shop,
Giving a boy for the cause;
Towns where the slowest of trains barely stop—
Atlas and Foxport and Hawes.

Dotting a valley or crowning a hill,
Sending their best with a smile,
Laugh at the whimsical names, if you will—
Morehead and Wahoo and Nile.

Towns that are peaceful, old-fashioned and slow,
Reading the lists for their lost,
Towns that were eager to see their boys go—
Grapevine and Cross-roads and Frost.

Towns that will never seem paltry again,
Hallowed by graves over there,
Valiant their children who perished like men—
Ozark and Red Cloud and Clair.

—HINTON GILMORE *in Leslie's.*

Respectfully Dedicated to W. H.

'Tis done—but yesterday a King!
And armed with Kings to strive—
And now thou art a nameless thing,
So abject—yet alive!

The triumph and the vanity,
The rapture of the strife—
The earthquake voice of Victory,
To thee the breath of life.

The sword, the scepter, and that sway
Which man seemed made but to obey,
Wherein renown was rife—
All quelled!—Dark Spirit! what must be
The madness of thy memory!

—From Byron's Ode to Napoleon (1814).

Bill Jones' Mule

Old Bill Jones had a kicking mule
He couldn't cure. The gol darned fule
Would kick all night and kick all day;
Hoist up his heels while eatin' hay.
He'd a "hee-haw" like a demon's screech;
He'd hit at ev'rythin' in reach;
And when his eyes saw nothin' there,
He'd kick away at the empty air.

But Bill is sure the wisest cuss;
He didn't raise a nasty fuss,
Ner trade the mule ter an innercent.
He knew what conservation meant:
He fixed a harness, strong and tight,
Till that mule's heels was a wondrous sight;
And then, with pulleys, belts and wheels,
He utilized them wasteful heels.

At ev'ry kick the wheels would turn;
He pumped the water; ran the churn;
Did the washin'; sawed the wood;
Ground the feed and ground it good;
Chawed the pigs to sausage meat;
Baled the hay and threshed the wheat;
Dug the ditches; laid the tile;
Stretched the wire fence more'n a mile;
Chopped the silage; shred the corn;
Milked the cows both night and morn;
Turned the cattle out to graze;
Dried the wash on stormy days;
He ran a little dynamo;
And, as his feet zipped to and fro,
They stored the wily 'lectric juice
In batteries for future use;
So house and barn were lighted well,
With current left enough to sell,
Till no one need to go without,
Who lived within ten miles about.

In fact, Bill Jones grew rich and fat,
Which isn't to be wondered at.
He'd caught the secret of the hour—
The harnessin' of wasted power.

Some genius of inventive mind
Should study hard and method find
To muzzle, rope or tie the men
Who waste their force in kicking, when
They might be turnin' wheels instead
And movin' this old world ahead.
Such mind would have endurin' fame,
And all the earth would praise his name.

—CHARLES ELBERT WHELAN
in *The Country Gentleman.*

Seasonable

"And what is so rare as a day in June?"
The poet has sung before.
'Tis a day in *March,* I reply in tune,
For then it is truly *raw!*

—*Life.*

Charge of the Tank Brigade

(Shade of Tennyson, forgive!)

Half a league, half a league,
Half a league onward,
Move like the scythe of Death,
Tanks by the hundred.
Boche bullets harmless glide
Down from their metal hide,
While from the steely Hell
Showers of shot and shell
Volley'd and thunder'd.

Was there a Boche that stayed
To see how they were made?
Not when each Fritzie felt
His hours were number'd.
Theirs not to peek and pry,
Theirs not to wonder why,
Theirs but to sprint or die.
Straight to Berlin they fly,
Huns by the hundreds.

Tanks to the right of them,
Tanks to the left of them,
Tanks back and front surround
Fritz, Hans and Herman.
Rolling the wires straight
Onward they navigate,
Crushing each creature that
Smells like a German.

What is that yellow streak
In the dim distance? Speak!
Is it a circus freak?
Has Nature blundered?
Hush! 'Tis the Kaiser's kin,
Trying to follow in
Vain his retreating chin.
Small blame you wondered.

Honor the Tank Brigade
Honor the fleet that made
Every last Boche afraid
Prussia was sunder'd.
End all this sin with them,
Help us to win with them,
On to Berlin with them!
War Lord, who blunder'd!

—HILDA SAUVAGE OWENS,
in the *New York Times.*

A Recessional

(*After Kipling*)

God of the Nation, known of old,
Supreme, all-powerful and just,
No longer on our coins of gold
Dare we inscribe: In Thee we trust.
Lord God of Hosts, forsake us not;
We have forgot, we have forgot!

Our fathers did not ask in vain
When, unashamed, they sought thine aid;
Now, in our day of stress and strain,
We falter in our faith—afraid.
God of our country, long forgot,
Forsake us not, forsake us not!

We bowed before the shrine of wealth
And, drunk with riches, went astray;
Restore, O God, the Nation's health
And lead it in the old, true way,
In sorrow, shame and vain regret
We plead that Thou will spare us yet.

Forgive our wilful waste, our pride,
Our foolish pomp and wicked lust;
Once more be Thou the Nation's guid:
That we may say "In God we trust."
For thoughtless act and idle word,
Thy mercy on Thy people, Lord!

—*Bellman.*

A Creed

I hold that when a person dies
His soul returns again to earth;
Arrayed in some new flesh disguise,
Another mother gives him birth.
With sturdier limbs and brighter brain
The old soul takes the roads again.

Such is my own belief and trust;
This hand, this hand that holds the pen,
Has many a hundred times been dust
And turned, as dust, to dust again;
These eyes of mine have blinked and shone
In Thebes, in Troy, in Babylon.

All that I rightly think or do,
Or make, or spoil, or bless, or blast,
Is curse or blessing justly due
For sloth or effort in the past.
My life's a statement of the sum
Of vice indulged, or overcome.

. . .

And as I wander on the roads
I shall be helped and healed and blessed;
Dear words shall cheer and be as goads
To urge to heights before unguessed.
My road shall be the road I made;
All that I gave shall be repaid.

So shall I fight, so shall I tread,
In this long war beneath the stars;
So shall a glory wreathe my head,
So shall I faint and show the scars,
Until this case, this clogging mold,
Be smithied all to kingly gold.

—JOHN MASEFIELD.

The Measuring Stick

It's quite the nature of most human minds to score
And measure other hearts by standards of their own;
But in this game of life one fact they oft ignore—
There never was a pack in which no knave was shown.

—WILLIS EDWIN HURD.

He who only rules by terror
Doeth grievous wrong.

—TENNYSON.

Low-Paid Labor Spells Extravagance

The Chinese coolie costs his employer proportionately more than does the modern freight train. The American miner produces several times more than his poorly paid British cousin. Justice to workers has proved better policy as well as better ethics.

"CHEAP labor is dear labor," contends Richard Spillane, editor of *Commerce and Finance*, writing in a recent issue of *The Public*. "If cheap labor is profitable," he says, "China should vault to headship in any industry in which it embarks." By way of example, he compares the Chinese burden bearer carrying one hundred pounds of freight slung over his shoulders, for 20 miles at 50 cents—or at the rate of 50 cents per ton per mile, with railroads carrying coal at the rate of 3 mils per ton per mile, making transportation cost, "in this instance, 166 times as much as the high priced man and machine power of this country." These estimates do not, of course, take into account the cost of construction and maintenance of the roadbed, but the writer points out that this does not enter necessarily into the calculation, it being the element of freight cost that counts. If the burden bearer of China had to transport the freight carried by the railroads, each train of 100 cars would require the equivalent of 100,000 men, and every 20 miles of transportation would cost the company $50,000. Continuing, he says:

GREAT BRITAIN WITH CHEAP LABOR BEHIND AMERICA

"Great Britain pays a much lower wage scale than America. The largest single industry in Great Britain is coal. Cheap labor, or what, compared with America, would seem cheap labor apparently has not worked to Great Britain's advantage in this field, while in America better paid labor has proved profitable to all concerned. Here are some figures that are illuminating:

"COAL PRODUCTION PER MAN

	United Kingdom	United States
1902	282 tons	539 tons
1912	244 "	660 "
1917	249 "	819 "

"The figures are from the annual trade review of *The London Times*, which laments not only over the fact that the American coal miner produces from two to three times more than the British but also declares that in all England motive power is used only to one-half of the extent per employee that it is in the United States.

"If Chinese cheap labor is more costly than American labor and machine power in transportation, and British labor, which receives a much lower pay than American, produces only from one-half to one-third of what American labor does in coal mining, possibly the high wage scale is not such a nightmare as it appears to some persons.

VALUE OF LABOR PROPERLY GAUGED BY PRODUCTION

"There is one true gauge to apply to labor and only one. That is the element of production. Wages come from production. Capital simply is a link between production and wage. In their blindness and antagonism capital and labor ignore this basic fact. One encroaches upon the rights of the other and thinks it is a victory achieved when, in reality, injury is done to both. When Henry Ford established the $5 a day minimum wage scale employers the country over had a chill. Highly paid labor is cheap labor if it produces proportionately more than low paid labor. The problem of the employer in America is not so much to lower the wage scale as to increase the scale of production.

FOLLY AND WISDOM IN DEALING WITH LABOR ILLUSTRATED

"Some men in their folly do all they can not only to continue but intensify the age-long combat between capital and labor, employer and employed. Edward N. Hurley, of our shipping board, went abroad in the hope of arranging with shipmasters of the principal foreign countries to accept the wage scale and the general regulations America has established in relation to seamen's wages and the manning of vessels. Some of the leading shipping men of Great Britain have scoffed at his mission and gone so far as to call his suggestion an impertinence. And yet, every man who has been in sea service knows the pay of a sailor is unjustly low, that the food he gets is poor, that little effort is expended to provide decent accommodations for him and that he is treated more as an animal than a human being. The men who sail the ships of commerce may not be of the best estate but what a mockery we would make of our war slogan of "making the world a better place to live in" if we should accept the purblind view of British shipowners who rise up in wrath at suggestion of improving the lot of the sailor man!

"In the stress of war the patriotism of the sailor was appealed to and he did not fail to respond. He went through mine fields, through submarine-infested seas, he went to death at times and to terrible exposure many times. And back to the seas he went again to serve his country, to serve it as faithfully as the man in the trench.

"If such a selfish view as that of the British shipowners paid in the long run it might have been merit, but it does not pay. It breeds dissatisfaction, trouble and agitation, as anything that is unjust in principle and effect is certain to do. It does not make for better men or better service, and only through better men and better service by men do we progress.

"A different example is furnished by a steel company of Ohio. The head of this company studies man. He has thousands of employees. He has woven his great force into one big family. He pays good wages. He does not think that ends his obligation. Without being patronizing he does everything that is reasonable to help his army of workers to help itself. His plant is one of the model plants of America.

"Does it pay? He thinks so, for the production per man of this mill is 135 per cent of that of the United States Steel Corporation; and the Steel Corporation is not an inefficient corporation.

"That man does not believe in cheap labor. He has built up a great industry through recognition of the fact that production is wealth; that the wage scale should be regulated at all times by production; and that, not infrequently, what is termed high priced labor is the cheapest or, rather, the most profitable labor to the employer."

Child Poverty

Child poverty is the only sort of poverty that matters. The adult that has been poor as a child will never get the chill of poverty out of his bones; but he will die and make room for a better nourished generation.

There are no doubt property owners in America who tell Judge Henry Neil that it is confiscation to tax one man's property to pay for the education of another man's children. We have scoundrels of that sort in England, too. Some day they will, perhaps, have the opportunity of saying it to a higher judge. He will send them to the place he reserves for those who have learned to say "Our Father," but have not learned to say "Our Children." The one without the other is blasphemy. Also, it is an unbusiness-like folly. Neglected children cost more than well-nourished ones to everybody except their immediate parents.

If America cannot see this, there is no future for America. And it is because she has been slow to see this that so much of her past is shameful and so much of her present miserable.—G. BERNARD SHAW in *The Public*.

Is the Government Service a Graveyard of Ambition?

Senator Smoot of Utah takes a pessimistic view of the Civil Service as a career. Unquestionably, heroic remedies for existing evils are needed—Who will take the lead in applying these, in cooperation with the workers?

"I have stated upon the floor of the Senate a number of times, and I will state again, that no friend of mine by my assistance or recommendation will be given a permanent government position in Washington, if he intends to make his calling and vocation in life a position in one of the departments."

THUS Senator Smoot, of Utah. This idea of the government service—that no man or woman with ambition should enter it as a calling—is, as the Senator says, not a new one. It has been harped upon by men of both parties, sometimes with good motives, sometimes with bad, until it has come to be quite generally believed. It has even worked its way into a well-known high school textbook on vocations, so that boys and girls throughout the country are being regaled with the cheerful theory that the service of their government is no place for a man or woman of spirit who is ambitious to enter upon a useful life work.

THE PUBLIC SERVICE RUINOUS EXCEPT AS A STEPPING-STONE

It is difficult to conceive of a more discouraging view than that presented by the Senator from Utah. The government worker, he says—

> becomes an absolute machine, and it is only a few years until he loses confidence in his ability to make a living. He gets settled down in one position, and he spends just the amount of money that he gets from the Government of the United States, and he becomes a dependent. . . .
>
> I want to say now that I have seen more good men ruined by being put into a chair in one of the departments than in any other way—men who would have made their marks in this life, men who would have stood high in their profession. . . .
>
> I like to see men encouraged to come here for the purpose of securing an education and while going to school earn enough to live on, and I want to see the universities in Washington filled with such young men; but I say now that when a man has received his certificate of graduation from the universities the best thing that can happen to him is, as soon as that certificate is issued, to be told to get out and go home and follow the vocation in life that he has previously selected.

Must this always be so? Is it not possible to make the government service what it should be—one of the most honorable professions? Will there not some day be, instead of a minority of Congressmen who understand the government organization, an overwhelming majority of Congressmen who will take a constructive view of the government service and help build up its personnel?

IN WHAT IS THE LURE OF GOVERNMENT OFFICE?

It is a matter of constant wonderment to the world outside, that so many high grade men and women are willing to serve the Government at salaries that shame the devil and often under working conditions that the Government itself would not tolerate in a private plant. Why is it?

For some the lure of a permanent tenure is effective. Others cannot escape. Having mastered certain fairly important government procedure or learned thoroughly some field of activity, they get to the position where they are of immense value to the Government, but of little value to anybody else. Their services are not marketable outside, though they may actually be worth thousands of dollars to the Government.

Another reason some men and women stay in government service at starvation salaries is, that they really like their work and stick to it from a sense of devotion and loyalty that certain Congressmen never will understand. Still another reason why government workers stay in the service is that, like most human beings, they are, after all inherently hopeful. They keep thinking: "Well, Congress gave us a pretty raw deal this year, but it cannot go on forever. Surely next year the Government will do something to make the service better!"

THE URGENTLY NEEDED CURE FOR THE EXISTING ILLS

If Senator Smoot and Senator Ashurst, and others who are genuinely interested in making America a better nation and its Government a more vital thing, really want to see a marvelous change in the government service, let them take the lead in a movement in Congress to make conditions better. It can be done. Federal employees will lend every aid. Let these Senators, with a group from the other side of the Capitol, bestir themselves energetically about such things as retirement, abandonment of the Congressional apportionment plan—a deliberate attempt to deprive the Government of the highest service—absurdly low salaries, inequalities between statutory positions and positions on lump-sum appropriations, and a few other problems that are worthy the attention of any member of Congress interested in the true welfare of his nation.

How Prohibition Won

The spectacle of an entire nation "swearing off" and signing a total abstinence pledge in the form of a constitutional amendment calls forth the very natural inquiry, "How did they do it?" The general plan of campaign was made public at a "victory" meeting held in New York the last of January, and their advice may be concisely summed up for the benefit of other organizations as follows:

1. Concentrate your efforts on the one object for which you are organized;
2. Refuse to scatter your energies over a variety of movements, however important and however closely associated with the one to which you have chosen to devote yourself;
3. Refuse to compromise on any half-way measures;
4. Keep out of partisan politics; get all the help you can from all parties;
5. Train a correspondence squad to act as minute men and, at the word of command, to fire a charge of shrapnel in the form of letters into the Congressional trenches at the psychological moment when the persuasive voice of the constituents back home most needs to be heard from.

Gems from Pension Office "Field Review"

Monogamous Polygamy. Comes now the *Arkansaw Traveler* with the following biological phenomenon:

"Jake Dickinson had two wives and her name was Delia and she died." It is conjectured that the Pale Reaper's arrival is all that saved Jake from prosecution for bigamy.

Now You See It and Now You Don't. A prestidigitator in the field presents the following:

"Of the names in the probate records, none can be found now."

Tares among the Wheat. Here is a bouquet of unrelated things fresh from the field:

"Soldier and claimant were well known in the locality. His reputation was not good, but she is referred to as being garrulous, and both joined the Presbyterian church."

No 'Ope for 'Opkins

Chaplain—So poor Hopkins is dead. I should have liked to speak to him once again, and soothe his last moments; why didn't you call me?

Hospital Orderly—I didn't think you ought to be disturbed for 'Opkins, sir, so I just soothed him as best I could myself.

Chaplain—Why, what did you say to him?

Orderly—" 'Opkins," sez I, "you're mortal bad."

" 'I am,' sez 'e.

" ' 'Opkins,' sez I, 'I don't think you'll get better.'

" 'No,' sez 'e.

" ' 'Opkins,' sez I, 'you're going fast.'

" 'Yes,' sez 'e.

" ' 'Opkins,' sez I,' 'I don't think you can 'ope to go to 'eaven.'

" 'I don't think I can,' sez 'e.

" 'Well, then, 'Opkins,' sez I, 'you'll go to 'ell.'

" 'I suppose so,' sez 'e.

" ' 'Opkins,' sez I, 'you ought to be wery grateful as there's a place perwided for you, and that you've got somewhere to go to.' And I think 'e 'eard, sir, and then he died."—*Life.*

A Natural Inquiry

One result of this war will be that the workingman will be better paid. He'll be content no longer with the shameful wages of the past.

The workingman is showing in numberless ways his resolve to have a better share of the good things his labor creates. I know a lady who, when the submarine crisis was at its worst, lectured on cheap and tasty dishes for the masses.

"My next dish," the lady said in the course of her lecture, "is boiled cod's head. A boiled cod's head, dear friends, is, properly prepared, a dish fit for the gods. You take four cods' heads of good size and quality, place them in a casserole with salt and pepper, an onion and——"

"Wait a bit, ma'am."

A gaunt chap had risen from a front seat. He was pointing his long forefinger at the lady and scowling.

"Wait a bit, ma'am," he repeated. "What I want to know is, who gets the cod?"

"Better be polite to every boy you meet. He might be your colonel some day."—*Jewell (Kans.) Republican.*

The Power of Music

The wounded Highlander seemed to make no headway toward recovery. He was forever talking about his "Bonnie Scotland," and the idea occurred to the doctor that a Scotch piper might rouse his spirits. Accordingly he found a piper and arranged that he should pour forth all the gems of Scottish music the pipes were capable of interpreting. When the doctor called the next morning he eagerly asked the matron:

"Did the piper turn up?"

"He did," replied the matron.

"And how's our Scotch patient?"

"Oh, he's fine. I never saw such a change," said the matron.

"That's grand! That was a fine idea of mine," said the delighted doctor.

"Yes," replied the matron, sadly, "but the other thirty patients have all had serious relapses."—*Youth's Companion.*

Caught

"Is that you, dear?" said a young husband over the telephone. "I just called up to say that I'm afraid I won't be able to get home to dinner tonight, as I am detained at the office."

"You poor dear," answered the wife sympathetically, "I don't wonder. I don't see how you manage to get anything done at all with that orchestra playing in your office. Good-bye."—*Everybody's.*

The Irish Coast

An officer on board a warship was drilling his men.

"I want every man to lie on his back, put his legs in the air, and move them as if he were riding a bicycle," he explained. "Now commence."

After a short effort, one of the men stopped.

"Why have you stopped, Murphy?" asked the officer.

"If ye plaze, sir," was the answer, "Oi'm coasting."—*Over Here.*

The Crowning Virtue

"Have you lived a good life?" said St. Peter to a trembling female who knocked timidly at the Gate of Beauty.

"I was only good at one thing," said the sprite before him, with a doleful shake of the head.

"And what was that?" inquired St. Peter, in a voice of blissful sweetness.

"Cooking," responded the timid one, in woeful tones.

"Come right in, then," said the sentinel saint; "you've saved more men from perdition than a dozen missionaries, and I don't believe you can find anything around here in the shape of blessedness that you're not entitled to."—*Texas Siftings.*

High Finance

A little boy had a pony and a dog, and his generosity was often tried by visitors asking him—just to see what he would say—to give them one or both of his pets.

One day he told a man he might have his pony, reserving the dog, much to the surprise of his mother, who asked:

"Why, Jacky, why didn't you give him the dog?"

"Say nothing—say nothing, mother. When he goes to get the pony I'll set the dog on him."—*Pittsburgh Chronicle.*

A Study in Psychology

The man went into a kaif and ordered a beer and laid a dollar bill on the bar. The bartender gave the man the beer and handed him back $1.05 in change. The man glanced hurriedly at the change, shoved it into his pocket, gulped down his beer with a red face, and hurried out of the kaif.

"Hey!" said another man in front of the bar who had noticed the transaction, "don't you know that you gave that fellow a dime too much change?"

"I do," replied the bartender. "If I had given him the right change he would have examined it; but, thinking that he was doing me out of a dime, he dashed out without looking at the money he received. And it was worth a dime to get rid of that lead half-dollar I slipped over on him."—*Cincinnati Enquirer.*

Too Many Legs

A young officer at the front wrote home to his father:

"Dear Father—Kindly send me $250 at once. Lost another leg in a stiff engagement and am in hospital without means."

The answer was as follows:

"My dear Son—As this is the fourth leg you have lost (according to your letters), you ought to be accustomed to it by this time. Try and hobble along on any others you may have left."—*Exchange.*

Summary of Labor Laws Enacted in 1918

War has done much to advance the standards of labor in the United States and gains through legislation have been greatly aided by presidential orders under authority of Congress, according to the summary of labor laws enacted in 1918, issued by the American Association for Labor Legislation. This summary shows what has been accomplished by the Department of Labor and by the various state governments.

"Protective labor legislation, won through long years of effort, has proved a sound basis upon which to maintain and increase the efficiency and sustained fitness of industrial workers," says Dr. John B. Andrews, secretary of the association.

Recognizing this, the Federal Government and the States have almost unanimously insisted upon upholding, enforcing, and extending labor laws.

Virginia is the latest recruit in the workmen's compensation camp, making 41 states and territories now having this form of social insurance, in addition to the model act of the Federal Government for its million civilian employees and the soldiers' and sailors' insurance act, the most important social insurance measure adopted by any country.

Official commissions in eight states have continued their investigations of universal health insurance. The Supreme Court's adverse child-labor decision was a temporary setback, but the individual states continue to throw protections around the employment of children. Several states—notably New York—have this year regulated women's hours and conditions of work and have improved safety and health safeguards.

Of far-reaching national import is the passage by Congress of the law providing for the rehabilitation and re-education of crippled soldiers and seamen and their restoration to self-sustaining industrial pursuits. Following this lead, Massachusetts has provided for similar rehabilitation of crippled victims of industrial injuries.

Three states passed bills further restricting employment of children. New Jersey and Virginia modified working hours for children. Maryland raised from 12 to 14 years the minimum age at which children may be employed during vacation or may work in canning or packing establishments. New York forbids females under 21 years from working in telegraph and messenger employments. Rhode Island has made unlawful the "kiss of death" suction shuttle in textile mills.

My Problem

Sooner or later in life there comes
To each and every one
Some trying problem to be solved,
And 'tisn't always done.

My problem deep, o'er which to solve
In vain I daily strive,
Is—how to make *one* dollar bill
Go just as far as *five*.

—*Life.*

No Political Labor Party Says Gompers

The Head of the American Federation of Labor traces briefly the experience of labor in the political field and the accomplishments of the Federation in behalf of the workers. President Gompers sees grave danger in the dependence of Labor on the fortunes of a political party.

IN RESPONSE TO a request from members of the American Federation of Labor, President Gompers, at a representative labor meeting held in New York City last December, announced his position in regard to the formation of a political labor party, taking as his text Art. III, Sec. 8 of the constitution of the American Federation of Labor, which declares that "politics, whether they be Democratic, Republican, Socialist, Populistic, Prohibition, or any other, shall have no place in the conventions of the American Federation of Labor."

After discussion it was unanimously resolved by the meeting that the American Federation of Labor should publish President Gompers' address. Further, the Executive Council of the Federation approved the address as expressing its judgment of the attitude to be taken for the protection and promotion of the best interests of labor, and, in conformity with this view, the Council declared that "while local and central bodies and state federations may enter into the political field, either independently or otherwise, it is not within their province to form or become part of a national political party."

HOW LABOR HAS FARED IN POLITICAL PARTY MOVEMENTS

In opening his address Mr. Gompers stated that no man had a right to look lightly upon the movement recently inaugurated in certain cities for a political party, and that it should be neither adopted nor rejected without serious consideration and deep concern. A brief outline of the progress of the labor movement both here and abroad followed, with special reference to political action, the speaker including in his review the National Labor Union, which dissolved after nominating a presidential candidate; the eight-hour movement which, while instrumental in reducing the working day from sixteen hours to ten, suffered a set-back by reason of the Haymarket tragedy with which it was sought to connect it; and the formation and dissolution of the Progressive Labor Party.

In Germany, Mr. Gompers said, the trade-union movement having been dissolved by Bismarck, and labor organizations not having the right to exist, the movement went to its death for a time. When the order was slightly modified, it revived, but with an absolute lack of democracy in its organization. Executive officers imposed their will on those below, whose principal aim came to be the currying of favor with those in power.

In France, the labor movement is not extensive. Some of the most completely organized unions are wholly out of touch with the French Federation of Labor because they want to exercise their individual right of trade-union action; the political party dominates the trade-union movement in France.

"In England there are the British Trade Union Congress, the British Federation of Trade Unions, and the Labor Party. For the discussion of business when the conventions of either party are not in session, they meet jointly in conference through the Parliamentary Committee of the British Trade Union Congress and the Executive Committee of the Labor Party. Quite a number of the members of the Parliamentary Committee of the British Trade Union Congress are members of the Labor Party, and quite a number of them who hold their seats in Parliament are members of the Labor Party. As a matter of fact, the Executive Committee of the Labor Party dominates the entire movement of England.

ECONOMIC MOVEMENT MORE EFFECTUAL THAN A POLITICAL MOVEMENT

"The fact is that an independent political labor party becomes either radical, so-called, or else reactionary, but it is primarily devoted to one thing and that is vote getting. Every sail is trimmed to the getting of votes. The question of the conditions of labor, the question of the standards of labor, the question of the struggles and the sacrifices of labor, to bring light into the lives and the work of the toilers—all that is subordinated to the one consideration of votes for the party.

"I have read the fourteen points which have been formulated for the proposed labor party here [printed in the December, 1918, FEDERAL EMPLOYEE, page 1214]. Is there one of them of an essential character to the interests and welfare of the working people of the United States which is not contained in the curriculum, the work and the principles of the bona fide labor movement of our country?

"Which movement, economic or political, in any country on the face of the globe has brought more hope and encouragement, more real advantage, to the working people than the trade-union movement of America

Digitized by Google

has brought to the wage-earning masses of our country?

"The organization of a political labor party would simply mean the dividing of the activities and allegiance of the men and women of labor between two bodies, such as would often come in conflict. . . .

"In our movement we have done some things. We have brought together more than three million workers, organized into our trade unions and belonging to the American Federation of Labor. In addition there are between four and five hundred thousand workmen in the Railroad Brotherhoods not affiliated with us but yet in accord with our work and our policies. In other words, there are nearly four million of organized trade unionists in the United States. There is not always harmony; there is disagreement; there is opposition, all of it important, all of it tending to crystallize the sentiment of unity and devotion to the cause of labor. The American labor movement occupies the field of activity without yielding one inch to any other body. . . .

"Who are we going to have as the leaders of this new political labor party here? I understand that there is impatience among our fellows. It is creditable to them that they are impatient. There is not any man in all America, or in all the world, more impatient than I with the progress that has been made, with the position we occupy. I want more, more, more for labor. I think I have tried and am trying to do my share. My associates of the Executive Council have tried to do their share, but there is such a thing as attempting to overrun, and by over-running to defeat the object we would gain for the wage-earners and to throw them into the hands of those who do not know the honest aspirations of labor or who would direct them for personal aggrandizement.

"I have been the President of the American Federation of Labor for many, many years. I regard that position as the most exalted that I could occupy. I have no aspiration to hold this or that position. It is not that I ask you to follow me. I ask that the trade-union movement be given its fullest opportunity for growth and development so that it may be the instrumentality to secure better and better and better and constantly better conditions for the workers of our country.

"Here we are in this transition period from war into peace, with all that it may mean. . A week ago last evening, that is, on Sunday evening, December 1, at the Century Theater, I delivered an address. I am proud of the address I delivered there on that night. I do not think that any one realizes all the dangers which I felt and tried to express as to the situation now and which may arise in the near future. I ask you whether the creation of a political labor party, and particularly at this time, would help to solve these problems and meet these dangerous conditions? If ever unity was needed for the toilers, it is now.

BIG THINGS DONE FOR THE WORKERS BY A. F. OF L.

"It is not true, as some carping critics allege, that the American Federation of Labor is a non-political organization. As a matter of fact, the workers of the United States and the organized labor movement act voluntarily in the exercise of their political right and power. We have changed the control of our government from the old-time interests of corporate power and judicial usurpation. We have secured from the Government of the United States the labor provision of the Clayton Anti-trust Law, the declaration in the law that the labor of a human being is not a commodity or article of commerce. In that law we have secured the right of our men to exercise functions for which, under the old regime our men were brought before the bar of justice and fined or imprisoned. We have secured the eight-hour workday not only as a basic principle but as a fact. We have secured the Seamen's law giving to the seamen the freedom to leave their vessels when in safe harbor. The seamen of America are now free men and own themselves. We have secured a child labor law, and although it has been declared unconstitutional, we are again at work to secure a law for the protection of our children. Better than all, we have established the concept in law and in administration that the interest and welfare of the workers are paramount, and this not only in the laws of our republic but in the laws of our states and municipalities.

"There are other laws in the interest of labor which we have secured, more than I can mention offhand, but far above all these are the improvements brought into the lives and work of the toilers by their own actions as organized workers. We have established unity of spirit; we have brought about the extension of organization among the formerly unorganized, and our organized free existence to function and to express ourselves is now practically unquestioned.

"Suppose in 1912 we had had a labor party in existence; do you think for a moment that we could have gone as the American labor movement to the other political parties and said: "We want you to inaugurate in your platform this and this declaration." If one of the parties had refused and the other party consented and took its chance, would the American Federation of Labor have been permitted to exercise that independent political and economic course if the labor party had been in existence? How long would we have had to wait for the passage of a law by Congress declaring law, in practice and in principle, that the labor of a human being is not a commodity or an article of commerce—the most far-reaching declaration ever made by any government in the history of the world.

VICTORY WON FOR LABOR IN THE COURTS

"I say this to you: I am sixty-eight years of age. I have been tried and seared as few men have. I have almost had my very soul burned in the trials of life. With my two associates, Mr. Mitchell and Mr. Morrison, I have suffered the indignity of being brought before the courts of our country and adjudged guilty and sentenced to imprisonment. Our eyes were wide open. I do not think that it is improper for me to say that I led in the thought and activity of that work, of that willingness to suffer, but it was not a very nice thing to have the endeavor made to besmirch our honor by a sentence of imprisonment—Mr. Morrison six months, Mr. Mitchell, nine months, and I twelve months. We fought that sentence, fought it and fought it, supported by the activity of the organized labor movement in all the states and towns of our country, until the principle for which we were contending through that action brought about the incorporation of those provisions in the Clayton Anti-trust Law which confirmed and legalized the very things for which we were sentenced to imprisonment. They were legalized, not for us alone but for labor.

"I repeat, we have secured the enactment of the Seamen's law, the right of a seaman to quit his vessel whenever his vessel is in safe harbor in any part of the world, a law which does not exist in any other country—secured it by our political activity and by our economic powers. Has anything like that been accomplished in any country of the world? Our delegates proposed it at the Inter-Allied Labor Conference in September, and there was not a hearty agreement to stand for it as an international demand.

"I think you know that I have been most cruelly hurt in the recent past. Somehow or other I believe that there are yet considerable years of fight in me for labor. I have said that I hold the position of President of the American Federation of Labor in the most exalted estimation, but it is not that for which I am contending; it is not that which I would want to keep one moment beyond the time when I can

no longer be of service to my fellows. The only thing that I can leave to my fellow men is that I have helped in trying to bring about a labor movement in our country that is better, more comprehensive and more united than in any other country on the face of the globe.

DANGER TO LABOR CAUSE IN POLITICAL PARTY PLAN

"I wanted to present these thoughts to you. I did not have in mind any particular theme or course to present to you. I know I feel and understand and apprehend the danger which is involved in the project which is now being so very actively agitated in some quarters of the labor movement of our country. I fear no danger; I am just as good a follower, perhaps a better follower, than I am a leader, and I am perfectly willing to occupy either position. I would be recreant to the great labor movement and all it portends now and for the future if I did not take you into my confidence, men and women of labor, and tell you what I have told you. I am apprehensive, justly so, justified by every event in the whole history of labor, that a great mistake may be made, a great injury inflicted upon our fellows, not for a day, not for a year, not for a decade, but perhaps for many, many, many years to come. I want to present that view to you so that you may understand the situation clearly.

"I have spoken calmly and without ceremony or attempt to touch your feelings, but simply to touch the innermost recesses of your minds and to lay before you the responsibility which rests upon you."

Sayings of Napoleon

Imagination rules the world.

Force without intelligence is nothing.

No man's loss is irreparable; for no man is indispensable.

They should have knowledge who seek to govern others.

Men are led by trifles.

It is but a step from the sublime to the ridiculous.

There are two means of moving men—interest and fear.

When a man is bent on public office he has already sold himself.

I conquer provinces, but Josephine wins hearts.

The only victory over love is found in flight.

A faithful friend is the true image of Deity itself.

Death overtakes the coward, but never the brave man until his hour has come.—*Scrap Book.*

Our Delegates to League of Nations Congresses

"CLINCH the victory—keep the world safe by a league of nations" is the slogan adopted by the League to Enforce Peace in sending out their invitation to the various organizations of America to appoint delegates to attend the series of congresses held under their auspices.

In response to this invitation the following delegates have been appointed by the NATIONAL FEDERATION OF FEDERAL EMPLOYEES and given credentials on the nomination of their respective unions:

ATLANTIC CONGRESS, New York City, February 5-6—W. E. Junker, Daniel Goldschmidt, James F. Hughes, William J. Coyne, John Fitzgerald.

NEW ENGLAND CONGRESS, Boston, February 7-8—William J. Burke, Percy A. Harrison, Benjamin F. Maricle, James H. Fitzgerald, William J. Sleep.

GREAT LAKES CONGRESS, Chicago, February 10-11—Howard D. Ebey, William A. Oldfield, James G. Boor, Frank Knoll, Miss E. Hunter.

NORTHERN CONGRESS, Minneapolis, February 12-13—A. M. Goodrich, George L. Weaver, A. J. Mullen, Oscar Larson, Catherine Conley.

NORTHWESTERN CONGRESS, Portland, February 16-17—A. F. Merrill, H. B. Evans, Wilfred F. Smith, H. W. McManus, John C. Grady.

PACIFIC COAST CONGRESS, San Francisco, February 19-20—F. W. Lynch, Daniel S. Looney, P. W. Naughton, J. K. Johansen, Alfred Berryessa.

The invitation declares that "the project for a league of nations has reached a point where it is necessary for those interested in determining its character and in securing its adoption to confer with one another and determine on united action. At this conference all phases of the league of nations will be discussed, both in general and in relation to the interests of particular groups within the nation. Agreements made at the peace conference will, for generations to come, vitally affect for good or ill the economic, political and moral well-being of mankind. The creation there of a league of free nations can alone insure the orderly development of the world and preserve peace. To get such a league President Wilson wisely decided, by personal attendance, to throw his great influence on the side of an unselfish and righteous peace, with a league of nations, to safeguard it perpetually. The series of nine congresses for a league of nations will give op-

portunity to those who won the war both on and behind the fighting line to speak their wishes. Agreement at Paris and ratification by the Senate may depend on the size and temper of these congresses and the carrying out in the states of the plan of action they adopt."

The invitation bears twenty-four signatures, including those of William H. Taft, Alton B. Parker, Samuel Gompers, Edward A. Filene, Norman Hapgood and Cardinal Gibbons.

Victor Hugo's Dream

Victor Hugo, in his day, was called a dreamer. He preached wildly beautiful things, which were too good to come true—it was thought. The following is one of his "dreams": "A day will come when the only battlefield will be the market open to commerce, and the mind open to new ideas. A day will come when bullets and bombshells will be replaced by votes, by the universal suffrage of nations, by arbitration of a sovereign senate, which will be to Europe what the parliament is to England, the diet to Germany, the legislative assembly to France. A day will come when a cannon ball will be exhibited in public museums just as an instrument of torture is now, and the people will be astonished how such a thing could have been. A day will come when these two immense groups, the United States of America and the United States of Europe, shall be seen extending the hand of fellowship across the ocean, exchanging their products, their industry, their arts, their genius, clearing the earth, peopling the deserts, improving the creation under the eye of the Creator, and uniting for the good of all these two irresistible and infinite powers—fraternity of men and the power of God."

German Bureaucracy and Red Tape

The widow of a German army officer went to the pension office for the purpose of drawing her pension. She presented the usual certificate of the mayor of her village to the effect that she was still alive.

"This certificate is not right," said the doctor.

"What is the matter with it?"

"Because it bears the date of December 21, but your pension was due December 15."

"What kind of a certificate do you want?"

"We must have a certificate that you were alive on the 15th day of December. Of what use is this one that says you were alive on the 21st day of December—six days later?"—*Dutch Joke.*

In Labor's Sphere

SECRETARY DANIELS AND LABOR

In the annual report of the Secretary of the Navy, a tribute to the patriotic part that labor has played in the winning of the war finds prominent place. This is commended to the prayerful consideration of those who seem to be fearful that they may be contaminated in some mysterous way by entering into relations with the labor movement.

"The relations between labor and the Navy Department have been highly satisfactory during the past year. In spite of the general bidding for skilled mechanics, the workmen in our navy yards, with few exceptions, have remained loyal to the department and have refused to accept more lucrative positions. On several occasions when the general relations appeared to have reached a critical stage, the various trades in our navy yards addressed resolutions to the Secretary of the Navy so clearly defining their belief that the duty of all loyal American workmen lay in securing the maximum production of war materials by combined individual efforts, without regard to selfish considerations of personal betterment, as to have no slight effect in bringing both sides in controversies to a realization of the need of forgetting their disputes and devoting their energies toward winning the war.

"Much of this satisfactory condition is due to the loyal cooperation of the heads of the American Federation of Labor, with whom the department has maintained the friendliest relations and whose wise and patriotic counsels have done much to keep such yard workmen as were members of labor organizations keenly alive to a sense of their duty as American citizens."

MINIMUM LIVING COST IN DISTRICT OF COLUMBIA

The cost of living having increased 69 per cent, according to estimates furnished by Dun and Bradstreet, the District of Columbia Minimum Wage Board, after thorough investigation into prevailing prices, has announced $16 as the smallest amount on which a working woman in Washington can live decently and maintain health, efficiency and self-respect. And even this calculation is lower than it would have been had it been possible to determine the percentage of increase in all articles considered instead of using the statistics gathered in 1916 where the later figures were not obtainable or were not of a character easy to classify, as in the case of vacation expenses, presents, philanthropy, church contributions, amusements, etc.

Miss Clara Mortensen, Secretary of the Minimum Wage Board, apportions the estimated weekly pay among the following modest expenditures: Room and board, $9; clothing, $3.85; medical attention, laundry, amusements, reading matter, fruit and candy, religion, charity, etc., $3.15.

Miscellaneous annual expenses today are estimated at $165.59, as compared with $150.67 according to the survey of 1916.

THE STUDY OF LABOR PROBLEMS IN OUR SCHOOLS

Labor problems are being brought before school children at this time by the United States Bureau of Education, which is issuing a series of pamphlet courses for the schools. Among the pamphlets are such subjects as "War Labor Administration," "Employment Agencies," "Employment Management," The Worker in Our Society," "Women in Industry," and "Child Labor."

The lessons for the upper classes in the high schools discuss topics more advanced than those for lower high school and upper-graded school pupils, while still more elementary subjects are provided for the intermediate grades of the grammar schools. In the high school lessons on the worker and the wage system is discussed the rise of the wage system, which is shown to be of comparatively modern development, with its result—leaving the worker dependent on the employer for hire in a speculative society.

The classes of risks that employees are subject to are described with their consequences in the way of insecurity for the worker. The influence of accidents, disease and fatigue and the weak bargaining position of the workmen are presented.

The aim of the lessons is to stimulate constructive thought on the problems of the wage worker.

ORGANIZED WORKERS NOT GUILTY OF PROFITEERING

The flippant charge that wage-earners indulge in extortion and profiteering is denied by Assistant Secretary of Labor Post, who discusses this question in a Washington (D. C.) newspaper.

The federal official says wage-workers do not get what they earn and that the real extortioners must be found "in circles where idleness pays better than working."

"Men whose annual wages would hardly pay the annual theater expenses of a gentleman of leisure cannot be accused of extortion," said Mr. Post.

"What possible powers of extortion do wage-workers have? Unorganized, they have none at all. These workers

Health Insurance Gaining

A careful survey of the United States for last year shows that health insurance is making rapid headway. It meets with the emphatic approval of leaders in many lines of progressive thought and activity, commercial, industrial, economic and social.

THE old principle that "an ounce of prevention is worth a pound of cure" is at last finding its way into legislation, and health insurance bids fair to take its place beside fire, accident, and life insurance.

Official state commissions were at work in seven states in 1918, according to Solon De Leon's summary of the year's developments along this line, written for the *American Labor Legislation Review.*

HEALTH INSURANCE WIDELY ENDORSED AS A SOCIAL NECESSITY

The New Jersey Commission's report, returned early in 1918, was unanimously favorable to it as being an essential step during the war and reconstruction periods. In May the national conference of health insurance commissioners was held at Cleveland on invitation of the Ohio Commission and proved to be a campaign of education on the subject.

At a convention held in Atlantic City in September, resolutions recognizing health insurance as "an inevitable social policy" were adopted by six organizations. In California and Illinois, particularly, women's commissions organized under councils of national defense have emphasized the need of such legislation.

At a New York conference of the principal leaders in social work in the United States, attending as individuals, a resolution was unanimously adopted urging that the necessity for pensions be avoided by adopted the "social insurance principle already adopted in soldiers' and sailors' insurance and in workmen's compensation laws." In the same state, after two years' study social health insurance was actively taken up by the organized labor movement which almost unanimously approved a bill on the subject, at its annual convention, and the health commission issued five pamphlet reports on the bill.

During the year the principle of health insurance was endorsed by more than forty labor organizations (state, national and international); by twenty-five national organizations of women trade unionists at a convention called at Washington by the United States Government in October; and was one of the fourteen points included in the platform of the Independent Labor Party launched in Chicago last November.

"Governmental and semi-governmental agencies have recognized the value of health insurance as a safeguard to industrial welfare and efficiency," writes Mr. De Leon, and quotes former Director General of Railroads McAdoo that "insurance against sickness, old age and unemployment, as they have it in England and other European countries, may be the next social step for the United States."

Continuing, the writer says: "The American Federation of Labor, in its St. Paul convention, directed its executive council to take up the subject of health insurance for study. The workman and his family, states the report of the council which was unanimously adopted by the convention, 'suffer through impairment of his earning power just the same when he is ill as when he sustains an injury.' The council further urged that 'as part of such legislation there should be embodied fundamental principles of democratic administration and guarantee to the workers an equal voice and authority in the administration of all its features.'

"Beneficial effects of the country-wide agitation for health insurance are already to be seen," concludes Mr. De Leon. "Among these are the many efforts to strengthen the public health service and to raise sanitary standards in factories in advance of the enactment of health insurance legislation."

The appended comments on health insurance, which are but a few out of a legion written in similar vein, are of interest and importance owing to both the names of the authors and the reasons given in support of their attitude:

EMPLOYERS AND FINANCIERS

FRANCIS KING CAREY, *President, National Sugar Manufacturing Company, Baltimore, Md.:* "It is most interesting to note that practically every argument which is now made against health insurance was made with great vehemence by the same interests against workmen's compensation. Even in the short time which has elapsed since state after state has wheeled into line on the subject of workmen's compensation every one of these 'ghosts' has been laid. and the same will be true of the ghosts which are being raised by the enemies of health insurance."

DANIEL GUGGENHEIM, *President, American Smelting and Refining Company:* "Unemployment, sickness, old age, and similar problems of labor can be solved only through some system of social insurance managed and applied by state authority."

WILLIAM G. MCADOO, *Secretary of the*

Treasury; former Director-General of Railroads: "In my opinion there is no doubt about the principle of social insurance. We have substituted the justice of insurance for the charity of pensions in the army and we shall undoubtedly come to a consideration of the whole field of social problems to which the principle of insurance can be applied."

FELIX M. WARBURG, *Kuhn, Loeb and Company, New York:* "Sickness, invalidity, and old age are insurable risks, and no more humane measures have been passed than those providing an insurance system to protect the workers against these inevitable contingencies."

LABOR REPRESENTATIVES

ED. J. CANTWELL, *Secretary, National Association of Letter Carriers:* "I am heartily in favor of the enactment of a law to insure wage workers against the hazard of sickness. I have given the subject of health insurance a great deal of study and am of the opinion that it is the most logical and practical step to follow workmen's compensation."

JAMES DUNCAN, *President, Granite Cutters' International Association of America; First Vice-President, American Federation of Labor:* "It is a long-deferred essential to our economic welfare. To wage earners health insurance is next in importance to compensation for industrial accidents. Both should be provided."

JOHN MITCHELL, *Former President, United Mine Workers of America; Chairman, New York State Industrial Commission; New York State Food Administrator:* "Public sentiment in this country is developing rapidly in favor of universal health insurance for wage-earners, including maternity benefits. My own observation, through long experience with ravages of accident, trade disease and sickness among working people and their families, leads me to the conclusion that health insurance is even more important than workmen's compensation."

PHYSICIANS

RUPERT BLUE, *Surgeon-General, United States Public Health Service; Former President, American Medical Association:* "Health insurance would lighten the burden upon the individual. Health insurance is the next great step in social legislation."

W. C. GORGAS, *Surgeon-General, United States Army:* "I am heartily in favor of all measures which tend to alleviate poverty. Health insurance, in my opinion, tends strongly in this direction. I would therefore strongly endorse it."

ALEXANDER LAMBERT, *President-Elect, American Medical Association; Medical Director, American Red Cross in France:* "I believe in health insurance and I believe it is coming in the United States as it has in England and other countries of Europe. Everything I have observed or learned in Europe during the past year as medical director for the Red Cross has strengthened my belief in the possibilities of health insurance for this country. In fact I appreciate more than ever the possibilities that can be developed out of the various systems that are in vogue there. All statements that I have altered my views on the desirability of health insurance are false."

SOCIAL WORKERS

JANE ADDAMS, *Hull House, Chicago:* "My years of experience at Hull House have convinced me that social insurance is the only way that the problem of sickness can be met."

KEEN KUTTER

That's the marking on the best safety razor that ever shaved an Army man's face. The Keen Kutter Junior doesn't pull or scrape; it lets you shave naturally with the sliding stroke. The blades are made from finest Swedish cutlery steel tempered just right. If any Keen Kutter Junior doesn't give perfect satisfaction, the dealer is authorized to refund your dollar.

SIMMONS HARDWARE COMPANY
St. Louis, Mo.

New York Association for Improving the Condition of the Poor: "Health insurance is the application to a serious social problem of the ordinary planning and foresight which every business man applies to his own affairs. It is simply an effort to supply forethought and system for the present haphazard, inadequate, and socially expensive methods of dealing with sickness in workingmen's families."

JOHN A. FITCH, *The Survey, New York:* "Health insurance will protect the wage-earner when protection is most needed, and it will promote the national health. It is a social necessity."

PUBLIC OFFICIALS

WILLIAM E. BORAH, *United States Senator from Idaho:* "I am thoroughly committed to the proposition that health insurance is wise from every conceivable standpoint—from the standpoint and interest of the laborer, the community, and society at large."

EVERETT COLBY, *State Senator; Chairman New Jersey Commission on Old Age Insurance and Pensions:* "We incapacitate by disease possibly 15,000,000 persons for some portion of the year—more than the number wounded, I believe, on the western front since the beginning of the war. It is against this waste, much of which can be prevented, that will come the reaction, and as a result much preventive social legislation, including health insurance."

FREDERIC C. HOWE, *Commissioner of Immigration, Port of New York:* "I am strongly in favor of it [health insurance].

JULIA C. LATHROP, *Chief, Children's Bureau, United States Department of Labor; President, National Conference of Social Work:* "The protection of maternity is a public question which cannot longer be evaded. No system of health insurance is complete which ignores maternity insurance."

SAMUEL W. MCCALL, *Governor of Massachusetts:* "I am strongly of the opinion that there is no form of social insurance that is more humane, sounder in principle, and that would confer a greater benefit upon large groups of our population and upon the commonwealth as a whole than health insurance."

RUFUS M. POTTS, *Superintendent of Insurance, Illinois; Chairman Social Insurance Committee, National Convention of Insurance Commissioners:* "Accident, sickness, disability, or invalidity, unemployment, old age pensions, maternity and dependency benefits—a complete and comprehensive form of social insurance—is the urgent necessity of the American people today, and it is their salvation from every point of view."

THEODORE ROOSEVELT: "I favor better housing and living conditions, efforts to see that work is made interesting, insurance against old age, sickness, and involuntary unemployment."

ECONOMISTS AND STATISTICIANS

IRVING FISHER, *President, American Economic Association:* "There is no other measure now before the public which equals the power of health insurance toward social regeneration."

ROYAL MEEKER, *Commissioner, United States Bureau of Labor Statistics:* "If I believed that social health insurance was merely a system of dealing out doles in relief to the families and dependents of sick workmen, I would have very little enthusiasm for it. It is because I know that health insurance will call attention to the costliness of illness that I am in favor of universal compulsory health insurance."

TELL YOUR STORY

Civilian Government Employees are doing from day to day every kind of work under the sun.

Why not tell the story of YOUR day's work? THE FEDERAL EMPLOYEE not only wants material of this kind but WILL PAY FOR IT if suitable for publication in its pages.

Here is an opportunity to help our cause by telling the public what federal employees are accomplishing and to help yourself at the same time.

(*Continued from page 172*)

cannot get even what are called 'fair wages,' except as their organized fellow-workers standardize wages. And organized wage-workers can standardize wages only by quitting work in bodies or threatening to do so if fair wages are refused. Who has the temerity to call this compulsion 'extortion'? It is an abuse of language to so denounce even the highest wages that labor organizations have ever been able to exact.

"Wage-workers engaged in production do not get what they earn.

ILLITERACY UNDER VIGOROUS ATTACK IN SOUTH CAROLINA

The Illiteracy Commission for this state has appealed to South Carolina pride to assist in the abolition of illiteracy.

"The shame of being the most laggard of all the states in literacy," says the Commission, "should sting the decent self-respect of every South Carolinian into vigorous action. The terrific test to which our political fitness and industrial competence will be put in the fierce after-war struggle demands universal education as a condition of self-preservation.

The Illiteracy Commission was appointed by Governor Manning in 1917.

NEGRO EDUCATION URGED BY LOUISIANA EDUCATION BOARD

The necessity for negro education is urged in a pamphlet issued by the Louisiana Department of Education. It is stated that while Louisiana pays more for the education of white children than any other southern state, less money is expended on negro education than in any state in the union. It is shown that in some sections of the state the Louisiana negro is not receiving for the education of his race the direct school taxes that he contributes. "The glory of achievement in our white school system is marred by the pathetic and pitiable condition of our negro schools."

USE OF NICKNAMES DEPLORED BY U. S. BUREAU OF EDUCATION

The United States Bureau of Education is trying to discourage the use of nicknames, especially those designating certain classes of foreign-born Americans.

"Dago," "Kike," "Wop," "Greaser," "Mick," "Paddy," and similar names are not looked on with favor with the Bureau, which maintains that such distinctions tend to promote lines of cleavage between American-born and Americanized foreign-born persons and groups.

The Bureau is sending out a sug-

gested form for a pledge to refrain from the use of such names.

RAILWAY CLERKS IN OHIO AND TEXAS JOIN UNIONS

As the result of an active campaign the railway clerks in Cleveland, Ohio, are joining the several new unions by the scores. It is purposed to continue active work until those still outside will be included in the new unions. Already five new unions have been formed.

Thirty-three lodges of the Brotherhood of Railway Clerks representing the southwestern section met recently in Waco, Texas, and formed an organization to be known as the Southwestern Federation of Railway Clerks. The delegates present represent a membership of more than 10,000.

POSTAL EMPLOYEES OF TENNESSEE FORM STATE BODY

Postal employees of the state held a most successful mass meeting. Representatives from all sections of the state were present. A permanent organization to be known as the Tennessee State Association of Postal Employees was formed. The purpose of the new organization is to better the postal service and the working conditions of postal employees.

PROPOSED LABOR BANK FOR THE CITY OF SEATTLE

The central labor council's plans for the organization of a banking institution are reported to have been fully matured and the promoters are hopeful of being able to do business in the near future. The new enterprise will be known as the Trades' Union Savings and Loan Assocation. Its board of directors will be composed of a member from each of the unions holding stock. An effort is being made to interest the grange, farmers' unions and other friendly organizations in the new venture.

PAN-AMERICAN LABOR FEDERATION IS NOW ESTABLISHED

The Pan-American Federation of Labor is now an established fact, with Samuel Gompers as President, John Murray of the International Typographical Union, as the English speaking secretary, and Canuto Vergas, of the United Mine Workers of America, as the Spanish-speaking secretary, both with headquarters in Washington, writes Chester M. Wright, of the American Alliance for Labor and Democracy.

A headquarters for organization and education among Spanish-speaking workers will be established in New York City if possible and both Mexican and American labor representa-

tives will be stationed at border points where immigration is heaviest.

Helping the Mexican people to help themselves, and convincing them of our sincerity are the first duties of this Federation, whose organization was completed by the Pan-American Labor Conference held in Laredo, Texas, at the invitation of the American Federation of Labor; and the need of such an educational and humanizing agency is shown in the description given of the mental, moral, physical, and economic conditions in that unfortunate country.

Mexico is a difficult problem, but one which in the writer's opinion is possible of solution, as her people have the power to understand and appreciate and the desire to reciprocate, although long suspicious of the United States, "with and without reason," but this conference, and especially the presence of Secretary of Labor Wilson as the President's personal representative, did much to convince them that we have come with clean hands.

"The Pan-American Federation of Labor has come," concludes Mr. Wright. "It has work of the most profound importance before it. Perhaps the fate of peoples is in its keeping. If that is so, no other agency could so well discharge its obligations."

INCREASE IN COST OF FAMILY BUDGET ITEMS

The National Industrial Conference Board, whose headquarters are in Boston, is issuing an interesting report in which it tabulates the items going to make up the expense account of the average family with their relative importance in the family budget. According to these tables, food, with a relative weight estimated at approximately 43 per cent has increased 83 per cent in price; shelter, estimated at 17 per cent, has increased 20 per cent; clothing, at 13 per cent, heads the increase list, with 93 per cent; fuel and light, at 6 per cent, has increased 55 per cent; and sundries, at 20 per cent, have increased 11 per cent.

Very Precise

The proof-reader on a small Middle-Western daily was a woman of great precision and extreme propriety. One day a reporter succeeded in getting into type an item about "Willie Brown, the boy who was burned in the West End by a live wire."

On the following day the reporter found on his desk a frigid note, asking, "Which is the west end of a boy?"

It took only an instant to reply, "The end the son sets on, of course."

Do Labor Unions Stand for Inefficiency?

WHAT I do not understand is why unions stand for inefficiency and protect the incompetent workman." This remark is one of the traditional criticisms of unionism and has to have periodic attention, says *Life and Labor,* which proceeds to discuss the matter in this way:

In the first place, trade unionism denies the assumption that lies back of the criticism. No union of clear-sighted leadership and responsible constituency accepts the doctrine that unionism protects the inefficient workman from discharge or seeks to secure him a wage out of proportion to his desert. It may well be that there are union officials who are so short-sighted as to seek to protect the inefficient workman and use the power of the organization to force the reinstatement of a man who has properly been discharged for poor workmanship or misbehavior. Sensible unionists recognize that power used in this way is arbitrary, awakens a just resentment and is hurtful to the best and ultimate interests of the union.

But there are also other angles to this question that are not so simple as the assumption of the critics or its denial by the unionists. It must be remembered that when a trade is organized many of the employees are inefficient measured by good standards of workmanship. The lack of adequate training, the haphazard selection of men, erratic control and discipline by autocratic management of industry result in inefficiency among the workers. . . . It is natural for the organization to resist the discharge of workmen for inefficiency when that inefficiency becomes abhorrent only after the union has secured an agreement. Can the union be asked to accept a higher standard than the employer himself accepted in the halcyon days when he was perfectly free to impose discipline?

Moreover, where the closed shop is in effect, the right of discharge is usually without limitation, so that the employer has still the exercise of discipline within his own discretion. And where piecework is the practice, that in itself gives a definite impetus to quantity production, though the quality naturally has still to be supervised.

As to requiring the employer to pay the union scale to the less competent men, one must remember that the union scale in the thought and intention of the unionist represents a minimum wage. A union would have no objection, as a rule, if the employer paid the more competent men a higher rate than called for by the union scale.

A Bad Quarter of an Hour

By G. E. M.

THIS LITTLE "mauvaise quarte d'heure," as we used to say in Paris the last time I wasn't there, happened my way soon after my appointment to the Ordnance Department nearly two years ago. Now the War Department, as you know, is distributed quite generously and impartially about Washington, thereby affording army officers opportunity for fresh air and free automobile rides—and the rest of us fresh air and exercise.

On the day in question my chief, being due at an important gathering of military lights on the top floor, requested me to take certain important papers pertaining to a munitions contract to the main building to have the official seal affixed thereunto. I packed up the papers in my extension handbag, put on my hat and was about to leave, when I discovered, on looking through my bag, that my pass was missing. A search through my desk failed to disclose its location, and yet without it I could not enter any office of the War Department, least of all the main building. My chief was tied up in conference and it was a case where "telling my troubles to a policeman" would not help matters. Besides, a lost pass always occasioned a severe reprimand, and an order circulated shortly before had announced that in future loss of passes would result in a lowering of our efficiency ratings. Clearly, confession was not my best play, so I made a break for a friend, Edith Wilbur, for whom I had finished typing a rush contract the day before, while she was out taking luncheon with Lieutenant Matthewson, a recent appointee whom I had not yet met. To Miss Wilbur I confidentially presented my case, with a petition for the loan of her pass—this being before the days of permanent, nontransferable photographic passes—and a promise not to get run over by an automobile before returning with it. She consented—thanks, perhaps, to the memory of that luncheon which my work had made possible.

Arrived at the main building I presented my pass—I mean my friend's pass—with as innocent an air as I could command. The watchman glanced at it and I started to walk on.

"Hold on a minute there," he called out; "have you a pass for that bag?"

I admitted that I had not, being unaware that such was necessary.

"You cannot bring property into the building without a property pass," he declared impressively. I described the character of the papers and explained the nature of my errand, but that gov-

Digitized by Google

ernment guardian, armed with a little brief authority and evidently determined to show it while the showing was good, commanded me to open up the bag.

Somewhat nettled at his manner, I opened it just a crack and let him do a little "rubbering."

"What's under that package of papers?" he demanded.

Seeing that he wished to be annoying, and desiring to do my share along that line, I answered, "Nothing but a couple of bombs and a stick of dynamite!"

But, alas! my words penetrated, but my sarcasm did not.

"Indeed," he replied, and taking my bag from me very gingerly he drew out my papers and carefully scrutinized them, then fished up a handkerchief and shook it, pulled out a lead pencil, two rubber bands, a personal letter which he read through, my purse, whose modest contests he scanned, then my card case and borrowed pass. That completed the interior furnishings of my bag, and, apparently disappointed at the result of his official investigation, he inspected that pass again with what seemed to me entirely unnecessary care.

"What's the number of your room?" he inquired.

"Number 19," I answered.

"This pass says 21," he announced triumphantly.

Now my own pass had not included the room number, and I had not noticed that it had been included on the other. "Er-yes," I explained, "our branch moved into another room a few days ago"—which statement was true enough at almost any time, as we were always on the move.

Obviously bent on punishing me, however, for my lack of deference for his brass buttons, he continued, "But you are from the Contract Section?" I admitted it, feeling on safe ground here, at least, as both passes contained that information.

"All right," he answered, "Lieutenant Matthewson came here from your section a little while ago to see the chief clerk and as he left his brief case in my charge I guess he'll be back this way soon and I'll see if he identifies you. Just sit down, please."

If I still appeared calm, cool or collected at this point, my looks belied me. My little game was up. I was strictly in for it, and there being nothing in particular for me to say, I said it. I could not even beat a "strategic retreat," as he held my ammunition, so I meekly obeyed instructions to sit down and wait, while the watchman turned his attention to others who were entering the building.

I am sure I held down that pesky

chair for at least an hour, despite the fact that the clock on the opposite wall indicated only fifteen minutes, while I wondered whether the maximum penalty would be shooting at sunrise or only life imprisonment.

Finally a young lieutenant appeared on the scene, and the watchman handed him the brief case with almost obsequious deference, and then, holding out my borrowed pass, asked whether he could identify me as the person whose name appeared thereon.

The lieutenant looked at me, and I looked at the lieutenant, trying to make my appealing glance carry an S. O. S. distress signal. Dead silence for a couple of long-drawn-out seconds. Then, to my unutterable relief, that dear, good lieutenant smiled, nodded to the watchman, doffed his cap and with a cordial "Why, good morning, Miss Wilbur"—to which I responded with equal friendliness and a large chunk of truthfulness, "Glad to meet you, Lieutenant Matthewson"—he departed, while I, after recapturing my property from my now silent and defeated foe, continued on my way, inwardly congratulating myself that the transmitter and receiver of our improvised wireless had both been in such good working order.

I took care to leave the building by another door, where the watchman merely glanced at my pass without even noticing my bag, which, after the delivery of the papers, had been reduced to its lowest terms and was not sufficiently large to be interesting.

On returning to my room the first thing to meet my view was the corner of my missing pass sticking out from beneath my desk blotter, under which it had taken refuge during the search for it. After returning Miss Wilbur's pass and ascertaining the number of Lieutenant Matthewson's room from her, I proceeded up stairs, located my benefactor, explained the circumstances to him and thanked him for his kindness to a stranger.

Whereupon the lieutenant, with an embarrassed laugh, explained: "Well, to tell the truth, there wasn't much else for me to do, because, you see, I discovered that I had left my pass at home this morning, and so, when I was sent over to the main building, I had to borrow Lieutenant Matthewson's pass to get in on, so it was up to me to identify anybody that the watchman said was from the Contract Section, even though I had never seen her before!"

And then we both laughed so heartily that the colonel, who was passing near us, looked inquiringly in our direction to see what the joke was, but neither of us volunteered to explain.

Songs of Our Soldier Boys in Two Wars

THE poet Shelley has said that "our sweetest songs are those that tell of saddest thought," and this is often exemplified in time of national strife.

Our great war was, happily, of too brief duration to allow so wide a range of human emotions to be thus reflected, as were brought to the surface half a century ago, when the moods of our boys in blue and in gray, varying as the tide of battle swept on, with its four years of "hopes, disappointments and renewed determination," produced such immortal songs as "We Are Coming, Father Abraham," "My Maryland," "Just Before the Battle, Mother," "Rally 'round the Flag," "John Brown's Body," "Dixie," "Tramp, Tramp, Tramp," "The Bonny Blue Flag," "When Johnnie Comes Marching Home," and other songs that helped to cheer and inspire where mere words would have failed —"such sweet compulsion doth in music lie."

Just as the popularity of songs in lighter vein gradually declined as the thrill and excitement of marching away to the strains of martial music, amid cheers and waving flags, gave place to the sterner realities of battlefield, prison pen or hospital, so, in the later conflict, "Good-bye Broadway, Hello France!" and "Tipperary" were later superseded by "Over There," "Keep the Home Fires Burning," "The Long, Long Trail," and "When the Boys Come Home." An interesting link between the two wars is found in the fact that the last-named song, set to music for this war, was a popular poem in Civil War times.

Planting Trees in Memory of Our Heroic Dead

ACCORDING to a bulletin of the American Forestry Association, the example set by the Episcopal Church of the Holy Innocents, at Tacony, Pa., is being followed by other churches and cities and even states, and bids fair to find wide favor throughout our country. That happy idea is the planting of trees as a fitting tribute to those who have given "the last full measure of devotion" to their country.

Taking up the idea introduced by the Tacony church, Louisiana proposes to plant "440 miles of 'victory oaks' and other suitable trees along Jefferson Highway, the State's principal road, which runs from north to south and connects with the highway that extends all the way on to Winnipeg, Canada. The plan advocated by the American Forestry Association, Washington, has been approved by Governor Pleasant, who declares that 'no more fitting memorial could be reared to our soldiers, dead or alive.' "

The *Literary Digest* adds: "Besides the memorial element in the act, it is a kind of reparation paid to universal nature for the devastation of some of her fairest countrysides. Then, too, it is a grateful recognition of the service rendered by inanimate nature in the great effort of defense. It has been said that France's great forests were more effective barriers against the Hun than anything that man has been able to build."

In years to come, if this idea of combining service with memorials continues to grow in favor, we may find statuary replaced by groves—"God's first temples"—that shall live on, "lifting their leafy arms to pray" while keeping fresh the memory of noble deeds.

The Tree

I think that I shall never see
A poem lovely as a tree.

A tree whose hungry mouth is prest
Against the earth's sweet flowing breast.

A tree that looks at God all day
And lifts her leafy arms to pray;

A tree that may in summer wear
A nest of robins in her hair;

Upon whose bossom snow has lain;
Who intimately lives with rain.

Poems are made by fools like me,
But only God can make a tree.

—JOYCE KILMER in *Literary Digest*.

Comparative Charms of French and American Girls

THE relative fascination of American and French girls, which seems to have caused some uneasiness in certain quarters, was recently the subject of a cable dispatch from Farmer Murphy in the Chicago *Tribune*. The question had been asked whether the less independent but more strictly feminine French type might not have such an influence on our men in France as to compel the American girls to look to their laurels when the heroes return. This is what Mr. Murphy cabled from France:

The French girl's training is to look up to and coddle the men in the family. She is more of a listener than a talker; she is pleased with small attentions, and never fails to show appreciation of them. It was inquired if the contact of our men with these customs might not make them less willing to fetch and carry and obey the beck and call of our self-reliant American type of girl.

There was only one way to settle the question, and that was to ask the men themselves. The army edition of the Chicago *Tribune* last week stated the case to its readers and invited them to give opinions.

Many of the letters were very thoughtful and showed that the men have not answered offhand, but have seriously considered before answering. Several such are from privates. One of the surprises was the number who favored the French girl. Among the first batch the French probably had the majority, but then the American girl's defenders came to the front. . . .

One of the most complete answers is from a sergeant who emphatically declared he considered the French girl more thoughtful, agreeable, and less exacting than the American, and just to show that he is not prejudiced he wound up by saying he was going back to the States to marry the dearest girl in the world unless she has changed her mind.

Giving the reasons he favors the French girl, he said:

"The French girl expects nothing and is not disappointed if she receives no more than that. The American girl expects everything and always is certain, in one way or another, to make known her feeling if she does not receive it. If you want a surprise ask a French girl to allow you to carry her umbrella or parcel, and, if she is not used to Americans, she will be just as surprised as you. It cannot be denied that the French girl has won her way into the hearts of the Americans."

Another soldier who is going home to an American girl begs that his name be not used when he says:

"The charm of the French home life is a revelation. The French girls stand the beauty test every time. Their keen humor doesn't take the form of the verbal sparring and the cheap banter of the American débutante. They can talk well and intelligently, and, what is more, they can listen.

"Woe to the American girl who fails to listen long and patiently when the A. E. F. goes home. The French girls are ideal companions, friendly, natural, unaffected, and self-possessed in a quiet way, never

seeking the center of the stage, and never conspicuous."

A sergeant who has lived in France for twelve years lauds the American girls.

"There is nothing doglike about the devotion of the American girl," he says, "but she is true blue and a real comrade through life, depending upon her worth, not her sex, to hold her beloved beside her and keep the respect of all men." . . .

One whole aero squadron votes the French girl adorable. So it goes, and the discussion is only beginning to warm up.—*Literary Digest.*

Work—A Song of Triumph

Work!
Thank God for the might of it,
The ardor, the urge, the delight of it—
Work that springs from the heart's desire,
Setting the brain and the soul on fire—
Oh, what is so good as the heart of it,
And what is so glad as the beat of it,
And what is so kind as the stern command,
Challenging brain and heart and hand!

Work!
Thank God for the pride of it,
For the beautiful, conquering tide of it,
Sweeping the life in its furious flood,
Thrilling the arteries, cleansing the blood,
Mastering stupor and dull despair,
Moving the dreamer to do and dare.
Oh, what is so good as the urge of it,
And what is so glad as the surge of it,
And what is so strong as the summons deep,
Rousing the torpid soul from sleep?

Work!
Thank God for the pace of it,
For the terrible, keen swift race of it,
Fiery steeds in full control,
Nostrils aquiver to greet the goal.
Work, the Power that drives behind,
Guiding the purposes, taming the mind,
Holding the runaway wishes back,
Reining the will to one steady track,
Speeding the energies faster, faster,
Triumphing over disaster.
Oh, what is so good as the pain of it,
And what is so great as the gain of it?
And what is so kind as the cruel goad,
Forcing us on through the rugged road?

Work!
Thank God for the swing of it,
For the clamoring, hammering ring of it,
Passion of labor daily hurled
On the mighty anvils of the world.
Oh, what is so fierce as the flame of it,
And what is so huge as the aim of it?
Thundering on through dearth and doubt,
Calling the plan of the Maker out.
Work the Titan; Work the friend,
Shaping the earth to a glorious end,
Draining the swamps and blasting the hills,
Doing whatever the Spirit wills—
Rending a continent apart,
To answer the dream of the Master heart.
Thank God for a world where none may shirk—
Thank God for the splendor of work!

—AMELIA MORGAN (Selected).

Wanted to Be Sure

The spread of tuberculosis had come up in class, and teacher had spoken most impressively of the opportunity the Red Cross stamps provided to help in the cure and prevention of the dread disease. The children listened eagerly, much impressed. By and by a boy in a rear seat asked anxiously:

"Please, teacher, where do you have to put the stamps to cure you?"

Resigning as a Fine Art

FOR the benefit of readers who may have envied the rural postmaster his government sinecure, we publish the following epistle addressed to First Assistant Postmaster General John C. Koons disrupting the entente cordiale and severing the diplomatic relations heretofore existing between the Postoffice Department and Dr. A. M. Riggs, postmaster at La Follette, Tenn.:

Your kind favor of the 4th inst. received, informing me that now the war is over and consequently less demanded of its loyal citizens, the Government can now manage to wag along without my services as postmaster at La Follette, Tenn., unless I devote my entire time to the office. Therefore,

I resign.

It pains me to do this, and I shall ever look back with regret to this rude separation from this ideal position requiring twelve hours a day service with the munificent compensation (after paying all expenses) of $2 a day. I have neglected my personal affairs to serve the Government; doing any and everything required; selling Liberty Bonds and War Savings Stamps galore, carrying water and sweeping the floor, as Uncle Sam has studiously avoided making any allowance for incidental expenses.

Selling War Stamps and immediately cashing the same has been one of my pet diversions. When I realize I am no longer compelled to do all these things, and a host of others equally edifying, such as explaining why the mail carrier took the flu, and the postmaster on a certain occasion (as reported by an inspector) sent an employee to the office for his mail instead of going for it himself; and why Rockepelter & Co. were not deprived of a mailbox the moment they failed to pay when due; why the flies were allowed to speck certain lobby notices. . . .

I again resign.

I am made to cogitate on the futility of so conducting the office that the patrons do not complain, of properly keeping the records and punctiliously accounting for every dollar of Uncle Sam's money, made to understand that "I, in the midst of the fighting," must be on the spot eight hours a day and every day, regardless, nothing else sufficing.

I would gently inform you, my dear General Koons, that what you need is a man as postmaster here who can support a family of eight on $2 a day. I frankly confess that I do not know how to do it. Do you? Realizing this, it is with a comforting sense of resignation that

I resign some more.

And, now, in my grand *finale* of resignation, I avail myself of the opportunity of congratulating the United States of America on having so efficient an Assistant Postmaster-General as your honored self. I am convinced that nothing escapes your vigilant eyes. I am made to shudder when I contemplate what may happen to this great country of ours when the fateful day comes when you, even you, will be summarily and unceremoniously kicked from office (the public welfare requiring it), as you now, without feeling or justice, deprive me of mine.

Crape is on the postoffice door, and the town is in mourning. God save the republic.

Respectfully and dejectedly yours,
A. M. RIGGS.

Comptroller's Decisions

Transportation of Books and Papers in Connection with Official Work

Where orders were issued to an officer of the Navy to transfer all public property in his possession to his successor books and papers retained by the officer and shipped to his new station, although for future reference in connection with the final settlement of accounts, partake of the nature of personal property the expense of transporting which should be borne by the officer.—*Decision by Comptroller Warwick, November 23, 1918.*

Clothing Gratuity and Transportation on Discharge, Naval Reserve Force

Credit in cash in the amounts actually expended by them is authorized to be made to enlisted members of the Naval Reserve Force who have provided themselves with articles of the prescribed uniform outfit which they have not been furnished, when such members are discharged for the convenience of the Government.

The discharge of members of the Naval Reserve Force in compliance with orders of the Navy Department is equivalent to a discharge by reason of expiration of enrollment within the meaning of laws and regulations relating thereto, and in accordance with the act of July 1, 1918, such members are entitled to transportation and subsistence from the place of discharge to their homes or to such other point as they may elect, provided no additional expense is incurred by the Government.—*Comptroller Warwick to M. D. Slade, disbursing officer, Dunwoody Naval Training School, November 25, 1918.*

Longevity Pay for Period Prior to Act of July 9, 1918

Inasmuch as it was the evident intent of Congress that the joint resolution of July 8, 1918, extending the availability of appropriations for the Army for the fiscal year 1918, should be effective simultaneously with the Army appropriation act approved July 9, 1918, and no further legislation relating to the matter has been enacted, the provisions of the latter act with reference to longevity pay are not retroactive; and any amounts overpaid to officers now in the service on account of longevity pay for the period July 1 to 8, 1918, should be refunded.—*Comptroller Warwick to Col. P. L. Smith, Quartermaster Corps, United States Army, November 25, 1918.*

Termination of War Contracts by Supplemental Agreement

It is the duty of the proper legal officers of the Government to draft contracts, and the responsibility thereunder must be theirs and that of the administrative officers. The accounting officers can not undertake to prescribe the form of such contracts, since it may become necessary for them to construe the terms of such agreements in connection with payments to be made.

The accounting officers may not determine whether payments of public money are authorized to be made under the terms of supplemental contracts proposed to be made to terminate existing contracts for war materials without a consideration of the language of existing contracts.

To substitute a new contract and another and different method of payment would be justified only when the new method is not prejudicial to the interests of the Government.

The making of a supplemental agreement and the certifying by a contracting officer of a minimum amount as the amount to which a contractor is entitled to reimbursement for terminating an existing contract would not be conclusive upon the accounting officers; the supplemental agreement can not be permitted to impose a liability upon the Government where none theretofore existed.

It is the right and duty of the accounting officers in each case where a payment is proposed to be made under a supplemental agreement in termination of the obligations under an existing contract to determine in the first instance that there was a legal contract with the Government prior to the supplemental agreement (of which the contract date alone will not be conclusive) made in compliance with the provisions of sections 3744, 3745, and 3746, Revised Statutes; to require the submission of facts and details showing the basis for the minimum amount to be paid the contractor, which has been fixed by the contracting officer; and that no amount has been paid without adjustment of such claims as the Government may have against the contractor arising out of defective performance, defaults, etc., under the contract.

If it be shown that there is an existing legal contract for a definite work or quantity of articles which is sought to be terminated by a supplemental agreement superseding it; that the Government will not be prejudiced by the change or will be benefited; and that the Government has no other legal method by which to terminate the old contract than by the execution of a new one, payment under such new agreement would be authorized.

As to outstanding contracts not signed by the officer named as contracting officer, their validity is open to question and is dependent upon proof of the fact, if it be a fact, that the officer who signed them was a duly authorized contracting officer and made the agreement with the contractor and that the officer named as contracting officer did not. The statute clearly requires the act of one officer in the making and signing and wholly negatives the idea of one officer signing for another.—*Comptroller Warwick to the Secretary of War, November 25, 1918*

Freight Differentials in Contract

The naming of an f. o. b. point for delivery under a contract fixes the maximum liability for freight and that liability cannot be made greater than the freight actually incurred; therefore, where a contract provided for deliveries f. o. b. Pittsburgh, Pa., and shipments were made from the contractor's plant located at Joliet, Ill., the Government is not liable for the difference between the freight from Pittsburgh to destination and from Joliet to that point.—*Comptroller Warwick to Depot Quartermaster, United States Army, Jeffersonville, Ind., November 26, 1918.*

War Risk Insurance Payments—Enlisted Men Missing in Action

The act of November 4, 1918, amending the war-risk insurance act of October 6, 1917, applies to an enlisted man reported as missing in action on a date prior to its approval.

Where an enlisted man is reported as missing in action on a date prior to the approval of the act of November 4, 1918, amending the war-risk insurance act of October 6, 1917, and for that reason payment of the allotment and allowance made in his case has been suspended, resumption of payment, if such resumption be allowed, will take effect as of the date of suspension of payment.

The proviso in the act of November 4,

1917, amending the war-risk insurance act of October 6, 1917, that payments authorized thereunder shall not continue for more than one year means that such payments shall not continue more than one year after the date the enlisted man is reported missing in action.—*Comptroller Warwick to the Secretary of the Treasury, November 26, 1918.*

Payment Under Contracts Informally Executed

Where certain materials were supplied to the Government under a procurement order and subsequently a formal contract was drawn fixing the place of deliveries and the price to be paid, in which agreement certain alterations and interlineations from the printed text were made upon dates which were subsequent to the date appointed for completion of deliveries under the procurement order, such agreement is not binding because not made in compliance with the provisions of sections 3744, 3745, and 3746, Revised Statutes, and the dealer having been paid as provided in the order is not entitled to further payment.—*Decision by Comptroller Warwick, November 26, 1918.*

Travel by First Available Transportation

Urgency is not indicated in orders to an Army officer to proceed by first available Government transportation (that being the usual form of travel orders), and where such transportation involved the use of a longer route and of greater opportunity for delay than by waiting several days for another transport, mileage by the shorter route only is authorized.—*Decision by Acting Comptroller Foree, November 27, 1918.*

Increase of Compensation of Civilian Employees

Per diem employees are entitled to the increased compensation provided by section 6 of the act of July 3, 1918, subject to the limitations contained therein, notwithstanding the fact that such employees work in excess of eight hours per day, their right to the increased compensation being computed on the rate received for the regular working hours and not for overtime.—*Acting Comptroller Foree to the Secretary of War, November 29, 1918.*

Longevity Pay for Service as Army Field Clerk

Commissioned officers of the Army are entitled to count service as Army field clerk and field clerk, Quartermaste Corps, for the purpose of computing longevity pay.—*Acting Comptroller Foree to the Secretary of War, November 30, 1918.*

Retainer Pay of Transferred Members, Naval Reserve Force

Except in the case of officers of the Naval Auxiliary Reserve, officers of the Naval Reserve Force who are transferred from one class to another in the Reserve with confirmed rank acquired as authorized by law are entitled to continue in receipt of retainer pay computed on the basis of the confirmed rank held by them.—*Acting Comptroller Foree to the Secretary of the Navy, November 30, 1918.*

Forward March

With a ripping and roaring
Old Boreas blows,
And off the clothes-lines
He strippeth the hose.
Our ears they are frozen
Much stiffer than starch—
A regular thing with
The coming of MARCH.

P. B. X. Switchboard, 200 lines capacity

One of the largest Independent exchanges in the country. A Kellogg common battery multiple installation

KELLOGG SWITCHBOARD & SUPPLY CO.
CHICAGO, ILLINOIS

FEDERAL EMPLOYEES

The up-to-the-last-minute management in non-public industries finds it pays to provide employees with sanitary lunch rooms in which are used tables with pure white enameled iron bases and snow white glass-like tops, especially the variety with the raised rim (SANI-ONYX) and white enameled iron stools and SANI-ONYX Serving Counters.

Instead of losing money in providing employees with sanitary furniture and wholesome food, actual profits result through increased efficiency and a contented mind in a healthy body.

It is a good business venture and not philanthropy or charity, because loyalty and enthusiasm result to those who try to serve the welfare of employees.

Whatever you are getting is up to you

CHICAGO HARDWARE FOUNDRY COMPANY
Factory: North Chicago, Ill.
Washington Office: Evans Bldg.

Bausch and Lomb

Optical Products

are favorably known throughout the world—and in all branches of government service requiring the use of optical instruments. They include Range Finders and Gun Sights for Army and Navy, Microscopes, Stereo Prism Binoculars, Photographic Lenses and Shutters, Engineering Instruments, Searchlight Mirrors of every description, Telescopes, Projection Apparatus (Balopticons), Photomicrographic Apparatus, Microtomes, Ophthalmic Lenses, Reading Glasses, Magnifiers, and General Laboratory equipment.

The Mark

of

Distinction

This Puritan label is more than an identification mark for your guidance.

It is the Cudahy Packing Company's guarantee that the product so marked has passed the severe quality test and that each step in the careful preparation has been successfully taken.

Thus the label not only guides your choice but insures the wisdom of it.

Eyes on work—Fingers on keys

The Dalton is *faster* because its simple keyboard may be operated by Touch Method. From photograph of Dalton Touch Operators in Citizens Commercial Trust Co., Buffalo.

A corner of the St. Louis Clearing House, where 16 Daltons handle the clearings of St. Louis and vicinity. *Every girl is a Touch Method Operator*

The machine for the big jobs of figuring.

Office managers, seeking the most efficient methods of further cutting office costs, will be interested in the greater efficiency of Dalton ***operation.***

The construction of the Dalton keyboard has a further purpose than that of making it so simple that anyone can operate it immediately. It provides 100% efficiency in operation because this keyboard is scientifically arranged for Touch Method operation—a keyboard easily covered by the fingers of one hand and operated without looking at the keys.

Eyes on Work—Fingers on Keys

Dalton operators save 25% to 40% of the time ordinarily required in adding and listing figures. They do not shift the eye from figures to machine and back again. They work freely and seem to forget the keys entirely.

The Auditor of the Michigan Mutual Life Insurance Co., Detroit, says: "Where the Dalton Touch System of operation is mastered, errors are practically eliminated. I do not remember of a mistake being made the past two years."

Simpler, Faster—for Multiplication also

The Dalton is more than a simpler, faster adding machine. It is an adding-listing-calculating machine combined. Multiplication is as simple as addition. Make a test for speed in addition, speed in multiplication.

The Dalton adds, subtracts, multiplies, divides, figures interest, makes out monthly statements, cross-foots, multiplies by fractions, adds two totals at once, etc.

The GLOBE MACHINE & STAMPING CO., Cleveland, says:

"Just as touch typewriting revolutionized that art, the Touch System of adding and listing, made possible by the installation of the 10-key Dalton, has greatly increased our accounting efficiency."

INGERSOLL RAND CO., New York, says:

"With the Dalton, the operator is able to use the Touch System, thereby making it unnecessary to take her eyes from the book, saving easily 50 per cent in time and decreasing chance for error."

Have a Demonstration

Our agents in a hundred leading cities will bring a Dalton to your office, without obligation. We will gladly forward a descriptive catalog upon request.

THE

FEDERAL EMPLOYEE

Vol. IV APRIL, 1919 No. 4

Two Big Gains

A joint commission on Reclassification of Salary and a $240 Salary Increase for the next fiscal year—these are the chief results of the efforts of our organization before Congress during the session just closed. The Johnson-Nolan Minimum Wage bill and the McKellar-Keating Retirement bill failed of passage because of the hopeless congestion in the legislative field which marked the closing days of the Sixty-fifth Congress.

THE federal employees who are united under the standard of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES were fortunate enough to be able to put on the credit side of the ledger containing their account with Congress two out of four of the chief objectives in their legislative program for the session. These are the creation of a Joint Commission on Reclassification of Salaries and a general increase of $240 in government salaries for the fiscal year 1920, an increase affecting all but a small portion of government employees. In neither case, however, should it be said, were the results obtained all that was sought. The employees, through the National Federation, urged the formation of a commission to reclassify salaries *throughout the entire civil service*, while the existing commission is limited in its operations to the executive departments and other governmental establishments within the District of Columbia and to the municipal government of the District. There seems to be every reason to believe, however, that the scheme of reclassification finally adopted by the commission, if found satisfactory, will be extended to embrace the entire government civil service. A statement to this effect was made by the two ranking members of the subcommittee of the Senate Appropriations Committee in charge of the Legislative bill, which contains the provision for the appointment of the Reclassification Commission. These are Senators Underwood and Smoot, the former a Democrat, the latter a Republican. The commission is to submit a preliminary report at the beginning of the regular session of the 66th Congress next December, and a final report a year later. Reclassification of salaries in the federal service has been, for a considerable period, one of the chief aims of our organization, and the creation of a commission for this purpose was strongly advocated throughout the session of Congress which ended recently.

Although our National Federation did everything in its power to bring about the appointment of a commission constructed along more democratic lines and with broader scope of activity, it is felt that the existing Joint Commission will achieve results which will redound decidedly to the advancement of the efficiency of the civil service, including the welfare of its employees. Everyone interested in this subject—we assume that all civilian workers in the government ranks are deeply interested—should read the statement, printed on other pages, from the pen of Secretary Keating of the Joint Commission.

Regarding the emergency salary increase, it may be explained that, as is no doubt generally known, our organization put forth its best endeavors to secure for *all* government civilian employees in the various services an increase, and that increase a dollar a day, or $360 a year. The House Committee on Appropriations included in the Legislative bill an increase of only $120 a year, and even this was denied the employees of the several war bureaus. Through strenuous effort on the part of the National Federation, seconded ably by our locals throughout the country, this amount was raised, on the floor of the House, to $240. Still the employees of the war bureaus were excluded. The Senate Appropriations Committee agreed to the action of the House, supplementing it by granting an increase of $120 to the employees of the War Risk Insurance Bureau, but declining to take similar action in the case of workers in the other war bureaus. This proved to be the final action in the matter. An amendment proposed to grant an increase of $360 was ruled out on a point of order, although it seems probable that the Senate would have voted this amount had the question itself been allowed to come to an issue on its merits.

The results thus achieved as the result of organized effort on the part of the federal employees are certainly encouraging, especially in view of the circumstances under which the fight was made. Not within living memory, possibly not within the range of Congressional records, could there be found a more discouraging condition to contend with—a less promising outlook. The attention of Congress was claimed most of the time, and likely

Digitized by Google

to be distracted at all other times, by war measures. There was an unprecedented jam of legislation owing to a combination of causes, and later came terrific pressure to cut down to the limit the expenditures of the Government. A certain consolation for the things that were not gained is to be found, perhaps, in the fact that an unusually large number of measures failed of enactment by this Congress notwithstanding their importance and the pressure exerted to secure their passage.

The New Retirement Fight

Temporary defeat has no terrors for the Joint Retirement Conference, which is hard at work preparing for the struggle which will come with the advent of the new Congress. Thanks to the courtesy of Brothers Beach and Reed of the Committee of the Conference charged with the redrafting of the retirement bill, there is given below an outline of the principal changes proposed, in the light of experience, looking toward perfecting the McKellar-Keating measure.

THE HALLS of Congress had hardly been deserted at the end of the session which has just closed before the Joint Committee on Retirement, the "shock troop" which so ably represents the federal employees of the country on this great issue, had taken up the work of preparing for the forthcoming battle during the first session of the new Congress.

It was decided to take up vigorously at once the question of having introduced at the opening of the session a retirement bill drafted along virtually the same lines as the McKellar-Keating bill. With that end in view, a committee was appointed for the purpose of reviewing the McKellar-Keating bill and suggesting to the joint conference any proposed changes. This committee consists of: John S. Beach, Federal Employees Union No. 2, National Federation of Federal Employees; Edward J. Ryan, President, Railway Mail Association; Dr. C. Eder Reed, Secretary, Joint Retirement Committee of Naval Gun Factory; William D. Clark, President, Washington Plate Printers' Union; Dr. Llewellyn Jordan, Secretary, United States Civil Service Retirement Association; Thomas F. Flaherty, Secretary-Treasurer, National Federation of Postal Employees; Bernard G. Ladd, Columbia Lodge No. 174, International Association of Machinists.

Some of the representatives of certain organizations deemed it inexpedient to make any radical changes in the McKellar-Keating bill, while others maintained that the time is opportune to write into the next retirement bill certain provisions more liberal to the employees. There was practically unanimity of sentiment in favor of incorporating in the next bill a provision by which employees who become incapacitated for efficient service before reaching retirement age shall be retired on an annuity.

Another question discussed was a proposed increase in the annuities. The McKellar-Keating bill provided for a maximum annuity of $600 per annum with no minimum. Under this provision it was possible for employees who are receiving small salaries and who have been in the service for fifteen to twenty years to be retired on an annuity as small as $150 per annum, and in some cases even a smaller amount. The idea was brought out that in the next retirement bill a minimum annuity should be provided. The advisability of increasing the maximum annuity to $720 per annum instead of $600 was also discussed.

The maximum annuity of $600 was provided in bills introduced prior to the war. Since that time there has been a radical change in the living conditions, causing the annuity which seemed adequate at that time to be wholly inadequate now; hence the necessity for attempting to secure a retirement law which shall provide more liberal annuities.

Another point is the limitation of contributions. The McKellar-Keating bill provided for a deduction of 2½ per cent from the salaries of all coming within its provisions, which in some cases would amount to $150 per annum. It is reasoned that since there is a limitation on the amount of annuities, there should be a limitation also on the amount of contribution.

Again, there is the question of reducing the age for retirement. The McKellar-Keating bill provided for retirement at 68 years of age, except in preferential classes. It has been suggested that the retirement age for the large mass of employees be fixed at 65 years of age, and for the preferential classes at 60 to 62 years.

The question of administration of the system was also considered briefly. The McKellar-Keating bill provided for administration by the Bureau of War Risk Insurance. It is understood that the Bureau of Pensions and the U. S. Employees' Compensation Commission are both desirous of having administration of any retirement system to be established. The question of administration, however, is a matter of minor importance as compared with the question of amount of annuity, contribution, and age for retirement. The McKellar-Keating bill was drafted along the line of the 50–50 proposition; that is, it provided a system through which the contributions by the employees and the contributions by the Government would be equal. Now if we undertake to provide for a higher scale of annuities and at the same time reduce the age for retirement, the question arises, Will it be possible to accomplish all this on a 2½ per cent contribution, and at the same time maintain the 50–50 idea as it relates to the contributions from the employees and the Government?

A subcommittee, of which Mr. John S. Beach is chairman, will carefully consider the foregoing questions with the end in view of reporting to the joint conference the draft of a bill which shall preserve the essential features of the McKellar-Keating bill and at the same time, if possible, contain more liberal provisions for the employees. A campaign of organization and publicity will be started throughout the country with the end in view of securing the support not only of all the civil service organizations but of financial and business interests, so that we shall be able to impress Congress with the proof that the demand for retirement is not restricted to the employees alone. The work done at the last session of Congress is by no means lost, for the reason that our activities resulted in converting many members who will sit in the next Congress to the desirability of enacting a retirement law at an early date.

Suggestions relative to the new retirement measure will be welcomed by the subcommittee and given careful consideration. These should be forwarded at once to the National Federation in Washington, to be placed in the hands of the subcommittee.

The conference provided also for the following *Committee on Organization and Finance:* Henry Sterling, Legislative Representative, American Federation of Labor; Edward J. Gainor, President, National Association of Letter Carriers; M. A. Bodenhamer, President, Columbia Typographical Union; N. P. Alifas, President, District 44, International Association of Machinists; John J. Deviny, Secretary, National Association of Civil Service Employees.

The Reclassification Problem

Government employees must be given a square deal and must know they are getting it. The fullest publicity is courted in connection with the work of reclassification. National President Steward is invited to confer with the Commission. The writer lays down several propositions bearing on the work of the Commission which he regards as fundamental and voices his appreciation of the federal employees.

By HON. EDWARD KEATING

Secretary of Joint Commission on Reclassification of Salaries

THE JOINT Commission on Reclassification of Salaries was created by a rider on the Legislative, Executive, and Judicial Appropriation Bill approved by the President March 1, 1919. The rider provided that the commission should be made up of three Senators and three Representatives who were members of the Sixty-fifth Congress. In the closing hours of the session Vice-President Marshall appointed Senators Henderson of Nevada, Jones of New Mexico, and Spencer of Missouri, and Speaker Champ Clark designated Representative Cooper of Wisconsin, the Nestor of the House, and Representatives Hamlin of Missouri and Keating of Colorado.

At the first meeting of the commission Senator Jones was designated chairman, Senator Henderson vice-chairman, and Representative Keating secretary.

THE BIG TASK AHEAD AND THE COMMISSION'S ATTITUDE

By the terms of the law the commission is directed to investigate the rates of compensation paid civilian employees by the municipal government and the various executive departments and other governmental establishments in the District of Columbia, except the Navy Yard and the Postal Service, and is directed to report to Congress not later than January, 1920. As a majority of the members of the commission are out of the city, we have not had an opportunity to formulate definitely policies which will govern our proceedings. Enough has developed, however, in the informal conferences between members to make it clear that the commission will court the fullest publicity concerning every phase of its work.

We are dealing with the bread and butter of approximately 100,000 human beings. To them our decisions are vital and they have a right to know the processes by which we reach our conclusions.

The government employees must not only be given a square deal, but they must know that they are receiving a square deal. It was with that thought in mind that the commission asked Mr. Luther C. Steward, President of the National Federation of Federal Employees, to attend the first informal conference. Herbert D. Brown, the chief of the U. S. Efficiency Bureau, was also called in. Both gentlemen were asked to state frankly their views concerning the task before the commission. I think we were all a bit surprised to find they were in substantial agreement as to the mechanics of the problem. It is one of the encouraging signs of the times when an efficiency expert and

Copyright Harris & Ewing

SENATOR A. A. JONES
Chairman of Joint Commission on Reclassification of Salaries

the head of a great labor organization can agree as to the method by which a public commission should approach the consideration of a problem involving the compensation of workers, and it justifies the hope that when a final decision is reached it will be of a character to command the same united support.

Of course no one can predict the result of the commission's labors. Some salaries will probably be increased and some will probably be decreased, while others may remain at the existing figures. That is something that can be determined only by careful compilation and consideration of exact data. Some propositions, however, it seems to me, may be regarded as fundamental.

BASIC PROPOSITIONS IN TREATMENT OF GOVERNMENT EMPLOYEES

Every man and woman who works for Uncle Sam is entitled to a living wage. I do not see how it is possible to get away from that. If the job is worth while, and the man who holds it is capable of performing its duties, surely he is entitled to sufficient remuneration to keep body and soul together. What that living wage should be can be determined with approximate accuracy by an examination of the very exhaustive inquiries conducted by respectable authorities.

The employees in all departments of the Government should receive the same compensation for performing the same work. There is no reason why the Government should pay a stenographer in the Interior Department $1,000 a year for performing exactly the same character of work for which a stenographer in the Treasury Department may receive $1,800.

Women are entitled to the same compensation as men when they assume the same responsibilities, and they should not be denied equal opportunity for promotion.

The government service can afford to be a just and even generous employer, but it cannot afford to be a foolishly extravagant employer. The money which meets the payroll of the employees within the District of Columbia does not grow on bushes or fall from heaven as the manna descended on the Israelites. It comes out of the pockets of the people of the United States, and most of it is coined in the sweat of honest labor.

The men and women who contribute that money would be ashamed of their Government if it transformed its departments and bureaus into sweat-shops, but on the other hand they would be justified in voicing indignant protest if their representatives author-

Digitized by Google

ized unreasonable salaries or failed to exact a reasonable day's work from federal employees.

I have been in rather intimate fellowship with the federal employees for more than six years, and I think I appreciate their point of view. They are not "slackers"—we have the word of the President of the United States for that. They have no desire to organize a "raid" on the public treasury. They are willing to give their Government the best that is in them, and in return they ask for such compensation as will enable them to live according to American standards.

Surely there is nothing unreasonable about that.

The Members of the Commission

OF THE six members composing the Joint Commission on Reclassification, four are Democrats and two are Republicans. Representative Cooper is the oldest in

Copyright Harris & Ewing
SENATOR CHARLES B. HENDERSON

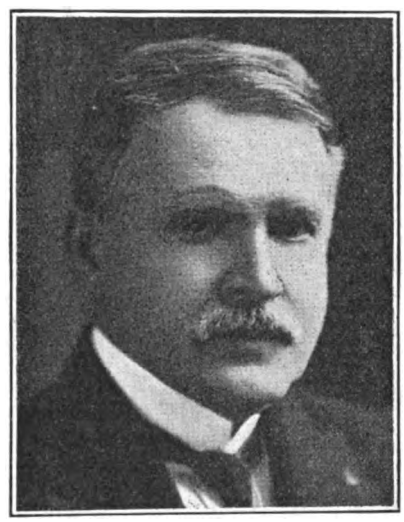
point of service, having served twenty-six consecutive years in the House of Representatives, while Senator Spencer is the youngest in point of service, having come into the Senate on the first Monday of last December to fill a vacancy.

So far as labor problems are concerned, all of the members are regarded as fair.

Senator Jones of New Mexico, chairman of the commission, was one of the most distinguished lawyers of the West country. With the incoming of the Wilson administration in 1913 he was appointed First Assistant Secretary of the Interior and served in that capacity until he was elected to the Senate in 1916. He conducted the hearings on the Nolan Minimum Wage bill (his attitude toward that legislation being rather unfriendly). On account of his experience in the Interior Department, in which the employees are rather notoriously underpaid, Senator Jones will bring to the work of the Commission much valuable knowledge.

Senator Henderson of Nevada is one of the youngsters of the Senate. He was appointed by the Governor of Nevada to succeed the late Senator Newlands, and the Governor's choice was confirmed by the people at the November election in 1918. In addition to being a successful lawyer, Senator Henderson has made unusual progress in the business world and is reputed to be the possessor of a comfortable fortune. He went West when he was graduated from college and underwent many of the privations of the pioneer. He knows what it is to be "broke," and out in Nevada they tell a story about him to the effect that when he found himself without financial resources he took a turn at shoveling coal into the maw of a locomotive.

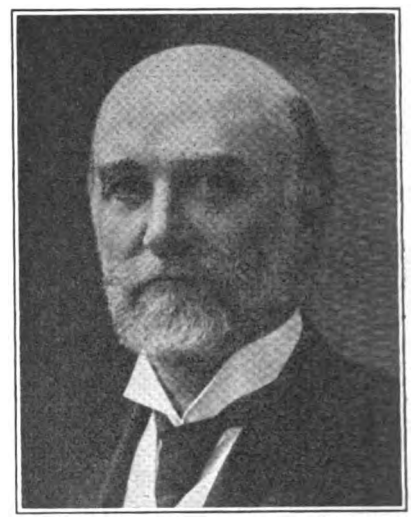
Senator Spencer of Missouri is the



Copyright Harris & Ewing
SENATOR SELDEN P. SPENCER

man who defeated Joe Folk and is filling the unexpired term of "Gumshoe Bill" Stone of Missouri. While he has been in the Senate only a few weeks, he has made a distinctly favorable impression on his colleagues. He is possessed of a keen mind and pleasing personality, and his attitude toward organized labor seems to be eminently fair.

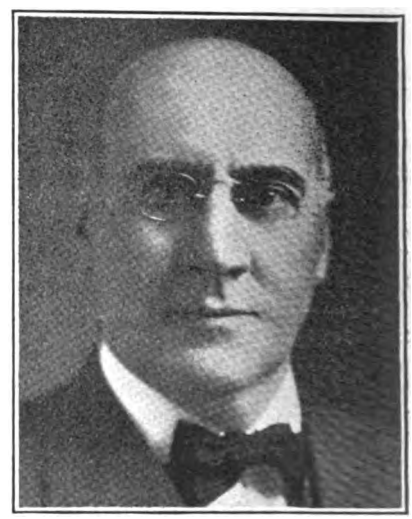
Representative Courtney W. Hamlin of Missouri served fifteen years in the House and has an excellent labor record. He was regarded as one of the substantial men in the House, a close student, hard worker, and disposed to take the liberal side in a majority of the controversies. During all the time he has been in Washington he has been the superintendent of a Sunday school, and it is said that he has not missed a single Sunday during his fifteen years of service except on those occasions when he was



HON. HENRY ALLEN COOPER

away from the city. In addition, he has been the director of the Sunday school teachers' classes in his church, and has conducted that work every Thursday night during that period.

Representative Henry A. Cooper of Wisconsin was for twenty-six years one of the stalwart figures of the House, a man of commanding presence. He is a ready debater, an orator of unusual power, and an uncompromising champion of what he believes to be the right. He was probably the originator of the fight on "Cannon-



Copyright Harris & Ewing
HON. COURTNEY P. HAMLIN

ism," and one of the first and probably most powerful champions of Philippine independence. No man in Congress has a better labor record.

Representative Edward Keating of Colorado is a newspaper man by pro-

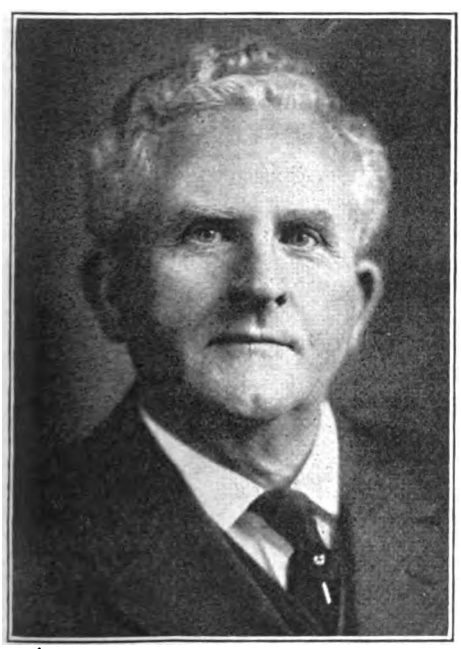
Digitized by Google

fession, having entered the office of a Colorado newspaper when only fourteen years old. He became a member of the Typographical Union before he was old enough to vote, and although he has long ceased to labor under the jurisdiction of that organization, he displays his membership card as one of his most valuable possessions. When he was elected to Congress in 1912, he was owner and editor of *The Pueblo Leader*. During the entire period of his service in Congress he was a member of the "labor group," acting as chairman during the Sixty-fifth Congress. He was the author of the resolution which brought about the investigation of the famous Colorado coal strike—the investigation which resulted in an industrial revolution in the coal-mining sections of Colorado; and he fathered the Child Labor bill, the Minimum Wage bill for Women, and took an active part in all the struggles affecting labor which marked the sessions of the Sixty-third, Sixty-fourth and Sixty-fifth Congresses.

The New Civil Service Commissioners

Ex-Representative Martin A. Morrison and Chief Examiner George R. Wales appointed members of the Civil Service Commission. Their careers are here briefly sketched. THE FEDERAL EMPLOYEE extends to the new Commissioners congratulations and sincere good wishes for a successful administration of their high trust.

FEW OFFICES under our National Government affect the federal employee more directly and intimately than the Civil Service Commission. It prescribes the examination through which, in most



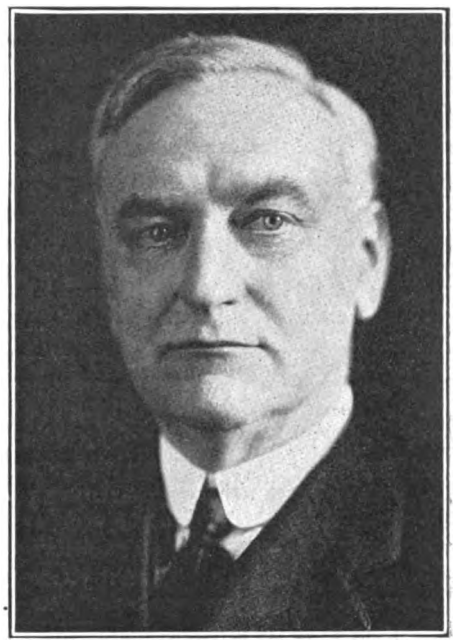
Copyright Harris & Ewing

COMMISSIONER MORRISON

cases, the service is entered. Its rules, in addition to forbidding discrimination on account of political or religious opinions or affiliations, in large measure govern transfer, reinstatement, and even promotion. These rules, although deriving efficacy as orders of the Chief Executive, are nevertheless framed by the Civil Service Commission, and reflect, in considerable degree, the viewpoint and temperament of the Commission. They may be conceived in a broad, liberal spirit, with desire to give direction and at the same time encourage initiative and avoid petty restriction, or they may be conceived in the spirit of the Prussian drillmaster. The personnel of the Commission is therefore a matter of serious concern to federal employees.

The two new Civil Service Commissioners whose portraits appear in this number of THE FEDERAL EMPLOYEE were appointed by President Wilson to succeed Commissioners John A. McIlhenny of Louisiana and Herman W. Craven of the State of Washington, the former a Democrat and the latter a Republican.

Hon. Martin A. Morrison, who succeeds Mr. McIlhenny as President of the Commission, represented the Ninth Congressional district of Indiana in Congress for eight years—from the Sixty-first to the Sixty-fourth Congress. In political affiliation he is a Democrat. His home is Frankfort, Ind., in which city he was born on April 15, 1862. He was educated in its public schools, and was graduated from its high school in 1878, thence going to Butler College. He was graduated in the class of 1883, receiving the degree of bachelor of arts. He spent the next three years studying law in the University of Virginia, from which institution he received the degree of bachelor of laws. After a year in Butler College, at the termination of which he received the degree of A.M., he returned to Frankfort, and that city has since been his home. He entered the law firm of Morrison & Morrison, of which his father and elder brother were already members, and from that day to this law has been his profession. Public education has always interested him, and he was for a time a member of the school board of Frankfort. While in Congress he was a member of the Committee on Patents, and in the Sixty-



Copyright Harris & Ewing

COMMISSIONER WALES

fourth Congress was its chairman. He was married to Miss Katherine McReynolds of Washington, D. C., on November 24, 1914. From "Who's Who in America," it appears that Mr. Morrison is a Presbyterian in faith, and a Thirty-third Degree Mason.

Mr. George R. Wales, the other Civil Service Commissioner appointed by President Wilson, was born November 22, 1862. He was graduated from the high school in 1883, and from a four years' arts course in Middlebury College in 1887, with the degree of A.B. The degree of A.M. was conferred on him by the same institution in 1890. In 1892 he received the degree of LL.B. from the National Law School, Washington, D. C., and in 1916 received the degree of LL.M. from the same institution. He is a member of the bar of the Supreme Court and the Court of Appeals of the District of Columbia.

For two years Mr. Wales was principal of a graded school in Bristol, Vt. He then qualified in a civil service examination for the federal service and was appointed to a clerkship in the War Department, where he served for some months, and from which position he was detailed to duty with the Civil Service Commission. He began his service with the Commission as examiner in 1891, and has held the

Digitized by Google

following positions successively: Law clerk, chief of division, assistant chief examiner, and in December, 1908, upon appointment by the President, chief examiner. Mr. Wales is a Republican.

Mr. Wales is very popular, not only among his associates in the Civil Service Commission, but a wide circle outside. On the occasion of his taking the oath of office as Commissioner he was accorded a veritable ovation. Then there is the usual manifestation of pleasure by government employees generally at a position of the "presidential class" being filled by the promotion, on merit, of one of their number.

The position of Civil Service Commissioner is a hard, exacting one, and the salary attached thereto not nearly commensurate with its duties and responsibilities. Nevertheless, it has from time to time been filled by persons of exceptionally high character and attainment—Dorman B. Eaton, Theodore Roosevelt, W. D. Foulke and John R. Procter. At no time since the civil service act was passed has these been more urgent need for strong men as Commissioners, and it is to be hoped that the new appointees will rise to the occasion.

A Well-Merited Tribute to Edward Keating

A host of friends and admirers of our brother from Colorado unite in wishing him godspeed and welcome back at the same time. The Joint Conference on Retirement are the hosts of the occasion.

Mr. Keating on Organization of Federal Employees

"I believe in the organization of federal employees; I believe, as I have often stated before, that it is going to result in an infinitely more efficient civil service. This service must be vitalized by men and women who have made the government executive service their life work. They must furnish the constructive leadership which will bring about genuine civil service reform."

COULD IT have been possible for the constituents of the Hon. Edward Keating, retiring member from the Third Congressional District of Colorado, to have been present in a body at the testimonial banquet given in his honor on the evening of March 4 at the Ebbitt House in Washington, the most skeptical and cynical among them would have found himself pondering how it happened that the "folks back home" had so signally failed to appraise at their true value the sterling personal qualities and splendid public services of their representative in Congress, whom millions throughout the United States acclaimed as their champion. It was a fine turnout, a splendid showing. Whichever way you turned you beheld the faces of men and women recognized as active workers for social and industrial betterment along lines of self-help.

The banquet was planned and executed by the Joint Conference Retirement Committee, composed of representatives of various organizations of federal employees interested in the McKellar-Keating Retirement bill, for which measure Mr. Keating had labored so unremittingly. Each speaker had been associated with Mr. Keating in reform legislation, especially that for the benefit of the federal employees.

Copyright Harris & Ewing

HON. EDWARD KEATING

Edward J. Ryan, the representative in Washington of the Railway Mail Clerks, announced the program, and introduced the toastmaster of the evening, Thomas F. Flaherty, the genial secretary of the National Federation of Postal Employees. The bright, witty things he said each time he "came to bat" furnished in themselves a good evening's entertainment. Robert H. Alcorn, the president of the Joint Retirement Association, was the first speaker. "All the progress possible under the circumstances," he stated, had "been made during the session to secure the passage of the McKellar-Keating Retirement bill," and it was his conviction it would be enacted at the next session.

Congressman Sims, of Tennessee, chairman of the committee which had favorably reported to the House the McKellar-Keating bill, promised that, so far as he was concerned, there would be no lessening of activity. Judge Sims paid a fine tribute to the guest of honor, saying that never in his twenty-two years of service in Congress had he known any Member "more patriotically devoted to the cause of humanity than Mr. Keating."

Assistant Secretary of Labor Louis F. Post, who was next introduced, said in part:

I have a feeling that Keating can get along better without Congress than Congress can get along without Keating, because of the honor and confidence which he inspired. I do not want to see him go back to the House of Representatives; I want to see him go back to the Senate, where he might have more influence and where they need him badly.

The next speaker was Mr. Frank Morrison, the veteran Secretary of the American Federation of Labor, who, eight years earlier, had been a leader in the movement for the abrogation of the law denying to government employees the right of petition to Congress and to affiliate with the A. F. of L. Among other things, Mr. Morrison said:

Representatives Keating and Nolan were the two men we depended upon to wage our legislative battles, and they have done yeoman service; and it was with the deepest regret that we heard of Congressman Keating's defeat; but still I feel that he will now be able to assist greatly in adjusting the salaries of federal employees on the basis of a minimum wage that will permit every federal employee to live in reasonable comfort.

We had expected this Congress to enact legislation to meet the unemployment situation that has been rising month by month, but we have been disappointed. Congress has passed no single act to meet the situation, and we do not know what the next few months may bring forth in this country. If we pass through the crisis, it will not be because Congress has given us any assistance; and labor is going to hold to account the Members of Congress who failed in their duties.

I bid the committee to be of good cheer, and want to say that the American Federation of Labor will be with you to the last ditch to secure the enactment of the Retirement bill.

In a few well-chosen words, Toastmaster Flaherty then presented Mr.

Digitized by Google

Keating with an engraved testimonial. The ovation that Mr. Keating received when he arose to make response was one that any man or woman might have felt proud of.

In response Mr. Keating said:

I should be a little less than human if I were not deeply touched by this manifestation of your friendship. I have been in Congress for six years, and during that time I have devoted some attention to what I consider the greatest question in the world, the question which is generally described as "the labor problem," and in considering that question and working for its partial solution I have come into rather intimate relationship with all of you, and with many who are not here tonight. . . .

Mr. Morrison has spoken to you of the failure of the Congress to enact needed legislation. His criticisms are, in the main, supported by the facts. There has been a great deal of talk about Bolshevism. There is no danger that the American workingman will become a Bolshevist. I am more afraid of the Bourbons who were capable of adjourning the Congress of the United States after having voted to discontinue the U. S. Employment Service and to enlarge the federal insane asylums. They ignored the suggestions presented so ably to committees of the House and the Senate by the Secretary of Labor and the Secretary of the Interior, and refused to consider measures which were designed to facilitate the work of demobilization.

After referring to the work of the Joint Commission on Reclassification of Salaries, of which he is secretary (dealt with by Mr. Keating elsewhere in this issue), he continued:

I feel under great obligation to the members of organized labor. I should never have seen the inside of the halls of Congress if the workers of Colorado had not faith in me and been willing to go out and work for me. I favor the active participation of the nation's workers in party politics. I am not trying to array one class against another, but it is driven home to me with tremendous force that the men who work should have the representation in Congress to which their numbers and interest rightly entitle them. I believe in the organization of federal employees; I believe, as I have often stated before, that it is going to result in an infinitely more efficient civil service. This service must be vitalized by men and women who have made the government executive service their life work. They must furnish the constructive leadership which will bring about genuine civil service reform.

The Minimum Wage Bill

Since there was published in our last issue the first part of the report of the hearings on the Johnson-Nolan Minimum Wage Bill before a subcommittee of the Senate Committee on Education and Labor, considerable new material of importance and interest in this connection has been secured. This became available too late for insertion in this number of THE FEDERAL EMPLOYEE, hence the conclusion of the present discussion of the Minimum Wage Bill will be found in our May issue.

With the Locals

(*Continued from page 213*)

THE WASHINGTON (D. C.) LOCAL SOON TO RAISE DUES

Convinced that it pays to have a permanent program and invest money to carry it out, the Board of Representatives of Local No. 2, Washington, D. C., have approved the constitution prepared by the Rules Committee, of which Brother S. E. Blassingham is chairman, providing for dues of 50 cents a month beginning July 1, instead of 35 cents as at present.

A 100 per cent growth in membership in the last two months has shown the need for a stronger financial policy and permanent paid officials.

The proposed increase now goes to the membership on referendum. It is believed that the members recognize the situation and will ratify the new constitution containing the provision for higher dues.

ARCHIE E. COLE

A membership campaign in Local No. 2 has been in progress for some months. The result has been most satisfactory. Since January 1, 1919, approximately 8,500 new members have joined this local.

The "drive" will be continued, and it seems highly probable that by Christmas there will be at least an equal gain in membership. The work has become so great that Mr. A. E. Cole, formerly of the War Risk Bureau, has been employed as an organizer. Mr. Cole had charge of the membership drive in the Allowance and Allotment Division (located in the National Museum) of the War Risk Bureau and brought in 1,200 new members.

On Our National Organizer's Trail

OUR last report left Brother R. E. Peabody, our National Organizer, in Oklahoma, where, in cooperation with Third Vice-president Florence Etheridge, he had just organized a local at Wyandotte. A few days ago Brother Peabody stood sponsor for the newest Local, this time at Charleston, W. Va.

He reports an encouraging state of affairs in Oklahoma City, where the Local has taken in of late a considerable number of members. After several days spent there Brother Peabody proceeded to El Reno. Here a fierce storm with a 60-mile-an-hour gale and a real blizzard the next day prevented an organizing trip to a nearby Indian school.

The next week was passed with the members of the Fort Worth Local in building up the interests of that organization. A successful open-air meeting was held, at which a corps of able officers was elected. The Local voted to raise dues to 50 cents a month and to affiliate at once with the Cenral Trades Council. Steady progress on the part of the Fort Worth Union is now anticipated.

At San Antonio Brother Peabody had a conference on matters of importance with President William Bailey, the very active head of Local No. 28, of that city, and also had the satisfaction of learning from Secretary Knapp of the Laredo Union, whom he met, that with the exception of two or three employees, that Local now has on its roll the names of all the civilian government workers in the town.

As the result of a conference with President John Mitchell of the Little Rock (Ark.) Local and a delegation of employees from Fort Logan S. Roots, near that place, a considerable increase in members was secured for the Local.

After a few days spent at national headquarters in Washington, Organizer Peabody proceeded to Charleston, W. Va., a few miles out of which is a big government projectile plant employing 2,200 to 2,500 persons. Here a local was formed, the outlook for which is very promising. Ground is now being broken for the erection of a big armor-making plant, which will attract a very large number of employees eligible for membership in the N. F. F. E. Further, at Nitro, 16 miles away, the Government is to establish a storage plant with 1,200 to 1,500 permanent employees, who will be, as in the case of the employees above referred to, in the civil-service ranks.

Consumers' Cooperation in Europe

How a few poverty-stricken weavers of Rochdale three-quarters of a century ago in despair rubbed the Aladdin lamp of SELF-HELP, and what the Slaves of the Lamp brought in response to the magic touch, not indeed as quickly but as surely as in the Arabian Nights tale. Stranger than fiction is the true story here told of what cooperation among the consumers of Europe has done to lighten their burdens and enrich their lives.

By MRS. ANNIE RILEY HALE

OF the three factors in wealth production—capital, labor, and custom—under the prevailing system of wealth distribution, capital is permitted to absorb most of the profits; labor is granted a bare subsistence—with such marginal variation from this as it may be able to wrest from employers by strikes, boycotts, sabotage, and other modes of "direct action;" while the third and most important party to the transaction—the ultimate consumer—is left entirely out in the cold. He is the final "goat" for all the cumulative exploitation of capitalist greed, trade-union exactions, expensive middlemen, and the various sources of waste inherent in costly and unscientific methods of buying and selling. All the hands through which food passes, from the place where it is grown until it reaches the kitchen of the consumer, promptly recoup all their tolls and losses by passing them on to him. The consumer, having no one else to pass them to, is compelled to swallow them along with the food which, though rendered costly by this process, is frequently none too wholesome nor palatable.

CONSUMERS HELPLESS BECAUSE OF LACK OF ORGANIZATION

Now the surprising thing about this wholesale and universally admitted exploitation of consumers, is that they should passively submit to it, when they are not only the most important, but the most numerous, body in the economic field. The most important, for capital and labor would be in rather sorry plight were there no customers to consume their products; and the most numerous, *since everybody is a consumer.*

The patent reason for the consumers' helplessness is that they are *not organized,* and unorganized forces are ever the prey of the organized hosts. Today combination and organization dominate every element in the economic field in this country *except the consumers;* they are the one neglected and unutilized factor in America's commercial life, and as one writer on the subject puts it: "The unorganized consumer is as well qualified to treat with the organized forces of production and distribution as a Belgian peasant is to deal with the German army. He has no friend at court; he is as helpless and unprotected as a fledgling bird in a feline world."

As things stand now, the capitalists are organized into giant corporations, powerful enough to control both the sources of production and the channels of distribution; laborers are united into unions, which can sometimes compel governments to listen to their demands; and even the farmers, though less effectively organized, are also combining for mutual protection. Yet it happens again and again in a capitalist state, that what labor *organized as producers* gains in its conflict with capital, it loses in great part through being *unorganized as consumers.* For example, in the great coal strike won by the strikers, the price of coal was immediately advanced, and since coal enters into the production of practically every kind of manufacture, the coal miners lost as consumers by higher prices much that they had gained as producers by higher wages. So with the Lawrence textile strikers, who won a 10 to 15 per cent raise in wages, whereupon the price of cotton goods rose 15 to 20 per cent. From this it is plain that labor unionism protects *only the dollar the working man earns.* To protect the dollar he *spends* he must have recourse to consumers' cooperation.

From Harris' "Cooperation the Hope of the Consumer"

THE "TOAD LANE" STORE

The pioneer establishment of the Rochdale Cooperative Movement (see page 206).

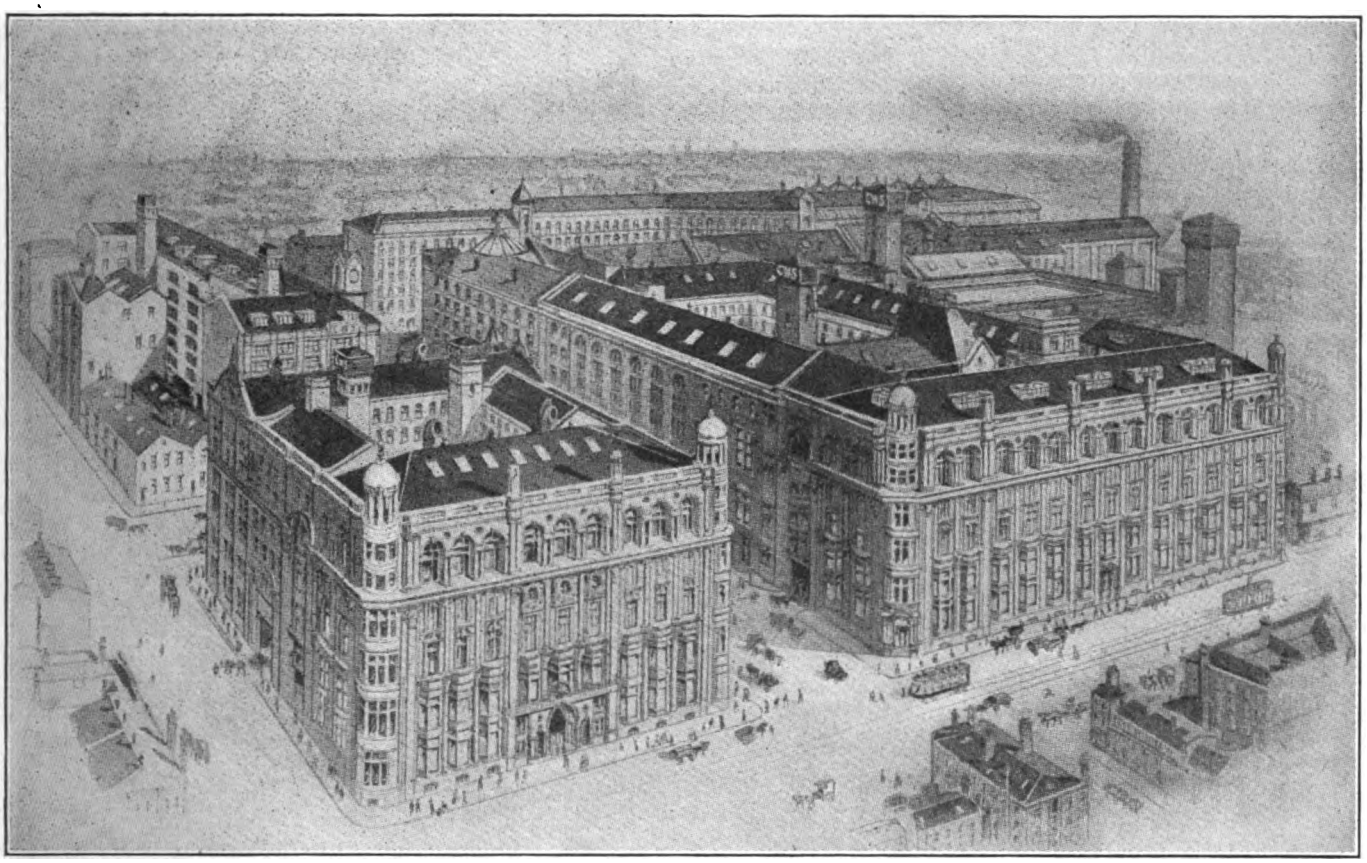
A few have recognized this truth in all ages and countries, and from time immemorial there have been sporadic attempts to organize consumers for mutual aid and community service in various parts of the world. These were for the most part philanthropic undertakings, however, growing out of the impulse of certain well-to-do patrons of the unfortunate to alleviate their condition, but with no thought of effecting any radical or permanent change in it. They wished to *give* the poor people something, *instead of showing them how to get something for themselves.* They ignored the vital truth expressed by Emerson: "Though the wide universe be full of corn, no kernel of good can come to *you* except by the labor bestowed upon the little patch that was given to *you* to till;" and they missed the cardinal principle in cooperative enterprise, which is *organized self-help, or self-help through collective help.*

LEADING PIONEERS IN THE COOPERATIVE FIELD IN ENGLAND

Most prominent among philanthropic workers in the cooperative field in England may be mentioned Robert Dale Owen and the "Christian Socialists." The former, a wealthy manufacturer, commonly called "the Father of Cooperation," established about 1825 a Socialist commune at New Lanark, which comprised four hundred to five hundred cooperative stores, schools, and recreation clubs for the mill-workers, and sought by relieving their material wants and inculcating the doctrine of universal brotherhood to elevate the characters of men. His enterprises both in England and in the United States, while of unquestioned benefit to those who came within the radius of their influence, afforded no model of permanent practical value for those who were seeking the way of life through

Digitized by Google

cooperative industry. The "Christian Socialists" made their greatest contribution to the cooperative movement in securing in 1852, with the assistance of John Stuart Mill, the enactment of the "Industrial Provident Society Act," which gave a legal status to the cooperative societies. The Christian Socialists were drawn chiefly from the ranks of the clergy and the barristers, most prominent among the former being Charles Kingsley, among the latter Thomas Hughes, author of the "Tom Brown" books. Like the Owenite Socialists, their work was valuable in spreading the gospel of cooperation and inculcating the cooperative spirit. That they failed to leave any enduring monument to their efforts in the cooperative field, was due to the fact that they tried to build from the top instead of from the bottom. This rock-bottom foundational work for a lasting cooperative movement was reserved for much humbler hands in a very humble spot.



From "The Cooperative Wholesale Societies Limited Annual, 1918"

BIRD'S-EYE VIEW OF CENTRAL PREMISES OF COOPERATIVE WHOLESALE SOCIETY LIMITED, MANCHESTER

LOWLY BEGINNINGS OF THE ROCHDALE COOPERATIVE PLAN

In the little English mill town of Rochdale, close by Manchester, on a certain dreary Sunday afternoon in November, 1843, twenty-eight poor flannel weavers met in a Chartist reading-room to talk over their troubles and if possible to find a way out. It was one of the darkest periods in the history of labor. Condemned to toil for long hours and scanty pay, they were forbidden by law to organize for their own protection. These flannel weavers had just lost a strike for an increase in wages, hope was at its lowest ebb, and the gloom of the November day was reflected in their souls. But one of their number, Charles Howarth by name, possessing a strong grip on the doctrine of organized self-help, through that obtained an inspiration and a vision of a better day for workers.

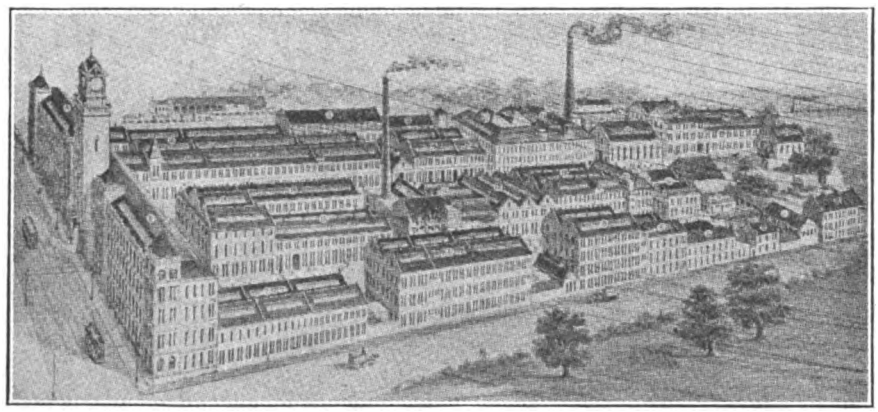
This he proceeded to unfold to his fellow weavers in a formulated plan of action—since so widely known as the "Rochdale Plan," which with slight modifications and adaptations, has been adhered to in all the vast cooperative enterprises in Great Britain, Europe, and beyond. Howarth's proposal to the weavers was as follows: That they should form an organization to be called the "Rochdale Society of Equitable Pioneers," since their object was equity in industry; and that they should begin operations with a provisions store, the working capital for which should be obtained from the consumer members subscribing for one or more shares (valued at £1 each), just as in a joint stock company; that the interest paid on this capital should be limited to the current rate, and that the shares should always remain at par; that the control of the business should be democratic, that is, one vote to one member regardless of the number of his shares, and that the voting must be done in person, never by proxy; and lastly, the selling price of goods to members should be at the prevailing market price for such; *but*—and herein is the feature which distinguishes the cooperative from the privately owned store—the difference between the wholesale and retail price, commonly called "profits," instead of finding its way into the pockets of private merchants, *is returned to the consumers in proportion to their purchases,* and all sales are for cash.

The boldness of Howarth's project appears to have caught the imaginations of the starving flannel weavers (to whom a pound of English money represented wealth beyond their wildest dreams), quickened their pulse-beats, and stirred their sluggish natures to something like a spirit of reckless adventure. At any rate they readily agreed to their leader's suggestion to put aside 2 pence a week from their meager earnings for the requisite pound share, and the pledge was kept though some of them, doubtless, went hungry. Three of their number volunteered to go around as collectors every Sunday, although they had to traverse a circuit of 20 miles. The original twenty-eight members grew to forty, and the weekly toll was raised from 2 to 3 pence; yet even so, it took

Digitized by Google

more than a year to raise £28 (about $140). With this munificent sum they launched the most notable commercial enterprise of modern times.

They rented the ground floor of a dilapidated warehouse in "Toad Lane" for a yearly rental of £10, and after buying store fixtures found they had £15 with which to buy their stock of groceries, which consisted at first of four commodities: Flour, butter, sugar and oatmeal. Four of the "Pioneers" served as a store force—salesman, cashier, secretary and treasurer, and on the evening of December 21, 1844, they took down their shutters and opened shop amid the jeers of the Toad Lane populace and the cat-calls of street gamins. For a time the store was open only on Monday and Saturday evenings; later, every evening, and it was several years before it kept open all day. The early existence of the Rochdale venture was precarious. As in most new undertakings those of little faith fell away, but the loyal and persevering ones held on, and slowly but surely the enterprise grew.



From "The Cooperative Wholesale Societies Limited Annual, 1918"

PRODUCTIVE WORKS OF THE SCOTTISH WHOLESALE COOPERATIVE SOCIETY LIMITED, AT SHIELDHALL, GOVAN, GLASGOW.

TREMENDOUS DEVELOPMENT OF MOVEMENT IN UNITED KINGDOM

At the end of their first year the "Pioneers" had eighty members, a capital of £180, and the weekly receipts in the last quarter of 1845 averaged £30—more than their original capital. The membership increased each year until in 1851 they numbered 800, and the capital had grown to £2,800! Their success gave a new impetus to cooperation in England, and societies and stores modeled on the Rochdale plan sprang up all over northern England and the Scottish Midlands. While some of these failed, the majority succeeded, and in 1863, twenty years after the conception of the plan, they formed the North of England Cooperative Wholesale Society (of which forty-five local stores took the stock), which opened a store in Manchester in 1864 with a force of two men and a boy. By 1869 the Society had built its own six-story warehouse and had opened two purchasing depots in Ireland. The subsequent development of the English Cooperative Wholesale Society makes one of the most romantic stories in the modern economic world, comparable with that of Standard Oil, United States Steel, and the Canadian Pacific Railway, only greater than these because of the principle of industrial democracy it embodies. By 1916 it had 30,000 employees, and 1,200 retail societies held shares in it. Its resources in share capital, loans, reserves, and insurance funds amounted to $64,000,000, and its net sales that year were $254,000,000. The English Cooperative Wholesale is the largest food supply establishment in the world, sending its buyers into every corner of the globe. The Scottish Cooperative Wholesale, with headquarters at Glasgow, operating in less territory than the English, has naturally a smaller volume of trade, yet in 1916 it recorded net sales of more than $70,000,000. In many great undertakings these two societies combine.

Very soon these wholesale cooperators saw the wisdom of getting nearer to the sources of production, and in 1873 they entered the manufacturing field, their first venture being a cooperative bakery and their second a boot-and-shoe factory—today the largest in the United Kingdom. They likewise operate the largest textile mills, and their eight great flour mills have been for some time the largest takers of Canadian wheat. At Glasgow, Scotland, the cooperators have the largest bakery in the world, while in their Shieldhall Works in Glasgow more industrial operations are carried on within one common gateway than in any other place in the world, 4,000 men of a hundred trades and occupations being employed in sixteen factories with a yearly output of $5,750,000. In its Annual for 1917 the British Cooperative Wholesale, Limited, lists sixty-five factories, some of them in Australia, and describes its activities in all fields as follows: Wholesale general dealers, manufacturers, bankers, insurers, millers, printers, bookbinders, lithographers, architects, engineers, builders, shipowners, butter-factors, lard-refiners, bacon-curers, fruit-growers, saddlers, tanners, cutlers, iron-founders and tin-plate workers, tea-growers, blenders and packers, farmers, importers, fellmongers, etc., ad infinitum, in the whole field of production and distribution. They own 30,000 acres of English farm lands and in 1917 bought 10,000 acres of the best Canadian wheat land; they have also nearly 4,000 acres of tea plantations in Ceylon, vineyards in Spain and Greece, and they have recently leased a vast tract of palm olive groves in British Sierra Leone, West Africa, for the production of oil for their soap factories.

Besides all this, the British Cooperative Wholesale has invested half a million dollars in 50,000 building lots and workingmen's homes, to be paid for on the cooperative plan; so that the old proverb about "eating one's self *out of* house and home" has been transformed by cooperators pursuing the policy of returning dividends on purchases into the happier philosophy, to "eat yourself *into* a home." Banking and insurance were later developments in the British cooperative field, but they have been crowned with as great success as the other cooperative enterprises, the cooperative insurance methods having proved of special value to investors by reason of their greater simplicity and economy. The investments and assets of the English Cooperative Bank at the close of 1915 were reported near $40,000,000 and its deposits and withdrawals in 1916 at $1,347,919,678.

Perhaps the figures which best attest the size and strength of the cooperative "spreading oak" which grew from the small Rochdale acorn are contained in the statement that, from 1861 to 1914, British cooperative societies, wholesale and retail, made net sales aggregating nearly $14,000,000,000, of which *two billions were returned to the consumers.* The growth of the movement during the war went far ahead of any previous records, the reason for this being easily seen. When the crash came, and the food panic seized the people in the warring countries, private dealers immediately began cornering food and boosting prices. This was the cooperators' opportunity to prove the truth of their claim of operating in the interest of consumers, and they improved it by holding down and standardizing prices, thereby increasing their popularity tenfold. Their mem-

Digitized by Google

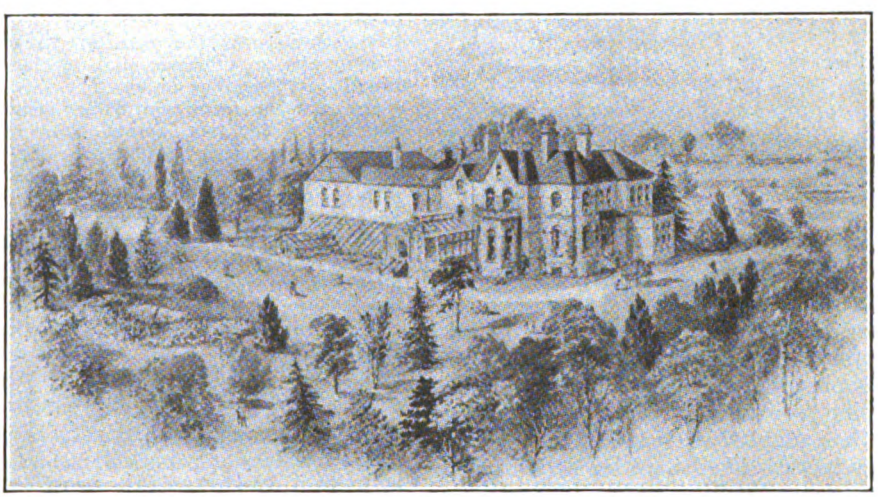
bership showed an increase in the first year of the war of 176,000, as against a 70,000 increase for 1913, and by 1918 the cooperators numbered about one-third of the entire British population. Their wholesale societies handled that year nearly $1,000,000,000 worth of commodities, with a net profit of $100,000,000; $35,000,000 were devoted to educational and social-welfare work, and the remaining $65,000,000 were returned to the consumers in dividends on purchases. They own their own steamship lines and operate their own coal mines. From the beginning of the movement, education and social welfare have been a feature of Rochdale cooperation, even the weaver pioneers voting to put aside 2½ per cent of net profits for such purposes. In consequence, schools, libraries, recreation clubs, hospitals and sanitariums have grown up in the wake of successful cooperative enterprise.

While the British Cooperative Movement is an epitome of the world movement and marks its greatest achievement to date, the same gospel spread to the continent and has made a substantial showing in practically every European country. Second only to its development in Great Britain has been that in Germany. Although the first Rochdale store in Germany was not opened until 1864, according to figures furnished by Prof. Charles Gide, the great French authority, the German societies made greater proportionate gains in both membership and sales within the period 1902 to 1914 than did the British societies. Gide reports a Hamburg society of 79,000 members in 1914, one at Leipzig with 65,000 members, and one at Breslau with more than 100,000, the largest cooperative society in the world—this, in spite of (or perhaps because of) the hostile attitude of German government officials toward the various cooperative concerns, which they dubbed "revolutionary shops," and forbade the government employees to deal with them.

THE STORY OF ROCHDALE COOPERATION ON THE CONTINENT

The movement gained in Germany during the war as it did in all other countries, the Hamburg society receiving more than 15,000 new members in 1915, and the German Cooperative Wholesale at Hamburg—the largest in the world outside of England and Scotland—did a business in 1916 of $38,000,000. This is what Germany did with a distinctly British organization, but Germany also originated and developed cooperative banks. In 1849 Frederich Raiffeissen organized a loan bank for rural peasants, the members of which were rich philanthropists. After this had languished for a dozen years he formed another *with the borrowing farmers as members,* which succeeded, and subsequently others were organized. In 1913 there were 16,000 of these Raffeissen banks in Germany, with a combined capital of $650,000,000, and deposits of $570,000,000, which have wrought untold good for the German agricultural classes.

The country next in cooperative development is Russia, the number of societies in which had risen from 2,000 in 1905 to nearly 50,000 in 1917, comprising about one-third of the population. The Moscow Union of Consumers' Societies, or the Wholesale, which started in 1898 with eighteen societies, embraced 3,000 by the end of 1916, and its yearly turnover rose from $5,000,000 in 1914 to $45,000,000 in 1916. Today organized cooperation is known to everybody in Russia; the people and the government both looking to it to rebuild the nation.



From "The Cooperative Wholesale Societies Limited Annual, 1918"

RODEN CONVALESCENT HOME, ENGLAND

France led the way in cooperative production, under Louis Blanc, who in 1848 organized a number of self-governing workshops, which gradually multiplied, and by 1910 were doing an annual business of $10,000,000. France has been active also in agricultural cooperation since 1893, forming thousands of societies with hundreds of thousands of members. The cooperative store had a slower growth in France, though Gide reports for 1914 3,261 distributive societies, with 881,000 members, and annual sales of 321,000,000 francs.

The great Vooruit Society of Belgium originated in a small cooperative bakery, started by Edouarde Anseele, the son of a poor shoemaker, at Ghent in the early eighties, now grown into a mighty institution, controlling three bakeries with a weekly output of 110,000 loaves, a large department store, twenty-one groceries, five clothing and six shoe stores, a large brewery, one of the largest printing presses in Belgium, a coal depot, and a chain of drug stores. The peculiar feature of cooperation in Belgium is that *all* the net profits from cooperative enterprises are given to education and social welfare, conducted through their beautiful "maisons du peuple," social centers in which is housed every kind of cultural and recreational activity. The most palatial of these, located at Ghent, is the home of the great "Vooruit" society. As evidence that the war did not obliterate cooperation even in this invaded country, the Vooruit gained 1,400 members in the first year of the war, opened its twenty-sixth branch store, and had a turnover of 5,688,000 francs.

Denmark and Ireland were both reclaimed from ruin by still another form of cooperation—agricultural, which has found expression in cooperative dairies and creameries, bacon-curing plants, and egg and poultry societies. Denmark was driven to this by the destructive Prussian war in 1866, and Ireland, decimated by famine and its wretched system of land tenancy, was finally persuaded by Sir Horace Plunkett and Father Finley in 1890 to experiment with the cooperative idea, suspicious as they were by nature of anything emanating from England. The success of the experiment may be indicated by the showing in 1913 of 947 cooperative societies in Ireland with a yearly turnover of $16,000,000. As in all other countries, this has increased greatly since the outbreak of the war.

Switzerland is one of the banner cooperative lands, having one cooperative society for every 500 inhabitants. The University of Zurich has lectures and courses in cooperation for the education of managers and officials in cooperative enterprises—a most important phase of the work. Norway, Sweden and Holland have all developed distributive and agricultural co-

Digitized by Google

operation on a large scale and have made substantial showings.

Austria was among the last of European countries to develop cooperation, and little was done until after 1890, when the active opposition of the middle-class tradesmen aroused the workers. As in Germany, the Austrian government was hostile to cooperative enterprise, but its desperate food straits during the war forced the government to entrust the control of food distribution to the cooperators, who had proved their greater efficiency. The powerful Vienna distributive society had a membership of 59,000 in 1915 and a trade of 24,000,000 crowns. In 1916 was established the great Victualing Union of War Workers, comprising 400 industrial establishments with 200,000 members, which provided cooperatively for about one-third of the population.

Italy has made a unique contribution to cooperation in her cooperative labor groups, wherein workmen become contractors for their own labor, subscribe or hire capital, and undertake large public and private contracts, as building railroads, roadways, and canals, though all forms of cooperation have taken root in Italy.

ADAPTABILITY AND LARGE RESULTS OF THE ROCHDALE PLAN

Thus has the movement spread across Europe from end to end; it has flourished under diverse forms of government and among the most diverse peoples and cultures. The significant thing about the Rochdale plan is that it has adapted itself to all. Each country has modified the idea according to its own peculiar genius. Thus England developed distributive cooperation, Germany cooperative credit, France and Belgium cooperative production, Denmark and Ireland cooperative agriculture and Italy cooperative labor. Holding itself resolutely aloof from both politics and religion the Cooperative Movement was the only thing that preserved its international character in the great war. When everything else, including Christianity and Socialism, went down in the universal cataclysm, cooperation alone stood up. One of its able advocates says of it:

> It necessitates no revolution; it disturbs no authority, confiscates no man's property and equalizes the future without spoliation. The strained relations of capital and labor adjust themselves automatically under the magic touch of cooperation. It changes the workingman's attitude toward capital, wherein he sees it not as an instrument of oppression but as an agent of progress; since cooperators are not *haters* of capital, but *creators* of capital, and it provides an easy, simple plan for those without capital to acquire it—THROUGH ORGANIZED, COLLECTIVE SELF-HELP. And cooperation in industry is the next step in the world sweep of democracy.

General Salary Provisions of the Legislative Act

A number of inquiries have been received and more are constantly coming in regarding the exact provisions of the Legislative, Executive, and Judicial Appropriation Act relative to the general salary increase granted civilian employees of the Government for the fiscal year 1920.

Appended is that part of Section 7 of the Act which contains the information sought:

SEC. 7. That all civilian employees of the Governments of the United States and the District of Columbia who receive a total of compensation at the rate of $2,500 per annum or less, except as otherwise provided in this section, shall receive, during the fiscal year ending June 30, 1920, additional compensation at the rate of $240 per annum: *Provided,* That such employees as receive a total of annual compensation at a rate more than $2,500 and less than $2,740 shall receive additional compensation at such a rate per annum as may be necessary to make their salaries, plus their additional compensation, at the rate of $2,740 per annum, and no employee shall receive additional compensation under this section at a rate which is more than 60 per centum of the rate of the total annual compensation received by such employee: *Provided further,* That the increased compensation at the rate of $120 per annum for the fiscal year ending June 30, 1919, shall not be computed as salary in construing this section: *Provided further,* That where an employee in the service on June 30, 1918, has received during the fiscal year 1919, or shall receive during the fiscal year 1920 an increase of salary at a rate in excess of $200 per annum, or where an employee, whether previously in the service or not, has entered the service since June 30, 1918, whether such employee has received an increase in salary or not, such employee shall be granted the increased compensation provided herein only when and upon the certification of the person in the legislative branch or the head of the department or establishment employing such persons of the ability and qualifications personal to such employees as would justify such increased compensation: *Provided further,* That the increased compensation provided in this section to employees whose pay is adjusted from time to time through wage boards or similar authority shall be taken into consideration by such wage boards or similar authority in adjusting the pay of such employees.

The provisions of this section shall not apply to the following: Employees paid from the postal revenues and sums which may be advanced from the Treasury to meet deficiencies in the postal revenues; employees of the Panama Canal on the Canal Zone; employees of the Alaskan Engineering Commission in Alaska; employees paid from lump-sum appropriations in bureaus, divisions, commissions, or any other governmental agencies or employments created by law since January 1, 1916, except that employees of the Bureau of War Risk Insurance shall receive increased compensation at one-half the rate allowed by this section for other employees: *Provided,* That employees of said bureau who are compensated at rates below $400 per annum shall receive additional compensation only at the rate of 60 per centum of the annual rates of compensation received by such employees; employees whose duties require only a portion of their time, except charwomen, who shall be included; employees whose services are utilized for brief periods at intervals; persons employed by or through corporations, firms, or individuals acting for or on behalf of or as agents of the United States or any department or independent establishment of the Government of the United States in connection with construction work or the operation of plants; employees who receive a part of their pay from any outside sources under cooperative arrangements with the Government of the United States or the District of Columbia; employees who serve voluntarily or receive only a nominal compensation, and employees who may be provided with special allowances because of their service in foreign countries. The provisions of this section shall not apply to employees of the railroads, express companies, telegraph, telephone, marine cable, or radio system or systems, taken over by the United States, and nothing contained herein shall be deemed a recognition of the employees of such railroads, express companies, telegraph, telephone, marine cable, or ratio system or systems, as employees of the United States.

Section 6 of the legislative, executive, and judicial appropriation act approved May 10, 1916, as amended by the naval appropriation act approved August 29, 1916, shall not operate to prevent anyone from receiving the additional compensation provided in this section who otherwise is entitled to receive the same.

Such employees as are engaged on piecework, by the hour, or at per diem rates, if otherwise entitled to receive the additional compensation shall receive the same at the rate to which they are entitled in this section when their fixed rate of pay for the regular working hours and on the basis of 313 days in the said fiscal year would amount to $2,500 or less: *Provided,* That this method of computation shall not apply to any per diem employees regularly paid a per diem for every day in the year.

Harvest Time

(Written for THE FEDERAL EMPLOYEE)

We're buildin' boats to float on water;
Makin' ships to fly in air;
An' a gun to blow the kaiser
From his saintly-kultur'd lair.

I ain't got much eddication,
An' I can't see werry far,
'Cept it's harvest time fer grafters
When the country is at war.

An' I'm not shure them cantonments
Ez gittin' doller's worth fer doller.
'Cause a lot o' them there grafters
Ez layin' low to git the "yaller."

'Course, I ain't had eddication,
An' I can't see werry far,
'Cept it's harvest time fer grafters
When the country is at war.

Sez the dreamer to the schemer:
Guess we gotta work our wits;
Sez the idler to the sidler:
We must shurely "git our bits."

Wisht I had some eddication,
So I couldn't see so far;
An' I couldn't see 'em reapin'
When my country is at war!

—S. TYSON KINSELL.

"My Day's Work"

It is hardly an exaggeration to say that almost every kind of work that the sun shines on is done daily, not only in this country but in other parts of the world as well, by the civilian employees of the United States in the ordinary performance of their official duties. To gather this wealth of material in the form of narratives told by the workers themselves and to place it before their readers is one of the tasks which the Editors of THE FEDERAL EMPLOYEE have set for themselves. The stories which appear below are the first of the contemplated series which is here outlined.

A Strenuous Christmas

By J. B. FITZGERALD

Immigrant Inspector and Member of New York City Federal Employees Union

"This narrative," writes the author, "which seems an unusual occurrence, was really typical of the work I carried on in the Rainy River section when on patrol between Kettle Falls and Lake of the Woods, a stretch of wilderness something like a hundred miles in extent. I had several such experiences during the winter of 1915."

SOMETHING disturbed me. I opened my eyes. The place gradually assumed the appearance of the bunk-house I had entered the night before. A gruff voice bade me get up. I tossed aside the rough blanket and brought my hundred and seventy pounds of tired and muscle-sore body slowly to the floor. A glance toward the adjoining bunk told me that Erickson, my guide, had gone. Dressing quickly, I buckled on my holster, then hastened to the cook shanty, where I glanced eagerly up and down the rows of faces hovering above the long board tables. The guide was not there. I thought it strange that Erickson had not awakened me earlier. He knew my plans—knew that I had anticipated an early return to International Falls, where I wished to spend Christmas evening with my family. As soon as breakfast was over I hastened back to the bunk-house. I had hopes of learning something as to the guide's whereabouts, but the place was deserted. I began to fear that something had gone wrong. I could think of no good reason why Erickson should have left without letting me know. I then went outside and made a further search. My worst fears were confirmed—the dogs, too, were gone.

IN THE FROZEN WILDERNESS DESERTED BY HIS GUIDE

I returned slowly to the bunk-house, where I slumped down upon the edge of my bunk, feeling very blue and very much alone, for I had counted upon Erickson to lead me back to civilization and to the wife and kiddies who were waiting for me.

Camp No. 3 was a lumbering camp situated on the northern bank of Sand Point Lake, one of the extensive chain of large lakes which marks the boundary between Minnesota and Ontario, Canada. There was only one approach to the camp from Canada, that through the muskeag and timber of the wildest section of northern Minnesota, through deep snow and across frozen lakes. The trip through this wilderness, even to the initiated, was an undertaking of considerable magnitude, involving hardships which to the inexperienced in woodcraft were almost unthinkable. You can imagine my plight then when I say that the only alternative was to make the return trip alone on foot.

The owners of the camp had a few weeks before requested of the United States Immigration authorities at International Falls the privilege of transit from Canada of a number of laborers. Inasmuch as these men were to perform work in a Canadian camp not much thought was given the request and it had been readily granted. Recently, however, word had come to the chief immigration officer that there were a great many more alien laborers entering than Camp No. 3 could accommodate. The Chief was puzzled. Where were the men going? None had been reported back as agreed by the camp owners, and none had been checked out by the immigration authorities. So I had been sent into the woods to investigate. I had hired Erickson and his team of six dogs to guide me in and out of the wilderness. He had guided me to the camp faithfully enough, but now it began to look as though he had deserted me.

The camp, as I said, was situated in the heart of a very wild country, where the fox, the beaver, the mink, and the fisher abounded; where the wolves howled in the early morning and, when the snow was deep and the cold intense, hunted and killed wantonly the valuable ruminant and herbivorous animals. It was, indeed, a country in which I had no desire to be left.

CAMP BOSS RED RILEY NOW APPEARS ON THE SCENE

As my mind dwelt upon Erickson's duplicity the bunk-house door suddenly opened and Red Riley, the camp boss, a typical lumberjack bully of prodigious strength and size, stepped into the opening, where he stood leeringly contemplating me. It occurred to me then that Riley might know—might be able to explain something about Erickson's disappearance. With this in view I approached him.

"Did you see Erickson?" I inquired.

Riley's leer disappeared and his expression changed to one of cunning. Then in slow measured tones, which left the impression that he and the guide had something in common, he drawled, "He left here about an hour ago, but you needn't worry; he'll be back in a week or so."

I knew then that he and Erickson had tricked me. Riley evidently feared the result of my investigation of the evening before, which would, when my report was finally rendered, spoil a very extensive attempt to lower the American wage scale and at the same time fill Riley's pockets with good American dollars.

"You induced him to leave?" I demanded with some heat.

He glared at me scornfully.

"Why did he leave?" I insisted, though by this time I felt certain that Riley had induced the guide to go.

Digitized by Google

The prospect, too, of having to remain indefinitely in this dirty and smelly bunk-house with its dirtier and smellier inmates loomed larger every second. "Why did he leave here without me?" I repeated.

Riley raised his head high and laughed out loud. "You inspectors are not so wise as you think," he rasped. "Do you suppose I was born yesterday?"

This left me speechless and boiling with wrath. I did not trust myself to speak—all I could do was to stare at him. Suddenly Riley turned, and giving vent to another loud, mocking laugh, stepped out.

RILEY'S CRIMINAL SCHEME AND HOW TO FRUSTRATE IT

The slamming of the door aroused me, and I rushed outside, intending to follow and demand an explanation, but Riley had disappeared. Perhaps it was well he had—for me. Back again in the bunk-house I cursed Erickson, the camp boss, and the wilderness to my heart's content. It was a quarter of an hour before I finally gathered my wits so that I could think clearly. It was up to me to get out somehow, but the only means that held out any hope of getting back to International in time to frustrate Riley's intentions was to walk, and this, I felt, was impossible.

My investigation had convinced me that the cheap labor which was being brought across the line from Canada was being distributed among the American camps farther south, and that those interested, Riley among them, were receiving large bonuses for their trouble. This was clearly in violation of the United States Alien Contract Law, and I had determined to stop it. Another large batch of laborers was expected to arrive in a few days. Riley was interested in securing their entrance to the United States, and now sought to prevent my return in order that he might not be molested. *It was up to me.*

I spent the day among the men in the woods learning what I could, and by dark had determined my course of action. On the way back to the bunk-house I noticed a horse, fully saddled and ready for a journey, picketed outside the cook shanty, but thinking it probably belonged to someone from one of the other camps, I dismissed the incident from my mind.

In the bunk-house I again met Riley. I took this occasion to remind him that I was a government officer and that he was interfering with me in the discharge of my duty.

"Duty!" he blurted. "Duty! What are you talking about? Duty!" He dragged the last word out with a scowl. "You and your crowd are interfering in my business. Your false ideas about cheap alien labor are all rot. Bah!" He then left the bunk-house.

I retired, vowing to show this big bully that our ideas about cheap alien labor were *not* all rot.

THE DAY'S WORK INCLUDES A THRILLING ADVENTURE

Early the following morning I packed away a good breakfast; then by a little cajollery I secured enough grub to last me two days or more. An hour later I was well on my way across the frozen lake, following an old wagon trail over the ice. Although it had snowed the night before, the trail was still fairly well defined, and along it I noticed the hoofprints of a horse, probably those of the saddled animal I had seen picketed outside the cook shanty the evening before.

The going was not so bad as I had anticipated, and I mushed along easily in my moccasins. About five miles from camp I was unfortunate enough to slip into an air hole and sank to my waist in the icy water. After this I took to running in order not to freeze and made excellent time. Suddenly, in chancing to look back, I was surprised to see six large grayish dogs following me. I stopped; the dogs stopped also. "Erickson!" I breathed. But no, Erickson had one black dog, while all these were of a light color. I whistled to them. They flopped down in the snow. And in that second I realized the truth. They were *timber wolves!*

Wolves! my God, wolves! Everything nearest and dearest loomed before me. Instead of having Christmas supper with my family it suddenly looked as though I was to make a Christmas meal for these forest beasts. I was already warm from running, but now the sweat rolled from me, for timber wolves meant death, and such a death! I shivered with terror and turning, ran. Goodness only knows how I kept up running. I ran, ran, ran, until it seemed I could not go a step farther. The wolves followed, always keeping at a distance, but always following, their red tongues lagging, the tiny puffs of vaporized breath from their throats always there—there, yet so close. Several times I stumbled and fell. On these occasions I noticed that the wolves stopped and waited, only to continue the chase the moment I again started off.

At last, exhausted, I sank down. Immediately the wolves formed themselves into a semicircle and squatted in the snow. It was minutes—minutes of terror—before I realized that I was not to be attacked at once. Presently my hand came into contact with the ice-incrusted holster at my side. My heart leaped with a new hope. In my terror I had forgotten all about my pistol, but again to my chagrin I found that the pistol was frozen fast to the leather. Then followed moments of anxious endeavor. All the while the wolves remained almost buried in the snow and sticking to their post. Finally I succeeded in unfastening my belt, and then by hammering the frozen holster against the ice I at last succeeded in freeing the pistol. But now I found that the barrel was held immovable and choked with ice. A good many more minutes passed before I had it working smoothly. Then I felt a great sense of relief and security.

Presently another thought obsessed me. What if I fired my ammunition and missed? Would the wolves still hang on my trail? Or would the noise of the reports scare them off? I speculated upon this before I finally decided to risk a shot. I had often practised with the weapon I carried and was a pretty fair shot under ordinary circumstances, but this was no ordinary circumstance. Next I spent several minutes in watching the almost indistinct animals. I wanted to pick out the leader, for I felt that if I could get him the others would light out. It was not easy to make the choice, for the wolves blended almost perfectly with the snow.

At last I made my selection. The animal I picked was in about the center of the semicircle which they had formed. I took careful aim at the spot where he sat crouched. But again the fear of missing caused me to lower my arm. If I missed I would have but five more chances and there were six animals. Why hadn't I carried more ammunition? I remembered then that six shells were all I had in the house when I left home, and I thought regretfully of the hundreds I had squandered in practising on Rainy river. My present position could not be maintained indefinitely, however, without something happening, so I again determined to take a chance.

Accordingly I once more took aim. Simultaneously with the report of my pistol I saw a tuft of hair spring into the air, then suddenly the snow in that direction spurted volcanically, blotting out the figures of the wolves and the landscape beyond. When the snow "dust" had subsided I saw my enemies far off across the lake; they were making for the timber with the greatest alacrity, followed by a cloud of snow. I gave a loud whoop, for I felt that impossible-to-describe feeling of having been over the top and of having won a battle.

THE TRAIL LOST AND FOUND—HOME ONCE MORE

Now that the worst was over I discovered that I was off the trail and lost. Nevertheless, this fact did not bother me much; the fear of being lost was nothing to the fear of being eaten by wolves. I then headed westward or in the direction I thought was west, but which I subsequently learned was almost due south, and it was well I had taken this course.

At ten o'clock I suddenly found myself leaving the lakes and approaching a group of shacks. This was Harding. Here I was informed that the old logging road from Cusson to Lake Kaptagama had that very morning been reopened, and that a logger would leave Kelly's Crossing for Elephant Lake at noon. I covered the seven miles to Kelly's Crossing in an hour and a half. At one o'clock I was dumped off the logger at Elephant Lake, from which point it was only eleven miles to Cusson, where a train was due to leave for Ranier at 3.20 p. m.

Weary beyond imagination, I reached Cusson in time to catch that train. Upon my arrival at Ranier I telephoned the Chief at International and informed him of what I had learned. My report reached him just in time to prevent the entrance of more than one hundred "bohunks," who, the Chief said, were at Fort Frances, Ont., in care of Red Riley, all ready to cross over. "Red Riley?" I whispered, "but—" then I recalled the hoofprints in the snow on the lake and understood.

The very first person I met when I reached the Falls was Erickson. He stared at me as though I were a ghost. But I was too fatigued to bother him then; I wanted right bad to get to the wife and kids. Anyhow, I had already done a day's work.

Salaries and Wages

We get confused dealing with salaries and wages. Fernald differentiates: "Salary is for literary or professional work, wages for handicraft or other comparatively inferior service." Seems to me, handicraft and brain-i-craft are closely allied if results are worth while. Skilled handicraft is no longer "inferior service"; neither is literary or professional work *per se*, superior service. F. says further: "Salary is regarded as more permanent than wages." Why? Because wages have depended upon the justice, generosity or meanness of salary. Go digging into any of these old rubbish piles and down in the mustiness somewhere you strike the master and serf idea.—*San Francisco Star.*

In "The Bureau"

It is a far cry from the frozen lakes and pine woods and wolves of Minnesota to the workrooms of the Bureau of Engraving and Printing (familiarly known as "the Bureau") on the banks of the Potomac. The story here told is that of more than 150 women, who play an essential rôle in the great plant which turns out for Uncle Sam billions of stamps, bills, bonds, and other securities.

By MARY O'SULLIVAN

Member of the Women's Union of the Bureau of Engraving and Printing

NOW THAT our munificent legislators have granted a salary increase of $240 for the next fiscal year to federal employees, after much discussion as to whether the said employees earned the compensation which they asked for, as an appropriate argument a little treatise on "A day's work in the life of a federal employee" may be convincing as well as interesting.

PERFORATING THE SHEETS OF STAMPS

AN EARLY START AND THE PREPARATIONS FOR WORK

Seven a. m. the writer boards a car, rides for about three-quarters of an hour and arrives at "the Bureau" about 7:45. On producing a pass admittance is gained, and at once there is a very noticeable rush on, as if the day's work started inside the door—each hurrying to her particular division or section. One of these very important divisions is the Stamp-perforating Division. Before starting the day's work it is absolutely necessary to change one's clothes and put on a gingham or white dress, as the dust which comes from the mucilage on the stamps leaves a thick white coating, particularly visible on any kind of dark apparel. Various kinds of hats are patented and worn by the workers, some made of paper and some of cloth, as the afore-mentioned dust has a ruinous effect upon the hair. Thus attired, at the sound of the 8 o'clock bell the dressing room is left behind and work starts.

THE DAILY GRIND OF THE MACHINE OPERATIVES

The stamp-perforating room is large and airy (looking), divided into two parts; on one side are ranged some twenty to thirty perforating machines, on the other, tables to accommodate the counters, who pack the stamps in readiness for the postoffice. The work in this division is interesting inasmuch as all kinds of stamps are handled by the operatives and counters, and they become familiar with the one-cent and the dollar stamp, the sixteen-cent aeroplane and the five-dollar War Savings Stamp, the thrift stamp and the various tax stamps, and the innumerable other grades that come in between.

A laborer (who, by the way, earns a larger salary than the skilled operative or counter, on the ground that he

Digitized by Google

is a male and she is a female, which is the "old order" way in which things explain themselves in the Bureau of Engraving and Printing), brings the work to the machine—500 sheets at a time. Each sheet contains 400 stamps, and there is a board separating each 100 sheets. These stamps have come direct from the gumming room, are stiff, inclined to roll and difficult to handle; if at once put through the perforating machine the sheet would wind round its wheels. To prevent this the work must be what is termed "broken." It is done after this manner: the operative takes hold of 100 sheets between the fingers and thumb of the left hand, at the top righthand and lefthand corners alternately, draws the work toward the opposite corner, and where the side

Courtesy of Director Wilmeth of Bureau of E. and P.

THE FINISHED WORK READY FOR DISPATCH TO THE POSTOFFICE

and top meet she "breaks" the paper with the side or the palm of her right hand, gradually moving the paper back to its old position. This "breaking" has to be done to all sides of the paper to insure the best results. It is warm exercise, excellent for the muscles of the right arm and very effective in producing large bones in the wrist. A supply of mallets for this purpose was distributed several years ago to the operatives in this division, but the supply has never been renewed. Perhaps if those in authority helped to "break" the greater part of 7,500 sheets of paper in a day they would better understand the worker's needs.

HOW THE COUNTERS CONTRIVE TO STEER CLEAR OF IDLENESS

Two women work at a machine—they are both operatives; one operates the machine, the other attends to the box into which the work falls as the sheets of stamps are cut in two, it being her duty to examine the front of the stamps and see that the perforations are not *in* the stamps but *between* them.

When the stamps are finished on the machines they are taken by the laborer to the other side of the room, to the counters. Accuracy, quickness of eye and hand, and the highest order of skill are the characteristics of the expert counter. The day's work for a counter is 10,500 sheets of 100 stamps, as received at the postoffice; this work keeps her busily engaged until 3:45, with a thirty minutes' respite for lunch. There are two ten-minute rest periods during the day, but the average counter cannot avail herself of these luxuries, else she is behind in the work which she must do, and do herself. The counter has to count and examine the stamps in lots of 100 sheets, which must be placed between two boards banded and sealed neatly, ready for dispatch to the postoffice.

BACK-STRAIN, EYE-STRAIN AND DUST FAMILIAR COMPANIONS

The operative and the counter work at all times under a severe strain. The former sits on a backless stool; she has a thin guide line to run her work through on—sometimes this line is heavy and clear, sometimes it is hardly visible. The noise of the machinery does not tend toward any relief. For the counter there is the continual count from one to fifty (the 100 pack is counted in two parts), each separate sheet has to be handled and examined, the stamps come out in different colors, causing the eyes to smart at times, and for everyone there is the dust from the mucilage and perforations, piled at times half an inch thick, so much so that the advisability of continuing the gas-mask factories suggests itself.

LIVING WAGES NOT IN SIGHT AFTER MANY YEARS

For this work some of our legislators "drest in a little brief authority" insist that these women are fully compensated in receiving the fabulous base pay of $2.37 per diem. Is it any wonder that the nerve strain lasts away and beyond the eight-hour working day? Self-supporting women and women with several dependents try to eke out an existence on this miserable wage. After years of service, acquiring a skill that is inimitable, together with patriotic service to the Government and the country, they have to ask and ask year after year for a *living wage*, and it has not yet been given them! Is it a strange thing that as the writer sits at the perforating machine and reflects on life, she sighs and stoically murmurs, "Life is a tough proposition and the first hundred years are the hardest!"

Uses of the Union Label to the Trade Union

It disarms opposition and conquers prejudice.

It commands the respect and protection of the courts and state.

It is invulnerable to the injunction, the lockouts, and the blacklist.

It supersedes the boycott by concentrating the purchasing power upon union products.

It facilitates organization by increasing the demand for the products of organized workers.

It constitutes recognition of the union by making certain the recognition of union products.

It protects the trade union against attack by constituting the purchaser and real employer.

It makes the strike unnecessary by making compliance with union conditions an advantage in business.

It is the most economical agency of trade union work, its cost being little compared with its results.

It is a constant reminder of the common interest and common duty of all trade unionists in and toward each other, and a certain guide in the discharge of that duty.

It is a weapon that profits the employer equally with the employee, but only so long as both aim at the same object. It can never be turned against the employee, because it is the latter's exclusive property, to be given or withdrawn at pleasure.

With the Locals Far and Near

The varied activities of a number of our Locals are here reported. These items suggest that our membership is not only growing apace in numbers and breadth of interests, but is rapidly acquiring an intensified up-and-doing spirit that makes for progress even more than do numbers.

A GOLDEN MESSAGE, ALBEIT TOO BRIEF, FROM CHICAGO

From our worthy brother, Fifth Vice-President Chas. F. Nagl of the National Federation, than whom no one does day in and day out better and more effectual work for the cause, proceeds this motto:

"For when the one Great Scorer comes
To write against your name,
He writes not that you won or lost,
But how you played the game
With your fellow employees."

BROTHER GRIFFITH OF EL PASO TO BE CONGRATULATED

Political honors have recently come to the Fourth Vice-President of our national organization, Brother W. T. Griffith of the El Paso (Texas) Local, in the form of an election for two years to the responsible position of member of the commission which controls the destinies of that town in lieu of the old-time mayor and council form of government. Mr. Griffith, who is the recipient of congratulations on all sides, polled the largest vote cast for membership on the commission.

A CORDIAL WELCOME TO THESE FIVE NEW LOCALS

During the last few weeks the work of organizing federal employees in several branches of the service has progressed in a very satisfactory manner. National Organizer Peabody (whose work is summarized on page 203) succeeded in bringing into the fold a number of employees of the great government projectile plant at Charleston, W. Va., who are under the jurisdiction of the Navy Department, as Local No. 120. In cooperation with National Third Vice-President Etheridge he also formed a union (No. 116) among the employees of the U. S. Indian School at Wyandotte, Okla. Good work on the part of Brother H. H. Ford of Wilmington, N. C., with live assistance from Brothers C. W. Robeson and J. G. Norris, President and Secretary, respectively, of the new organization, added to our list a union at Savannah, Ga. This local (No. 117) counts among its members, employees in the U. S. Engineers' Service, War Department; Customs Service, Treasury Department; and the Weather Bureau, Department of Agriculture. Brother M. J. Hines, the hustling secretary of the Leavenworth (Kans.) Local, "turned the trick" in the case of the civilian workers of the Quartermaster's Corps, War Department, at Fort Riley, in the same State, who constitute Local No. 118. Down in the orange country, at Riverside, Cal., Local No. 119 seems to have sprung up of itself; that is, without the energizing spirit having come from abroad. Here the membership is among the employees of the U. S. Indian School known as Sherman Institute.

N. F. F. E. MEMBERS AT OFFICIAL CONFERENCE IN WASHINGTON

A largely attended conference of employees of the U. S. Employment Service held shortly after the adjournment of Congress was the occasion of bringing to Washington a number of members of locals, who are (or were) connected with that service. Those on duty at national headquarters had the pleasure of meeting some of these members, among them Brother Earl R. Hoage, President of the Denver Local; Brother Roy C. Fleming, representing the brethren at Seattle, and Mrs. Anna Brand of El Paso. It is hoped that a kindly fate will steer this trio again into our midst before long.

Other N. F. F. E. members attending the above-named conference, with the names of their respective locals, were:

MINNEAPOLIS—Axel Peterson, Mrs. Katherine King; DENVER—Miss Theodosia Raines, H. A. Schofield; KANSAS CITY, Mo.—John E. Lundburg, Mrs. W. E. Cramer, Harry C. Allen, C. M. Tipton, A. W. Clalker; PORTLAND, ORE.—Mrs. Vivian Scott, Edw. R. Wolf; DES MOINES—Mrs. Pauline Newfeld.

INDIANAPOLIS LOCAL REPORTS MEMBERSHIP RAPIDLY INCREASING

The Custodian force at Indianapolis is being enrolled in the local at that place in gratifying numbers, reports Secretary M. P. Grady of F. E. U. No. 78. Brother Grady speaks of attending a "meeting of the Postal Clerks, at which Mr. Hiatt spoke, and was very much pleased at his favorable reference to the progress of our national organization. He spoke in glowing terms of our executive officers, and the wonderful progress of the organization at large. At our last meeting we had the pleasure of being addressed by State President Hamilton of the Post Office Clerks, Local No. 130, Indianapolis. His talk was listened to with close attention, and at its conclusion a rising vote of thanks was extended him for the manner in which he handled his subject, 'Why the necessity of federal employees organizing?'"

[Brother Grady refers to our good friend, President Gilbert E. Hiatt, of the National Federation of Postal Employees.]

TWO LOCALS PROVIDE FUNDS TO PAY TELEGRAPH BILLS

At a recent meeting of the San Diego (Cal.) Local it was voted to assess each member a day's pay, the proceeds to be used as a fund to defray the cost of telegrams sent in the common interest of the federal employees' cause. In this way the sum of $48.44 was collected, out of which telegraph bills amounting to $45.75 were paid.

"With reference to telegrams sent Senators and Congressmen," writes Brother George P. Gurnoe, Secretary-Treasurer of the Hayward (Wis.) Local, "we feel that we will stand the expense rather than the home office pay for the same."

It is the spirit such as here shown that is bound to make the cause forge ahead in spite of any and all obstacles.

ADDITIONAL DELEGATES TO LEAGUE OF NATIONS CONGRESSES

Since the list of delegates on the part of a number of our locals was published (in the March issue) names of additional delegates have been received at national headquarters, as follows:

Representing the St. Louis Local at the congress held in that city February 25 and 26: Brothers John J. Heil, Frank J. Ficker, Charles D. Etue, M. R. Bevington, and W. F. Watson.

Representing the Atlanta Local at the Southern Congress held in that city February 28 and March 1: Brothers Andrew J. Duncan, John W. Boyle, Earl G. Hopkins, J. W. Higgins, and Miss Della Richardson.

The Woman's Labor Movement

American working women, with the warm approval of President Wilson, are sending representatives to the Labor Peace Conference at Paris. This action is a logical outgrowth of the woman's labor movement in this country, which gave rise to the formation fifteen years ago of the National Women's Trade Union League, the remarkable development and achievements of which are traced below. Women's biggest battle—for recognition of economic rights—is yet to be fought.

By ETHEL M. SMITH

Secretary of Legislative Committee of National Women's Trade Union League and Member of the Washington (D. C.) Federal Employees Union

AMERICAN working women were given no representation in the labor delegation sent to the Peace Conference by the American Federation of Labor. Nowhere in the peace councils or in the international labor commissions did the men who organized these bodies give women a voice in determining the international labor policies and agreements which will henceforth control the lives of women and the lives of their husbands and children.

An anomalous situation this, at the close of a world war for democracy—a war for political and industrial democracy both, labor men insist.

ORGANIZED WORKING WOMEN'S DELEGATION TO CONFERENCE

But if the organized working men see no wrong in leaving women out of their councils the organized working women do. Through their representatives on the executive board of the National Women's Trade Union League, which includes some 300,000 organized working women, the

ROSE SCHNEIDERMAN

MRS. RAYMOND ROBINS
President of the National Women's Trade Union League

women decided to send their own delegation to Paris, at least to knock at the doors of the all-male Peace Conference. That delegation sailed early in March. The announcement of the project brought from President Wilson such warm approval and encouragement that it now seems certain the women workers' representatives will have an actual part in the international labor councils.

The delegation consists of Mary Anderson, of Chicago and Washington, and Rose Schneiderman, of New York. They went in response to the following letter from the President, written in reply to the League's request for advice as to the timeliness and desirability of a presentation of the working women's case at Paris:

THE WHITE HOUSE
WASHINGTON
1 *March*, 1919.

MY DEAR MISS ANDERSON:

I have your letter of yesterday and have read it not only with great interest but very thoughtfully, with regard to the question it asks.

I think it is very desirable that the women workers of the country should have at least one or two representatives in Paris, qualified to speak before the commissions that are considering labor matters. I am sorry to say that I am not informed as to whether any women's organizations are already represented over there or not. You will yourself be better informed about this than I am.

May I not thank you for your thoughtful kindness in consulting me?

Cordially and sincerely yours,
WOODROW WILSON.

Miss Mary Anderson,
401 Continental Trust Building,
Washington, D. C.

Boot and Shoe Workers' Union, is assistant director of the Woman-in-Industry Service of the United States Department of Labor. Miss Schneiderman, of the Cloth Cap and Hat Makers' Union, is president of the Women's Trade Union League of New York. Both women have for years been among the leaders of the woman's labor movement in America. They will present the reconstruction program of the National Women's Trade Union League and will urge the representation of women upon every international labor commission and any international labor bureau that may be formed.

ORGANIZATION OF THE NATIONAL WOMEN'S TRADE UNION LEAGUE

A *woman's* labor movement? YES. A woman's movement within the general labor movement was and is as necessary and as inevitable as in the general movement for political democracy. Never, until both industrial and political democracy are attained, will it be possible for women as women to cease fighting for their rights. Working men, including many labor leaders, are just like other men. "Chivalry" with them too often takes the place of justice. They still say "Woman's place is in the home," which turns out to mean, in millions of instances, in the low-paid or incidental industries in which men do not care to compete. Working men, like other men, shut their eyes alike to facts and women's rights.

So the women have rebelled— fifteen years ago in fact the National Women's Trade Union League came into existence fundamentally to express that rebellion and give expression to the working women's desire to make a constructive contribution to the movement for labor's rights. Its organizers saw the need of developing women leaders among the working people in order that women should be aroused to the necessity of effecting trade-union organization themselves, in order to protect themselves. They realized that working men, by their disposition to leave, and at times actually to bar, women out of their unions were working against women and men alike. For where working women are unorganized they are the same kind of a menace to industrial standards as are the immigrants from Europe, Asia, and Mexico.

It is worth while, then, in these days of reconstruction, to get the significance of such an organization as this. There is no other like it in the United States—but it has a predecessor and counterpart in the British Women's Trade Union League and there are signs of a similar movement in other countries since the war.

PLATFORM OF THE LEAGUE AND PROGRAM FOR PEACE CONFERENCE

The National Women's Trade Union League was organized in 1903 upon a platform of five solid planks as follows:

1. Organization of all workers into trade unions.
2. A fair living wage.
3. A maximum eight-hour day.
4. Equal pay for equal work.
5. Full citizenship for women.

In amplification of these principles, the League at its biennial convention in 1917 adopted the following program for submission to the Peace Conference:

The first essential of a democracy is a standard of life for the citizens of the commonwealth. We declare for a standard of life which shall insure to all citizens, both men and women, free opportunity to work with hand and brain, and secure to them a full measure of health, education, recreation and fruitful leisure; such a standard as shall guarantee to every child the certainty of a high school education and the possibility of a university education in preparation for citizenship.

Copyright Clinedinst
MELINDA SCOTT

As a step toward this end, we ask that the following labor standards be included in the treaty of peace, to take effect within a given time:

Compulsory education up to sixteen years of age, and part-time education up to eighteen years.

Abolition of child labor.

An eight-hour day and forty-four-hour week.

No night work for women.

One day's rest in seven.

Equal pay for equal work.

Equal opportunity for men and women in trade and technical training.

Social insurance against sickness, accident, industrial disease, and unemployment.

Provision for old age and invalidity pensions and maternity benefits.

We urge a complete restoration, at the earliest possible moment, of all fundamental political rights—free speech, free press, and free assemblage, and the removal of all war-time restraints upon the interchange of ideas and the movements of peoples among communities and nations. We ask an immediate amnesty for all political prisoners.

We ask that the principle of self-government in the workshop be established in all industry, both public and private, and that the right of the workers to organize into trade unions be recognized and affirmed.

We urge the full enfranchisement of women, and that they be accorded political, legal and industrial equality; and further, we urge the adoption of the most modern methods of representation for the establishment and maintenance of political democracy.

We ask for the establishment of universal social standards, a single standard of morality, the protection of motherhood, and the guarantee to every child of the highest possible development, physical, mental and moral.

Believing that a government that demands universal service from its citizens in time of war should provide universal employment at a living wage for its citizens in time of peace, we ask for the establishment in every country of a Commission on Demobilization, on which labor shall be fully represented by men and women, to formulate plans which shall ensure employment for all workers at standard rates of wages; that the army be not demobilized in greater ratio than industry can absorb; and that munition workers and other war-contract workers be considered equally with the soldiers and sailors in the plans for demobilization.

We ask, further, that to crippled soldiers and sailors be afforded a just opportunity, through education, allotment of public land (intelligently directed, as under the law of the state of California, or otherwise), and other means, to reestablish their individual lives and homes, and that equivalent provision be made for all men and women incapacitated through service in war industries.

PLACE OF THE LEAGUE IN THE AMERICAN LABOR MOVEMENT

The league is endorsed by the American Federation of Labor and the Trades and Labor Congress of Canada, and its constitution is in harmony with these big national bodies. It is primarily a federation of the trade unions of America which have women in their membership. It organizes women workers for the local and international trade-union bodies that are affiliated with the American Federation of Labor. Its constitution and purpose differ from that of the American Federation of Labor, however, in that the league appeals to the general public as well as to the wage-worker, and admits to membership and affiliation any person or organization that agrees to the league platform. It draws the line only against a wage-worker who does not join the union to which she is eligible. Thus every wage-earning woman who is a member of any local of the National Women's Trade League is a trade unionist. And nearly every national or international labor organization with women members which is affiliated with the Amer-

Digitized by Google

ican Federation of Labor is affiliated with the National Women's Trade Union League.

EDUCATIONAL ACTIVITIES OF LEAGUE AND DEVELOPMENT OF LEADERS

As to its policies and achievements one of the outstanding works of the league is its educational department. It maintains in Chicago a school for organizers, which offers scholarships to trade-union girls who qualify as candidates for future usefulness and leadership. Almost every well-known

Copyright Clinedinst
MRS. SARAH GREEN

woman in the American labor movement today has reached her position through the door of opportunity opened by the league.

In every city where the league has local branches the local women leaders are found in its personnel, while the national executive board of the organization includes such outstanding examples of able leadership as Melinda Scott, of the hat trimmers; Agnes Nestor, of the glove workers; Elizabeth Maloney, of the waitresses; Rose Schneiderman, of the cap makers; Nellie Quick, of the bindery workers; Louise Mittelstadt Brown, of the tin foilers, and Julia O'Connor, of the telephone operators. During the war two of these women, Agnes Nestor and Melinda Scott, together with Mary Anderson, Elizabeth Christman, of the glove workers, and Florence Thorne, of the news writers, members of local league boards, were selected for executive positions in the war labor administration of the United States Government.

Presiding over the National Women's Trade Union League, in its highest office, is Mrs. Raymond Robins, the beloved leader whose vision and enthusiastic devotion to her ideal have made the organization a national factor in the development and well-being of the 12,000,000 women counted in the industries of the United States today.

THE WORK OF THE LEAGUE AND THE METHODS USED

The league works for its objects through organization primarily, but through legislative and political methods as well. The constant work of each of the fifteen local branches is organization, which is pushed always in cooperation with local trade unions, because the league's first purpose is to induce working women to join or to form trade unions under charter of the American Federation of Labor. The Chicago league, of which Agnes Nestor is president, has always worked in closest cooperation with the Chicago Federation of Labor, known as one of the liveliest and most powerful central labor bodies in the United States. Last winter the Chicago league turned all its energies into the joint organization campaign conducted by all the trade unions represented in the stockyards, under title of the Stockyards Labor Council, which succeeded in unionizing 60,000 men and women employed by the packing houses. The league is now carrying a large part of the similar campaign for organization of the department stores and electrical industries of Chicago.

In Kansas City also the Women's Trade Union League is one of the strongest organizations in the Central Labor Union, and its president, Mrs. Sarah Green, of the Waitresses' Union, is one of the most influential labor leaders of Kansas City. Federal employees have reason to know this because of the large part she had in the defeat in the primaries in August, 1918, of Representative Borland, of Kansas City, because of his effort to lengthen the government workday. It was through Mrs. Green's leadership also that the street-car men of Kansas City accepted the women conductors as fullfledged members of their union—with the result that when the street-car workers went on strike to compel the company to comply with the ruling of the National War Labor Board, the women conductors went out with the men and are standing solidly with them now. This situation presents a striking contrast to the condition in Cleveland, Ohio, where the street-car men have fought the women conductors to the extent of refusing them membership in their union and going on strike to force their dismissal from their jobs.

In New York and Philadelphia the Women's Trade Union Leagues are engaged in a legislative campaign which is backed by the State and local labor bodies and the women's organizations of both states, to secure such needed labor legislation as a minimum wage and eight-hour law for women, and social insurance.

Among the leaders for New York are Rose Schneiderman and Maude Swartz, the latter a printer. Florence Sanville, the Philadelphia league's secretary, is also secretary of the joint legislative committee of Pennsylvania, while the organization work of the league is directed by Frieda Miller and

Copyright Clinedinst
AGNES NESTOR

Pauline Newman, of the shirt-waist makers.

Both the Boston and New York leagues have furnished important examples within the past few months of successful political activity. The league takes no stand for or against any political party, but it does fight political candidates who are opposed to labor principles. Thus the secretary of the Boston league, Mabel Gillespie, headed the "Women's Campaign Committee to Defeat Senator Weeks," and Julia O'Connor, another Boston league officer, was a member of the committee and of the squad of speakers who stumped the State of Massachusetts to tell the voters about Senator Weeks' long and unmitigated anti-labor, anti-suffrage record. David I. Walsh, who was elected in Senator Weeks' place, is said to attribute his election chiefly to this committee of women.

In New York the Women's Trade Union League engaged in a similar campaign against State Senator Ottinger, because of his suffrage and labor record, and here, too, the women were successful. In both New York and Chicago the Women's Trade Union League was a recognized factor in the

Digitized by Google

organization of the new Labor Party of those cities.

The league affiliations in Washington include nearly 12,000 organized women who are employed in the government service and in the public schools, in addition to the organized women in private employ. The activities here are largely legislative and the league has acted as the central agency for organization of joint committees of women workers to push the campaigns to secure better pay for women workers and equal pay for equal work by women and men. The chairman of the Washington branch of the league is Mrs. Gifford Pinchot, the vice-chairman, Mary Anderson. Mary O'Sullivan and Gertrude McNally, of the Women's Union of the Bureau of Engraving and Printing, and Mary Burr, of Federal Employees Local No. 2, are among the most active league workers here.

National labor legislation is, of course, a part of the program of the National Women's Trade Union League, which has a national legislative committee headed by Agnes Nestor as chairman and Mary Dreier as vice-chairman. Through this committee the league some two years ago initiated a bill for a national eight-hour day for women workers, and a bill to create a woman's bureau in the United States Department of Labor. It also backed the Minimum-Wage Bill for the District of Columbia, which has since become a law, and it has joined forces with the legislative committee of the National Federation of Federal Employees to secure passage of the Nolan Minimum-Wage Bill for Government employees, the general salary increase which has just been secured for the next fiscal year, and the several other bills before Congress affecting wages and conditions in the Federal Civil Service. The Women's Eight-Hour Bill in its original form was abandoned after the Supreme Court declared the first national child-labor law invalid, because the eight-hour law was framed upon the same principle and would be subject to the same ruling. The woman's bureau in the Department of Labor, though apparently it would have been created by Congress had not the war intervened, was realized during the war by the creation of the Woman-in-Industry Service by the Secretary of Labor as a war necessity. After a bitter fight in Congress at the session just ended, this bureau was retained in the Sundry Civil Bill as passed by the House just before adjournment this session, but as the bill failed of action in the Senate, the bureau's continued existence has yet to be assured by law. This will be the league's immediate legislative activity when Congress reconvenes.

WOMAN'S RIGHT TO WORK IS NOW THE BIG ISSUE

Undoubtedly the biggest question now occupying the attention of the league is the fundamental issue of woman's right to work in fair competition with men. Always there has been a latent opposition to women as wage-earners. Men have always expected women to keep their homes and relieve them of laborious or disagreeable tasks for which no pay was given. But where women have appeared in industry or commerce men have paid their wages grudgingly and always with the distinction that almost any price was "enough for a woman."

During the war, when women's work was called for by private employers and the Government alike, and when men's wages became higher, women's wages, too, went up. Not only this, but the labor administration, through the National War Labor Board, the War Labor Policies Board, and the Woman-in-Industry Service, required equal pay for women and men for equal work.

With the new standards thus set during the war, the woman problem in industry has taken on a new and acute stage since the war. The latent opposition of men to women as wage-earners has become an open challenge. In Cleveland, Ohio, as already mentioned, after refusing to allow women conductors to become members of their union and thereby denying them protection, the street-car men went out on strike to force the company to dismiss the women. The women were their competitors, and notwithstanding they were competing on equal terms—same wages, same hours, same seniority rights—the men insisted on their divine right as men to the street-car jobs.

In other cases, men's organizations have demanded that women "step out of industry to make room for men." And some employers who were none too friendly to women workers have taken the opportunity, in professed zeal for the returning soldiers, to dismiss or displace these women workers wholesale.

The United States Government is perhaps the worst offender in this direction. The railroad administration reports thousands of dismissals of women employees—and in some instances, at least, they have been dismissed without notice, and boys of 17 and less have been put in their places.

By act of Congress, furthermore, just passed, women will be practically excluded from appointment in the Federal Civil Service for forty years to come. This is not, of course, the wording of the act. But an amendment to the Census Bill just passed provides that hereafter all honorably discharged soldiers, sailors and marines shall be given preference in civil service appointments. Thus the 4,000,000 men in the military forces of the Government are potentially eligible in preference to any civilian, including *all* women.

Facing this tide of sentiment—pure sentiment as opposed to balanced judgment—women's organizations, and particularly women's labor organizations, are forced into the biggest women's struggle of the ages. Men have all but conceded the political rights of women. Some of us thought the recognition of political rights would carry with it the recognition of economic rights. We have found that it does not. Women's biggest battle is yet to be fought.

For that battle the National Women's Trade Union League has already taken its stand on the firing line, and come what may, and be the struggle long or short, the right to work for wages, in fair competition with men, will not be yielded by the organized working women and their allies in the woman's labor movement.

Hints for Government Employees

How did we do it? Simply by going without everything we needed. When I was first married my salary was thirty dollars a month.

My mother-in-law, who lived with us, decided to save enough out of my salary to build us a home.

When the cellar was finished, I became ill and lost my position, and had to mortgage the cellar to make my first payment.

Although we went without food for thirty days the first year, we never missed a monthly payment.

The taxes, interest on mortgage and monthly payment on house were now three times the amount of my earnings.

However, by dispensing with the service of a doctor, we lost our father and mother-in-law, which so reduced our expenses that we were able to pay for the parlor floor and windows.

In ten years seven of our nine children died, possibly owing to our diet of excelsior and prunes.

I only mention these little things to show how we were helped in saving for a home.

I wore the same overcoat for fifteen years, and was then able to build the front porch, which you see at the right of the front door.

Now, at the age of eighty-seven, my wife and I feel sure we can own our comfortable little home in about ten years and live a few weeks to enjoy it.—*Life.*

A Slip of the Pen

"Bill!" the poet gasped, staggering into his friend's room.

"Why, what's wrong?" the friend inquired, grasping hold of the tottering man.

"Wrong!" the poet muttered. "Ye gods! I wrote a poem about my little boy. I began the first verse with these lines:

"'My son! My pigmy counterpart.'"

"Yes? Yes?"

The poet drew a long breath as he took a newspaper from his pocket.

"Read!" he cried, suddenly. "See what the criminal compositor did to my opening line."

And the friend struggled unsuccessfully to stifle his mirth as he read aloud:

"'My son! My pig, my counterpart!'"—*The Veteran.*

The Lesser Evil

A gentleman from the North was enjoying the excitement of a bear hunt down in Mississippi. The bear was surrounded in a small cane thicket. The dogs could not get the bear out, and the planter, who was at the head of the hunt, called to one of the negroes:

"Sam, go in there and get that bear out."

The negro hesitated for a moment and then plunged into the cane. A few moments later the negro, the bear and the dogs were rolling upon the ground outside. After the hunt was over the visitor said to the negro:

"Were you afraid to go into that thicket with that bear?"

"Cap'n," replied the negro, "it was jest dis way: I neber had met dat b'ar, but I was pussonally 'quainted wid de old boss, so I jest naturally took dat b'ar."—*Montreal Herald.*

A Sad Mistake

Advertiser (furiously): I'll have damages from you, sir! You have ruined my business.

Newspaper Man: Calm yourself, pray. What's the matter?

Advertiser: Don't you see that you have referred here to my "Quick Cure for Consumption" as a "Quack Cure for Consumption"? And this has gone before 200,000 readers!

More Interesting Matter

Subscriber (to editor): I don't see anything in your paper today about the heroic act of Smith, who saved the life of Brown at the risk of his own.

Editor: No; it was crowded out to make room for an account of the cowardly manner in which Jones took the life of Robinson.

The Faithful Nurse

The husband arrived home much later than usual "from the office." He took off his boots and stole into the bedroom. His wife began to stir. Quickly the panic-stricken man went to the cradle of his first-born and began to rock it vigorously.

"What are you doing there, Robert?" queried his wife.

"I've been sitting here for nearly two hours trying to get this baby to sleep," he growled.

"Why, Robert, I've got him here in bed with me," replied his wife.

Then there were words.—*Tit-Bits.*

Unsolved

Jack London, the novelist, had a great affection for children.

In San Francisco there were twin sisters, little girls of six years, of whom Mr. London was very fond.

On the way to his boat one morning, Mr. London met one of the twins.

He stopped and shook her hand.

"Good morning, my dear," he said. "And which of the twins are you?"

The little girl answered gravely:

"I'm the one what's out walkin'."

THE OPEN FORUM

THE FEDERAL EMPLOYEE invites letters from its readers on subjects which properly come within the scope and purpose of the magazine. Particularly desired are suggestions which place the emphasis on the constructive side of things, looking toward the improvement of the United States Civil Service and of the condition of its employees.

Communications should be written concisely and should not exceed 300 words in length, otherwise the editorial blue pencil may have to be used. Please write on one side of the paper only. Typewritten manuscript, OPEN-SPACED, will be greatly appreciated by the editors. Each correspondent should retain a copy of his contribution. Every communication must be accompanied by the writer's name and address, which will be withheld from publication on request.

THE FEDERAL EMPLOYEE assumes no responsibility for expressions of either fact or opinion by correspondents.

PRIZE ANNOUNCEMENT

Until otherwise announced, THE FEDERAL EMPLOYEE will pay the sum of five dollars for the letter published in the OPEN FORUM which shall be adjudged the best in the number of the magazine in which it appears. Contributors will please bear in mind that communications intended for publication in the OPEN FORUM of a certain month should be in the hands of the editors by the tenth of the month next preceding.

Political Rights of Civil Service Employees in Washington

Autocratic form of Government at Nation's Capital. Principles of the Declaration of Independence violated. Federal employees urged to support movement for District suffrage.

To the Editors:

"Taxation without representation is tyranny." So said a brave people in the day of the Boston Tea Party. And it is not difficult to imagine what the answer would be to the cry of the people of the District of Columbia for suffrage and a voice in the affairs of government, were the true spirit of that day called into being.

I have no mind to criticize any of the affairs of local government as administered in the District of Columbia, for indeed the Congress has been very considerate of our needs. But were the laws affecting interests in the District, in both their application and their substance, as perfect and idealistic as it is possible for man to make them, the principle underlying the arrangement is absurdly undemocratic and grossly incompatible with the idea of popular government.

A person who attains his majority in the District of Columbia and cannot, therefore, claim citizenship in one of the states of the Union, has no vote and no political responsibility whatever; and the civil service employees, gleaned from every part of the United States, who make up a large part of the population of the District, are likewise without political status, unless they maintain their citizenship in their respective states and return there to cast their votes at election time. Why should this expense and loss of time be required?

We hear much in these times, and rightly so, of democracy, and we fight that it may be perpetuated abroad, but the word itself is all that is permitted to live among the people of the shrine of democracy itself, the District of Columbia, the only city in the country where the people are thus disfranchised.

Think of a man living in the United States, devoting the whole of a useful life to the service of this Government, paying taxes and responding, as far as he is able, to every call and need of his country in both war and peace times, and yet denied a vote. The Declaration of Independence recognizes certain inalienable rights and says "that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed." How are these rights secured to the people of Washington, where live approximately 450,000 men and women giving their best service to a government born of this Declaration? Why should not the people of Washington be fully enfranchised? Because a large percentage of them work for the Government? So did the slave for his master, but he was freed and we are all agreed that slavery was wrong.

The number of civil service employees, particularly in Washington, has increased enormously since the United States entered the European war and will never fall back to the prewar figures. When we consider the growing agitation for government control or ownership of public utilities and other industries, we must concede that the tendency, for the present at least, is steadily toward an increase of the permanent workers of the Government, all of whom, under the present laws, will become political nonentities and bondsmen the day they take up their duties for the Government. Ought not this great number of people who are daily in touch with the details of its work and who are responsible for its proper execution under authority of the Congress, to have the same privileges as other free citizens under the same Government? It is essentially autocratic in any government or organization not to permit its subjects freedom to express their opinions on matters affecting their interests, or to have a voice in their own affairs.

There is a movement on foot now to win suffrage for the District of Columbia. Let the employees join the movement and gain their just rights under the Government they serve. Justice will win as it always has done.

E. R. MOOSE,
Indian Office, Washington, D. C.

Cooperative Stores and Federal Employees

Federal employees in Sault Ste. Marie, Mich., find it pays to patronize the cooperative store. Brother Ross urges members of other locals to do likewise.

To the Editors:

This Union, in conjunction with the other unions of the city, recently held a meeting with the directors of the Soo Cooperative Mercantile Association at which the union men agreed to ally themselves with this association and to urge their members to do the same.

The Soo Cooperative Store has been in existence for about six years; for the first five years of its existence it had a rather checkered career, having more or less bad luck with managers, with expensive locations, and also owing to the fact that directors were more or less new to the business. The principal goods dealt in are groceries of all kinds, meats, and baked goods. Within the last year this cooperative store has been placed on a firm basis, and we decided, instead of starting a separate store for ourselves, to amalgamate with the one already in existence, and by infusing new blood in capital and membership, to enlarge greatly the scope of its activities and make it more useful to us all.

Last year our cooperative store did a business of sixty-five thousand dollars. This year we hope to make it one hundred and fifty thousand dollars. In addition to paying 6 per cent on the capital stock each year since the

Digitized by Google

company was organized, it paid a dividend of 5 per cent this last year on all purchases of goods, in addition to a cash discount of 5 per cent for all goods carried away from the store and paid for in cash; thus practically constituting a 10 per cent discount on prevailing prices from other stores in this city. We have just increased the capital from ten thousand dollars to twenty thousand dollars, and as soon as business conditions warrant it we will proceed to greatly enlarge the business. We have now three cooperative stores in this city.

Cooperation is a movement which will greatly grow in the future and should be supported by all unionists, because through trading at cooperative stores you obtain all the profits which otherwise go to the merchant. I would urge that all Federal Employees Unions in cities of any size appoint a committee to consider the matter of starting a cooperative store and make plans to do so. There are many avenues of information, and much literature on the subject, and it is just another way of enlisting the support of your members and bringing a large benefit to them. Of course a great many outsiders also trade at the local cooperative stores, as they find the goods and prices attractive, although they do not share in the dividends unless they are stockholders.

THOMAS M. ROSS,
Secretary F. E. U. No. 32,
Sault Ste. Marie, Mich.

Mobility of Clerk Power

"Why not shift a few clerks temporarily," to meet changing office requirements? asks this correspondent—a very pertinent query to one who knows the government service and its lack of elasticity.

To the Editors:

It is encouraging that our magazine asks for articles of a constructive nature, reminding us that one of the objects of our organization is "to aid in the perfection of systems that will make for greater efficiency in the various services of the United States."

It is well known that our work tends strongly to make the clerk a mere cog in the great governmental machine, destroying initiative and lessening interest. At times we are rushed to the limit of endurance, and then there are slack periods which are almost as trying. I have worked far into the night for weeks at a time, while petty chief and assistant petty chief prodded me on to clear up an ever-increasing surplus of "cases." On the other hand I have fidgeted at my desk hour after hour wishing for enough work to fill out the day, while across the hall clerks were covered up with work in which I was experienced and skilled. The remedy is simple, so simple that it has been overlooked by efficiency experts with a love for complexity.

The relations existing between bureaus of a department resemble those between nations, and the relations between departments remind one of nations at war. Why not shift a few clerks temporarily to take care of situations of this kind instead of overworking the regular force or employing temporary clerks at an additional expense? It would be beneficial to the clerks thus detailed by bringing them into contact with new personalities, acquainting them with new phases of the service, and would greatly relieve the dull, monotonous routine, which sooner or later takes the life out of the day's work. It would also result in an occasional "discovery" of some one especially fitted to perform a higher grade of work.

But this change must come through the enforcement of a general policy, for at present supervisory officials are afraid to let it be known that work is slack lest their force be reduced, and with it their importance. Also, experience has taught them how difficult it is to secure an allowance for an increase in clerical force.

Let us insist on a policy that, while saving the Government additional expense, will lessen the monotony of the daily task, give a fresh incentive to better effort, increase the efficiency of the service, and afford greater opportunity for merited advancement.

Suggestions for Organization and Conduct of Locals

The contributions which appear below are submitted in response to the appeal of THE FEDERAL EMPLOYEE *for suggestions in the line indicated by the caption of this paragraph.*

Increasing Membership and Collecting Dues

This writer advocates the formation of teams with captains for the purpose of bringing in new members and collecting dues.

To the Editors:

In each building occupied by government offices one enthusiastic member of the Federal Employees Union should be chosen to act as captain of a team of workers whose duties will be to secure new members for the Union and to collect dues from both old and new members. This team should be composed of one Union member from each individual office in each building, who should personally invite all non-union employees in his particular office to join the Federal Employees Union. Each member of the teams should be supplied with copies of the Constitution of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, in order that he may intelligently answer any questions which may be asked of him. Each member of the Federal Employees Union should loan his copies of THE FEDERAL EMPLOYEE to non-union employees in his particular office. Should there be any office in which there are no members of the Federal Employees Union, the captain of the team operating in that building should personally invite the clerks employed therein to join, and see to it that they have ample opportunity to read the various issues of THE FEDERAL EMPLOYEE. The captain of each of these teams should submit a report in writing at stated intervals as to the results accomplished by his team. The Membership Committee representatives who receive the applications for membership should use the 25 cents per member to which they are entitled for the purchase of Union buttons and present one free of charge to each new member. Each member of the teams referred to above should keep a record of the dates on which the dues of each member in his particular office should be paid, and bring the matter to the attention of the persons concerned at the proper time.

CHARLES A. LOCKE,
Office of Inspection, U. S. Department of Agriculture.

Dues and the Collector

"Put your imagination into the game" of collecting dues. Study human nature and develop yourself by closer contact with your fellows.

To the Editors:

Who originated the beautiful art of collecting? If Cadmus invented books, and therefore the collecting of thoughts in a new and better form, let us hail him as truly our father collector, and do homage to the great Phoenician.

Now let us not think that we are anticlimaxing literature if we leap suddenly from its roof in Archaeon, and find ourselves following the road of the collector—the collector of dues—simply dues—for our Federal Employees Union. After all, who may say there is no delight in it? If we only will to have it so, we are playing a game; we are studying humanity; we are serving a real purpose for that which we represent.

My text is—Romance for all affairs of life. Put your imagination into the game. Even if you call it a checkerboard, with each move of a man but the checking off of dues paid on your collecting sheets, you may watch the

Buy Victory Liberty Notes

Statement by the Secretary of the Treasury

The Victory Liberty Loan campaign will open on Monday, April 21, and will close on Saturday, May 10. Under the Act of Congress approved September 24, 1917 and amendments thereto, the Secretary of the Treasury still has the authority to issue bonds similar to those of the Second, Third and Fourth Liberty Loans to the extent of not over $5,022,518,000, but any issue of bonds under authority of this Act is limited as to rate of interest to a maximum of 4¼ per cent per annum and would be subject to supertaxes and profit-taxes except for the right to participate in the exemption of $5,000 principal amount with other outstanding issues of Liberty Bonds and Certificates.

The Congress has now passed the Victory Liberty Loan Act which was approved March 3, 1919, under which the Secretary of the Treasury is authorized to issue notes of the United States to the extent of not over $7,000,000,000 upon such terms and conditions and at such rate or rates of interest as he may prescribe. It is provided in this Act that these notes shall be payable at such time or times not less than one year or more than five years from the date of issue as may be prescribed by the Secretary.

After studying financial conditions in all parts of the country, I have determined that the interests of the United States will best be served at this time by the issuance of short-term notes rather than of longer term bonds which would have to bear the limited rate of interest of 4¼ per cent.

The Victory Liberty Loan will therefore take the form of notes of the United States maturing in not over five years from the date of issue. These notes will be, as were the Liberty Loan Bonds, the direct promise to pay of the United States, will be issued both in registered and coupon form, and the coupon notes will be in final form and will have attached the interest coupons covering the entire life of the notes. I am hopeful that the notes in final engraved form will be ready for delivery by the opening of the campaign on April 21.

I am led to adopt the plan of issuing short-term notes rather than long-term bonds largely because of the fact that I believe that a short-term issue will maintain a price at about par after the campaign is concluded far more readily than would a longer-term issue.

I have not yet reached a conclusion as to the rate of interest and exemptions from taxation which these notes will bear because this decision must be based on existing conditions immediately prior to the opening of the campaign.

I take this opportunity to repeat what I have already stated that it is the intention of the Treasury Department to carry on the same kind of intensive campaign for distribution as heretofore. It would be a most unfortunate occurrence if the people of the United States failed to take these notes, thus placing the burden of subscriptions on the banks. The business of the country looks to the banking system for credit wherewith to carry on its operations, and if this credit is absorbed to a large extent by the purchase of Government securities, there will be many limitations placed upon the supply of credit for business purposes. Our merchants and manufacturers need ample credit for setting the wheels of industry in motion for peace-time production and distribution, and the wage-earner is directly interested in seeing that these wheels are kept moving at a normal rate in order that full employment at good wages may continue, and where readjustment conditions have necessitated a slowing down of industry, it is vitally important that activity be resumed and labor re-employed at the earliest possible moment.

I therefore ask the American people once again to give their support to their Government in order that this great Loan may be made an overwhelming success by the widest possible distribution.

IMPORTANT

Victory Liberty Loan Campaign

Opens Monday, April 21

Closes Saturday, May 10

Victory Liberty Loan Notes will mature in not over five years. Rate of interest on the Victory Liberty Loan Notes, and Exemptions from Taxation will be announced later.

THE YIELD OF THE SESSION

With the close of the final session of the War Congress comes the pertinent question, What has it wrought for the cause of the many thousands of the Government's civilian workers represented by the NATIONAL FEDERATION OF FEDERAL EMPLOYEES? The immediate, concrete answer to this question is not far to seek. Two main objectives have been gained: The creation of a Commission on Reclassification of Salaries and provision for a general salary increase for the next fiscal year of $240.

As our membership is doubtless aware, neither of these legislative acts is a wholly adequate response to the representations made by our National Federation in behalf of the employees. The creation of the present Reclassification Commission, however, marks the most important step yet taken for the upbuilding of the civil service. In both personnel and conception of the task before it the Commission gives every promise of achieving things really worth while. As Secretary of the Commission Mr. Keating will prove a tower of strength.

The salary increase granted was in the nature of a compromise between the amount urged by our National Federation as the smallest allowance commensurate with justice and the pressing necessities of the case (a dollar a day, or $360 a year) and the amount recommended by the House Committee on Appropriations. The treatment accorded the war bureaus, so far as the War Risk Insurance Bureau is concerned, was likewise a compromise, the Federation having used its best efforts to secure for the employees of these bureaus the benefit of the full amount of the increase provided for others.

On reviewing the situation after the smoke of the long-drawn-out battle has cleared away, there is every reason to feel that the cause of the organized federal employees has made very substantial progress, not only in the tangible results just mentioned, but in other respects even more important, although not so clearly within the range of vision for the moment. The persistent and well-directed and coordinated efforts of those charged with the conduct of our affairs, on the part of both the national and the local organizations, have greatly strengthened the power of the organization as a cohesive whole to accomplish bigger things in the not-distant future. "The team-work of every bloomin' soul," of which the poet sings, seems more and more within the range of the attainable. By doing, we have measurably advanced in the knowledge and ability to do. By demonstrating that the civilian employees of the country are equal to the task of bringing about constructive results through the agency of COLLECTIVE SELF-HELP we have attracted to our standard many thousands not hitherto connected with the organization, and the cumulative effects of our activities are constantly materializing in an ever-increasing ratio.

A great conqueror of old said that he had killed many of his enemies by making them his friends. Following his example, it is within the truth to say that our cause is looked on in both houses of Congress with more friendly eyes than ever before. This is evidenced in part by the general tone of the discussions devoted to matters pertaining to the government employees. Many voices which used to be raised in somewhat strenuous opposition whenever the interests of the employees were under consideration are heard no longer, at least not in the same strain. The cause of better salaries received strong support in the House, especially from Representatives Mann, Keating, Wood (of Indiana), Gallivan, and Mason.

On the other side of the Capitol Senator La Follette of Wisconsin made a masterly speech in advocacy of fair treatment for the Government's civilian workers, and his efforts were ably seconded by Senators France of Maryland, Sheppard of Texas, Lenroot of Wisconsin, and Curtis of Kansas. Even a casual reading of the debate

Digitized by Google

in the Senate (liberal excerpts from which will be found in this issue) suffices to convince one that no serious attempt was made to controvert Senator La Follette's facts and arguments. Unfortunately the deadly point of order was invoked by Chairman Underwood of Alabama of the Appropriations Committee to deprive the employees of the $360 increase which, it is believed, would have been approved by the Senate on a vote. The thanks and sincere appreciation of the federal employees throughout the land are due to the staunch friends in both houses of Congress who supported their cause.

As suggested recently in these columns, developments during the session made it very plain that the only hope of securing a general increase in salaries over last year rested in the "campaign" conducted by our organization. The Supplemental Estimates submitted by the Heads of Departments and other governmental establishments, which offered at least some measure of relief, though far short of that which the exigencies of the day demanded, were brushed aside without serious attention. With the elimination of these estimates died the only chance of bringing about betterment in salary conditions during the session apart from the movement conducted by our organization. Fortunately for the employees this movement ecentuated in substantial results.

It is hardly necessary to add that keen regret is felt because of the failure of the Johnson-Nolan Minimum Wage Bill and the McKellar-Keating Retirement Bill to be enacted into law. These shared the fate of several of the great appropriation bills and of hundreds of other measures of the first importance, all of which went down together in the final crash, regardless of the needs of the country or the extent and power of the influences supporting them. In the closing days of the session Congress was small respecter of either men or measures. The work expended on the Minimum Wage and Retirement measures is by no means lost, however; it is merely to be charged against the essential educational account, and will make the path toward enactment much easier in the new Congress, which is to be appealed to in the strongest possible way to put this vital legislation on the statute books.—J. G. G.

NFFE

OUR CAUSE IS ONE

As is forcefully pointed out in the timely contribution on the labor situation from the viewpoint of the working women of the land, which appears in subsequent pages, they are face to face with a fundamental issue, which must be squarely met. This is nothing less than the question of economic and industrial independence, without which political independence is scarcely more than a vain shadow, a truth which finds emphatic expression in the reconstruction program of the American Federation of Labor.

There can be no doubt, in the judgment of the writer, as to the attitude toward this issue of the organized government workers represented by our National Federation. They stand thoroughly committed to granting women full political rights and to the position that equal pay must be given for the same kind of work regardless of the sex of the worker. But of what avail the right to fair compensation if the right to the opportunity to work on equal terms in denied? The former without the latter fades away into an "iridescent dream."

As a matter of abstract justice the position of the women workers is unassailable; but more than this, it is unassailable from the standpoint of sound public policy. Surely the women of our country who have entered, and are to enter in increasing numbers, the field of industry, are as much entitled to the democratic right of self-determination as are the inhabitants of the various countries for whose freedom of development we are contending so strongly.

To the membership of our organization, moreover, the question appeals with more than academic force. Thousands of women are working side by side with us, doing their duty "manfully" (if our good sisters will permit the use of the term) in furthering the common cause. To them we owe the duty of whole-hearted and effectual support, not only in theory but in practice, and beyond them we owe support to women in industry in general, whose cause is inextricably interwoven with their own.—J. G. G.

With the Poets

At the Peace Table

Who shall sit at the table, then, when the terms of peace
are made—
The wisest men of the troubled lands in their silver and
gold brocade?
Yes, they shall gather in solemn state to speak for each
living race,
But who shall speak for the unseen dead that shall come
to the council place?

Though you see them not and you hear them not, they
shall sit at the table, too;
They shall throng the room where the peace is made and
know what it is you do;
The innocent dead from the sea shall rise to stand at
the wise man's side,
And over his shoulder a boy shall look—a boy that was
crucified.

You may guard the doors of that council hall with bar-
riers strong and stout,
But the dead unbidden shall enter there, and never you'll
shut them out.
And the man that died in the open boat, and the babes
that suffered worse,
Shall sit at the table when peace is made by the side of
a martyred nurse.

You may see them not, but they'll all be there; when
they speak you may fail to hear;
You may think that you're making your pacts alone, but
their spirits will hover near;
And whatever the terms of the peace you make with the
tyrant whose hands are red,
You must please not only the living here, but must satisfy
your dead.

EDGAR A. GUEST, *from Collection of the Author's Verse.*

The Present Crisis

When a deed is done for Freedom, through the broad
earth's aching breast
Runs a thrill of joy prophetic, trembling on from east
to west,
And the slave, where'er he cowers, feels the soul within
him climb
To the awful verge of manhood, as the energy sublime
Of a century bursts full-blossomed on the thorny stem
of Time.

. . .

Once to every man and nation comes the moment to de-
cide,
In the strife of Truth with Falsehood, for the good or
evil side;
Some great cause, God's new Messiah, offering each the
bloom or blight,
Parts the goats upon the left hand, and the sheep upon
the right,
And the choice goes by forever, 'twixt that darkness and
that light.

. . .

Careless seems the great Avenger; history's pages but
record
One death-grapple in the darkness 'twixt old systems and
the Word;
Truth forever on the scaffold, Wrong forever on the
throne—
Yet that scaffold sways the future, and, behind the dim
unknown,
Standeth God within the shadow, keeping watch above
his own.

. . .

We see dimly in the Present what is small and what is
great,
Slow of faith how weak an arm may turn the iron helm
of fate,
But the soul is still oracular; amid the market's din,
List the ominous stern whisper from the Delphic cave
within—
"They enslave their children's children who make com-
promise with sin."

Then to side with Truth is noble when we share her
wretched crust,
Ere her cause bring fame and profit and 'tis prosperous
to be just;
Then it is the brave man chooses, while the coward stands
aside,
Doubting in his abject spirit, till his Lord is crucified,
And the multitude make virtue of the faith they had
denied

Count me o'er earth's chosen heroes—they were souls
that stood alone,
While the men they agonized for, cast the contumelious
stone,
Stood serene, and down the future saw the golden beam
incline
To the side of perfect justice, mastered by their faith
divine,
By one man's plain truth to manhood and to God's su-
preme design.

. . .

For Humanity sweeps onward; where today the martyr
stands,
On the morrow crouches Judas with the silver in his
hands;
Far in front the cross stands ready and the crackling
fagots burn,
While the hooting mob of yesterday in silent awe return
To glean up the scattered ashes into History's golden urn.

. . .

New occasions teach new duties; Time makes ancient
good uncouth;
They must upward still, and onward, who would keep
abreast of truth;
Lo, before us gleam her camp fires! we ourselves must
Pilgrims be,
Launch our Mayflower, and steer boldly through the
desperate winter sea,
Nor attempt the Future's portal with the Past's blood-
rusted key.

—LOWELL.

The Man from Athabaska

Oh, the wife she tried to tell me that 'twas nothing but the thrumming
Of a woodpecker a-rapping on the hollow of a tree;
And she thought that I was fooling when I said it was the drumming
Of the mustering of legions, and 'twas calling unto me;
'Twas calling me to pull my freight and hop across the sea.

And a-mending of my fish-nets sure I started up in wonder,
For I heard a savage roaring and 'twas coming from afar;
Oh, the wife she tried to tell me that 'twas only summer thunder,
And she laughed a bit sarcastic when I told her it was war;
'Twas the chariots of battle where the mighty armies are.

Then down the lake came Half-breed Tom with russet sail a-flying,
And the word he said was "war" again, so what was I to do?
Oh, the dogs they took to howling, and the missis took to crying,
As I flung my silver foxes in the little birch canoe;
Yes, the old girl stood a-blubbing till an island hid the view.

Says the factor: "Mike, you're crazy! They have soldier-men a-plenty.
You're as grizzled as a badger, and you're sixty year or so."
"But I haven't missed a scrap," says I, "since I was one and twenty,
And shall I miss the biggest? You can bet your whiskers—no!"
So I sold my furs and started . . . and that's eighteen months ago.

For I joined the Foreign Legion, and they put me for a starter
In the trenches of the Argonne with the *Boche* a step away;
And the partner on my right hand was an Apache from Montmartre;
On my left there was a millionaire from Pittsburgh, U. S. A.
(Poor fellow! They collected him in bits the other day.)

But I'm sprier than a chipmunk, save a touch of the lumbago;
And they calls me old Methoosalah, and *blagues* me all the day,
I'm their exhibition sniper, and they work me like a Dago,
And laugh to see me plug a *Boche* a half a mile away.
Oh, I hold the highest record in the regiment, they say.

And at night they gather 'round me, and I tell them of my roaming
In the Country of the Crepuscule beside the Frozen Sea;
Where the musk-ox runs unchallenged, and the caribou goes homing—
And they sit like little children, just as quiet as can be:
Men of every clime and color, how they hearken unto me!

And I tell them of the Furland, of the tump-line, and the paddle,
Of secret rivers loitering, that no one will explore;
And I tell them of the ranges, of the pack-strap, and the saddle,
And they fill their pipes in silence, and their eyes beseech for more;
While above the star-shells fizzle and the high explosives roar.

And I tell of lakes fish-haunted, where the big bull moose are calling,
And forests still as sepulchers with never trail or track;
And valleys packed with purple gloom, and mountain peaks appalling;
And I tell them of my cabin on the shore at Fond du Lac;
And I find myself a-thinking: Sure I wish that I was back.

. . .

For I've had my fill of fighting, and I've seen a nation scattered;
And an army swung to slaughter, and a river bed with gore;
And a city all a-smolder, and . . . as if it really mattered,
For the lake is yonder dreaming, and my cabin's on the shore;
And the dogs are leaping madly, and the wife is singing gladly,
And I'll rest in Athabaska, and I'll leave it never more.

—Robert W. Service, in
Canadian Poems of the Great War.

A Farmer's Letter to His Sweetheart

(Under Modern Mail Conditions)

I like to get your letters, love, I miss you every day,
I'm dull and sad and desolate whenever you're away.
But if it's just the same to you, please make your missives light,
And don't enclose remembrances in everything you write.
This may seem trifling, darling, but it means a lot to me,
For they're using flying postmen on the R. F. D.

Last night a billet doux from you destroyed my Maltese cat,
Just dropped him, ruined in his tracks—the knife you sent did that.
The book of verse that you enclosed to me the other day
Impinged upon the hired man, and now he's gone away.
And hired men are very scarce these busy days to me,
And very hard to come by on the R. F. D.

That cigarette case was a dream, but it was my hard luck
To lean upon the letter box the moment that it struck.
And though I would have rhapsodized on getting it, no doubt,
My joy was somewhat dampened by the fact that I was out.
For when things fall they will fall hard, and when they light on me
I miss the dear old flivvers on the R. F. D.

I love you just the same, my dear, as in the days of yore,
And every day that you're away I miss you more and more.
But if you'll write a dozen sheets, instead of sixty-five,
When you return there'll be more chance of finding me alive.
For when it drops five thousand feet, the merest note, you see,
May croak your doting lover on the R. F. D.

Boston's Work for the Cause

The local at the Hub has enjoyed a happy history—a record of steady growth in numbers and achievement. From Boston as a center, moreover, the spirit of unionism among government employees has radiated into other parts of New England, influencing the formation of locals in other cities and towns. The writer cites a concrete case of the practical and humanitarian side of union activities.

By A. W. STOCKWELL

Member and Correspondent of the Boston Federal Employees Union

IN DECEMBER, 1916, about fifteen employees of the Immigration Service met after official hours in an anteroom of the Boston Immigration Station to consider the question of forming a branch of the Federal Employees Union. Precisely two years from the date of that meeting Boston Local (No. 25) had 872 members, while the immigration force had achieved a record membership of 100 per cent.

IMMIGRATION SERVICE EMPLOYEES TAKE LEAD IN ORGANIZING

The story of the birth and growth of Local 25 is doubtless similar in its main features to that of many other unions. The subject of unionism first received serious consideration as the result of a visit from Mr. Peabody in his capacity as field organizer. Shortly thereafter an opportunity was given the district organizer of the American Federation of Labor to address the employees of the Immigration Service regarding the undoubted advantages of organization and the alleged advantages of affiliation with the Federation of Labor. The leaven thus set at work resulted in the meeting of December, 1916, at which a temporary organization was effected (under the chairmanship of Mr. Wm. H. Nitz) and during which it was voted to form a branch of the Federal Employees Union and to apply for a charter from the American Federation of Labor.

There were obvious reasons why the initiative in these matters should be taken by employees of the Immigration Service. For years these employees had upheld the banner of ORGANIZATION as a branch of the U. S. Civil Service Retirement Association and had taken active part in the field of endeavor to which that Association's energies were directed. Thus the principle of organization had become firmly implanted in the Immigration consciousness, so to speak, which promptly responded to the larger call for organized effort through the Federal Employees Union, since developed into the NATIONAL FEDERATION OF FEDERAL EMPLOYEES.

PERMANENT ORGANIZATION FORMED WITH GRATIFYING RESULTS

After the meeting of December, 1916, matters moved swiftly. Another fortnight brought forth a permanent organization with Mr. William J. Burke of the Immigration Service as President, and Mr. William H. Bond of the Customs Service as Recording Secretary. During the next six

PRESIDENT WILLIAM J. BURKE
A veteran in the cause of unionism, who has worked unselfishly and effectually in behalf of the organization of federal employees and others to bring about better conditions.

months the organization made fair progress. But under the leadership of President Burke, whose courage and persistence soon enlisted the loyal support of the rank and file, Local 25 on January 1, 1918, had attained a membership of 501, not including a group of 105 members who were given cards of withdrawal to form a local union at Hingham, Mass. Locals were organized also in a number of other cities of New England. At this time the membership of Local 25 represented the Customs Service, Subtreasury, Public Health Service, Internal Revenue and Custodian Service of the Treasury Department; Quartermaster's and Engineer's office of the War Department; various branches at the Charlestown Navy Yard in the Navy Department; the Bureau of Investigation in the Department of Justice; Animal Industry and Entomology in the Department of Agriculture; Lighthouse Service, Fisheries, office of Inspector of Steam Vessels in the Department of Commerce; Immigration Service, Naturalization Service and Employment Service in the Department of Labor; and the Civil Service Commission.

WIDE-AWAKE ORGANIZATION FOR THE CURRENT YEAR

In the meantime two important changes in the official personnel brought Mr. William J. Sleep of the Customs Service into the secretary's chair and Mr. William H. Nitz of the Immigration Service to the office of financial secretary. This proved to be a happy combination. Both men are enthusiastic in the work of the Federation. Their cooperative attention to details promotes mechanical efficiency and partly accounts for the steady growth and financial prosperity of Local 25. President Burke is not so much interested in the details of the organization as in the organization itself. He believes in the divine origin of the union movement and consequently sees no reason for hurry or worry. There have been temptations to accelerate the growth of Local 25 by initiating members whose employment obviously was of a temporary nature and whose membership could not be counted as a permanent asset. But this course is not encouraged by Mr. Burke, who sees superior advantages in more conservative methods of advance. So, all in all, with the three "Bills" at the helm—Burke, Sleep and Nitz—the organization seems assured for the present of a reasonably true course and continued momentum.

The other officers elected for 1919 are Percy J. Harrison, Vice-president; George A. Copeland, Treasurer; James K. Kealey, Guardian, and Christopher F. Gayler, Guide—all hold-overs from 1918 except Mr. Harrison. For Trustees, Harry E. Rice,

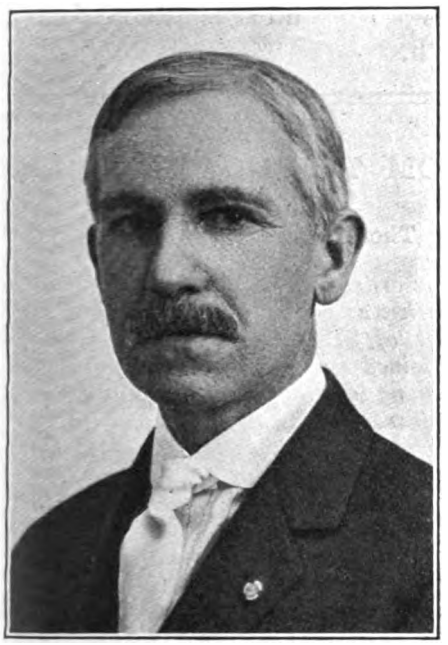
D. H. Lydon, and James F. Tansey were chosen. The Board of Representatives, in addition to the elective officers above mentioned, includes D. J. Callahan, Wm. F. Pounder, W. J. Ryan, Thos. J. Shea, E. A. Noonan, Charles Grace, Thos. J. Eagan, John Brennan, F. J. Small, John G. Hag-



SECRETARY WILLIAM J. SLEEP

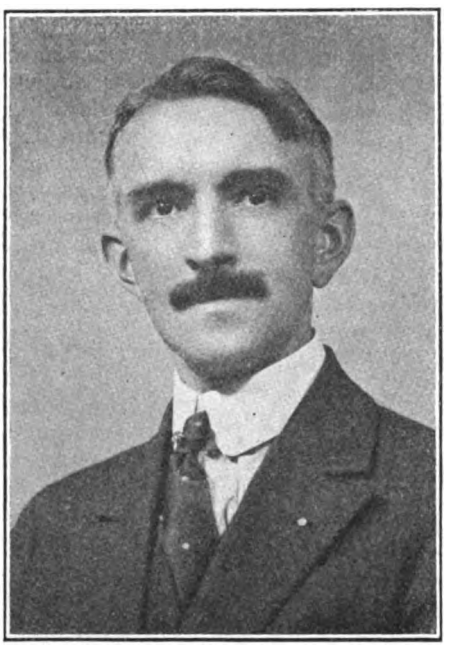
berg, James H. Fitzgerald, Arthur G. Merchant, John A. Kieling, Jr., John A. Robblee, and Geo. E. Kezar.

URGENT NEED FOR THE UNION IS HERE SHOWN

Now that the union has become an established institution, and has quietly taken its place as an integral part of civil-service existence, some employees are wondering how they survived without it in the past, for experience clearly demonstrates the fundamental need in governmental employment of an organization, not only of national proportions and influence, but with local units under responsible officials to meet local requirements. The story of the Cross Rip lightship will illustrate this fact. This lightship broke away from her moorings on February 4, 1918, and drifted out to sea. Both ship and crew disappeared from human sight forever. Among the missing crewmen were two members of Local 25. Some time during the month of March information received from Cape Cod indicated that the families of several members of the crew (one of whom had left a wife and six children) were suffering for the necessities of life. The report was referred to Secretary Sleep. It was learned that no action had been taken under the Compensation Act in behalf of the families of the lost crewmen; that the income of the families had ceased with the payment of the men's salaries for December; and that apparently no official notice had been taken of the families' existence. With the assistance of the local Congressman and of President McLarin of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, communication was established with the Compensation Commission, the necessary blanks were prepared and the proper reports filed. By these and other means practical sympathy and encouragement were extended to the bereft families, and they were assured of substantial relief at a much earlier date than otherwise would have been possible. It would be easy to cite instances of successful endeavor on the part of our representatives to remove causes of dissatisfaction or grievance existing in civil-service employment, and it is gratifying to be able to testify to the uniform courtesy accorded them by the constituted authorities.

FINANCES IN GOOD CONDITION; HIGHER DUES DISCUSSED

The finances of Local 25 have been administered with generally satisfactory results. The initiation fee of one dollar and the monthly dues of 40 cents have sufficed in the past to meet all demands. Already, however, there is talk of doubling the initiation fee and



TREASURER WILLIAM H. NITZ

increasing the monthly dues to 50 cents. Certain it is that an expansion of program can be met only by an increase of income; and if certain projects now in the air are brought to earth there will be no alternative to increased taxation. On January 1, 1919, there was a balance in the treasury of more than $900, including $400 invested in Liberty bonds. That balance has since been somewhat reduced.

UNION MEETINGS OCCASIONS OF INTEREST AND PROFIT

We offer no apology in presenting to the readers of THE FEDERAL EMPLOYEE a picture of the Boston Immigration Station; or, to speak more accurately, of the building the second

THE BOSTON IMMIGRATION STATION

story of which is rented by the Government for immigration purposes. This building, it is true, is a poor makeshift for an immigration station of the second port of the United States, which must serve also as the headquarters of an immigration district that embraces the subports of Portland, Providence, New Bedford, and Gloucester; but it is rather intimately associated with the history of Local 25. It was here that the organization had its birth, and an occasional meeting of the immigration branch of Local 25 is still held in this building. But it became long since necessary to rent a public hall for the regular meetings of the organization, which are held on the first and third Thursday evenings of each month. The meeting on the first Thursday is largely in the hands of the Board of Representatives and is devoted strictly to business. On the third Thursday evening of the month the program is of wider scope and of more general interest. It has been the endeavor to secure speakers at that meeting representative of the various branches of governmental service, including Congress. On one occasion the State Director of the United States Employment Service addressed the meeting. The next month one of the local Congressmen gave a very interesting address. On the program for future meetings are officials representing bureaus in the Departments of Commerce, Justice, and Agriculture, with others to follow. It is this getting-together process as much as anything else, perhaps, that has fostered the spirit of cooperation and goodwill which exists between officials and employees in our district; and this is one way toward "greater efficiency in the various services of the United States."

Salary Debate in the Senate

The Senate concurs with the House in providing a salary increase of $240 for civilian employees in general, for the fiscal year 1920, and provides also $120 for the War Risk Insurance employees. Senator La Follette hits straight from the shoulder in support of the employees' cause, which receives aid also from Senators France, Sheppard, Lenroot, and Curtis. The discussion of the subject is reproduced below. A new "Borland amendment" proposed meets with a quick, painless death.

SENATOR LA FOLLETTE PARTS THE SHEEP FROM THE GOATS

The Sheep

"I am not at all surprised that so many Senators retire to the cloakroom when the attention of the country is to be called to the fact that since 1905 [*to* 1915] *we have made the following increases in the salaries higher up:*

"The President's salary has been increased 50 *per cent; the salary of the Private Secretary to the President has been increased* 50 *per cent; the salary of the Vice-President has been increased* 50 *per cent; the salary of the secretary to the Vice-President has been increased* 81 *per cent; salaries of United States Senators have been increased* 50 *per cent; salaries of Representatives in Congress have been increased* 50 *per cent; the salary of the Secretary of the Senate has been increased* 30 *per cent; of the Sergeant at Arms,* 44 *per cent; the salary of the Speaker of the House of Representatives has been increased* 50 *per cent; of the Secretary to the Speaker,* 33 *per cent; of the Clerk of the House,* 30 *per cent; of the Chief Clerk,* 25 *per cent; of the Sergeant at Arms,* 44 *per cent; of the Doorkeeper,* 42 *per cent; the Secretary of State,* 50 *per cent; the Secretary of the Treasury,* 50 *per cent; the Secretary of War,* 50 *per cent; the Attorney-General,* 50 *per cent; the Postmaster-General,* 50 *per cent; the Secretary of the Navy,* 50 *per cent; the Secretary of the Interior,* 50 *per cent; and the Secretary of Agriculture,* 50 *per cent. . . . Senators find occasion for agitated inquiry here as to the subject of unrest in this country. The salary of the Chief Justice was increased* 15 *per cent, and the Associate Justices,* 16 *per cent. The salary of the Chief Justice was raised from* $13,500 *to* $15,000 *a year; the Associate Justices from* $12,000 *to* $14,000; *the circuit judges from* $7,000 *to* $8,500; *the district judges from* $6,000 *to* $7,500.

The Goats

"Two years ago, in order to equalize the salaries of other employees, which was forced upon an unwilling Congress, an increase of $120 *a year, as it finally worked out, was obtained in the salaries of government employees receiving less than over* $2,500 *a year.*

"What did that increase of salary amount to in percentages? The increase for those receiving $2,500 *was* 4 *per cent and a fraction; for those receiving* $2,400 *it was* 5 *per cent; for those receiving* $2,220 *it was* 5 *per cent and a fraction; for those receiving* $2,000 *it was* 6 *per cent; for those receiving* $1,800 *it was* 6.6 *per cent; for those receiving* $1,600 *it was* 8 *per cent; for those receiving* $1,440 *it was* 8.4 *per cent; for those receiving* $1,400 *it was* 8.6 *per cent; for those receiving* $1,300 *it was* 9.2 *per cent; for those receiving* $1,200 *it was* 10 *per cent; for those receiving* $1,100 *it was* 10.9 *per cent, and for those receiving* $1,000 *it was* 12 *per cent.*

"Now, mark you, when you get down to $1,000 *you are down to the line below the level of where you could support, away back in* 1916, *a family of five persons on that salary. Just think of it, Senators! It makes some Senators smile.*

"The percentage of increase in the salaries of those receiving a salary of $800 *was* 15; *it was an increase in salaries of* $720—*and you are below the life line now—of* 16.5 *per cent; on salaries of* $600 *it was an increase of* 20 *per cent; on salaries of* $540 *it was an increase of* 22 *per cent; on salaries of* $500 *it was an increase of* 24 *per cent; on salaries of* $480 *it was an increase of* 25 *per cent, and on salaries of* $400 *it was an increase of* 30 *per cent.*

"Just think of it, Mr. President! Employees of this Government receiving a salary of $400 *a year and trying to take care of a family, with the cost of maintaining a family in New York figured at the lowest possible limit, where charity doles out the amount—in New York, away back of the war period, it was* $880; *in the city of Washington in* 1916 *it was* $1,080."

THE DEBATE which follows (in a somewhat abridged form) took place in the United States Senate February 20 on the subject of the proposed salary increase for the next fiscal year, dealt with in the Legislative, Executive and Judicial Appropriation Bill. The discussion regarding the increase to be granted employees of the War Risk Insurance and other war bureaus begins on page 239. (The text of the salary-increase section of the Legislative bill will be found on another page.)

Mr. FRANCE [Md.]. Mr. President, I offer the following amendment [substituting $360 for $240, the latter being the amount carried in the bill as reported to the Senate by the Committee on Appropriations, as the emergency salary increase for the fiscal year 1920].

Mr. UNDERWOOD [Ala.]. Mr. President, if the Senator from Maryland will allow me, I desire to make a point of order against that amendment. I make the point of order that it increases the appropriation on this bill without being recommended by the committee,

Digitized by Google

that it is not estimated for by the head of any department, and, third, that it is not moved by the direction of any standing or select committee of the Senate. It seems to me clearly that it is within Rule XVI. The Chair is familiar with the rule, as it has just been read. I therefore make the point of order, and I think that ought to be disposed of first.

The PRESIDING OFFICER. The Chair will hear the Senator from Maryland on the point of order.

MR. FRANCE. Mr. President, I do not feel that I care to discuss the point of order at this time. I realize that this amendment is subject to a point of order. I hoped that the chairman of the subcommittee would not make the point of order; but since he has made it, I am willing to submit to the judgment of the Chair. I do not care to detain the Senate at this time with any argument on the point of order.

The PRESIDING OFFICER. The point of order is sustained.

[After a brief discussion on an amendment increasing the salary of the District Judge of Panama, Senator La Follette, of Wisconsin, obtained the floor.]

Mr. LA FOLLETTE. Mr. President, I do not suppose any point of order can be made against the amendment, and I doubt, Mr. President, if it were subject to a point of order whether any point of order would be made against it, because it has been the practice of Congress to raise the salaries of Senators and Representatives and Cabinet officers and their assistants, and judges, but when any suggestion is made to the Congress of the United States that there should be an increase in the salaries of the employees of the Government who are earning less than enough to sustain life, every technicality that can be suggested and every argument that can be made is interposed to stop it.

There have been some investigations conducted by people entirely competent to make them as to the lowest possible amount upon which a family in this country can subsist. Such investigations were made in New York City in 1914. They have been conducted by this Government under an authorization by the United States Senate here in the District of Columbia. In 1914 a body of economists in New York City, after a thoroughgoing investigation, determined at that time that with the cost of living as it then stood, not less than $880 could possibly carry a family of three children, a father, and mother through to the end of the year. Since that time the cost of living has advanced from 75 to 100 per cent.

I think that it was in 1916 that, under authority conferred by the Congress, an investigation as to the cost of living was conducted by government officials here in the city of Washington, and it was ascertained that the lowest possible sum upon which a family of five could be supported here in the District of Columbia in 1916 was $1,080. Since that time the cost of living has steadily mounted.

Mr. President, I am aware of the fact that it is not at all popular to discuss this side of the proposition here in the Senate. I am not at all surprised that so many Senators retire to the cloakroom when the attention of the country is to be called to the fact that since 1905 we have made the following increases in the salaries higher up.

The President's salary has been increased 50 per cent; the salary of the Private Secretary to the President has been increased 50 per cent; the salary of the Vice-President has been increased 50 per cent; the salary of the secretary to the Vice-President has been increased 81 per cent; salaries of United States Senators have been increased 50 per cent; salaries of Representatives in Congress have been increased 50 per cent; the salary of the Secretary of the Senate has been increased 30 per cent; of the Sergeant at Arms 44 per cent; the salary of the Speaker of the House of Representatives has been increased 50 per cent; of the secretary of the Speaker 33 per cent; of the Clerk of the House 30 per cent; of the Chief Clerk 25 per cent; of the Sergeant at Arms 44 per cent; of the Doorkeeper 42 per cent; the Secretary of State, 50 per cent; the Secretary of the Treasury, 50 per cent; the Secretary of War, 50 per cent; the Attorney General, 50 per cent; the Postmaster General, 50 per cent; the Secretary of the Navy, 50 per cent; the Secretary of the Interior, 50 per cent; and the Secretary of Agriculture, 50 per cent.

Mr. DILLINGHAM [Vt.]. Will the Senator state what period that covers?

Mr. LA FOLLETTE. From 1905 to 1915.

Senators find occasion for agitated inquiry here as to the subject of unrest in this country. The salary of the Chief Justice was increased 15 per cent, and the Associate Justices 16 per cent. The salary of the Chief Justice was raised from $13,500 to $15,000 a year; the Associate Justices from $12,000 to $14,000; the circuit judges from $7,000 to $8,500; the district judges from $6,000 to $7,500.

Two years ago, in order to equalize the salaries of other employees, which was forced upon an unwilling Congress, an increase of $120 a year, as it finally worked out, was obtained in the salaries of government employees receiving less than $2,500 a year.

What did that increase of salary amount to in percentages? The increase for those receiving $2,500 was 4 per cent and a fraction; for those receiving $2,400, it was 5 per cent; for those receiving $2,220, it was 5 per cent and a fraction; for those receiving $2,000, it was 6 per cent; for those receiving $1,800, it was 6.6 per cent; for those receiving $1,600, it was 8 per cent; for those receiving $1,440, it was 8.40 per cent; for those receiving $1,400, it was 8.6 per cent; for those receiving $1,300, it was 9.2 per cent; for those receiving $1,200, it was 10 per cent; for those receiving $1,100, it was 10.9 per cent; and for those receiving $1,000, it was 12 per cent.

Now, mark you, when you get down to $1,000 you are down to the line below the level of where you could support away back in 1916 a family of five persons on that salary. Just think of it, Senators! It makes some Senators smile.

The percentage of increase in the salaries of those receiving a salary of $800 was 15; it was an increase in salaries of $720—and you are below the life line now—of 16½ per cent; on salaries of $600, it was an increase of 20 per cent; on salaries of $540, it was an increase of 22 per cent; on salaries of $500, it was an increase of 24 per cent; on salaries of $480, it was an increase of 25 per cent; and on salaries of $400, it was an increase of 30 per cent.

Just think of it, Mr. President! Employees of this Government receiving a salary of $400 a year and trying to take care of a family, with the cost of maintaining a family in New York figured at the lowest possible limit, where charity doles out the amount—in New York away back of the war period, it was $880; in the city of Washington in 1916 it was $1,080.

How did they make up the balance? They found jobs at night. When sickness falls upon the family, when trouble comes, when death throws its shadow across the threshold, collections are taken up among those who are not so unfortunate, upon whom affliction has not yet been visited. That is the way they do it. If you want the testimony for it, it is to be found in the records of the committees of Congress. These government employees have appeared before the committees of this Congress to plead their cause for higher wages under the conditions that exist today, and I have before me here ample evidence which they have furnished of the hard conditions under which they live; how they are compelled to take up collections whenever affliction comes upon a family.

Back of the time of high war prices, Senators will vote themselves an increase of salary of 50 per cent and

Digitized by Google

deny to government employees a percentage of increase that will sustain life, and yet they marvel and complain and threaten because there is dissatisfaction in this country; they organize investigations to find out why it is that meetings are held and voices are raised protesting against the condition of things that exists here today.

This serious condition of affairs is not the outgrowth, Mr. President, of the war. It has been on for a long period of time. The great masses of the people of this country are loyal to our system of government, sir. All they ask is justice and a fair chance. They are fairly intelligent; they know pretty well that something has been radically wrong with the economic system of this country. With the consent of the Government, for a score of years the cost of living had been slowly but steadily mounting upon the American people from 1898 down to August, 1914, when we began to feel the effects of the European war. Why was that so? I say to you, sir, that it should not have been so. The cost of living should have steadily decreased right along year by year instead of increasing year by year. Why do I say that? I say it because it is the law of civilization; I say it because the genius of the American people wrought out a system that should have resulted in a continual and steady decline in the cost of living. Throughout all these years the cost of production has steadily decreased, from the time this Government was established down to 1898. Why? Because there was the free play of all the economic forces in this country; because the most inventive country on the face of God's earth had been working out the problems of production and cutting down the cost of producing things by invention and by better organization; and the cost had steadily fallen down to that time.

[Mr. LA FOLLETTE then discussed the effect of the reorganization of business throughout the country, contending that as the result of extensive combinations "competition was suppressed, prices were controlled, and the American people had to pay more and more for everything they bought."]

It [the cost of living] mounted step by step, step by step [from 1898]. It has denied thousands, tens of thousands, and hundreds of thousands of children the education that their parents would have been able to give them except for that unlawful organization. It has violated every principle of right. It has undermined the principles of democracy. It has well-nigh destroyed, sir, a government of equality of rights. I say to you that instead of the cost of living mounting year by year the cost of living should have fallen year by year.

Oh, but I fancy that some Senator from some Eastern State is saying that "La Follette ignores the fact that wages have been increased, and that that accounts for the increased cost to the consumer." Wages have not increased. It is a lie that wages have increased. I am speaking now of the period before the war. Wages fell. Counting the purchasing price of the dollar, wages fell steadily, year by year, under the power of this same controlling force. A competent and authoritative study of the trend of wages from 1900 down to 1914, 14 years, gives us the exact decline—an actual decline of 10 per cent in the wage of the laboring people of this country during that period of advancing prices and rise in the cost of living.

If you are looking for an answer to the question as to why there is unrest in this country, Mr. President, as to why people are striking, and as to why some of the more radical of them are saying extreme things, look for it in the United States Senate today. A dozen Senators here when the economic truths of the last 20 years are being recounted! If some Senator should rise here to denounce some meeting that is held where complaint is made, you would see the Senate thronged, and the seats filled; but when the real reason is stated that underlies the complaints that are in the hearts of the great body of the toilers of this country, only a few of whom have yet begun to express themselves, you see empty seats.

I say again, Mr. President, that every economic law that ought to rule society, that ought to regulate prices, that ought to determine wages, has been violated for the last score of years in the United States; and I say, look there if you are on the hunt for the motives that lie back of the surging that is sweeping across this country, that has not yet begun to break in waves but that just shows in undulations upon the surface, but it represents a deep and a profound agitation below the surface.

Mr. President, the great mass of the American people have never been very far wrong. They have been pretty generally right; and it behooves those who nominally stand as their representative to pay some heed to their voice when it is raised in protest. That protest has not been very violent. I pray God that it may be heeded in time.

Senators think they have been awfully generous to the government employees because they have given them $240, an increase of $120 since a year ago. It was an increase of 10 per cent at that time, according to the figures of the Senator from Utah, who is always accurate. You did not flinch much when it came to giving yourselves 50 per cent. I did not see any points of order raised on it. I suppose probably it was not subject to a point of order, but it always lies with any representative upon this floor to avail himself of a technicality or not, and I venture to suggest that perhaps it would be wise statesmanship not to invoke a technicality against a raise that is equitable and just. Think of an employee of this Government who is receiving $600 or $720, and trying to get along on it, and take care of a family of four or five children, and buy shoes at $3, $4, and $5 a pair!

Mr. President, I expect the salaries of the judges in Porto Rico to be increased. Of course that will just level them up with the other judges whose salaries we have increased, and I expect that the great mass of employees who work for the Government, who on the average earn only $918 or $980 apiece—I do not remember which—I expect that they will stand by you just the same. But, mark you, Mr. President, the difference between the way in which they treat these employees and the way in which they treat themselves and the Cabinet officers and the judges. They give them, under the law, a permanent salary fixed by statute. This is a bonus for the time being, and then you will drop back, you government employees, to the old wage level of 1855. The wages of the employees of the Government have not been materially changed since 1855, but the salaries of representatives, of senators, of judges, of Cabinet officers, of presidents, of ambassadors have been raised enormously.

Mr. President, aside from all other questions, aside from the question of what is right and just between man and man, the course you are pursuing is not politic. I venture to say it is unwise statesmanship. When the amendment was proposed increasing the amount that should be paid to those employed in the War Risk Bureau the Senator from Alabama (Mr. UNDERWOOD) warned the senators that "they were talking in millions now." Mr. President, justice, equity, what is right between employees, does not take account of amounts. When it came to increasing the salaries of United States senators and representatives and Cabinet ministers and ambassadors and Supreme Court judges and federal judges, all down the list, it would have been well enough then for the Senator from Alabama and for every other Senator on this floor to think about these increases, regardless of the question of whether the amounts were large or small, but on the basis of whether they were just in comparison with what other government employees were re-

Digitized by Google

ceiving. Those increases were not necessary to provide bread and shelter and clothing for the family.

I am not complaining, sir, that these increases were made in those salaries. I recognize the existence of this artificial and unjust increase in the cost of living. I do not blame Congress for recognizing that fact and increasing their own salaries and those of the judges and the cabinet ministers and ambassadors and others who have received these magnificent additions to their salaries, but what I do protest is your beginning to economize when you come down to make a little, meager addition to the salaries of the mass of the government employees, who have to figure, oh, so closely, to live. There is the rent, the grocer's bill, the meat bill, the doctor's bill; if there is anyone sick in the family, it is a calamity that calls for a family council in order to know how to meet it. When you come to consider those people who are living so close to the margin of existence, who are struggling for enough to get along with, then I say, Mr. President, that that is the wrong time to begin to cut and to pare and to be technical.

Mr. President, I do not want to assume the rôle of prophecy. No man knows what the future veils; but I say that we shall be wise if we will try to be just to all the people in this country.

I am only sorry, Mr. President, that this proposed increase of $1 a day to government employees to meet the increased cost of living was not agreed to. It was figured out in 1914 by competent tribunals that made investigations, not only in New York City but elsewhere over this country, fixing about $880 as necessary for the support of a family of five. I regret beyond expression that the proposition here was not accepted to add to that amount a dollar a day to meet the increased cost that everybody agrees had come upon us, and there is plenty of evidence here, and I can read from the testimony of investigators who appeared before committees of Congress, that since 1916 the advance has been more than would be covered by this addition. If it were $240 instead of $120, it would not more than cover the added cost that has come by reason of the increase in the necessities of life.

Mr. THOMAS [Colo.]. I sympathize entirely with the Senator's attitude regarding the duty which the Congress owes to the employees of the Government on account of the rise in prices. Since I have been in the Senate I have, as far as I can now recall, voted against every increase in salaries, regardless of the officials the salaries would benefit. My contention has been, and I think it is correct, that those who supply the necessities of life—the landlord, the grocer, the dry goods man, the shoe man—regulate their prices so as to absorb whatever amount of increase is made in the salaries of the employees, so that instead of benefiting the employees we really benefit the class which caters to their needs.

I have felt, and I think I have stated, on more than one occasion, that the Government can and ought to remedy this condition by fixing a maximum rate of rental and also of supplies, and seeing that through the proper agencies the employees of the Government shall be required to pay no more, covering the difference between the existing rates and the amount so fixed by the Government as a charge against the Treasury. I believe that would give a very substantial measure of relief. I am not a prophet, but I could almost prophesy that this raise which is given now will be followed by a demand for another, because of the consequent need due to the absorption of this increase by the very conditions that make it necessary.

I am prepared to join in an effort to frame some legislation, and to support it to the best of my ability, that will meet this situation and do justice. I am very much afraid it is the only way in which it can be done. I should like to have the opinion of the Senator upon that suggestion.

Mr. LA FOLLETTE. Mr. President, it may be that we will come to recognize the necessity of putting a limitation upon the charges of various kinds, but I have always been a pretty profound believer in the free play and operation of economic laws. I believe that if we had all the laws against combinations properly enforced competition would regulate prices for people who have to buy, whether it is rent, or groceries, or dry goods, or the supplies of the butcher.

There was a day when we had but a handful of these trusts and combinations in this country, and you all know it. They were then not more powerful than the Government. I have before reminded the country and the Senate, as I recall the fact, that in 1901 there were but 149 combinations in this country, and they were perfectly easy to deal with. Seven years later there were 10,020, and the cost of living had mounted 70 per cent.

Mr. President, I had greatly hoped that no point of order would be made against the amendment adding to the pay of these government employees this little sum of $120 per annum. Of course, in the aggregate I know it runs into the millions. It is the cost of a battleship or two; that is what it is. I will not go into those comparisons, Mr. President. I could extend them somewhat.

I am not going to oppose the amendment of the Senator who has asked the increase of the salary of the judge. Let him go along with the rest of them. At some time or other you will have put enough of these increases in the scale on the side of the "higher ups" so that possibly you will make some additions to the other side that will not balance—I do not expect you to balance the scale—but it will be a little approach to justice.

Mr. UNDERWOOD. Mr. President, I do not intend to detain the Senate long, but after listening to the Senator from Wisconsin [Mr. LA FOLLETTE] I think it is only fair that the RECORD should show some facts.

The Senator from Wisconsin says in his statement that he was "sore." I am glad he puts it that way. He at least had gotten a long way away from the facts that controlled the framing of this bill. The Senator bases his argument on an appeal to class legislation, an attack on the increases in salaries that are made in this bill for judges.

The increases in salaries for judges contained in this bill were established by law. They are not the creation of our committee. This is a legislative bill, that carries the salaries of the government officials. It is the business of our committee—and the Senator knows it is the business of that committee—to write into this bill the appropriations to pay the officers of the Government the salaries which it has been designated by law that they shall receive.

I was in the Senate Chamber when the bill increasing the salaries of the judges was passed. I did not observe the Senator from Wisconsin rise in his seat and hear him protest against the increase of those salaries. I do not know how he voted; but if he did not vote for that increase, at least his voice was silent in opposition to it.

The Senator would have those who read the RECORD believe that this Congress—the men who sit here before me—had just been guilty of raising their own salaries and then of refusing to take care of the clerical force of this Government. I will say to the Senator that the last increase in the salaries of Congressmen in this country was more than a decade ago, and that there are comparatively few men under the dome of this Capitol today who had seats in the Congress of the United States when that increase was made.

The Senator from Wisconsin was a Member of Congress at that time, and so was I. When the provision for an increase of salary to Members of Congress came before the other House, of

which I was then a Member, I voted against that increase. I am not informed as to how the Senator from Wisconsin cast his vote in this body under similar circumstances.

However, the provisions of this bill, whether for Congressmen or judges, have been fixed by law, and it was the duty of our committee to report the appropriation bill to pay these men their salaries, lest the Government should fail to perform the functions for which it is organized; and possibly some people in the United States would be glad to see it fail to perform its necessary functions.

Now, as to the salaries of the clerical force of the Government, while the Senator, like the Pharisee, would like to wrap his cloak about him and thank God that he is better than other men, I will say to the Senator from Wisconsin that he is not the only man in this chamber who has a sincere desire to uplift humanity and assist those who struggle each day for their daily bread; but the men in whose hands is intrusted the real business of this Government, the men who must sustain the flag in times of peace as well as in times of war, must consider the business interests of this Government and not what they can gather unto themselves by abusing their colleagues.

The Senator states that it has been ascertained how much money is necessary to support a family, and because this bill carries on the pay roll certain employees who only receive $420 a year, then, forsooth, we are not paying these people enough to support their families. The Senator knows as well as I do that that statement is not sincere. The Senator has been a Member of this body longer than almost any man who sits in this Chamber, and he knows as well as I do that the people whose compensation is fixed in this bill at $420 a year are those who only render partial service to the Government or are paid for piecework. The Senator knows, as well as I do, that the most of the $420 class of employees carried in this bill are the charwomen—some of them getting as low as $240—who only spend a few hours in the government service, and then earn a compensation outside of the government service. The government employment is merely a matter of assistance to them, and not their daily vocation.

If the great committees in charge of the legislation of this Government were to allow their sentiments and their desires and their effort for popular acclaim to control their handling of the affairs of the Government in connection with these great supply bills

Digitized by Google

we would have no government before long, because it would put the burden of taxes upon the people so great that they could not carry it. It is not the John D. Rockefellers and the Pierpont Morgans who pay the great taxes in this country, and the Senator knows it. They may pay a large amount of money so far as they are individually concerned, but it is a mere drop in the bucket compared with the immense amount of taxes that rest on the masses of the people. The toiling people of this country pay the taxes and support this Government, and unless the Government is honestly and economically administered that burden cannot be borne.

This provision was subject to a point of order and could have been stricken from the bill; but members of the Appropriations Committee, whom I happen to represent at this time, being in charge of this bill, do not occupy the position that the Senator from Wisconsin would place them in, that they are reckless in their desire to oppress humanity; that they are unwilling to listen to the appeals of those who need these salaries; but the committee sat down with deliberation and tried to work out a system of increases for the clerks of this Government that would be reasonable and just, that would take care of the increased cost of living and at the same time have some due regard to the burden which the taxpayers of this country have to bear.

Last year we gave the clerks an increase of $120 a year, or $10 a month. This year, with a falling price of living—at least, there is every reason to believe the cost of living from July on will fall below war prices—the committee reports an increase of $240; and, although I am not a prophet nor the son of a prophet, I have not any doubt in my own mind, although I may be mistaken, that if the committee had reported in favor of an increase of $360 the Senator from Wisconsin would have been desirous of adding another $120 to it to enable him to make his speech.

Mr. SMOOT. Mr. President, just a word in answer to what the Senator from Wisconsin has so graphically depicted.

I say now that among the 100,000 employees in the city of Washington there are perhaps 90 per cent of them receiving more salaries than they ever received before in their lives, and many of them you could not drive away from the positions that they hold with a Gatling gun. [Laughter in the galleries.]

The PRESIDING OFFICER. Order must be preserved in the galleries.

Make Your Body Give Your Brain a Square Deal

Three hours a week of physical training in our Power House makes you worth more to your boss, to your profession, to your clients, to your family and to yourself. You can't expect to do your best thinking and work if torpid liver, clogged pores, upset digestion, waste-laden blood handicap your brain and nerves.

Our gym classes provide power-giving, pep-creating, training for brain workers.

To supple up desk-cramped muscles—relax your mind—get blood circulating and pores, liver, and kidneys working for and not against you. Sends you to work keen and fit.

There is a class at an hour convenient for you. Investigate today.

The cost is only $15 a year; part payments if desired, $16.

1736 G Street **Y.M.C.A.** **Tel. M. 8250**

[According to the Housing and Health Division of the War Department, cited by the U. S. Civil Service Commission (see our February issue, page 106) there were 40,718 separations from, to 75,588 appointments to, the government service from March to December, 1918—no reference made in the report to the use of Gatling guns.—EDITORS.]

Mr. SMOOT. I want to say that not only are they receiving the wages I have referred to, but they are allowed thirty days' leave of absence, and, in addition, a sick leave; they are working seven hours a day, and I can take you into a department where they are over 5,000 girls employed, drawing $1,100, $1,200 and $1,320 a year. Now, we have added $240 more, and I say now that I do not think that half of them ever worked for a salary before, and in case they did, many of them never received a salary of more than $30 a month. I am tired, Mr. President, of having it said that the Government of the United States is having people labor for a mere pittance. I want to say in this connection that there are other employees of this Government who are not receiving what they ought to receive. It is the system that is wrong. It ought to be corrected. But is it the fault of the Committee on Appropriations? How often have I stood upon this floor and called attention to this matter? How often have we asked for legislation, and how often have we been defeated in it? I say, Mr. President, that until there is a thorough investigation and reorganization from top to bottom there will be these inequalities and injustices that no one can defend.

Mr. VARDAMAN [Miss.]. I do not think the Senator intended to make the reflection upon the young women who have come here to do this work which his remark would naturally mean, when he says that very few of these young women—the majority of them capable, educated, many of them I know from my own State being graduates of leading educational institutions—that very few of them received more than $30 a month before they came here. I think that is rather unwarranted, rather unjust, rather unkind. They are not of the cheap class of people. They are splendid young women; they are serving their country and rendering good service and they are entitled to fair compensation; and I know the Senator from Utah is in favor of giving it to them himself.

Mr. SMOOT. I want to say to the Senator from Mississippi that I stated that some of the 50 per cent of the employees I referred to I did not think

Digitized by Google

had received more than $30 a month before coming here; and I want to ask the Senator from Mississippi if half of the young women who are employed in the bureau I referred to who came from Mississippi received more of a salary per month than I stated?

Mr. VARDAMAN. Oh, I think they received very much more, because a great many of them were school teachers.

Mr. SMOOT. Yes, and a great many of them were not, I will say to the Senator. The Senator and I have the same feeling toward all of mankind and womankind. I would not do an injustice to anyone.

Mr. VARDAMAN. Oh, I know the Senator would not.

Mr. SMOOT. But I want to say to the Senator now that if he will go down to some of the departments when they leave their work and see the girls that could not have had very much experience in the work they are called upon to do, coming out of the departments dressed as they never dressed before, wearing apparel that they never wore before [laughter in the galleries]——

The PRESIDING OFFICER. The Chair will warn the occupants of the galleries that the Sergeant-at-Arms will be instructed to clear the galleries unless the occupants refrain from making demonstrations of any kind.

Mr. SMOOT. I will say to the Chair that the disorder is in the Chamber more than in the galleries.

Mr. VARDAMAN. I want to say to the Senator that I had no idea that these young women were living in such affluence. I have not seen any evidence of it; and I do not think a young woman can come here and pay 40 or 50 or 60 dollars a month for board and then dress so handsomely, and go about decked with diamonds and satin and fine linen on $100 a month.

Mr. SMOOT. I have said nothing about diamonds, nor have I said anything about satin or fine linens in any way. I am in earnest in this matter. I do not want Members of Congress to be branded as a lot of ingrates and have it said that they are not doing justice to the employees of the Government. That is all that I have in view at this time, and I think I am well within bounds in what I have said. Do I object to seeing them dress in the best possible style? Why, no; but, Mr. President, when we consider a question we ought to consider it as it really exists; and I want to say to Senators that the committee is not asking any employees of the Government to work all the time for $400 a year. I know that the charwomen that work for that amount only work

about three hours a day, and I know that many of them are also employed elsewhere, because I have employed them as washwomen for $2 a day, and they have been filling both positions, and are making more money today than they ever made before; so I would not want it to appear in any way, shape or form that the Government of the United States was paying a salary of only $400 to regular employees.

Mr. La Follette. Mark you, with all the defense, eloquence and caustic comment which has been interwoven here by the Senator from Alabama regarding the readiness of Congress to respond to the demands upon it, there was voted down two years ago every increase that had been proposed to the salaries of employees. It had occurred upon bill after bill as it had come into the Senate of the United States. I cannot recall now just how many times the Senate has gone on record against an increase in the salaries of the employees of the Government, but it has gone on record repeatedly in the face of all the testimony showing the justice of such increase at that time, a year ago, notwithstanding the Senator's approval of Congress as always being so responsive to the right thing.

Senators may recall that the Senate again and again voted down that increase of a certain percentage, 5 and 10 per cent, two years ago, on bill after bill, as it had been presented here, covering the employees of different departments. Finally there came before the Senate here one night the Indian Appropriation Bill in the form of a conference report, and it happened that I had gathered together a lot of data upon the subject, not only of increases that Senators had voted to themselves, but the increases they had voted to various other highly salaried public officials. Furthermore, I had prepared by the statistician of the Bureau of Labor a record of the past salaries of the employees of this Government.

I may state that too broadly, and I do not wish to be in error in any respect; but at least I am safe in saying that the employees of the Treasury Department were covered by the data that he furnished me. That data I read before the Senate that night. Do you remember what it showed? It showed that since 1855 there had not been an increase of the wages of the employees of the Treasury Department. It is not necessary for me to say, Senators, that the same thing prevails with regard to other departments of the Government, because you do not raise the salaries of the employees of one department without raising the salaries of employees of another department.

But, Mr. President, the matter which I presented in a 20 or 30 minute speech that night to the United States Senate was so appealing, taken together with the roll call of their own vote for increasing their own salaries, that I succeeded in getting a vote in favor of adopting on the conference report on the Indian appropriation bill an increase of 5 and 10 per cent to employees then in the office of the Bureau of Indian Affairs.

Do you see what followed that? The fact that that was voted that night put the salaries of the employees of that bureau on a higher level than the employees of other bureaus and other departments of the Government. So it led logically to raising the salaries of the employees of all the other departments. As it finally worked out in the various Congresses it gave a salary raise of $120 a year, which was called a bonus. It was not a salary raise; it is not something that will continue. It is just a sort of gift temporarily to tide over these times when prices are high and people are complaining about the cost of living. Do not let any employee of the Government fancy that he has gotten a permanent statutory increase in his salary, because he has not. The salaries, as I understand it, stand by law and statute just where they did first in 1855. You have not done anything more for these people who work for the Government. You have done something more for yourselves. My friend from Alabama, or the Senator from Alabama——

[At this point Mr. UNDERWOOD interposed for the purpose of citing the CONGRESSIONAL RECORD of the Fifty-ninth Congress, when he was a member of the House of Representatives, to show that he voted against raising the salaries of Congressmen from $5,000 to $7,500 a year.]

I remember in the discussion that night, in appealing to Senators, I had turned to the old CONGRESSIONAL RECORD on the salary increase, and since the Senator from Alabama has raised the question as to how I might have voted at that time, I take the liberty of reading into the RECORD the vote on that occasion as I read it into the RECORD two years ago. The yeas were 53, the nays were 21. [Of those who are still members of the Senate the following voted *yea:* Brandegee, Dillingham, Knox, Lodge, McCumber, Overman, Penrose, Simmons, Smoot, Sutherland, Warren; and these voted *nay:* Culberson, La Follette, Nelson.]

Mr. SMOOT. Two years ago when the vote was taken for the increase of salaries, I think the first time the amendment was agreed to it was on one of the appropriation bills—the legislative, as I remember—but in the

conference they would not agree to it and sent it back here. The House would not agree to the amendment offered by the Senate. The Senator knows I did what little I could to secure that legislation and fought for the amendment at that time.

While it is true that I voted in 1905 for an increase of salaries for Senators and Congressmen, I take it for granted that anybody in the United States would feel that a Senator who did his duty was worth that amount of money.

Mr. LA FOLLETTE. I am not suggesting; I have not raised the question here; I have not intimated that the increase of salaries of judges was not proper. I have not intimated that the increase of the salaries of the Senators was not proper. I simply took the position, so far as I am concerned myself, that I would not vote for an increase of salary during the term for which I was elected. I felt that my services were worth more than $5.000 a year—the amount of salary at that time. You cannot find anywhere a suggestion from me that the increases in salaries to which I have called attention here tonight are unjust or improper. I realize the fact that the very conditions to which I have called attention here tonight, the iniquitous conditions that have been permitted to grow up under a free democratic Government, increasing unjustly and unlawfully the cost of living upon the American people, made it necessary that if a man is going to live within his salary and be honest he has got to have an increase commensurate with the increases that these unlawful combinations are able to put upon him.

It is very far from me to offer such a suggestion, and the suggestion of the Senator from Alabama that my attitude has been one of hostility for the purpose of raising class prejudice here to these increases in salaries is very unjust upon his part. Never can you find a word in the RECORD on my part making an appeal of that sort.

Mr. President, I know that I am overtesting the patience of the Senators. The Senator caught me up on this $420 salary. I believe I did mention that $420 salary. I believe the Senator from Utah dwelt at some length upon that $420 salary.

I knew that the charwomen did not work 8 or 10 or 12 hours a day; but how about the $620 and the $720 salaries, that did not reach up to the cost of maintaining a family, or the $900 salaries, that are only $20 above the cost of maintaining a family in 1914, as established by a scientific investigation at New York, in which—and I have the table here before me—only $20 was allowed for medicine and doctor bills?

There is no use dwelling upon this thing. You have made your record. The committee was appealed to to make this $360 increase. It did not do it. It brought in the bill in a form in which no amendment could be proposed here which under our rules could be considered by the Senate, and therefore we could not have it tried out by the Senate. Therefore we have given to these people with these meager salaries an increase of $120 a year over the salaries which they have been drawing to meet the increased cost of living that has resulted in the last year.

The Senator from Alabama is very hopeful that prices are going to decline. Of course, he does not guarantee it and he will not be around to make up any losses to you if they do not happen to decline. I hope they may decline, but I have been glancing over the testimony given by the Armour-Swift combination before the Committee on Agriculture of the United States Senate, and it does not hold out much hope to me that there will be a decline. I very much fear you will find at the end of the year prices in some respects higher than they were at the beginning of the year.

Why Employees of War Bureaus Will Not Receive the $240 Salary Increase

The thousands of employees of the Bureau of War Risk Insurance and of other war bureaus naturally want to know why they are excluded, either in part or altogether, from the benefit of the $240 salary increase for the fiscal year 1920 granted by Congress to the civilian employees of the Government in general.

The discussion in the United States Senate which is reproduced below throws considerable light on this subject.

[The Legislative bill as passed by the House of Representatives made no provision for an emergency increase in salary for 1920 for the employees of the Bureau of War Risk Insurance or of other war bureaus.

The Senate Appropriations Committee proposed an amendment, as below.]

The committee amendment provides "that employees of the Bureau of War Risk Insurance shall receive increased compensation at one-half the rate allowed by this section for other employees. *Provided,* That employees of said bureau who are compensated at rates below $400 per annum shall receive additional compensation at the

rate of 60 per cent of the annual rates of compensation received by such employees," so that the section as amended shall read:

The provisions of this section shall not apply to the following: Employees paid from the postal revenues and sums which may be advanced from the Treasury to meet deficiencies in the postal revenues; employees of the Panama Canal on the Canal Zone; employees of the Alaskan Engineering Commission in Alaska; employees paid from lump-sum appropriations in bureaus, divisions, commissions, or any other governmental agencies or employments created by law since January 1, 1916, except that employees of the Bureau of War Risk Insurance shall receive increased compensation at one-half the rate allowed by this section for other employees: *Provided*, That employees of said bureau who are compensated at rates below $400 per annum shall receive additional compensation at the rate of 60 per cent of the annual rates of compensation received by such employees.

[Senator CURTIS of Kansas offered an amendment to the committee amendment providing that the employees of the Bureau of War Risk Insurance shall receive the increased compensation allowed for other employees; that is, at the rate of $240 per annum.]

Mr. CURTIS. What I want is to have the employees of the War Risk Insurance Bureau put on the same plane as to salary as the employees of other bureaus of the Government. I know it is contended that when these clerks were employed their salaries were fixed so as to include the $120 allowance made last year in the appropriation bill to the regular statutory employees of the Government, but I do not think these clerks were employed with any such understanding.

I wish to read two telegrams that were sent to clerks appointed in the War Risk Insurance Bureau to show that there was no indication of that kind given to them. Here is a telegram sent out on September 11, reading as follows:

Appointed clerk. Bureau of War Risk Insurance, New National Museum, Tenth and B Streets, $1,100 per annum. Report immediately, or before September 20. Services urgently needed. Early promotion, if service proves satisfactory. Wire.

The person who received that telegram reported, was employed at $1,100, has received no increase, and is still working for the bureau.

I read another telegram, dated September 14, which is as follows:

Appointed typist, $1,100 per annum, War Risk Insurance. Chance of promotion, if merited, good. Wire earliest can report at destination. Service urgently needed.

That young lady reported. She started to work at $1,100 and is still drawing $1,100. It will be seen that a promise of promotion was offered, but it has not been kept; and yet in

Digitized by Google

this bill, instead of getting the allowance that has been given to other government clerks, the employees of the War Risk Insurance Bureau are only given one-half. I hope the amendment offered by me will be agreed to.

Mr. UNDERWOOD. Mr. President, I desire to say that there is no item in this bill to which the subcommittee in charge of it gave more careful consideration than this item in reference to the bonus to the employees of the War Risk Insurance Bureau. It was left out of the bill last year, for the reason that it has been the policy of the Congress in adopting this bonus not to apply it to those bureaus that were entirely war emergency bureaus, and the committee last year had the idea that the War Risk Insurance Bureau was of that class, although so far as the insurance features of that bureau are concerned it becomes a permanent bureau.

The reason the distinction was made between the old bureaus and departments of the Government and the war emergency bureaus which were established here, was that the clerks in the emergency bureaus were paid out of a lump sum; there was no limitation; there was no statutory provision for those temporary clerks; and undoubtedly they were paid a great deal more salary than the clerks in the regular bureaus. The effort of the Congress and of the committees of Congress was to equalize those salaries, to take care of the statutory clerks whose salaries were not increased and of the clerks in the old bureaus employed under lump-sum appropriations who were on the same basis.

Mr. CURTIS. Does not the Senator think that the fact that these clerks received telegrams stating that they were appointed at $1,100, and that there would be early promotion, entitles them to some consideration?

Mr. UNDERWOOD [Ala.]. I do not think that alone should determine the matter. We could not increase the clerical force of the Government and their salaries to an amount perhaps of $4,000,000 or $5,000,000 a year because the head of a bureau wired one or two clerks that, if they would come here, he would give them an increase over their initial salary. That would be an impossible proposition. It might have been a very unust thing for the head of the bureau to have done; but it would not justify Congress in giving a general increase all along the line. However, that is not my argument.

Mr. CURTIS. I only read two telegrams, but I had at least 50 clerks, who were employed at $1,100, tell me that they had received similar telegrams.

Mr. UNDERWOOD. That may be;

but I want to come to the real details Young ladies employed in the Bureau of War Risk Insurance came before the committee and urged this increase. They all believed they were getting smaller salaries than anybody else—I have no doubt about that—because they could point to a clerk here or a clerk there in some other department or bureau who was getting more salary than they did; but we sent for the heads of this bureau and examined them, and also had a report from the efficiency commission of the Government, and we found that their salaries last year were placed on a basis to equalize the increase of $120 which we gave to the statutory clerks. Unless we are willing to reject the testimony of Mr. Brown, the head of the Efficiency Bureau of the Government, whom we sent down there to look into this matter and report to us, we must believe that these clerks got that $120 last year by reason of its being provided in the lump-sum appropriation that was made to run the bureau.

Mr. SMOOT [Utah]. One hundred and twenty-nine dollars was the actual average.

Mr. UNDERWOOD. The Senator from Utah calls my attention to the fact that the actual amount which they got by way of increase was $129. That being the case, if the Senate gave them the entire increase of $240 carried in this bill, instead of equalizing their salaries with the salaries of other clerks of the Government on the statutory roll, we would be putting them $120 above the other clerks. We have attempted to equalize the salaries. We have carefully examined the facts, and there was not a dissenting voice in the committee as to what the result was after we heard the testimony. I am absolutely certain, from the testimony, that if we let this bill remain as it is, we put the clerks in the War Risk Insurance Bureau on exactly the same basis of pay as the average pay in the general statutory bureaus of the Government.

Mr. SMOOT. Mr. President, I have had a great desire to have all of the employees of the Government receive equal treatment under this provision. The bill passed the House with no mention whatever of the Bureau of War Risk Insurance, as it was not provided for in the bill a year ago. The Bureau of War Risk Insurance, when it began to employ clerks, typists, and stenographers shortly after its organization, paying them out of a lump sum, paid higher wages than most any other department of the Government. Senators know themselves that they lost their own clerks; they

Digitized by Google

were taken away from them; and many of them went to the War Risk Insurance Bureau. In the investigation a year ago it developed that they were paid higher salaries than the clerks in many of the other departments when the clerks in the other departments were paid an additional amount of $120 as they were a year ago.

When the House passed the pending bill, as I said, they gave a $240 increase instead of the $120 which was given a year ago; but they still left out the War Risk Insurance Bureau, and we began an investigation as to whether that was fair to that bureau. It developed—and I have the figures here to prove it—that between the passage of the legislative bill for the present fiscal year and the present time there has been an average increase of $129 in the salaries of employees in that bureau. That increase was made upon the order of the head of the department of which the bureau is a part. The Bureau of Efficiency, with Mr. Brown at its head, went into the whole question. I have here a long statement, which I do not wish to burden the Senate with at this time, showing that that increase was made; and not only that, but it is now agreed that there shall be further increases in the bureau after a service of three months.

Mr. CURTIS. Those increases have not been given. I have read 2 telegrams on the subject, and I could have read 50 more.

Mr. SMOOT. No matter whether this provision is adopted or not, they are going to receive the agreed increases. If the Senator doubts it, I have here a statement from the Bureau of Efficiency stating just what the agreement was and how the salaries should be increased.

Mr. TOWNSEND [Mich.]. Mr. President, are these all temporary salaries?

Mr. SMOOT. They are all paid out of a lump sum.

Mr. TOWNSEND. But are they temporary—for one year?

Mr. SMOOT. No.

Mr. LODGE [Mass.]. They are not statutory clerks.

Mr. SMOOT. They are not statutory salaries. They are fixed by the bureau at the time they are employed.

Mr. FLETCHER [Fla.]. Do I understand the Senator to say that within three months the employees of this bureau will be receiving the same as the employees of other bureaus?

Mr. SMOOT. They will receive the same as the other employees will receive if the others get the $240 increase, and the employees in the Bureau of War Risk Insurance get only the $120. That $120, given to the employees of the War Risk Bureau,

places them upon an equality with the others, as nearly as it is possible to place the employees of all of the departments of our Government upon an equality.

I know that the employees of the bureau say that the average compensation in that bureau is not as high as in the Department of Justice, or the Federal Trade Commission, or the Quartermaster General's Department, or the Department of Commerce. That is very easily accounted for. There are over 5,500 employees in the War Risk Bureau drawing a salary of $1,100; or, in other words, they are all employees from typists down. I have here a letter from the Civil Service Commission in which it is stated that many of those employees receiving $1,080 are doing work that requires no preparation and no particular ability, and therefore the Civil Service Commission think the salaries they are receiving now, if the $120 is added, will be ample.

Every young lady who appeared before the committee who was asked what salary she was receiving, was receiving over $1,300, and with the $120 added it means that they will be receiving about $1,450 a year; and there are a great many of them. I could go into the details and tell just exactly how many there are, but I believe enough has been said to show the Senate that the committee wanted to do the right thing by all of the employees of the Government.

If an effort should be made upon the part of any Senator to increase the $240 bonus to $360, then, of course, of necessity, the $120 increase for the War Risk Insurance Bureau ought to be increased to $240. That should be done in case the other bonus is increased to $360.

Mr. LENROOT [Wis.]. I will state that I made an investigation and came to the same conclusion that the committee did; but I should like to ask the Senator whether he has information there as to the lowest salaries paid in this bureau?

Mr. SMOOT. Yes; I can tell the Senator in just a few moments what they are, and there are only a few of the employees who are receiving less than $1,100. I will run through this statement, and tell, in a moment, just what departments they are in.

The filers in the section of correspondence are receiving $1,140. Whatever filers there are, are receiving $1,140.

The typists in the same section are receiving $1,140.

The sorters—that is, the incoming sorters, meaning those who sort the mail as it comes into the section—receive $1,080; and the sorters on the

outgoing mail, where it is distributed to the desks of the heads who handle it in detail, receive $1,140.

In the claims division the typists receive $1,140, and they are the only employees in that whole division who receive less than $1,200.

Mr. LENROOT. Has the Senator a memorandum there of any that receive a salary of $660?

Mr. SMOOT. There are the graphotype operators, who receive $900; the miscellaneous mail clerks receive $1,080; the numbering clerks receive $1,080; the dropping and stitching clerks receive $1,080; and the punchers receive $900.

Mr. LENROOT. Is it the Senator's understanding that that is the lowest salary that is paid in the bureau?

Mr. SMOOT. I will say to the Senator that that is the lowest salary that is being paid in the bureau today.

Mr. Smoot subsequently said: I ask, following my statement made a a few moments ago, to have printed in the RECORD a memorandum furnished by the head of the Bureau of Efficiency in relation to just what has been done in the way of increased salaries in the War Risk Insurance Bureau.

The matter referred to is as follows:

JANUARY 24, 1919.

MEMORANDUM

At the hearings before the Committee on Appropriations of the House last year, the representatives of the Bureau of Efficiency and the Bureau of War Risk Insurance promised the committee that they would fix standard salaries for the different kinds of work performed in the Bureau of War Risk Insurance and pay the employees according to the value of their services as nearly as that value could be determined. This work was undertaken by representatives of the Bureau of Efficiency, and the standard salaries were designated. These standard salaries were submitted first to officers of the War Risk Insurance Bureau and later to representatives of the House Committee on Appropriations. In most cases this standardization has resulted in raising the pay of employees engaged on the different kinds of work.

Entrance salaries of $1,000 for clerks and typists and $1,100 for stenographers were fixed by officers of the Bureau of War Risk Insurance last spring. At about the same time the entrance salary for clerks and typists was raised by the War Department to $1,100 and for stenographers to $1,200, with a promise of an automatic promotion of $100 at the end of three months' service. This created dissatisfaction among the employees of the Bureau of War Risk Insurance and since the classification work required considerable time it was finally decided by the Bureau of Efficiency in the early part of August to recommend that an automatic increase be given to all employees of the Bureau of War Risk Insurance who had been in the bureau three months and who had not been promoted. This increase was made effective August 16. A little later great difficulty was experienced in securing satisfactory eligibles from the Civil Service register at the entrance salaries offered by the Bureau of War Risk Insurance and with a view to

overcoming this difficulty, the Bureau of Efficiency recommended that the entrance salary of clerks and typists be raised from $1,000 to $1,100, and of stenographers from $1,100 to $1,200. This recommendation was also adopted. Shortly after this a third recommendation was made that any clerks and typists who had been appointed by the bureau at less than $1,100, and any stenographers who had been appointed at less than $1,200 and who were receiving less than those salaries should be promoted to those salaries. This recommendation was also adopted. These various recommendations were made because it was found that under the classification these blanket increases would in very few cases raise the pay of the employees above the standards that were being prepared. In the early part of September the Bureau of Efficiency began to submit to the Bureau of War Risk Insurance its standard salaries for the different kinds of work. These were generally adopted and promotions under them put into effect. These standards are shown in the tables appended to this memorandum. In many cases the promotions made under these standards did not bring the clerks up to the standards because it was felt that at the first rating no one should be promoted more than $240 a year, no one should be promoted to more than the standard salary for the work he was doing, and no one should be promoted who had not been in the bureau at least three months.

On July 1 the average salary of employees in the Bureau of War Risk Insurance was $1,017. The average salary on December 1 was $1,119, or an increase of $102. This increase was due to the blanket promotions, to the raising of entrance salaries, and to the increases under the standard salaries that had been adopted by the bureau. Since December 1 further standard salaries have been submitted to the bureau that, when adopted and promotions made under them, will bring the average salary up to $1,141, or an average increase of $124.

The question to be considered is whether or not the blanket increase of $240 or some other amount should be granted to the employees of the Bureau of War Risk Insurance. In fixing the standard salaries shown in the accompanying schedules, the Bureau of Efficiency endeavored to take into account the increased cost of living, the compensation paid in other offices of the Government and in commercial establishments, and these standards are intended to correspond to the pay in other offices of the Government where the bonus of $120 is paid. An examination of the standard salary schedules attached will aid in determining what bonus should be given the employees in the Bureau of War Risk Insurance. [Lack of space prevents inclusion of these schedules, which should be examined with care by those especially concerned therewith. They will be found in the CONGRESSIONAL RECORD of February 20, 1919, pages 4018-4020.—EDITORS.]

It should be stated that because of the rule which was adopted that no promotion should be made until an employee had served at least three months, and that no promotion should be made of more than $240 at one time, there are still thousands of persons in the bureau who are receiving less than the standard pay fixed for the kinds of work they are performing. Under the rules laid down for fixing the value of the services of employees a clerk performing a quantity and quality of work far above the standard might be paid more than the standard salary, but since the first ratings were made in great haste, and were therefore more or less imperfect, the rule was adopted that no promotion above the

Digitized by Google

standard salary should be made at the first rating.

The salaries have been standardized and promotions made under them in the following divisions: Allotments and allowances, accounts, actuarial, and compensation and claims. The standard salaries, and recommendations for promotions under them, have been submitted in the following offices, but so far as we are informed the promotions have not yet been made: Administrative, insurance, legal, and receipts and disbursements.

The increases that have been made in the salaries paid to employees in the Bureau of War Risk Insurance since last July have amounted to more than a million dollars a year. The recommendations already made, but which have not yet been acted on by the bureau, will bring this amount up to $1,300,000 a year. With subsequent ratings under these standard salaries, this amount will be still further increased. The amount of this increase cannot be stated at this time.

[The Senate then defeated the amendment offered by Mr. CURTIS raising from $120 to $240 the salary increase for 1920 for War Risk Insurance employees.]

Mr. THOMAS [Colo.]. Mr. President, I should like to ask the Senator having charge of the bill what the aggregate amount of this increase of salaries will be if the bill passes with the committee amendment?

Mr. UNDERWOOD. I send to the desk and ask to have read by the Secretary a letter from Mr. Herbert D. Brown, chief of the Bureau of Efficiency, stating the facts in answer to the Senator's question.

In this letter dated February 4, 1919, Mr. Brown says that a statement from the Treasury Department "shows that for the six months ending December 31, 1918, the actual expenditures on account of the $120 provision amounted to $7,284,007. At this rate the total expenditures for the year would be $14,568,000 or $32,000 less than our estimate.

"It is impossible within the time available to make a very careful analysis of the probable cost of the proposed bonus of $240 a year but I believe that in most instances the number of employees included in our estimate of last year will not vary greatly during the ensuing year. On this assumption, the cost for the current year of $14,600,000 should be doubled. This would bring the cost up to $29,200,000. To this amount should be added the cost of whatever allowance is made to the employees of the Bureau of War Risk Insurance. As I understand it, the employees of that bureau are to receive $120 instead of $240 because the allowance of $120 for the current year is included in the standard salaries that have been adopted by the bureau. It is difficult to estimate the number of employees that will be required in the Bureau of War Risk Insurance during the fiscal year 1920, but if we assume the roll to include 13,000 people, then we should add $1,560,000 to the $29,200,000 mentioned above. This will bring the total cost of the $240 increase up to $30,760,000. I know of no other offices where large increases are likely to occur.

"If increased compensation is granted employees at the rate of $360, the cost of $29,200,000 mentioned above would be increased by 50 per cent, or $14,600,000, making a total of $43,800,000. To this amount should be added $3,120,000 ($1,560,000×2) for the employees of the War Risk Bureau, or a grand total of $46,920,000.

"I have made no allowance for any reduction in the civilian clerical force of the War Department. A large reduction will be made in the clerical force of that department through the discharge of drafted men engaged on clerical work. The large amount of salvage and accounting work yet to be done by the department will probably make it necessary to keep all of the civilian clerks they now have."

SALARY INCREASE PROPOSED FOR ALL WAR BUREAU EMPLOYEES

Mr. SHEPPARD [Tex.]. Mr. President, the object of the amendment [referring to an amendment just offered by him to the pending committee amendment] is to put all the bureaus and divisions that have been created since January 1, 1916, on the same basis the committee places the War Risk Insurance Bureau. The representatives of the Federal employees had the following to say about it:

Furthermore, the specific mention of the War Risk Bureau in the Appropriations Committee's report creates certain inequalities with respect to other war bureaus or divisions in older departments created by law since January 1, 1916, where the salaries have not been fixed upon the basis calculated for the War Risk Bureau—in fact, have been fixed on a prewar basis. In order to adjust this inconsistency and at the same time, we believe, to carry out the intent of the Appropriations Committee, we suggest the amendment above mentioned.

Mr. UNDERWOOD. Mr. President, I do not think that will do. We carefully investigated the proposals that came before the committee. Several other bureaus have been created since, and we investigated them like we did this bureau. We found they were getting the increased salary already, and that they were being paid under lump-sum appropriations. If you adopt this amendment, I will not say that every clerk in the Government, because I cannot see that far, but if you adopt this amendment you are going to lift a lot of clerks who have already been getting higher salaries than the statutory clerks and pay above the basis. The Senate cannot afford to do that. It is a question if you are going to equalize salaries to have a committee that will work it out. I will say to the Senator in reference to every one of these proposals of these other bureaus we gave them careful investigation.

Mr. SHEPPARD. Will not what the Senator says happen in the War Risk Insurance Bureau under the amendment you have presented?

Mr. UNDERWOOD. No; we investigated the War Risk Insurance Bureau, we had the Bureau of Efficiency investigate it, and on that report made this increase in the language we did, to equalize it with the statutory bureaus. You are playing in millions on this question. I think it would be most unwise to bet the game blind, and that is what it amounts to.

Mr. LENROOT. I would like to ask the Senator from Alabama in what respect the employees of the War Risk Bureau differ from the employees of these other bureaus.

Mr. UNDERWOOD. I will say to the Senator that we have an old statutory roll here that fixed the salaries before the war of most clerks, not absolutely equal, but in the main they were carried in the same class of salary. There were certain lump-sum appropriations that were from time to time given to these bureaus and departments, and the salaries under the lump-sum appropriations were fixed at that basis. But then the war came along and a large number of new bureaus, some of them temporary bureaus for the war purposes, and some that are proving to be permanent bureaus, were established with no limitation on the pay roll, but just a lump sum thrown out and the head of the bureau was told to employ people. On our investigation we found that the basis of salary which was fixed at that time was way above the statutory salary and the statutory pay as the basis for other clerks. Our effort here has been merely to equalize that. More than that, the clerks in the War Risk Bureau came here under a war basis and under a war salary. They got an increase that was so satisfactory that it has attracted them from other positions to come here and get this increased salary. That is not true of the old bureaus.

Mr. LENROOT. No; my inquiry was not as to the old bureaus, but as to the difference between the employees in the War Risk Bureau and the employees in other bureaus created since January 1, 1916.

Mr. UNDERWOOD. I will explain that the War Risk Bureau was established originally on the basis of a statutory bureau. Then there was the increase given to them to equalize or more than equalize the increased bonus we gave to statutory bureaus last year; but these other bureaus, as far as we investigated them, not only had more than that increase, but vastly more in salary. I am not speaking about individuals, but I am speaking about averages. We could not go into individuals. The salaries were vastly more and are more now than that of the clerks in statutory bureaus with the bonus added.

Mr. LENROOT. That may be true of the higher positions, but is that true of the ordinary grade clerk?

Mr. UNDERWOOD. It is more true of the low position than it is of the high position.

Mr. LENROOT. Mr. President, from such investigation as I have been able to make, which accorded with the investigation made by the committee so

far as the Bureau of War Risk Insurance is concerned, I have not been able to find any distinction between the employees of the War Risk Bureau and the employees of these other bureaus. It does seem to me that they all ought to be put upon an equality.

When the Senator says that the employees of these other bureaus are now receiving the benefit of the $120 increase, that is true; but so are the employees of the Bureau of War Risk Insurance now receiving the benefit of the $120 increase. If we are to give a further increase of $120, as this bill does, to the regular employees that it gives to employees of the War Risk Bureau, I cannot for the life of me see why the employees in these other bureaus should not be entitled to the same increase.

[The Senate then rejected the Sheppard amendment designed to place on the same footing as War Risk employees, employees of other bureaus and divisions created since January 1, 1916; and agreed to the committee amendment, carrying salary increase of $240 for employees in general and $120 for War Risk employees.]

ANOTHER "BORLAND AMENDMENT" VOTED DOWN IN SHORT ORDER

[Mr. THOMAS of Colorado offered an amendment in substance requiring of government employees not less than eight hours work per day.

Mr. THOMAS discussed his amendment as follows:]

Mr. President, just a word in regard to this amendment. A very substantial increase will be made to this bill for the compensation of employees, and the Senator having the bill in charge has told the Senate that an attempt has been made to equalize the compensation as far as the committee could do so. In connection with this increase, which in the aggregate is enormous, and in connection with the attempt to equalize the compensation, there should also be an effort to equalize the hours of employment.

It is the purpose of this amendment to place within the excepted classes those employees who do not at present serve the Government the usual number of hours generally prevailing—that is to say, eight hours.

[The Thomas amendment was rejected without further discussion.]

Recent Decisions of the Comptroller

Below will be found abstracts of decisions recently made by the Comptroller of the Treasury which, it is believed, are of special interest to our readers.

Continuance of Appropriations, Department of Agriculture

The appropriation made by the joint resolutions providing for the continuance of necessary operations of the Department of Agriculture as they were carried on at the close of the fiscal year 1918 provides for an item in the former appropriation, if for a necessary operation, and is available during the period covered by said resolutions, regardless of whether or not specific appropriation is made in the later general appropriation act.—*Acting Comptroller Foree to the Secretary of Agriculture, December 2,* 1918.

Injured Employees' Compensation

The amount collected by the Employees' Compensation Commission from a third party because of the latter's liability for the death of a government employee may not be deposited in the compensation fund, but, after deducting the amount of any compensation already paid to the beneficiary as prescribed by the act of September 7, 1916, the remainder, if any, should be paid to said beneficiary.—*Acting Comptroller Force to the chairman United States Employees' Compensation Commission, December 3,* 1918.

Increase of Compensation of Civilian Employees

The increase of compensation allowed to employees of the War Department for Philippine service is not a special allowance because of service in a foreign country within the meaning of section 6 of the act of July 3, 1918.—*Acting Comptroller Foree to the Secretary of War, December* 5, 1918.

Leaves of Absence, Ordnance Department at Large

Civilian employees of the Ordnance Department at Large who are within the class of employees covered by the acts of August 29, 1916, and July 9, 1918, and who are granted leave without pay during their first service year may be allowed pay for such leave in lieu of leave with pay due them in the second service year.

Civilian employees of the Ordnance Department at Large who are within the class of employees covered by the acts of August 29, 1916, and July 9, 1918, and who continue in the performance of work throughout their first service year are entitled to be paid for the leave of absence earned during said year in addition to and at the rate of pay provided for the regular work of such employees.

Disbursing officers are not responsible for the correctness of statements of fact appearing on pay rolls of which they can have no knowledge but which are certified to by the proper administrative officers; they are, however, responsible for the correct application of laws and regulations to the statement of facts certified, and for the sufficiency of the facts stated.—*Acting Comptroller Foree to Capt. John M. Lee, disbursing officer, Ordnance Department, United States Army, December* 6, 1918.

Compensation of Member of Selective Draft Board

The payment of additional compensation to employees of the District of Columbia serving as members of selective draft boards, which is based upon the number of men inducted and therefore in the nature of fees rather than salary, is not within the prohibition of the act of May 10, 1916, as amended.—*Acting Comptroller Foree to the Secretary of War, December* 12, 1918.

Compensation for Holidays

October 12 and November 11, 1918, not being holidays designated by law, government employees who were not excused from duty are not entitled to additional compensation for the work performed by them on such days.—*Acting Comptroller Foree to the Secretary of the Navy, December* 14, 1918.

I have your first indorsement of December 5, 1918, forwarding for decision a letter from the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, dated December 2, 1918, as follows:

"I have been requested by the secretary of our local union at the U. S. Navy Yard, Mare Island, California, to request a ruling from your department as to whether the two recent holidays—namely, October 12, Liberty Bond Day, and November 11, Victory Day—are considered by the department as being national holidays.

"This ruling is requested in the interest of the police force and other seven-day men employed in the navy yard aforesaid. I judge from the subject matter of my correspondent's letter that these employees have been denied extra compensation by the official in charge on the ground that the days aforesaid were not considered as national holidays."

The acts of January 6, 1885 (23 Stat., 516), February 23, 1887 (24 Stat., 644), and June 28, 1894 (28 Stat., 96), provide that certain employees of the Government shall be allowed holidays on "the first day of January, the twenty-second day of February, the fourth day of July, the twenty-fifth day of December, and such days as may be designated by the President as days for national thanksgiving, the day of the year which is celebrated as 'Decoration Day,' and the first Monday of September, known as Labor's Holiday," and receive the same pay as on other days.

"There is no law which provides that these employees of the Government shall be allowed holidays on October 12, Liberty Bond Day, and November 11, Victory Day," and receive the same pay as on other days.

"Employees of the Government who, owing to the nature of the duties required of them, could not be spared, and were not excused on October 12 and November 11, 1918, are entitled to one day's pay and no more. There is no law under which they are entitled to be paid any additional compensation for services rendered on those days. (77 MS. Comp. Dec., 1129, June 26, 1916.)

[The above decision seems to be of sufficient interest to warrant printing it in full.—EDITORS.]

Increase of Compensation of Civilian Employees

The provision of section 6 of the act of July 3, 1918, which requires the making of a certificate of eligibility to receive the increased compensation authorized by that section in the case of employees who "whether previously in the service or not" have entered the service since June 30, 1917, does not apply to the case of an employee who resigns from the service after

receiving the increased compensation referred to and is subsequently reinstated; such reinstatement not being an entry into the service within the meaning of the law.—*Acting Comptroller Foree to the Secretary of Labor, December 26, 1918.*

Increase of Pay of Civilian Employees

Employees of the Indian Service receiving $400 or more per annum, who are employed for a given number of months only and who are authorized to receive the increased compensation provided by section 6 of the act of July 3, 1918, are entitled to such additional compensation at the rate of $10 per month for every month they are in a pay status; if their total annual compensation is less than $400, the additional compensation should be reduced accordingly.

A person employed temporarily to fill a position requiring service for less than twelve months is entitled to the increased compensation provided by section 6 of the act of July 3, 1918, at the same monthly rate as the permanent incumbent would receive.

Employees whose services are required for limited periods, although under permanent arrangement, are not within the provision of section 6 of the act of July 3, 1918, which denies the additional compensation provided thereunder to employees whose services are utilized for brief periods at intervals.—*Acting Comptroller Foree to the Secretary of the Interior, January 3, 1919.*

Repeated Travel of Contractor's Employees

Where under a cost-plus contract a contractor was to be reimbursed for the cost of transporting employees required in connection with the work but not for repeated travel of such employees, an amendment of said contract not requiring the performance of any additional service but authorizing reimbursement for repeated travel under certain circumstances is without consideration and ineffective to authorize reimbursement for that item.—*Assistant Comptroller Foree to the Secretary of the Navy, January 10, 1919.*

Allowance of Per Diem in Lieu of Subsistence

The omission of a statement of authorized per diem rates from estimates of annual appropriations does not operate to prevent heads of executive departments or other government establishments from prescribing per diem rates of allowance not exceeding $4 from appropriations under their control.—*Decision by Assistant Comptroller Foree, January 22, 1919.*

Per Diem in Lieu of Subsistence

Where an employee of the War Department was ordered to temporary duty for which a per diem rate of $4 in lieu of subsistence was allowed, there is no authority for the imposition of further conditions by a disbursing officer before making payment of a voucher covering such per diem.—*Assistant Comptroller Foree to Maj. C. E. Gray, Quartermaster Corps, United States Army, January 23, 1919.*

Reduced Cost of Living

The night watchman was explaining the advantages of his job:

"Ye see, I work all night, and that way I save the cost of me lodging; and I sleep all day, and that way I save the cost of me board."—*Selected.*

National Federation of Federal Employees

(Affiliated to the American Federation of Labor)

ITS OBJECTS, METHODS, AND ORGANIZATION

The NATIONAL FEDERATION OF FEDERAL EMPLOYEES is an active organization of civilian workers in the government service, composed of representatives from virtually all branches except the postal service, the employees of which have organizations of their own.

The *Objects* of the FEDERATION are: To advance the social and economic welfare and education of the employees and to aid in the perfection of systems which will make for greater efficiency in the various services of the United States.

The *Methods* for attaining these objects are petitioning Congress, creating and fostering public sentiment favorable to proposed reforms, cooperating with government officials and other employees, securing the enactment of appropriate legislation, and other lawful means. Under no circumstances is the FEDERATION to engage in or support strikes against the United States Government.

The FEDERATION now comprises 120 local unions, located in nearly as many cities and towns throughout the United States, in Canada, and the Panama Canal Zone A list of these unions appears on pages 255 and 256. Additional unions are constantly being formed.

WHAT THE FEDERATION IS FIGHTING FOR

Adequate and proper salaries for the employees of the national civil service, including a minimum living wage.

Standardization and reclassification of the civil service, to the end that salaries and working conditions shall be fairly adjusted in the interest of the efficiency of the service and the well-being of the employees. *The creation recently of a Joint Commission on Reclassification of Salaries marks a decided step in this direction.*

Retirement of superannuated employees under a system which shall be equitable and beneficial to both the employees and the Government.

The right of civil service employees to adequate representation in connection with the regulation of the essential conditions of their employment, as salaries and wages, hours of labor, promotion and demotions, transfers, removals, and sanitation.

WHAT THE FEDERATION HAS ACCOMPLISHED

Although the formation of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES dates back only to September, 1917, and the present movement for the organization of civil service employees is but little older, much has already been accomplished—more than had been accomplished in this direction by federal employees without organization during many decades of helpless dependence on others.

More specifically, organization has been instrumental in bringing about, during the very brief period mentioned, these results, among others:

Substantial increases in salaries and wages. *For the fiscal year* 1920 *a general increase of* $240 *has been secured.*

Redress of many grievances of employees in various services of the Government.

The defeat of an attempt, both unnecessary and unjust, to fasten on employees of the Government a longer workday.

The arousing and marked development among federal employees of a spirit of self-reliance and cooperation, and of closer affiliation and sympathy with the great mass of the nation's wage-earners.

How Can I Help Our Magazine?

Members of our organization often say to the editors: "I am greatly interested in the magazine. What can I do to help?"

This is an admirable spirit, a spirit which, if translated into action, will go further than anything else toward making THE FEDERAL EMPLOYEE what we all wish it to be—OUR MAGAZINE, the magazine of each and every member of the N. F. F. E.

Members CAN DO MUCH toward this end. Among other things they can—

Contribute articles, letters, poems, and magazine and newspaper clippings on topics of general interest to our readers. Especially desirable are items regarding the personnel, doings, needs, and plans of our locals; suggestions as to improved methods of transacting government business, and means by which employees can increase their own efficiency; and letters discussing briefly and pointedly the various questions in which federal employees in general, as such, are most vitally interested.

Let the editors know often what features of the magazine they like or do not like, giving reasons for their preferences, and, if possible, constructive suggestions in the way of betterment.

Do not forget that suitable pictures add greatly to the attractiveness of the magazine.

"Use Is the Test"

P B. X Switchboard, 200 lines capacity

One of the largest Independent exchanges in the country. A Kellogg common battery multiple installation

KELLOGG SWITCHBOARD & SUPPLY CO.
CHICAGO, ILLINOIS

FEDERAL EMPLOYEES

The up-to-the-last-minute management in non-public industries finds it pays to provide employees with sanitary lunch rooms in which are used tables with pure white enameled iron bases and snow white glass-like tops, especially the variety with the raised rim (SANI-ONYX) and white enameled iron stools and SANI-ONYX Serving Counters.

Instead of losing money in providing employees with sanitary furniture and wholesome food, actual profits result through increased efficiency and a contented mind in a healthy body.

It is a good business venture and not philanthropy or charity, because loyalty and enthusiasm result to those who try to serve the welfare of employees.

Whatever you are getting is up to you

For Men—Society Brand and The Hecht Co. Clothes

These Clothes for Men are so good that we have no hesitancy in guaranteeing them from every angle—outside, inside—in every hidden stitch, thread, seam, fabric and finding.

And the best part about the styles is the fact that many models are made exclusively for us and for no other store in Washington—or anywhere else.

Suits are priced at $25 to $85 **Topcoats, $35 to $55**

The whole world of figures in only 10 keys—one for each numeral. Column selection eliminated—machine puts each figure into proper column automatically

"The Dalton will check an invoice like this in 35 seconds"

Making every multiplication and addition and furnishing a physical audit of work performed.

Most figure work, especially in the retail store or one-man office, is done by pencil and paper because the ordinary adding machine is not an efficient *calculating* machine. The Dalton is an efficient all around adding-listing-calculating machine *combined*.

The invoice above is typical of a retail hardware store. It involves a series of nine multiplications and two additional totals. The Dalton will check such an invoice in 35 seconds. Any business, large or small, has such work as proving invoices, preparing estimates, figuring sales, costs, profits, all involving *calculating*.

The Dalton gives the double service of a simpler, faster adding machine which multiplies as easily as it adds, thereby fitting the needs of business better by giving the retailer or one-man office a figuring machine which he himself can use and which will *add*, *subtract*, *multiply* and *divide*.

Hundreds of corporations have standardized on Daltons and use them in sales, cost, statistical and shipping departments. No special operator is required—the drudgery of calculating or adding is reduced to pleasant recreation and as for speed in straight addition or multiplication—the Dalton has no equal.

Choice of 50,000 users

The Pickands-Mather Co. of Cleveland has over 30 Daltons. Harry Wetzel, Assistant Manager of the Dock Department, says: "For 8 years we have been using the Dalton Adding Machine, getting new equipment as the need arose, until now we have over 30 of them doing various kinds of work."

Have a Demonstration

We will prove by demonstration in any office in America that the Dalton will figure the above invoice *in 35 seconds*, making every multiplication and addition and delivering a physical audit of work performed. Request this of any Dalton Sales Agent in the hundred leading cities—look for "Dalton" in your phone book. Descriptive catalog by mail upon request.

THE FEDERAL EMPLOYEE

Vol. IV MAY, 1919 No. 5

National Federation News

The Joint Commission on Reclassification of Salaries makes an important move in recognizing the collective bargaining principle on the part of the employees. Departmental committees on reclassification are appointed, the employees' representatives thereon being designated by our National Federation. Temporary salary increases granted classified Navy Yard employees. New certification for $240 salary raise not required.

DURING the last month the chief event of moment to civilian federal employees, whether in the ranks of the organized or not, is the progress made under the Joint Commission on Reclassification of Salaries, of which Senator A. A. Jones of New Mexico is chairman, in the all-important task entrusted to that body. In our last issue Secretary Keating of the commission stated very clearly certain broad principles underlying the work of his colleagues and himself which he holds as fundamental, and in this month's pages will be found the views of Senator Charles B. Henderson of Nevada, vice-chairman of the commission, on the same general subject.

PROGRESSIVE ATTITUDE OF THE COMMISSION TOWARD EMPLOYEES

The progressive attitude of the commission, in line with the expressions just referred to and others coming from its members, is shown by the formal action recently taken in recognizing the collective bargaining principle in dealing with the employees, pursuant to which they are to have a voice in the reclassification of salaries in the Civil Service.

A committee of three is provided for in each department or independent establishment of the Government, including the Government of the District of Columbia, one member of the committee to represent the head of the department or establishment, one to represent the employees, and one to represent the commission.

The Joint Commission on Reclassification has decided that the representatives of the employees shall be selected by the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, and such representatives whose names appear in the list printed below have been designated by President Luther C. Steward of that organization. All these, with the exception of Brother Dawson of F. E. U. No. 89, are members of Washington Local No. 2. Dr. W. Carson Ryan, Jr., representing the employees of the Department of the Interior, and Brother John W. Ginder, representing those of the Treasury Department, are, it may be added, President and First Vice-President, respectively, of Local No. 2.

DEPARTMENTAL RECLASSIFICATION COMMITTEES THUS FAR SELECTED

The following is the membership of the reclassification committees designated thus far for the departments and independent establishments here named.

(Members of Joint Commission designated by (*); departmental representatives in roman; employees' representatives in *italics*):

INTERIOR DEPARTMENT.—*Hon. Edward Keating; E. J. Ayers, chief clerk; *W. Carson Ryan, Jr.*

TREASURY DEPARTMENT.—*Hon. H. A. Cooper; Paul F. Myers, chief clerk; *John W. Ginder.*

DEPARTMENT OF STATE.—*Hon. H. A. Cooper; *George L. Brist.*

WAR DEPARTMENT.—*Hon. Charles B. Henderson; *Alphonso Rogers.*

DEPARTMENT OF JUSTICE.—*Hon. Courtney W. Hamlin; Charles E. Stewart, chief clerk; *E. M. Kennard.*

POSTOFFICE DEPARTMENT.—*Hon. Courtney W. Hamlin; Ruskin McArdle, chief clerk; *S. E. Blassingham.*

NAVY DEPARTMENT.—*Hon. H. A. Cooper; *Wm. S. Douglass.*

DEPARTMENT OF AGRICULTURE.—*Hon. Courtney W. Hamlin; Leon M. Estabrook, chief of Bureau of Crop Estimates; *J. R. Williams.*

DEPARTMENT OF COMMERCE.—*Hon. Edward Keating; E. W. Libbey; *J. Franklin Meyer.*

DEPARTMENT OF LABOR.—*Hon. Edward Keating; Ethelbert Stewart; *Emma Duke.*

INTERSTATE COMMERCE COMMISSION.—*Wm. A. Powers.*

PANAMA CANAL COMMISSION.—*Daniel J. Crowell.*

LIBRARY OF CONGRESS.—*Henry S. Parsons.*

DISTRICT OF COLUMBIA.—*Hon. Courtney W. Hamlin; *Edward M. Dawson,* member of F. E. U. No. 89.

For the more detailed work, as the various bureaus are taken up for reclassification, subcommittees are to be formed, to be composed of representatives of the department (or independent establishment) heads and the employees.

$120 AND $240 INCREASES GRANTED CLASSIFIED NAVY YARD EMPLOYEES

Effective April 1, "those members of the clerical, messenger and police force, including store men, store laborers, stock men and checkers, in the navy yard service, who have served six months, and who do not automatically receive the benefit of the $120 bonus" for the current fiscal year are to be allowed this increase from April 1 to June 30, 1919. Further, the same classes of employees will receive the benefit of the $240 salary increase "from July 1, 1919, until such time during the fiscal year ending June 30, 1920, as the rates of pay for such employees may be readjusted. These provisions will also apply to chief and supervising clerks, but will not apply to employees who are carried in ratings on the schedule of wages, supervisory mechanical employees, or draftsmen, whose compensation has been recently increased, nor to members of the various technical forces, as inquiry is now in progress as to a fair and just rate of pay for employees in technical ratings."

The announcement above set forth was made by Acting Secretary of the Navy Roosevelt under date of April 3, in a letter addressed to President Steward of our National Federation. "The department's action," it is explained, "is taken in view of the lack of funds under its appropriations, which prevents it from increasing the rates of pay for such employees, but the bonuses authorized by the acts approved July 3, 1918, and March 1, 1919, respectively, are paid from moneys in the Treasury not otherwise appropriated."

The Acting Secretary's communication, from which the foregoing excerpts are made, was in response to a letter addressed him on March 27 by President Steward stating that, with regard to "the wage scale of the classified employees in the various navy yards," no action had been taken by the Navy Department for their relief since the matter was placed before the department November 22 last, and pointing out that some temporary relief could be granted by allowing them the $120 increase this fiscal year and the $240 increase for the fiscal year 1920.

NEW CERTIFICATION FOR $240 INCREASE NOT TO BE REQUIRED

In a recent letter to the Secretary of Agriculture, the Comptroller of the Treasury rules that government employees who have already been certified as entitled to a temporary salary increase will not require new certification to entitle them to receive the $240 increase provided for the fiscal year 1920.

Executive Council of the National Federation Meets

MUCH BUSINESS of interest and importance to the membership of our organization was transacted by the Executive Council of the National Federative Council of the National Federation during the two-day session recently held at headquarters in Washwith the exception of Fifth Vice-President Nagl, who found it impossible to attend, were present, namely: President Luther C. Steward, Vice-Presidents Junker, Leonard, Etheridge, Griffith, Kinsell, and Wiegand, and Secretary-Treasurer Newmyer. National Organizer Roy E. Peabody and Organizer Gertrude M. McNally were also present.

The council agreed unanimously that President Steward should devote his entire time to the work of the organization, and satisfactory arrangements were made to that end.

Secretary Edward Keating of the Joint Commission on Reclassification of Salaries had a conference with the council with the view of establishing close cooperation in dealing with the great task which confronts the commission.

In pursuance of the instructions of the Chicago convention, the council took up the investigation of the feasibility of providing for our membership insurance of some kind—life, health or accident, or a combination of these. An expert from New York City explained at some length the several forms of insurance most desirable in such cases, stating that a saving in cost of probably 10 per cent (exclusive of dividends) over the individual commercial rate could be expected. All policies would be reinsured in one of the large standard companies. A novel feature would be monthly premium payments. Further, health insurance for women could be furnished on the same terms as for men, a condition which does not now exist. It is the intention of the council to continue the investigation.

The decision was reached that early action should be taken through the legislative committee for the purpose of securing the repeal of the legislation which prohibits interdepartmental transfers in the government service.

On motion of Miss Etheridge it was ordered that a minute be adopted as follows and be published in the next issue of THE FEDERAL EMPLOYEE:

Be it resolved, By the Executive Council that wherever legislation is introduced in state legislatures, and local organizations of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES are invited to participate in campaigns in its behalf, the president of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES be advised by such locals of the nature of the proposed legislation, in order that the general principles for which the N. F. F. E. stands may be consistently followed in all legislation to be supported by its locals.

The following delegates were selected to represent our National Federation at the convention of the American Federation of Labor to be held at Atlantic City beginning June 9: President Luther C. Steward, and Vice-Presidents Etheridge, Junker and Leonard. Alternates, Vice-Presidents Kinsell and Wiegand.

Miss Gertrude M. McNally was named a delegate on the part of the National Federation to the annual convention of the National Women's Trade Union League, which is to meet in Philadelphia June 2.

Vice-Presidents Junker, Wiegand, and Kinsell were appointed a committee to formulate as soon as possible a comprehensive plan for intensive organization of federal employees in all the states.

Miss Johnstone, field organizer of the National Civil Service Reform League, personally invited representatives of our National Federation to attend the state convention of the league, to be held in the near future in Philadelphia. President Steward stated that he had accepted an invitation to make a brief address on that occasion, an announcement which met with the approval of the council.

The Executive Council will meet again June 6 at national headquarters in Washington.

Report of Auditing Committee, N. F. F. E.

"The Committee on Audit, assisted by an accountant, has carefully examined the books of the National Federation of Federal Employees and finds that all expenditures for the period up to and including December 31, 1918, have been duly vouched for, and all bank checks covering said period examined and reconciled with the the bank account. The books indicate total revenue from all sources of $30,388.14; and total expenditures of $26,402.97."

The foregoing statement, under date of April 23, is signed by J. W. Ginder, of Washington Local No. 2, chairman of the Committee on Audit. The other members of the committee are Messrs. John Fitzgerald, of the New York City Union, and John B. Corken, of the Rock Island (Ill.) Local.

Digitized by Google

In "Field" and Capital

Rapid and steady growth of our organization continues. Federal employees join hands across the Pacific with the formation of the first overseas local. Other items of interest and moment to our readers also appear below.

Prize Announcement

In our next issue announcement will be made of the decision of the committee awarding the prizes in connection with the several offers recently set forth in the columns of THE FEDERAL EMPLOYEE.

HAWAII JOINS THE MOVEMENT; SEVEN OTHER NEW UNIONS

A NOTEWORTHY incident in the development and broadening of our organization is furnished in the long leap across the Pacific to distant Hawaii, where a local has just been formed in the capital, Honolulu. The membership of this union (No. 127) is composed of civilian employees of the Naval Station at Pearl Harbor. There is every reason to believe that the membership will show considerable increase in the near future.

In addition to the Honolulu Local seven other unions have been created since the appearance of our last issue.

National Organizer Peabody has brought into line employees of the War Department, Custodian Force (Treasury Department), Bureau of Animal Industry (Department of Agriculture, and United States Employment Service (Department of Labor) at Wheeling, W. Va., and acting in cooperation with National Seventh Vice-President Wiegand, has formed a local at Annapolis, Md., the members of which are employees of the United States Naval Academy. These unions bear the numbers 121 and 123, respectively. Brother Peabody reports further that, following up preliminary work carried out from national headquarters and by First Vice-President Junker, a successful meeting was held in Albany, New York, recently, at which a number of employees representing several services, including United States Engineers (War Department), Bureau of Animal Industry and Weather Bureau (Department of Agriculture), Custodian Force (Treasury Department), and Steamboat Inspection and Coast and Geodetic Survey (Department of Commerce), were present. An application for a charter was freely signed, and as the result the New York State Capital is now the birthplace and home of Local No. 126. Following close on the heels of this action the efforts of the national organizer caused members of the Ordnance Bureau, War Department, at the United States Arsenal at Watervliet, New York, to join their brethren in the organizing movement as Local No. 128.

At Atlanta, Ga., a new local (No. 122), composed of employees under the jurisdiction of the Departments of War and Agriculture, has been added to the list through the efforts of Special Organizer H. H. Ford. A trip westward brings two more new unions within range—one at Del Rio, Texas (No. 124), the membership of which is drawn from several services: Customs and Public Health (Treasury Department), Immigration (Department of Labor), Weather Bureau (Department of Agriculture), and Department of Justice. The other western local is located at Ogden, Utah, where a number of the employees of the Forest Service have cast their lot with our national organization as Local No. 125. The unions at both Del Rio and Ogden were organized as the result of correspondence from headquarters in Washington.

EL PASO (TEXAS) LOCAL GIVES ANNIVERSARY BALL

"The anniversary ball of the Federal Employees Union held in Liberty Hall Saturday night, was attended by more than a thousand persons, says the *El Paso Morning Times* of April 8. "An eight-piece orchestra furnished music for dancing.

"Programs for the occasion were handsome souvenirs, which were embossed with the American flag in red and white, with the slogan, 'We are going to help put over the next Victory Loan.' A corps of decorators had spent much time in preparing the hall for the ball, and their work was a success.

"Hereafter the balls are to be annual affairs.

"The chairman of the general arrangements for the pleasant affair was the President of the Federal Employees Union, Clifford A. Perkins, who was also chairman of the Arrangements Committee; Robert L. Blades, Vice-President and member of Arrangements Committee; Henry M. Walker, Secretary-Treasurer and chairman of Publicity Committee; Mrs. Nora Dawson, Recording Secretary and member Arrangements Committee; C. J. Staheli, Sergeant-at-Arms and member of Hats and Wraps Committee; Harry Ellis, Trustee and chairman Committee on Decorations; George B. Slater, Trustee and member of Arrangements Committee; Joseph H. Meyers, Trustee and member of Advertising Committee."

MORE WORK FOR BROTHER WALKER OF EL PASO

Brother Henry M. Walker, secretary of the El Paso (Texas) Local, has been elected a delegate to the convention of the Texas State Federation of Labor, which is to meet at Beaumont May 19 to 23, and is going to do all he can to advance the interests of the cause of the federal employees at the gathering. Brother Walker is not new to "the game," having attended a number of these conventions, any more than he is a stranger to the art of securing helpful publicity, a field in which he has been most successful. The interests of the organized government workers at Beaumont will be in good hands.

PHILADELPHIA BRETHREN DELEGATES TO IMPORTANT SCIENTIFIC GATHERING

By the time this is read four active members of the Philadelphia Local—Brothers S. Tyson Kinsell, C. V. Mallet, and John D. Cloud, with Mrs. S. E. G. Oelhaf—will have doubtless added to laurels already won in other fields, by serving as delegates of our National Federation at the meeting of the American Academy of Political and Social Science, in Philadelphia, May 2 and 3. We shall look for a report from them at an early day which shall contain real enlightenment for the readers of THE FEDERAL EMPLOYEE.

FINE PROGRESS REPORTED BY THE CANAL ZONE LOCAL

A recent letter from Brother J. Wynne, who lets no grass grow around his feet while looking after the interests of Local No. 6 at Balboa Heights, Canal Zone, paints in a few strokes a telling picture of conditions there.

"We think that we have about 80

Digitized by Google

per cent of the eligibles on the Isthmus in our local at the present time," says Brother Wynne, "and are going to make a determined effort to secure the other 20 per cent. I believe the Canal Zone is the most solidly organized locality within the jurisdiction of the United States, as it is thought that fully four-fifths of the employees are members of some labor organization.

Since the first meeting of F. E. U. No. 6, August 1, 1916, we have grown from "zero" to 981 members. In addition we organized the school teachers and transferred them to their own National a few months later; we organized also the telephone operators, who deserted us and joined the electrical workers, organizing their local with 100 per cent membership. The butchers have now formed their own local as have the longshoremen, so that the Federal Employees' Union is responsible for five distinct labor organizations, with a total membership of more than 1,100."

MUSKOGEE F. E. U. CLOSELY IDENTIFIED WITIH LOCAL ORGANIZED LABOR

The Muskogee (Okla.) Local (No. 47) is another of our unions that has set the laudable example of "close communion" with the ranks of organized labor in general. From the columns of *The Muskogee Advocate*, which has just made its appearance in the field of labor journalism, we extract the following well deserved references to two active workers in the F. E. U. ranks:

President Clarence M. Smith of the Muskogee Central Labor Union—

is a federal employee in the royalty division of the Indian Agency and has long taken an active part in all movements for the betterment of Muskogee and Oklahoma. Mr. Smith is also President of the Muskogee Local of the National Federation of Federal Employees and has been greatly instrumental in bringing that local up to a high standard of membership and efficiency.

Mr. Phil S. Dege, local organizer and business manager of *The Muskogee Advocate*, is one of the younger members of the organization and enjoys a reputation for honesty and energy second to none. He is a member of the Federation of Federal Employees and also assistant city auditor of Muskogee. Mr. Dege's efforts in behalf of organization are widespread and the future bids fair to see a number of new branches joining up.

The officers of the Central Labor Union are all well-known citizens of importance and standing in their various walks of life and have been indefatigable in their efforts in behalf of organized labor and of Muskogee, Okla., and this great and glorious America.

Ask the Boys

Those who speak of their sons or brothers coming through the war "without a scratch" forget about the cooties.—*Boston Transcript.*

S. TYSON KINSELL

Brother Kinsell Leaves Washington

The failure of Congress to provide for the continuation of the work of the United States Employment Service, and the inability of the President to allot from his special appropriation any additional funds, brought about many changes. Especially regrettable among these was the release of Sixth Vice-president S. Tyson Kinsell, who held the post of chief of the orders section and Assistant Director of the Control Division, to which he was appointed last October, and who has returned to the Customs Intelligence Bureau at the Port of Philadelphia, the work of which was in his charge at the time he was requisitioned by the Department of Labor for this war emergency work in the U. S. Employment Service.

Brother Kinsell was especially active in various phases of the work at national headquarters, to which he gave virtually all his time after closing his offices at the U. S. Employment Service. The Executive Council designated him acting president to serve in the absence of President Steward, next to whom he was also the ranking member of the legislative committee. His presence as well as his earnest work and counsel will be greatly missed by his colleagues and the staff in the offices of the National Federation.

Brother Kinsell, be it known, in addition to his experience as an executive, has made successful excursions into the field of poetry, as witness the pages of worthwhile magazines. Our readers will doubtless recall that on more than one occasion verses from his pen have appeared in the columns of THE FEDERAL EMPLOYEE.

We congratulate the Philadelphia Union and the Customs Service at that port on the return of Brother Kinsell to their midst, as they thus have with them again a tried friend and advocate.

Doings and Plans of Our Biggest Local

By W. CARSON RYAN, JR.

President of Washington Federal Employees Union No. 2

GAIN OF TEN THOUSAND MEMBERS SINCE JANUARY 1

Ten thousand new members between January 1 and April 15, with the figures still going up—that is the record of Local No. 2 of Washington. A live membership committee, encouragement from other workers in and out of Washington, recognition of the union in high places—all have contributed to the rapid strides in membership. With Chairman U. J. Biller of the Membership Committee on the job assisted by such workers as Archie E. Cole and a staff of representatives in every one of the larger government establishments, it has kept Treasurer Zahn busy counting application cards.

SPLENDID WORK DONE BY "THE FIELD" FULLY APPRECIATED

The meeting of the Executive Council at Washington headquarters made it possible for the officers of the Washington Locals to say something of how much they appreciated the work of the locals out in the states. Nobody in Washington has any illusions about this. We know how much we depend upon the brethren in the locals outside. One of our friends in an executive position describes the situation in a few words. He says: "Before the employees organized the average Congressman offered two reasons why Congress couldn't do anything for the employees—they couldn't get together, and the folks back home wouldn't stand it. The employees have answered both objections. The employees are united now, and the locals throughout the country are in a position to tell Congressmen that their constituencies favor a square deal for Uncle Sam's employees, whether in Washington or outside."

RECLASSIFICATION BRINGS BOTH OPPORTUNITY AND RESPONSIBILITY

Reclassification is giving the Washington employees a lot to think about and work for. Representatives of the Reclassification Commission are appearing at meetings of the union to explain the problems the commission has to face. Elsewhere in this issue the names of the employees' representatives on the departmental committees are given. Every union worker drafted for this work has been told by the union that he (or she) is expected to render a permanent service to the Government and to the employees.

Digitized by Google

SERVICE CLUB IN WASHINGTON FOR GOVERNMENT EMPLOYEES

Sooner or later the service club idea for government employees will be put across—by the employees themselves. A committee of No. 2, with F. S. Moise as chairman, is working on the building proposition. Recreational needs are imperative in Washington. According to the local press, the Government Recreation League and the War Camp Community Service are not working in harmony to provide the essential facilities. At a conference held recently by representatives of both organizations, presided over by Chief Clerk Charles E. Stewart of the Department of Justice, the chairman said, speaking in behalf of the representatives of the Cabinet officers, that no official recognition could be given while a fight exists between the two organizations. He advised them, according to the *Washington Post*, "to put their claims before the Federal Employees Union."

COOPERATIVE BUYING A TOPIC OF LIVE INTEREST

Possibilities of cooperative buying are receiving more and more attention from members of the Washington Union. No. 2 is represented in the Central Labor Union Committee on this subject. At the April board meeting E. J. Ward described the existing opportunity for cooperative buying in the community centers in the Washington public schools. Mrs. Annie Riley Hale spoke on the subject of cooperative buying at the quarterly meeting of the Union April 18. Employees of the District of Columbia government have just opened a cooperative store. Some of the members of No. 2 are interested in the newly formed Association for the Advancement of Cooperative Enterprises, of which Arthur E. Holder is president. Help from other locals in this field will be appreciated. Cannot Chicago tell us something?

Meddlesome Philanthropy

A little girl was weeping bitterly in the street, greatly to the concern of sympathetic passers-by. At last a benevolent old gentleman approached the little maid, and, patting her on the shoulder, enquired what was the matter.

"I've lost a penny, sir," was the reply, given between sobs.

The old gentleman promptly thrust a hand into his pocket and brought out a penny, which he handed to the child.

"Oh, 'oo wicked ol' man; 'oo had it all the time!"

The Notable Drive in Local No. 2 and the Leader

MENTION HAS already been made in these pages of the recent large accessions to the membership of Washington Local No. 2. The credit for the remarkable showing which has been made is due more than to anyone else to Brother Ulrey J. Biller, the active and highly efficient chairman of the membership committee. Since he "got on the job" the committee has been in virtually continuous session. It took time to gather the necessary momentum, but the pace has been rapid since then. New members have been gathered into Local No. 2 as follows: November, 515; December, 372; January, 2,218; February, 5,291; March

ULREY J. BILLER

1,104; April (up to the 15th), 867; total, 10,367.

The greatest "drive" came in the latter part of January and throughout February, when the doors of the War Risk Bureau "blew open," owing to the fact that War Risk employees were denied the $240 emergency salary increase. As the result of the drive about 4,500 of these employees were taken into the union. "Campaigns" were conducted also in the Departments of Agriculture, Interior, Labor, and Justice, in all of which the membership was about doubled.

Brother Biller says it all depends upon getting a "live coal" in each place. "A live coal lights others, and if there is enough combustible material around, you soon have a conflagration."

Brother Biller entered the government service in September, 1889, as a clerk in the Adjutant General's Office, War Department. In September, 1893, he was transferred to the Special Examination Division of the Pension Bureau and is still in that service. After serving as a field examiner for more than twenty years in a number of cities he returned to the Pension Bureau in October, 1917, and was chosen Chief of the Review Section of the Field Service, which position he still holds.

Brother Biller's rise in the Washington Union has been rapid. In February, 1918, he was appointed collector; in April he was elected to the Board of Representatives; in August he became a member of the Committee on Elections, serving as acting chairman of that committee. Somewhat later he was chosen on the Rules Committee, and afterward on the Membership Committee, of which he was elected chairman. In January of this year he was elected president of the Interior Department Branch.

Country Hikes for Washingtonians

Here is an opportunity with which THE FEDERAL EMPLOYEE is glad to acquaint its Washington readers to whom fresh air and the out-of-doors life make an appeal. Many persons on coming into a new environment like to explore the picturesque spots and enjoy an occasional picnic or some such outing, but have no one to act as guide or do not desire to go alone.

The Red Triangle Outing Club of the Y. M. C. A. takes care of this. The schedule following for the May dates named is well worth taking advantage of. In addition there is to be a special evening outing to the Y. W. C. A. Vacation Lodge at Cherrydale, Virginia, the details of which are not yet available. Further information may be secured, however, by writing to the Trail Leader, Red Triangle Outing Club, Y. M. C. A.

All hikes unless otherwise specified are for about five miles. Meet at the Y. M. C. A., 1736 G Street, N. W., at 2 p. m., or as mentioned below:

May 18. Bring lunch. Buy round-trip ticket to Great Falls. Prospect Hill Station to Potomac, then up river to Black Pond and Yellow Pool. A trip of exploration. Meet at 36th and M, N. W., 2.40 p. m.

May 25. Jewell to Viresco via Miner Hill. Meet 36th and M, N. W., 2.40 p. m. Buy ticket to Jewell on Great Falls car line.

May 30. *Memorial Day.* All day outing. Bring lunch. Meet at M and Wisconsin Avenue, N. W., 9.15 a. m. Take 9.30 Rockville car. Start at Rockville Railroad Station for ten-mile hike to Dense Woods and along headwaters of Rock Creek, stopping en route for campfire and lunch.

There is nearly as much ability requisite to know how to make use of good advice as to know how to act for one's self.—*De la Rochefoucault.*

Farms for Returning Soldiers

A comprehensive plan to provide for our "boys" coming back from "Over There" adequately equipped farm homes on long-time payments. The Government will provide also practical instruction for those who may need it. The results which may be expected from this back-to-the-land movement, based on experience with similar movements, are set forth. In the mind of the author, "the biggest thing" about the plan "is the fact that we are making home-owners."

Written for THE FEDERAL EMPLOYEE

By Hon. FRANKLIN K. LANE, *Secretary of the Interior*

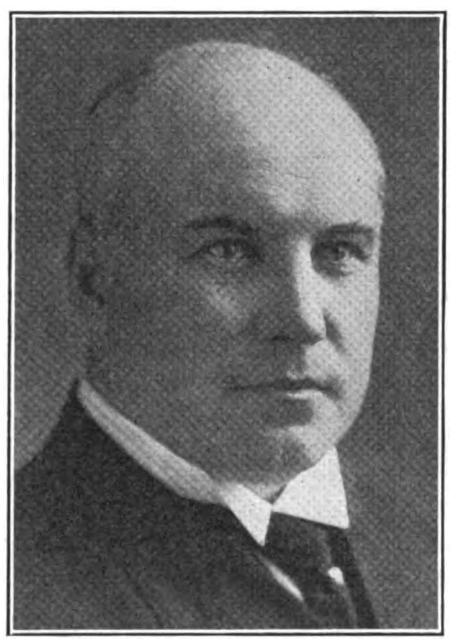
THE READERS of THE FEDERAL EMPLOYEE are perhaps more or less familiar with the plan which has been advocated for the last year providing for the reclamation of some of our unused and unproductive land by utilizing the labor of our returned soldiers, sailors, and marines in the construction of so-called soldier settlements, where many of these same men can later take up farm homes of their own. This plan was presented to Congress at the last session in the form of bills, which were favorably reported to the House and Senate, but which unfortunately did not come to a vote because of the congestion of business in the closing hours of the session.

MUCH UNUSED LAND AVAILABLE FOR SOLDIER SETTLEMENTS

Our homestead land is practically exhausted. It is true that there are still some millions of acres of public land ostensibly available for entry, but most of this is valueless. As I stated in my testimony before the House Committee on Appropriations, "the larger part of it is at the top of the Rocky Mountains." But fortunately we are not limited to these mountain-tops for soldier settlements.

There are in the West large areas of arid land which can be made available for agriculture by the utilization of the available water supply through the construction of storage and diversion dams and of the necessary canals and laterals. Similarly, in the East and South are vast tracts of cut-over timber land and swamp land which can be made equally valuable as a part of our agricultural resources by clearing off the stumps and brush and by drainage.

Although these tracts of at present unused and unproductive land comprise in the aggregate many millions of acres, only a comparatively small portion is actually susceptible of reclamation under existing economic conditions. Much of the cut-over land, for example, would be of more value to the nation if allowed to grow up again to timber; large areas are unsuitable for agriculture because of the character of the soil; in the arid region the cost of making the water available for irrigation would, in many instances, prove prohibitive, at least under present conditions. Even with these deductions, however, there is enough unused land to furnish work and homes for a very considerable number of American citizens.



HON. FRANKLIN K. LANE

THE OPPORTUNITY OFFERED BY THE SOLDIER-SETTLEMENT PLAN

The plan which was presented to Congress, and which will be presented again at the special session, is to give our returning soldiers, sailors, and marines the opportunity to reclaim some of this unused land. This will afford them work at the time when they need work and when the problem of unemployment is becoming a more and more serious factor, and will bring under cultivation land which will produce food supplies sorely needed not only by our own people but by the nations of Europe.

Let us see for a moment what we hope may be accomplished if Congress acts favorably on this soldier-settlement plan. One of the bills for this work introduced at the recent session carried an appropriation of $100,000,000. Using this sum as a basis, it is estimated that it would be possible to construct soldier-settlement projects containing 25,000 farms, or, roughly, 1,500,000 acres of land. In other words, we would provide work for possibly 50,000 to 75,000 men, furnish farm houses to 25,000 of them, and increase the acreage of improved land in the United States by about three-tenths of 1 per cent.

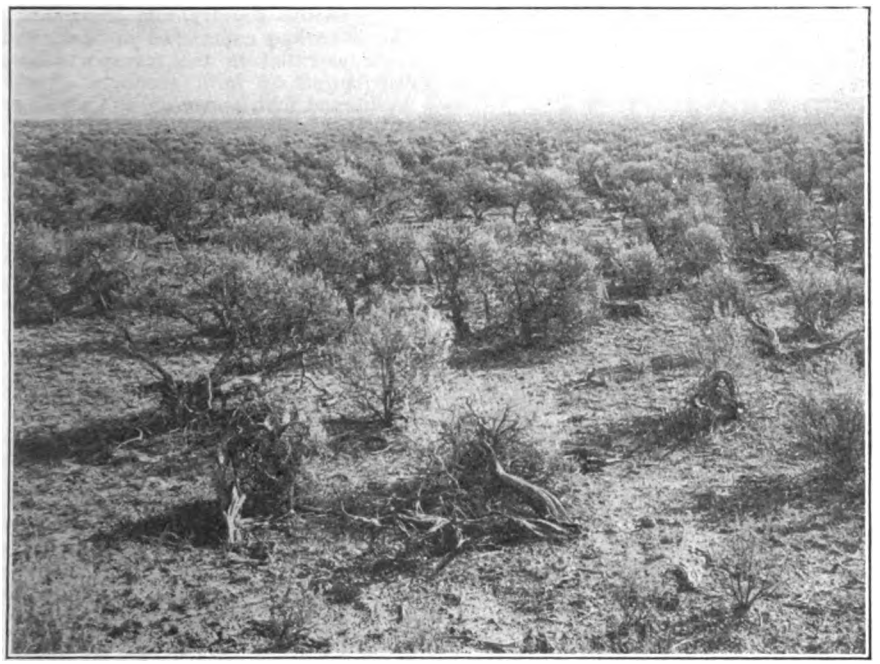
The biggest thing to my mind is the fact that we are making home owners—one of the most potent forces that can be imagined in maintaining the stability of a nation—men who own their homes, who have a stake in the land.

HOW THE PROJECTED FARM HOMES WILL BE PAID FOR

Some of you perhaps have heard it said that these farms will be given to the soldiers by the Government—that after these soldiers have reclaimed the land, laid out the farms, built the houses and barns, constructed roads, and brought these proposed community settlements into being, they will be given farm homes free of further cost. I am sure this notion would not appeal to these men themselves. They do not want charity; they believe, as all right-thinking men and women do, that what a man works for and pays for he appreciates and values far more than something he gets for nothing. And so these men will not only work to build these soldier settlements, but they will also pay for their farms.

Payment, however, will be made readily possible, if not easy. While these men are employed in the construction of these projects, they will be

Digitized by Google



THE YAKIMA DESERT PROJECT

paid by the Government. From these wages a man possessing the qualities of thrift, energy, and the determination to get along, who is looking ahead to his future, will be able to save enough to make his first small payment on the cost of the farm. The balance he will be asked to pay in similar small installments spread over a period of forty years.

PROJECTED FARM HOMES TO BE FULLY EQUIPPED

Experience in other countries has shown that long-time payments of this character are essential if the maximum percentage of success is to be attained. The first years of a pioneer farmer are always hard. Under the prevailing system of short-time loans such a man is harassed with a burden of debt from the beginning, and he frequently never gets far enough ahead to pay out. Often his capital is exhausted before he is able to get in his first crop. But under the proposed soldier-settlement plan this will be changed. In the first place, these farms will be practically going concerns before the men are allowed to take them up. Each farm will contain a house, a barn, and other necessary outbuildings; fences will be erected, and roads built; the land will be leveled, plowed, and cultivated, and perhaps even the first crop will be put in. From these farms good roads will lead to a central town site, where, under the supervision of the Government, will have been erected a public school, a church, and a town hall. And not until all this has been accomplished will these men, who have been picked out by a process of selection on the basis of their possession of qualities essential to agricultural success, be permitted to take up their future homes.

GOVERNMENT TO PROVIDE INSTRUCTION FOR THE NEW FARMERS

Nor will the guiding hand of the Government leave them here. Many of the men who have been selected as future farm-owners will have had little experience in farming. They must be instructed in those methods which will bring the best results. Some of this instruction will already have been furnished them during the time they were at work constructing these settlements, for it is intended to utilize the services of the State Agricultural Colleges in providing elemental instruction in the rudiments of agriculture while construction is still in progress. In addition, each community settlement will be furnished with a practical agricultural agent, whose time will be devoted to demonstrating to these newly fledged farmers how best to accomplish the results they are seeking.

FORECAST, FROM EXPERIENCE, OF RESULTS OF PROPOSED PLAN

Another feature of the plan which it is expected will be developed is the construction of so-called laborers' allotments, comprising one or two-acre plots of ground set aside for the use of men who wish to work for wages. This provision for such men was carried out for the first time in the history of American land development at the Durham colony in California where these allotments have proved one of the attractive features of this successful colony.

This mention of the Durham colony leads me to state that this proposed soldier-settlement plan is not new or untried, as many have thought. In fact, Europe and Australia have inaugurated similar settlements in past years with the greatest success, and our own colony at Durham is a shining example of a similar group settlement on a small scale. Perhaps I can do no better than to quote from a recent report of the Land Settlement Board of California as indicating exactly what the Federal Government may be expected to accomplish through soldier-settlement legislation, namely:

Lessen the expense of subdivision and settlement of large estates.

Provide the money or credit needed to improve and equip farms; and to furnish land to settlers in small tracts at wholesale prices.

Reduce the cost of farm buildings and other permanent improvements by the purchase of material at wholesale and for cash.

Give beginners practical advice about farming operations, and thus prevent costly mistakes and the waste of money and time.

Make farming more profitable and attrac-

CUT-OVER LAND

Showing the result of wasteful methods of lumbering

tive by the creation of cooperation organizations and thus bring neighborhoods into closer social and business relations.

Create better living conditions for farm laborers and their families.

To these I would add what I stated in my last annual report, that the construction of these soldier settlements will solve or tend largely to solve several problems:

That of the immediate job for the man himself.

That of helping protect the labor market against any possible collapse by being swamped with a surplus of labor.

That of providing for many lines of reestablished industry an immediate demand for their products.

That of staying the movement toward the cities, and thus more completely decentralizing our population.

That of affixing to our soil a large number of the best-proved Americans.

That of setting up throughout the land the most modern pattern of farm settlement, in which the social side of human nature is given consideration.

That of bringing into use those great areas of our land which now lie neglected and of no value to the world.

There can be no surer insurance for the nation than to put its men upon the soil.

The American Farmer and Reconstruction

The farmers of the country, awake to the necessity for radical changes in existing conditions, are doing their own thinking along constructive lines. The program which follows takes into account the close interdependence of farmers and other workers, as such, and consumers, and proposes measures for the common betterment.

WITH "reconstruction" the burning question of the hour, and with almost every other great division of human society advancing a policy and program, it was not to be expected that the farmers of the country would prove the exception. Such, in any event, is not the case. Indeed, the question now is whether certain of our farm organizations have not proposed a more fundamental, far-reaching plan of reconstruction than that advocated by any other great division of our population.

OUTLINE OF PROGRAM OF "FARMERS' NATIONAL CONFERENCE"

The following are some of the main features of the program of the "Farmers' National Conference," composed of representatives of state granges, state farmers' unions, the Ancient order of Gleaners, the National Nonpartisan League, and other organizations of farmers:

DEMOBILIZATION, VOCATIONAL TRAINING, PUBLIC IMPROVEMENTS

In view of the world's shortage of food stuffs, men in the army and navy training camps in this country, and soldiers abroad who have had experience in farming, and those essential to the transportation and distribution of farm products, should be discharged first, and provision made to secure them employment in agriculture at the earliest possible moment. Men not experienced in farming but who wish to farm should be encouraged to do so by the adoption of a system similar to that which has proven so successful in the settlement of soldiers in the Province of Ontario through the provision of training for agriculture, with adequate payment during such period.

Men in the army and navy who do not wish to enter in schools established for that purpose should be given vocational training until such time as they can be absorbed by the peace industries of the country. Men in the service overseas should be similarly trained and discharged by industries, as industrial opportunity develops.

Federal, State and local governments should also immediately plan construction of public improvements in order of urgency, so that when due to industrial or economic crises any large number of men or women are unemployed they may find work at fair rates on governmental undertakings. Extension of railroads, reclamation work, reforestation, and land clearing and preparation, the development of highways, waterways, and other public works should be similarly planned.

CHANGES NEEDED FOR BENEFIT OF FARMER AND CONSUMER

Among the essentials to place farming on a sound basis are the following:

The establishment of a sound and economical method of marketing farm products. Thousands of unnecessary middlemen intervene between the producers and the consumers of farm products. These must be eliminated, and direct, free and open channels established—either through cooperation or direct government operation—all the way through, from farm producer to ultimate consumer. Municipal slaughter houses, warehouses, and cold and common storage warehouses must be established in large centers of consumption, while centralized wholesale and retailing plants must be established under municipal ownership or control.

The present unrestrained system of land tenure must be terminated. Vast holdings of productive fertile lands in a single ownership is detrimental to all legitimate agricultural interests. Tenant farming should be replaced by the more responsible system of cultivation by owners. Taxation should be used as a remedy to force into productivity idle acres held for speculation.

Terminal elevators should be either controlled in the interest of public service or should be subject to direct public ownership and operation.

LABOR SHOULD BE THE FIXED CHARGE ON ALL INDUSTRY

The principle must be fully established and universally recognized that labor is the first fixed charge upon all industry, taking precedence of the claims of property and investment in business and commerce. This is essential to securing the well-being of our people, and the industrial and economic democracy for which our men have striven. Living wages to those engaged in industry, commerce, trade, mining, railroading, and in all other legitimate activities, are a direct benefit to farmers because they increase the purchasing power of those so engaged, and not only increase the efficiency of these

The Work of Reclassification

A plain, frank statement of the great task which confronts the Joint Committee on Reclassification of Salaries, and of its progressive attitude and plans. A mere living wage is not sufficient. Success depends on hearty cooperation between the Commission and the employees. The results must be fair to both the Government and the employees, so that this reclassification may become the foundation for the reclassification not only of the entire federal service but of private concerns as well.

By HON. CHARLES B. HENDERSON
Vice-chairman of Joint Commission on Reclassification of Salaries

[*An address delivered before the employees of the Department of the Interior in Washington, D. C., April 16, 1919*]

FRIENDS, I am very glad indeed to have this opportunity to appear here this evening to speak to you for a few minutes on the work of the Joint Commission on Reclassification.

THE WORK WHICH LIES AHEAD AND HOW TO GET RESULTS

This Commission has been in existence only about six weeks. Our plans have not yet been fully consummated, but we want to get down to work as soon as possible, in order to complete the work by January, 1920. The Commission wants this work done in such a manner that it may be the foundation stone on which other reclassifications can be made, not only in the Government, but also in private concerns throughout the United States. We want your hearty cooperation, and we assure you that you will have at all times the confidence and full cooperation of the Commission. Together, I believe that we can make a success of this, but if we are not together, I am afraid the task will be too big for any one individual or one commission to succeed in it.

I never realized what this reclassification means until within the last few weeks. In the last four days we have had unfolded before us plans of men who have made this their life work. I have read of reclassifications of salaries in various countries, but just how fair and scientific they are I do not know, but *we* want to make it fair and just, not only to the Government but to the Government's employees in the District of Columbia. Let us treat them both in a way that shall be perfectly fair and square, and I am sure that success will crown our efforts. Then we can help our brothers outside the District because then they can have something on which to work when the time comes for their reclassification.

MORE THAN MERE LIVING WAGES ESSENTIAL TO EFFICIENCY

I have read of the "living wage" and wondered what it meant. No one is satisfied with merely a living wage; if you cannot get more your hope is gone. No business concerns in the United States or any other country can live if they do not make a profit. They might be satisfied to break even at first if they could see that in the future they could build up a successful business; and a young man or woman in entering the government service may be satisfied with a living wage to begin with, but there must be a minimum and a maximum wage for each grade in order that there may be hope for the future. What would we have done throughout this war had we had no hope for the future?

INTEREST, FAIR DEALING, AND COOPERATION THE BIG FACTORS

The fact that you came out on so rainy a night shows that you are interested; if you were not interested in this subject, I should say that you were not interested in your work. It means a great deal to you to see that this Commission does its work right. Some in this room doubtless have been in the government service twenty or twenty-five years or even longer, and having spent that length of time in the service, what would you turn to on the outside? And is it your wish that when you go out of the service you have nothing for your family? So we must look to the future, to the good of the working people as well as to the good of the Government. We want you to know what we are doing and are ready at all times to receive suggestions and advice along any line that may suggest itself to you.

THE PRESENT WORKING PLAN OF THE COMMISSION OUTLINED

The plan that we have been considering is the one which was presented to you, and upon which you took action. I believe that there has been an election in the Interior Department and that Dr. W. Carson Ryan has been elected to represent the employees and Mr. Ayers has been chosen to represent the department. A member of the Commission will be selected soon to act with those gentlemen. After considering the matter from all its various angles, it seemed to us that it would be advisable to go still further and add subcommittees to represent bureaus or branches within the various departments. Take for instance the Bureau of Mines: now there are some of you working in the Department of the Interior who are not familiar with the work of the Bureau of Mines, and so all the way along the line. Why not, under this head committee, have a committee in the Bureau of Mines, and let the head of that bureau appoint some one to represent that bureau, and let the employees within the bureau elect some one to represent them? Now when it comes to examining the questionnaire, those employed in that bureau are familiar with its work and can help ascertain whether that questionnaire has been properly filled out. And so in other offices; in other words, every bureau in the Department of the Interior would have its own committee, which would be familiar with the work of that special department or bureau; and, in turn, they could have subcommittees for the various branches, etc. So you would always have some one in your bureau on that committee who knows the work of that office.

Now it is just as much your duty to see that those questionnaires are properly filled out as it is the duty of the Joint Commission. You want to put before the Commission the absolute facts as they exist; you want to present to us, so that we may have

Digitized by Google

it in workable order, the particular service that the employees render in each bureau of a department.

We have not a great deal of time in which to do this work. It is a tremendous task to reclassify the salaries of the employees within this District, and the first thing that we must do is to see what service is rendered in order to arrive at a correct wage for that service. In other words, if a man came into your office and asked for a position at a certain salary, you must know what service that person is going to render to receive that salary. Now I understand that there has been discrimination in some of the departments in this city. What we want, so far as possible, is to correct such things as this. Here is a young man, we will say, who applies for a position. He is put into a certain grade. Now there should be several salaries within that grade, and after a certain length of time that man should receive an increase in salary; he is entitled to it if he does his work conscientiously and efficiently. What we want is efficient work, and I think we shall get it through this reclassification if we make it along the right lines. That young man knows there is an increase in salary ahead—not a promotion, because he remains in the same grade, but there should be a number of increases in salary within that grade. If, when he reaches the top of that grade, there is chance for promotion, he should go on into the next grade, and there should be the same stepping-stones to the top of that grade and chance for still further promotion, depending always of course on the character of the services rendered. There is under such conditions some hope for the future for government employees. They know that they are going to receive that additional salary and promotion to the next grade if they do their work as it should be done.

Now we want to correct the inequalities and injustices in all or any of the government departments in Washington. We want to give everyone that opportunity that we have all looked forward to. Now the Commission hopes—I am not stating exactly what the Commission will do, but what is in my mind as to how the matter will probably work out, although we have reached a decision so far only as to representation—the Commission hopes to get the questionnaire in shape the first thing. When the representatives have all been selected, then the Commission hopes that as soon as possible thereafter we can get all the representatives together and hold a school for a number of days after office hours, instructing these representatives how to do the work on the questionnaires. Then the representatives who have attended this school can instruct others how to fill out the questionnaires. This will be an important part of our program. If they are not properly filled out, it will be impossible for the Commission to arrive at a just and fair classification. You can see the necessity of having these questionnaires filled out properly so that we may know what your duties are—whether administrative, executive, clerical, or otherwise—the number of hours you work, and so on. Then the Commission can get down to work, and with the assistance that the representatives of the several departments can render we can get the work in shape so that we can tell what classifications can be made.

We shall hold hearings from time to time, so that those who wish may be heard, but if we were to start by holding hearings from the beginning, it would render our work interminable.

With your help and assistance, I firmly believe that we shall make a success of this reclassification, to the satisfaction of both the Government and the employees. Remember that this Commission must report to the Congress, and it will be up to the Congress to enact such laws as will carry our work into effect. With the assistance of all of you we shall accomplish something for humanity and for the future.

Statistics for Federal Civil Service for Fiscal Year 1918

The figures which follow are now available for the first time. These possess special significance and value owing to the abnormal conditions of the government service due to the war.

WRITING in the April number of *Good Government,* Albert Smith Faught notes that "for the first time in many years the current report of the United States Civil Service Commission omits the official statistics which normally appear and reveal to the curious public the extent to which the competitive civil service system is being applied in the various branches of the government service. Official statistics, it seems, have not yet been collected for the year just past [the fiscal year 1918]."

The figures which follow have been furnished through the courtesy of the Secretary of the Commission, Mr. John T. Doyle, who states that the information "has been compiled from various sources, part of which are official and others mere estimates and information obtained by telephone. While it may be far from accurate, it is the nearest approximation that can be made without exhaustive inquiry."

"It is apparent at once that the competitive principle still has many broad fields to conquer in the realm of the Federal Civil Service. On June 30, 1918, not only were there over fifty thousand postoffice employees who did not hold competitive positions in the classified service, but there were large permanent groups of federal employees who did not hold such positions. Among these may be mentioned employees of the Senate, of the House of Representatives, of the Library of Congress, of the Bureau of Engraving and Printing, and also the employees of the District of Columbia."

The number of civil employees of the Government on June 30, 1918, may be grouped as follows:

"GROUP ONE (Over 10,000)		"GROUP TWO (1,000 to 10,000)		"GROUP THREE (Under 1,000)	
Postoffice	**232,071**	Labor	**9,532**	House Employees.	*935
War	191,647	Justice	**6,132**	Senate Employees.	***750**

No New Certification for $240 Salary Increase

THAT GOVERNMENT employees who are now enjoying the benefit of the temporary $120 salary increase by reason of having been certified by the head of the department or other establishment in which they are employed as being entitled thereto will not require further certification in order to receive the $240 increase for the fiscal year 1920 is the substance of a communication addressed to the Secretary of Agriculture, under date of April 5, by Comptroller of the Treasury W. W. Warwick. This decision is, it is needless to say, of great importance to a large number of federal employees, whom it relieves of no little uncertainty as to their pay status under recent legislation.

Discussing the question whether a certificate made under the Legislative Appropriation Act for 1919 "is sufficient to entitle the employee so certified to the additional compensation at the rate of $240 per annum provided by section 7 of the act of March 1, 1919" (Legislative Appropriation Act for 1920), the Comptroller says:

The certificates made in conformity with the proviso in section 6 of the act of July 3, 1918, set forth a certain state of facts in regard to the employees certified. The passing of a certain date does not of itself operate to change the facts as set forth. In cases where there has been no change in the status of the employees certified and where the facts as to the ability and qualifications personal to such employees have not changed I see no necessity for a new certificate. It is true that the additional compensation at the rate of $120 per annum will terminate on June 30, 1919. The appropriations for salaries for the fiscal year 1919 will also terminate on the same date. But the latter fact does not make it necessary to issue new appointments for employees who continue to hold the same positions.

You are advised that a new certificate is not required where there has been no change in the facts as to the ability and qualifications of the employee certified and where the employee has not received an increase of salary in excess of $200 per annum since the date of the certificate made during the fiscal year 1919.

Reclassification of the Service

The author of this contribution has had for more than a quarter of a century an opportunity given to but few to observe and study closely from within the working of the vast and intricate machine which we term the Government. The results of this intensive observation and study as applied to the upbuilding of the public service and the welfare of its civilian employees are crystalized in the following article.

By JOHN T. DOYLE

Secretary of the United States Civil Service Commission

THE CREATION of a Joint Commission of Senators and Representatives to report upon a reclassification of salaries holds out hope for remedying the unequal remuneration of employees and giving them reasonable certainty of advancement upon merit. It is, however, not merely a measure to do justice to employees, but a vital means of securing economy and efficiency in the public service.

SYSTEMATIC ORGANIZATION OF GOVERNMENT SERVICE LONG NEEDED

When the Civil Service Act was passed, in 1883, the need of a systematic and coherent organization of the service was apparent, since the various parts had grown under differing systems. It was foreseen that the service could not be put upon a firm foundation until a classification upon a uniform basis was effected. Accordingly bills were introduced in both the House and the Senate to establish a commission to investigate and report a gradation of salaries on the basis of duties and a uniform practice as to leaves of absence. It was stated in a preamble to one of these bills that great inequalities had arisen in salaries, due in part to the fact that such salaries had been arbitrarily fixed in individual cases and at divers times without any comprehensive standard.

In a speech in the House on March 30, 1886, on a bill to secure an equitable classification and compensation, Hon. William R. Cox said, in part:

> It would take away from the heads of the departments a generous discretion, which in some instances would be abused, and remove the temptation to extravagance and favoritism by pointing directly to the specific object of the appropriation.
>
> . . .
>
> No attempt is made at grading the work by the pay, and pay by the work and responsibility, and under the present system it is impossible for Congress to give its time and attention to correcting abuses.

SALARY SCHEDULES ANTIQUATED, COMPLICATED, AND CONFUSED

The whole matter of salaries is in such contrariety and confusion, at once so complicated and so intrenched in many statutes providing diverse salaries, that no solution is possible—at least no ordinary solution—until salaries are regulated by a new and radical law which will base them on the character and amount of work required. Congress now appears to appreciate that the subject should no longer be postponed.

The classification now in force in

JOHN T. DOYLE

the departments was adopted in 1853 and 1854, when there were about 700 clerks employed. This number was so small that the heads of departments and bureaus were able to be in close personal touch with the clerks under their supervision and could see that the class to which a clerk was assigned corresponded with his duties and relative merits. The number of clerks in Washington has grown from 700 to not far from 60,000, and the work has become so vast and complicated that it is no longer possible to adjust salaries to the duties required through personal observation on the part of those in charge. A clerk of mediocre ability may reach the higher grades while performing a lower class of routine work, while at the next desk a clerk of ability is performing work of a high grade for less compensation. Employees in the same line of work receive different salaries, according to the department. There is no uniform entrance salary for any given character of work. The disparities are even greater in lump-sum appropriations, where direction as to the rate of pay is vested in executive officials.

The Civil Service Law has remedied the more flagrant abuses of patronage. The next essential step is the adjustment of salaries according to duties on a uniform basis, with pay related to that for similar employments in the commercial world. No scheme of just promotions is possible until such changes are effected. Salaries need to be related to duties not merely in the same department, but throughout the departments, treating the service as a whole. The assured advancement of employees for efficient service is only possible upon the adoption of a comprehensive classification. Through lack of proper salary gradation, a deadening spirit prevails, resulting in inefficient employment conditions. The failure to establish a sound and equitable system of advancement and promotion produces conditions which are alike unjust to the employees and costly to the Government.

The average pay of the clerical force has not changed materially since 1853, while the service has grown enormously in complexity and responsibility. Increases of force are made on the ancient scale of pay, but without any consistent plan or relation to the service as a whole, which has caused the existing inequalities of pay for the same kind of work. The adherence to the same scale also fails to recognize duties and responsibilities. The chief of division of today has to pass upon questions of far greater moment and responsibility than a bureau chief of fifty years ago. The hours of labor are longer and the rearing of a family costs more. Most of the necessities of life were then raised and consumed locally, rents were lower, and the wages of servants were small. The clerk in the past, al-

Digitized by Google

though his income was not large, had fewer wants and they were satisfied more cheaply. As a result, he could live in a manner befitting his station and at the same time lay aside a competence for his old age.

With the reorganization of the service on harmonious lines, the difficulties which now operate against making promotions on a basis of merit would be lessened and advancement for efficiency could be secured under regulations prescribing a mode of procedure applicable to all departments. Existing conditions militate against any satisfactory application of merit principles in the development of an efficient personnel and hamper the application and development of the civil service rules. The establishment of an equitable scheme of retirement would also require that the compensation and duties of an employee at the age of retirement should depend upon his efficiency. Just systems of promotion and retirement thus depend upon a reclassification of positions and readjustment of salaries on the basis of the character of work performed.

Appropriations are made for employees either under a few designations or in lump sum. In the first instance, most employees, although their duties may differ widely, are called clerks and the departments are forced to appoint them under that designation, however inappropriate and however inadequate the salary. It is manifest that the Government should not rely upon securing persons with technical qualifications at the pay of ordinary clerks. An appropriation under lump sum permits a multiplicity of designations, which renders difficult the application of promotion regulations.

The pay for the same class of work in various parts of the service differs widely. Employees in parts of the service where pay is lower than elsewhere naturally seek transfer; unrest is produced, and each transfer of an efficient employee involving a change in duties causes a distinct loss in training to the Government. It is evident, therefore, that there should be a uniform classification in the various parts of the service based on duties with the same pay for the same duties. In order to put such a classification into operation it would be necessary to ascertain the duties performed by the employees. Designations describing duties with approximate accuracy should be made, and the pay fixed at the standard rate prevailing for efficient work of the character included under the designation.

The reason why promotion regulations based upon merit have not been more effective is that there is no standard classification of clerical work. Promotion seldom means advance in grade of work, but simply an increase of salary.

DISCUSSION OF PRINCIPAL METHODS OF MAKING PROMOTIONS

There are four principal methods of making promotions. The first is that of *free promotions*. While such a system may work well in private business where the motive of profit enters, it does not work well in the public service where no such motive prevails. The second method is that of *promotion by seniority*, which bears only a slight relation to efficiency. This method is preferable to promotion by personal selection, which would be subject to personal and political considerations. Seniority should be used only as a means of distinction among employees whose other qualifications for advancement are equal. The third method is that of *promotion on records of efficiency*, which has not always worked satisfactorily, as the efficiency ratings are apt to become perfunctory. Unless the system is regulated by a central body it cannot result in uniform ratings as among different bureaus.

The making of efficiency markings is difficult because the work of clerks, even in the same grade, varies widely. In some positions the clerk must be familiar with numerous laws, regulations, orders and decisions; able to weigh evidence, determine questions of law and fact; state accounts from original data, and compile statements of the details of officials actions and the reasons therefor. Clerks doing this high-grade work are classed along with those doing inferior work. A recognition of qualifications for higher work will induce clerks to qualify themselves for it, instead of turning to the study of a profession which will take them out of the service, as is now quite general.

A fourth method of promotion is that of *competitive examination*. Under this method employees are placed on an equal footing, as they submit themselves to the same tests which relate to their powers to perform the duties of the higher positions and their general ability and capacity. Such examinations should cover branches bearing directly upon the work of the department, or they should be tests of mental qualifications, such an stenography, mathematics, languages, proofreading, drafting, or branches of science.

SUGGESTED QUALIFICATIONS GOVERNING SALARIES AND PROMOTIONS

Each of the groups of employees engaged upon the same kind of work could be subdivided into classes upon the basis of salary for that group; and throughout the departments original entrance to any grade of work should be to the lowest salary provided for that grade. Such a system should provide for an annual increment of salary for efficient service, as is done in the Army and Navy, and with postal employees. Entrance to any grade in which the same kind of work would be done, if original, should be by competitive examination; and if by promotion, by either competitive or noncompetitive examination. To illustrate: If all merely clerical work were in one group, a person would enter a grade within the group through competition at the lowest salary, which would be the same for all the departments; if efficient he would receive his yearly increment until he had reached the maximum salary for that grade. His promotion or transfer to a higher clerical grade or to any professional, technical or scientific group, would be as a result of competitive or noncompetitive examination. This system would be productive of economy, as the increment would cease when an employee vacated a position for any reason. Employees would then know in advance the compensation they might expect, provided they attained and maintained a prescribed standard of efficiency. Where the pay of a position is lowered as the effect of a reclassification of the service, it should be provided that the change would not become effective until there was a change of incumbent.

BETTERMENT IN CONDITIONS NECESSARY FOR UPBUILDING OF SERVICE

The inauguration of these betterments will go far towards raising the service in public esteem. It has been one of the consequences of the failure to regulate public employment that it has not attained its just rank with outside professions and has failed to be adequately rewarded. There is a feeling, especially manifest in Congress, and in most cases quite unjustly, that the public service is not equally efficient with outside employment. This brings distrust and reproach upon a very large, deserving and self-respecting class of employees who rely upon their merits for advancement. If Congress shall adopt the report of the Joint Commission and place the classified service upon a better basis a needed stimulus will be given to employees to put forth their best efforts and qualify themselves for advancement. The service will then become a worthy career, higher positions will be open to merit, stability and efficiency will be secured, the old estimate of official life will be changed and public employees be given a just measure of social consideration.

Teachers and Current Problems

"There can be no doubt," says the author, "that the schools are to mirror the universal enthusiasm for a new attitude toward national responsibilities." The undemocratic position of the Board of Education of the District of Columbia in the case of a teacher and the position assumed by the strongest manufacturers' organization in the country toward certain progressive teachings in the schools are cited as reactionary. Proper material for social science teaching should be provided by cooperative efforts of conservatives and progressives.

Written for THE FEDERAL EMPLOYEE

By CHARLES H. JUDD, *Professor of Education, University of Chicago*

THE SCHOOLS must teach children about the state and nation. This has been decided by public opinion. Since the war raised our patriotism to white heat and made us aware of our destiny as the world's example of democracy, we have been eagerly trying every possible experiment in the effort to make school children aware of their future and present obligations. We have had parades and liberty loan drives for which the regular exercises of the schools were set aside. We have had courses on the causes of the war; we have abolished all traces of enemy influence; we have introduced lessons on food and thrift and have pushed military drill and patriotic farming and a hundred other kinds of social activities. There can be no doubt that the schools are to mirror the universal enthusiasm for a new attitude toward national responsibilities.

FATE OF THE TEACHER WHO TOUCHED ON BOLSHEVISM

Scarcely is this new program well under way when suddenly we begin to feel the recoil. There was a certain teacher who on the testimony of her fellow teachers had a blameless reputation for Americanism. She taught a class in current events. She came on reports of the doings of the Bolshevists, and the class read articles on the League of Nations. She thought that it was legitimate to comment on these matters in a class dealing with current events. The Board of Education suspended her for a time without pay because they say she had no right as an amateur to deliver any opinions on these subjects. This happened in no small and remote center where democracy may not have penetrated. This happened in the District of Columbia, in the city of Washington.

PROGRESSIVE SOCIAL SCIENCE TEACHING UNDER ATTACK

Again there have been widely used in the schools certain lessons which tell children how the great business machinery of our nation operates. These lessons tell how men are interdependent in their struggle to extract from nature those things which satisfy human needs. They tell how social institutions and organizations have grown up out of men's efforts to live together harmoniously and cooperatively. The lessons are the most elaborate body of social science ever offered to the lower schools. The war is hardly over when the greatest organization of manufacturers in this country—the National Industrial Conference Board—publishes a pamphlet viciously attacking these lessons because the board objects to the material on such matters as industrial insurance, labor organizations, and the eight-hour day. The lessons in question were published by the Bureau of Education of the United States in cooperation with the Food Administration. The manufacturers say that they are going to tell the Department of the Interior to suppress these lessons. In the name of democracy the manufacturers cry out against what they call "the most subtle propaganda."

So we see that while public opinion has decreed that the schools shall teach about the doings of society, there are to be hot words about what is going to be taught.

Does the Board of Education of Washington or the Manufacturers' Association seriously believe that suppression of open discussions will be possible in this democratic land? Do they believe that they can dictate what shall be thought by the sons and daughters of the people? If they think such thoughts, the cause of their short-sightedness is surely to be found in the fact that they grew up in schools which omitted, as most schools have in the past, instruction in the ways of society.

Let it be admitted freely that enthusiasm for this new kind of teaching will in some cases be radically overzealous. Let it be admitted that most teachers are amateurs in social science for the same reason that conservatives are short-sighted; namely, because schools have in the past omitted lessons in community and national life.

COOPERATION IS NEEDED TO PUT EFFECTUAL LESSONS INTO SCHOOLS

The remedy for all this is not to be found in silence or in the persecution of earnest endeavor, but in vigorous and cooperative efforts to solve the problem of putting productive lessons into the schools. One of the reasons why instruction in this field is in some cases of doubtful value is that there is little available material out of which to make lessons. One can find plenty of good reading about Greece and Rome, about geography and nature, but very little about how cities are built in man's efforts to work out plans of industrial cooperation. There are plenty of books on the American revolution and the Franco-Prussian War, but only recently can one find mention made in schoolbooks of the industrial revolution. Yet the industrial revolution has in a century and a half or even less radically transformed human life.

Teachers have been reaching out after material on society. In the absence of other available reading matter they have often resorted to current periodicals and have attempted courses which have been called courses in current events. The comments which they are able to make on the issues of the day are likely to be directed in the main by their personal views and opinions. When they try to be more systematic they have sometimes resorted to one or another of the short texts on community civics. These texts are for the most part open to the criticism that they are abstract; or if concrete, they usually fail to include reference to the problems that arise in the community with which the teacher and the pupils are familiar. The result in either case is that the course becomes a series of miscellaneous comments capable of misinterpretation and of doubtful educational value.

Digitized by Google

The conservatives ought not to blame the progressives for this situation, nor ought the progressives to rest content with the lack of well-organized material. Both parties can unite and ought to unite in advocating the creation of sound, vivid, concrete lessons which deal with facts and hence are not open to dispute. The way to get the right kind of material is for every school system to throw itself with its whole soul into this new task. Let boards of education provide the best talent that can be found in the city to organize a course on city life. Let states organize commissions to do this work on a larger scale. There ought to be cooperation within states between the different school districts so that material of a broad comprehensive character shall have the widest currency. There ought to be in the Federal Government itself centers for the collection and distribution of material of this sort. We have at the present time centers for the distribution of scientific material on agriculture and commerce and all of the problems that are connected with industry and transportation and foreign relations. This material is educative in the highest degree. It is usually not formulated in such a way that it can be used in the schools. Is it not legitimate to ask for the creation of proper federal agencies to recast this material so that it shall serve the purpose of the lower schools as well as the purpose of society in general? Such a program provides agencies that are superior to the petty criticisms which develop in local communities, and it provides agencies vigorous enough and powerful enough to reach the widest constituency.

Until material is thus created in a comprehensive and authoritative way there will be petty bickerings in local communities, and there will be dangerous efforts on the part of conservatives to throttle this movement. There will be ill-advised efforts on the part of enthusiasts to break over the bonds set by conservatism, and we shall have exhibitions of injustice on the one side and irrational radicalism on the other. All of these evils grow out of a lack of the right kind of organization. The cure for this situation is not inaction but a vigorous and official treatment of a situation which deserves the best attention that the public can devote to its solution.

"PROPAGANDA" CHARGE NOT SERIOUS—MERELY A BOGEY MAN

Nor does a cooperative scheme of this kind need to fear the cry set up by bigots who have learned to wield against legitimate reform the word "propaganda." There is public propaganda on every hand. The Department of Agriculture is engaged in propaganda against insect pests. The Department of Commerce is engaged in propaganda in favor of correct standards in every line of industrial activity. There is no good reason why proper conditions for workers should not be advocated with the full strength of a public agency. There is no good reason why industry should not be understood as fully as the anatomy of the human body. In short, there is no good reason why public cooperative agencies should not take up the task of carrying out without fear or hesitation the decree of the people that lessons in national and community life shall have a large place in the schools.

Help Your Teachers

The public school teachers throughout the country are organizing effectually and rapidly. Already seventy locals have been formed, united in the AMERICAN FEDERATION OF TEACHERS, *which is affiliated to the American Federation of Labor.*

Our cause and that of the teachers run in closely parallel and converging lines. Our locals and our members as individuals have it in their power to do splendid work by supporting to the fullest extent the teachers' unions, where formed, and where not yet formed, by giving all possible encouragement and backing to their speedy organization.

The national organizer of the AMERICAN FEDERATION OF TEACHERS *is L. V. Lampson, 1336 Otis Place, Northwest, Washington, D. C.*

The Union Label

The union label adds to business as a leading inducement to union buyers and to union merchants. It keeps trade at home where there is local enterprise. It benefits the retailer as well as the wholesaler. It individualizes quality with price. It aids the newspaper and the union whose tenets it advertises. It is beneficial for stability. It defies unscrupulous competition. It helps to establish the wage scale. It insures a recognition of rights. It is a profit producer. Its colors glow with humanity. Its insignias stand for health, skill, and dignity. It is the foe of the "open shop," and it points to a growing cooperation among the workers for the millennium of universal rights. It wins patronage on merit, indexes character, and promotes American individuality.

A. F. of L. Convention at Atlantic City, June 9

THE NEXT convention of the American Federation of Labor, one of the most important, perhaps *the* most important, gathering in the history of that organization, will be held at Atlantic City June 9. Active preparations for the convention are now in progress. The return from France of President Gompers and the other members of the American delegation to the Labor Peace Conference arouses new interest in the momentous problems confronting the masses of the country's workers, which are to receive attention from the Atlantic City meeting.

The delegates to the convention on the part of our National Federation are President Luther C. Steward, and Vice-Presidents Etheridge, Junker, and Leonard; alternates, Vice-Presidents Kinsell and Wiegand.

The call for the convention, which bears the signatures of President Gompers and the other members of the Executive Council of the A. F. of L., reads in part as follows:

To All Affiliated Unions, Greeting:

You are hereby notified that, in pursuance of the constitution of the American Federation of Labor, the Thirty-ninth Annual Convention of the American Federation of Labor will be held at the Steel Pier, Atlantic City, N. J., beginning 10 o'clock Monday morning, June 9, 1919, and will continue in session from day to day until the business of the convention has been completed.

THE CONDITIONS GOVERNING REPRESENTATION IN THE CONVENTION

Representation in the convention will be on the following basis: From national or international unions, for less than 4,000 members, one delegate; 4,000 or more, two delegates; 8,000 or more, three delegates; 16,000 or more, four delegates; 32,000 or more, five delegates; 64,000 or more, six delegates; 128,000 or more, seven delegates, and so on; and from central bodies and state federations, and from local trade unions not having a national or international union, and from federal labor unions, one delegate.

It is, of course, entirely unnecessary here to enumerate all the important subjects with which our forthcoming convention will concern itself, but the reminder is not at all amiss that every effort must be made to broaden the field and means for the organization of the yet unorganized workers; to strive to bring about more effectually than ever a better day in the lives and homes of the toilers; to defend and

A Grave "Comedy of Errors"

Presenting a serious problem for Democracy, this case transcends in significance the boundaries of the District of Columbia. An efficient and faithful high school teacher in Washington is suspended by the Board of Education for alleged indiscreet utterances in the classroom on the subject of Bolshevism. The principal facts in the case are here summarized in so far as the refusal of the Board to disclose essential evidence permits.

By W. CARSON RYAN, Jr.

President of Washington Federal Employees Union No. 2

THE teachers' unions of Washington, D. C., are engaged in a fight in behalf of certain fundamental principles of democracy.

MISS WOOD AND THE BOLSHEVISM INCIDENT IN CLASS

Miss Alice Wood, a member of the High School Teachers' Union, is a teacher of English in Western High School—one of the best English teachers in the system, according to the testimony of those who know her. Her loyalty had never been questioned; indeed, she had been accepted for service by the American Red Cross and would now be serving in France had the armistice not been signed. Her American lineage dates back to before the American Revolution.

Like every other teacher of English in the Washington high schools, Miss Wood is required to teach current events as part of her duties; further, according to the course of study, teachers are to "encourage free and spontaneous discussion and criticism." One day in current events class one of the students raised the question of Bolshevism. Miss Wood answered the question as best she could, emphasizing the fact that little accurate information on the Russian situation is available. Pressed for her opinion of the soviet form of government, she said that she considered it an improvement over the form of government in Russia and a good government for Russia; for further information, she referred her pupils to well-known periodicals, most of them found in the school library.

A "FRIENDLY CONFERENCE" IN THE SUPERINTENDENT'S OFFICE

Shortly after this Miss Wood was handed by the principal of the school a letter signed by two parents, quoting indirectly and protesting against various remarks, especially those on the subject of Bolshevism, made by her in an English class. In reply Miss Wood explained the occasion of her remarks and her aims in teaching.

[Her letter with that of the parents to which it is a reply will be found on page 270.]

She also assured the principal that she would not permit discussion of any subjects the board wished to exclude. In response to this no suggestion came to her.

For nearly a month there were no further developments in the case. Miss Wood was then called into what was asserted to be a "friendly conference"

ALICE L. WOOD

in the Superintendent's office, at which were present two members of the Board of Education, the Principal of the Western High School, and Miss Wood. Miss Wood was not accompanied by counsel because she had been assured that this was in no sense a trial. Following the conference, the members of the committee (who had not conferred during the meeting) announced the conclusion that she had been indiscreet in dealing with certain economic and social questions in the classroom.

MISS WOOD BRANDED IN THE PRESS AS "UNPATRIOTIC"

The next development in the case was an announcement in the daily press that Miss Wood had been suspended by the Board of Education, for one week without pay, as "unpatriotic," with various false statements in the stories. The official notice of suspension, however, which did not reach Miss Wood until after she had read the press statements, said nothing of lack of patriotism, but gave the following as the reason for the action:

> **The Board took this action because of your attempt to touch on and interpret certain economic and social subjects in which you were clearly an amateur and in which you revealed indiscretion and poor judgment in assuming to be anything else.**

ACTION BY THE TEACHERS' UNIONS; PUBLIC OPINION AROUSED

The teachers' unions then took up the case, engaging counsel and asking for Miss Wood a public hearing, in accordance with the organic law of the District of Columbia and the regulations of the Board of Education. Federal Employees Union No. 2 also took up the case, as did the Central Labor Union and numerous civic and educational bodies. The board finally declined, in a lengthy reply, to grant a public hearing, giving as one reason, that Miss Wood herself had made no request for any further hearing. To meet this technical objection, Miss Wood herself filed a formal request that the action of the board in her case be rescinded in its entirety. To this request the board has not yet replied, nor has it granted her request for a copy of a report of the committee which held the "friendly conference" with her.

SEVERAL INTERESTING AND PERTINENT SIDELIGHTS ON THE CASE

This in brief is the record of the matter to date. Many of the interest-

Digitized by Google

ing sidelights have had to be omitted from this account—how the board sought to justify its secret conferences" on the ground that it is not a violation of law to hold lengthy secret discussions and then open in "public meeting" for a few minutes to take action; how the Superintendent of Schools gave "advice," as he terms it, not to discuss the League of Nations, Bolshevism, or "similar heresies" in the schoolroom, and then would neither affirm nor deny that he had issued any instructions of this sort; how the Board of Education, when it saw public opinion turning against it, tried to compromise by offering to grant the demand for teachers' councils.

FUNDAMENTAL PRINCIPLES VIOLATED BY THE BOARD

On its own testimony the Washington Board of Education has violated at least three fundamental principles:

1. The right of any teacher to a fair trial, in public, after charges have been preferred. (The District regulations are very clear on this point.)
2. The principle that meetings of the Board shall be open to the public. (The federal law on this point is one of the most explicit in the United States.)
3. The principle of free discussion of public questions.

THE QUESTION OF UNIONISM ALSO INVOLVED IN THIS CASE

The first communication in the Wood case addressed by President Hamilton of the Board of Education to Miss Deal, President of the High School Teachers' Union, in the latter part of March, seems to raise directly the issue of unionism: "While the board does not feel," says President Hamilton, "that its action in the premises is the proper subject of interrogation or review by other teachers or groups of teachers," etc. The well-known corporate interests and affiliations of certain leading members of the board, moreover, strongly suggest that a leading motive, if not *the* leading one, may have been to strike a blow at unionism. It is noticeable that in its later and principal statement in the case the board does not advert to this phase of the subject. In this communication the desire is expressed that committees representing all the teachers shall discuss with the board twice a year "matters of general policy and direction," and that all teachers shall be included in "one distinct professional organization," but the inference is irresistible that the existing teachers' unions are not recognized as representative of the teachers for this purpose.

But the bolt which seems to have been launched at the solidarity of the teachers' organizations fell far short of the mark. The Washington unions have proved their mettle. By their wise leadership, intelligence, and honesty in this case they have succeeded in bringing an overwhelming public sentiment to bear in favor of Miss Wood and the teachers and against the Board of Education, or those of its members who made the fatal mistake of leading the rest into so undemocratic an action as the illegal punishment of a faithful and efficient teacher.

THE APPEAL OF THE TEACHERS TO THE PUBLIC

The final appeal of the teachers' unions, addressed to the public, is in the form of a series of questions.

ALICE DEAL

These questions are of such immediate concern to the citizens in every community where schools are cherished that they are given here in full. The teachers ask:

Is it for the good of the schools, pupils and public—

1. That a teacher should be disciplined by a suspension for one week without pay? A teacher is in a position requiring the exercise of authority and enforcement of discipline over her pupils; punishment or humiliation known to her pupils lessens her efficiency as a teacher. Are the same methods of discipline appropriate to her as to an operative employee? Does discipline by suspension improve her teaching? Does it improve her relations with her pupils? Does it improve the morale of other teachers?
2. That the Board should punish teachers for assuming to discuss with pupils subjects clearly within the general scope of courses which they have been directed by their superiors to teach, upon the ground that the Board considers them to have been incapable of discussing the subjects in question?
3. That teachers assigned to teach economic, industrial and social subjects should be restrained from freedom of expression by fear of discipline should their views not be approved by the members of the Board whose views and desires have not been made known to the teachers?

[1]4. That "Bolshevism and similar heresies," to use the superintendent's phrase, should be excluded from discussion by trained teachers, with pupils of an average of sixteen to eighteen years, for whose intelligent understanding of government, economics and current events the teachers are responsible?

[1]5. That "Bolshevism and similar heresies" should find here in America the unfairly fertile field that ignorance on the part of our future citizens can alone prepare?

[1]6. That the teachers of such pupils should fear to aid them to an understanding of social and political doctrines and practices different from or even inimical to our own, as though knowledge of them would not lead the product of the American public school the more to cherish and enable him the better to preserve and defend the heritage of our institutions?

7. That the views of the heads of departments (of instruction, such as English, History, Mathematics, etc.) and of principals of schools, should be ignored by the board in appraising the work of teachers?
8. That the views of a few (perhaps two or perhaps three) of many parents founded upon information from a few of many pupils should be accepted by the board, without a hearing, and the action adhered to by the board in the face of a positive denial from the teacher presented and supported by the unanimous action of the teachers' unions?
9. That a teacher should be disciplined—

(a) Upon a matter complained about by two or three parents upon information derived from children whose immaturity formed an element in the complaint;

(b) Upon verbal information communicated to the board in secret session by one of two board members (who had with the superintendent and her principal so conferred with her in an "informal friendly conference" as to leave her under the impression that the matter discussed was to be dropped) and

(c) Upon the motion of an influential member of the board who never saw her and who was a close business associate of two complaining parents, seconded by a member who never saw her and had no information other than that derived as above stated?

10. That the Board of Education, directed by law to meet in public should so abuse the privilege of prior conference (assuming that as claimed by the board the privilege exists) that a matter in which the public is so vitally interested as the application of the unions for a hearing in this matter, should be disposed of without announcement other than that a reply would be sent, in a board meeting scheduled for 4.30 p. m., and taking place from approximately 6.05 to 6.20 p. m., preceded by a secret conference lasting from 3.30 to 6 p. m.?

[1] Questions 4, 5 and 6 are not essential to Miss Wood's case; she has been at all times willing to obey the directions of the Board, and has not raised the question of the wisdom of the directions when given. Her complaint in this respect is that no directions had been given when her supposed offense was committed.

SEVERAL LETTERS OF IMPORTANCE IN THE CASE

Appended is an excerpt from the letter (dated February 12, 1919) from two parents of pupils in Miss Wood's class making complaint regarding her references to Bolshevism:

We submit the following which can be substantiated: that Miss Wood expressed herself as follows on different occasions. In repeating these sentiments no attempt is made to quote her exact language but to convey the substance of her remarks.

1. Miss Wood told the class that she had attended a meeting of the citizens of the District and others held at Poli's Theater, and that the statements made at that meeting proved that what the newspapers were saying about Bolshevism in general were not true; also that the newspapers had misrepresented those who spoke at the meeting.

2. That she had a letter from a friend in Russia telling her that conditions there were fine and that everything was going smoothly.

3. She was asked if she believed in Bolshevism and in reply said that she believed in what her idea of Bolshevism is, and that her idea of Bolshevism, as she interpreted it, was that of a good government; that most people did not know what it was, but that according to the true idea of it which existed in her mind it was very good, that it meant only a government of the majority.

4. She further stated that she preferred not to discuss the subject in class because she might get into trouble, but that if the pupil or pupils to whom she was talking would come in after class she would give them all of the information they wanted; that the idea of Bolshevism obtained from newspapers is all wrong.

5. She has brought magazines into her classroom, particularly one having a title about as follows: "The Bolsheviks and Soviets," which she told members of her class was a defense of Bolshevism and that she had lent this paper to certain members of her class to read.

In reply to the foregoing Miss Wood wrote (February 14):

1. No recital of quotations *apart from their context* can give a true idea of one's opinions or principles.

2. Any discussion of Bolsheviki government in my classes has been brought up *not by me but by the pupils themselves*, as a subject for discussion in current topics.

3. I will take up the items as numbered in the letter before me.

(1) I did say that I had attended the meeting at Poli's Theater, that the statements there were contradictory of most of the published stories in the daily press, and that I believed the testimony of the eyewitnesses; also that the newspapers had misrepresented the spirit of the meeting.

The above is true. The first is a statement of fact; the second of personal opinion in answer to a question; the third a statement of fact borne out by Representative Mason as well as many others.

(2) This statement I never made. I have no personal friends in Russia.

(3) In speaking of the Soviet government, in answer to a direct question, I did say that I considered it an improvement *over former government in Russia and a good government for Russia.* I still maintain that most people do not know what it is, since literature telling what it is by its leaders is almost impossible to get.

I said the *word* does not mean Anarchist but *Majority*, and that it is the Majority party of the Left in Russia.

(4) I did say that we would not use the class time to discuss the subject and that if any pupil cared to read the other side from that of the daily press, he could read certain articles as those in *The Dial, The New Republic and Current Opinion.*

I also referred them to the explanation of Soviet government given in the pamphlet sold at the meeting at Poli's Theater, which meeting was openly advertised in public and among members of Congress and was permitted to be held.

May I say further that I am second to none in patriotism. My forefathers were in America long before the Revolution; I was born on land given my ancestors for services in that Revolution, and remaining in my family until this day. My ancestors and their services give me the right to express myself on the Government which they helped to found. I love it too much to declare it beyond improvement.

I believe in democracy as set forth by its greatest exponent and the greatest statesman of all times, Woodrow Wilson, and conceive it as something that, in its perfection, is still in the future and not something that was finished in 1789, and therefore believe it to be something that we all have a part in helping to attain. My aim in teaching is to teach individuals to *think*, to set forth *both* sides of every question, never imposing my own opinion, but permitting *free discussion* of all topics.

My confidence in the *rightness* of our fundamental principles is so deep that I have no fear of full and free examination and discussion of them.

NATIONAL FEDERATION OF FEDERAL EMPLOYEES

Washington, D. C.
April 10, 1919.

MR. GEORGE E. HAMILTON,
President of the Board of Education.

MY DEAR SIR:

It is our purpose to devote considerable space in the May issue of THE FEDERAL EMPLOYEE to the broad question of the rights and duties of public school teachers involved in the instruction of their classes in the subjects usually grouped under the designation "current topics."

In order that the matter may be properly presented to our readers, may I not ask your cooperation, on behalf of the Board of Education, to the extent of submitting a statement setting forth as clearly as possible: (*a*) The charges on which the action taken by the Board was based, with the evidence offered in support thereof; (*b*) copies of any report or reports submitted by Principal Newton and by the committee composed of the Superintendent of Schools and two members of the Board, by any member of the committee; (*c*) a copy of any rules or regulations requiring teachers of English to discuss "current topics" in their classes.

It is our desire to present Miss Wood's case fairly and impartially. You will agree with me, I think, that the information here sought is essential to an intelligent understanding of this case, and I may add that it is very desirable, from our viewpoint, that this information be laid before our readers as coming directly from the proper source—the Board of Education.

Inasmuch as the forms for our May issue will close at an early day, I hope that it will be convenient and agreeable to you to furnish this information by the 15th instant.

Yours very truly,
J. G. GURLEY,
Editor of THE FEDERAL EMPLOYEE.

. . . . .

BOARD OF EDUCATION OF THE DISTRICT OF COLUMBIA
FRANKLIN SCHOOL BUILDING
Washington, D. C.
April 12, 1919.

MR. J. G. GURLEY,
Editor of THE FEDERAL EMPLOYEE,
404 Continental Trust Building,
Washington, D. C.

MY DEAR SIR:

Your letter of April tenth received. In its reply to the High and Grade School Teacher's Unions the Board of Education has said all that it desires to say concerning an incident that it considers, in so far as the Board is concerned, a closed one.

I am accordingly sending you herewith a copy of the reply referred to [the Board's letter of April 8, quotations from which appear on page 271].

Yours very truly,
GEORGE E. HAMILTON,
President.

The position of the Board of Education is set forth in two communications from President George E. Hamilton, one dated March —, 1919, addressed to Miss Alice Deal, president of the High School Teachers' Union, in answer to a letter of March 22 signed by herself and Miss Clara K. Stutz, president of the Grade School Teachers' Union; the other bearing date April 8, sent Misses Deal and Stutz as a response to the formal protest made by the two unions March 31.

Excerpts from the communications of the board, dealing with the principal features of the Wood case, are here appended. In order that our readers may get a fair view of the whole case, these should be taken in connection with the other statements bearing on the subject which appear in this issue.

(*From letter of March —, 1919.*)

The suspension of Miss Alice Wood was made under authority conferred in the organic act and under rules made in accordance therewith.

The action of the board, as stated in the order, and the letter of the superintendent [see quotation therefrom in Dr. Ryan's article, page 268] transmitting this order,

Digitized by Google

would seem to furnish sufficiently the reasons for board action.

First.—From questions submitted through the principal of the Western High School in writing, and by her in writing answered [this has reference to the parents' letter and Miss Wood's reply thereto, which appear on page 270], and

Second.—From questions asked by a committee of the board before whom she appeared, with the principal of said high school present at her request, and her answers to said questions, Miss Wood is perhaps fully informed as to the grounds of her suspension. But if she desires fuller information, and requests it, her request will be complied with. [At least *three* requests for the contents of the report of this committee have been made—by Miss Wood, March 22; by the presidents of the Teachers' Unions, March 22; by the editor of THE FEDERAL EMPLOYEE, April 10. All these requests have been refused.—EDITORS.]

While the board does not feel that its action in the premises is the proper subject of interrogation or review by other teachers, or groups of teachers, it will state, however, that Miss Wood's indiscreet discussion before young pupils of present international conditions, social and political; her defense of bolshevism; her offer to instruct boys on the subject out of class; her advice to them to read certain named magazines which would give the other and correct side of the aims and precepts of that form of government: her advanced ideas on the subject of individual direction, fully discussed with, and impressed upon immature youth, with that added weight which a teacher's instruction always carries, and Miss Wood's admissions of her attitude concerning the above as shown by the report of the committee—constitute in the minds of the board "an offense against good order" and a failure "to perform satisfactorily the duties of her position" (Board Rule 70), and at least require for disciplinary purposes a suspension; and it may be added that this action by the board does not fully meet the indignant protests of parents of some of her pupils.

(*From the letter of April 8.*)

Early in February three parents of pupils in Miss Wood's class in the Western High School addressed letters to Dr. Newton, principal of said school, complaining of Miss Wood's discussion and instruction upon certain subjects, and their complaint in the board's letter to you of March 22, was summarized as follows [quoting the larger part of the final paragraph of the letter of March —, just above]:

The writers of these letters gave the names of six pupils as the source of their information.

When the board was informed of these complaints, it considered that there were two courses of procedure—a formal board investigation, which might result in trial, or an informal inquiry to establish whether the conditions were such as to warrant, in the discretionary power of the board, and without formal investigation, the application of suitable discipline.

The latter course was decided upon, certainly as a preliminary one, both on Miss Wood's account and on account of the system.

Communication was accordingly made to Miss Wood, through Dr. Newton, and on February 14 Miss Wood made reply [see page 270], which reply was transmitted by Dr. Newton to the board. Miss Wood's answer was neither satisfactory nor full in explanation or denial, and in connection therewith Dr. Newton wrote to Superintendent Thurston on February 24, and in that letter says:

"She (Miss Wood) feels that while her answers taken separately and without reference to the questions asked may seem unpatriotic and offensive, she had no such intent, and is quite convinced that she may be trusted to steer away from such dangerous topics in the future."

As stated, the board was not satisfied with Miss Wood's answer, but still desired full information from her, and accordingly requested the superintendent and two members of the board to see Miss Wood in person, and by personal communication inform themselves, if possible, more fully as to Miss Wood's discussion of the topics referred to and her attitude regarding the same, and whether there was any real ground for the complaint contained in the letters received.

This was accordingly done, and at the interview Dr. Newton, at the request of Miss Wood, was present.

One member of the committee was not present when the majority members gave the forgoing result of their interview with Miss Wood.

On Miss Wood's written statement, as submitted by Dr. Newton, and on the report just above referred to of her verbal communication, the board concluded that conditions did not call for a formal investigation or trial, but were such as to be amply met by the application of discipline or short-time suspension, which is vested in the board by law and is necessarily incident to the exercise of the control and direction expressed in the organic act.

The board, at the regular public meeting following the conference at which the conclusion was reached, without a dissenting vote, the order:

"That Miss Alice Wood be suspended, without pay, for a period of *one week* commencing March 20."

The board is fully aware of the provision of the law requiring all board meetings to be open to the public, and will state that all board meetings are open to the public, but all meetings are, or may be, preceded by conferences of board members, and this is essential for useful and sound board direction.

The board is advised and believes that its action was not only in accordance with the law but in accordance with useful and proper board direction, and so far as the board is concerned the incident is a closed one.

If the board is wrong in its interpretation of the law and of its authority under the law, it will be pleased to be instructed by the court; if the law is wrong in placing a too large authority and discretion in the board, Congress may remedy the fault. Until otherwise directed, however, by Congress or the courts, the board will continue its present interpretation and direction.

The board throughout intended to, and believes that it did, act for the best interests of the system and to the benefit of Miss Wood, and certainly did not wish, and endeavored in its action to prevent, any unnecessary publication or detriment to Miss Wood.

The question of patriotism did not enter into the board's conclusion; if so, a formal investigation and trial would have been deemed necessary.

"Why that somewhat unusual name?"

"People are so apt to take it."—*Louisville Courier-Journal.*

The American Farmer and Reconstruction

(*Continued from page* 260)

workers, but provide the most economic and advantages market for farm products—a home market.

THE STANDARDS OF PUBLIC EDUCATION MUST BE RAISED

Education is the basis of all progress. We favor:

Raising the standards of teachers through higher wages and special courses of instruction for rural teachers.

Introducing democracy by organizing into self-governing bodies as far as possible all rural schools, the children learning government by governing themselves.

Teaching industrial history, and farm economics, and marketing.

Teaching organization, cooperation and cooperative methods.

GOVERNMENT MUST OWN AND DEVELOP COUNTRY'S NATURAL RESOURCES

The natural resources of the country, now in public ownership—coal, iron and copper ores, water power, timber lands, phosphate deposits, potash, gas, oil, etc.— are worth hundreds of millions of dollars. It is a solemn obligation devolving upon the country not to alienate any more of these natural resources either by patent or by lease, but to develop and hold them in trust for this and succeeding generations. Such of these natural recources as are now in private ownership should be acquired by the Government at the earliest possible opportunity, payment to be only for actual and prudent investment.

GOVERNMENT MUST OWN AND OPERATE TRANSPORTATION SYSTEMS

Within twenty-one months following the close of the war, at the expiration of which the railroads would otherwise be returned to their present owners, the Government should acquire and operate all the railroad systems of the country, and within the same period acquire and operate the express companies, and the Government should operate all inland water transportation so that we may have a unified system of transportation of passengers and freight as a government service. This service should be rendered at cost, with the single view of reducing cost of transportation, securing fair treatment of those employed, and facilitating the development and expansion of domestic manufacturing, and of domestic and foreign commerce.

Enormous sums have been expended by the Government in constructing ships. These ships should remain the property of the people of the country and be operated as a merchant marine for the benefit of the people as a whole, with due regard to terms and conditions of employment.

MONOPOLY OF PACKING INDUSTRY MUST END AT ONCE

The revelations by the Federal Trade Commission of the monopolistic control which the "Big Five" packers have established in the business of the manufacture and preparation of meat, their effort to control the entire food supply of the country, and their entrance into allied and unrelated lines of business . . . make it clear that the privileges which have enabled the packers to build up such a monopoly must be immediately terminated.

Relief for American Consumers

"The Cooperative Movement in America," says the author, "is developing in close alliance with the Labor Movement." He sketches briefly the growth of Cooperation in this country, which has received new impetus since 1916, with special attention to the situation as it exists today. It is a vital and inspiriting message, a fit sequel to Mrs. Hale's contribution, "Consumers' Cooperation in Europe," which appeared in our last issue.

By JAMES P. WARBASSE

President of the Cooperative League of America

THE HISTORY of Cooperation in the United States is a story of idealism, blasted by failures. From a practical point of view the pioneers were not rewarded by the success of their enterprises. But idealism never perishes, and today we are reaping the benefits of which they despaired.

The spirit of individualism, the newness of the country, the mixture of races and nationalities, the presence of frontiers into which a fluid population could be kept moving, and the not hopeless possibilities of escape from poverty, all contributed to inhibit the growth of Cooperation in the United States. In later times the strenuous competition among private tradesmen, the allurements through business advertising, and the great power of monopolies and vested interests have been potent factors against cooperative development.

MARKED DEVELOPMENT IN COOPERATIVE MOVEMENT SINCE 1916

Since the year 1916 a new impetus to the movement has been seen. This has been due partly to a greater stability of industry and partly to the conspicuousness of profiteering and the obvious evils of the competitive system. But a very potent factor has been the establishment of the Cooperative League of America, which has promoted education in the fundamentals of Cooperation and has instituted centralized information, guidance, and standardization.

All over the country the movement has developed. It has been sporadic. No center can be designated as the seat of the renaissance of Cooperation. The Cooperative League of America has knowledge of more than 2,000 true consumers' cooperative societies conducting stores. In some locations the purchasing power of groups of societies has become so great that they have federated and organized wholesale societies.

A PROSPEROUS COOPERATIVE ENTERPRISE IN PENNSYLVANIA

The Tri-State Cooperative Society maintains a wholesale with a warehouse at Monessen, Pennsylvania. It has recently acquired another warehouse at Pittsburgh. The demands of the cooperative societies within reach of its motor trucks are so great that it does not attempt to give service beyond a radius of twenty or thirty miles. It carries a stock of staple commodities, which are quickly consumed and renewed. It is growing rapidly. A single labor union contributed $5,000 to its capital.

WHAT ILLINOIS HAS ACCOMPLISHED IN COOPERATION

The Central States Cooperative Society is a federation of about seventy distributive societies. Its headquarters is at Springfield, Illinois. It maintains a wholesale with a warehouse at East St. Louis. These societies are largely built up among the union locals of the United Mine Workers in Illinois. Their financial success enables many of them to return to their members a savings-return of 6 to 12 per cent quarterly on the cost of their purchases. The society at Witt, Illinois, may be taken as a typical example of this group. It has more than 300 members. Its last quarterly report shows that for the three months they paid a cash savings-return to their members of 8 per cent, totaling $2,213; they added to their merchandise reserve fund $1,051; their sales to members for the three months were $27,685, and to non-members $3,354; and their total resources are $28,847. Its building is the largest in the town. They state: "Private merchants no longer look upon us lightly; some of them are beginning to wonder how long they will last. Almost all of them have reduced their help." This society, like that at Danville, has an energetic committee on education and social features, and brings together the men, women and children in its educational and recreational activities.

The Staunton, Illinois, Society has nearly 400 members, declares a 10 per cent savings-return, does a quarterly business of $36,376, and has resources amounting to $35,000.

Many of these societies own their own buildings. They sell groceries, meat, hardware, dry goods, and clothing. Some conduct their own coal yards. The Roseland, Illinois, Society, has 400 members, and is doing a business of $130,000 a year. The Gillespie, Illinois, Society does a business of $140,000 a year. Here is a society with a large element of Scottish cooperators, who learned cooperation in the old country.

The $3,000,000 annual business which these Illinois societies do is in the hands of working men who have come up out of the mines and taken charge of financial affairs. Illinois is but an index of what is going on in the neighboring states. Strong groups of societies exist in Indiana, Ohio, and Iowa. The Palatine Cooperative Society of Chicago with 1,200 members conducts a school with 400 Polish students. The society has a capital of $500,000.

COOPERATION DEVELOPING ALONG BROAD LINES IN NORTHERN STATES

The societies in the northern states are growing up in the farmers' organizations. Their wealth, numbers, and the size of their membership are greater than in any other section of the country. These societies are largely connected with cooperative producers' organizations. Hundreds of them not only conduct stores where groceries, dry goods, clothing, and hardware are sold, but they do an enormous business in supplying seeds, fertilizer and harvesting machinery to their members. These same organizations buy the farmers' products and sell them on a cooperative basis. Some of them own grain elevators, others are organized to sell livestock, and not a few conduct a meat-packing business. One of these societies started in 1914 with $7,000 capital paid in. In 1918 it had seventy-five branches with more than $700,000 paid in. It has a wholesale and has entered the field of manufacturing. A society in Wisconsin does a business of between $700,000 and $1,000,000 a month. The expense of carrying on this business is 3 1-3 per cent of the amount of sales.

SEATTLE MAKING A SPLENDID RECORD FOR THE CAUSE

The Northwest has a vigorous movement around Puget Sound. The powerful labor organizations of Seattle have become interested in Cooperation. Things are happening rapidly. The Seattle society bought a store doing a business of $4,200 a month. They started in June, 1918, and increased the business to $7,000 a month. They then took over the city market, and during the first thirty weeks did a business of $500,000. Now their meat business alone amounts to $70,000 a month. Their net profit in the first seven months was $20,000. All this business is conducted on strictly Rochdale principles.

Among these Seattle Cooperatives are found a laundry, printing plant, milk condensary, several shingle mills, fish canneries, and recreation houses. Recently they have established a bank and a watch and jewelry cooperative store. Behind them is the support of the labor unions. A single union contributed $12,000 to their paid-up capital. The Puget Sound Cooperative Wholesale, a federation of the societies about Seattle, was organized in 1918. In the winter of 1919 it fed the families of the striking shipyard workers when the city authorities, the military forces of the Government, and the private merchants conspired to starve them out.

THE FINNS SET THE PACE IN THE UNITED STATES

A group of people who have done more than any other nationality to promote Cooperation in the United States are the Finns. They have the intelligence, the solidarity, and the traditions necessary for success. At Superior, Wisconsin, they have a wholesale in the midst of a group of about fifty splendid societies. Their bakeries are as near perfection as possible. In western Massachusetts is another group of Finns. In New York City they have cooperative apartment houses, restaurants, and clubhouses. Their central bank at Fitchburg, Massachusetts, has a branch in New York. It receives the deposits of the members and finances their enterprises. They conduct printing houses which publish several daily papers, weeklies, and monthly magazines. They have done more in developing the social, educational, and recreational aspects of Cooperation than any other people. Their clubhouses, theaters and amusement parks represent the best America has in these expressions of Cooperation.

Other national and racial groups which have made notable progress are the Russians, Italians, Germans, Poles, and Slovaks. Besides these groups there are hundreds of isolated societies in every part of the country.

INFLUENCE OF 1918 NATIONAL COOPERATIVE CONVENTION

The National Cooperative Convention at Springfield, Illinois, in 1918, under the auspices of the Cooperative League of America, was a significant event in the development of the American Movement. It brought together delegates from all parts of the country, united the cooperative forces, and set on foot the organization of an American Wholesale. During the first six months after this event the League added the names of more than 1,000 societies to its list.

COOPERATIVE MOVEMENT STRONGLY SUPPORTED BY ORGANIZED LABOR

The Cooperative Movement in America has undergone a striking revival. In 1916 the American Federation of Labor passed strong resolutions indorsing consumers' Cooperation and provided for the promotion of true Rochdale methods. Since that the labor publications throughout the country have carried on an effective propaganda. The result has been as follows: the subject is brought up in union locals, a committee is appointed to get information, the committee writes to the League, advice and literature are sent, a society is organized, and a store opened. This is the natural current of events.

The Cooperative Movement in America is developing in close alliance with the Labor Movement. The indications are that this alliance will become stronger. It is desirable for both that it should. The Labor Party has taken a stand in favor of the Cooperative Movement. All the indications show that these three social forces—Cooperation organizing the consumers; Labor organizing the workers at the point of production; and Labor in the political field—are destined to go forward together to victory.

Rochdale Cooperative Movement Endorsed by the A. F. of L.

The Special Committee on Cooperation, with the approval of the Executive Council, urges on the trade unionists of the country a practical program for the development of the Rochdale Cooperative Movement. The simple principles of this system are clearly set forth in the appended report.

IN NOVEMBER, 1917, a Special Committee on Cooperation submitted to the Executive Committee of the American Federation of Labor the report which appears below, signed by G. W. Perkins, J. H. Walker, W. D. Mahon, A. E. Holder, and J. W. Sullivan. "All the members of your committee," says the report, "have made the subject of cooperation the study of many years, have had personal experience in conducting or investigating cooperative societies and are acquainted with cooperation as a great world movement."

The report, which follows, was unanimously adopted by the Executive Council:

Your "Committee on Cooperation," appointed by President Samuel Gompers, in accordance with Resolution No. 86, adopted by the Baltimore Convention, November, 1916, present the following as their report:

PRACTICAL PROGRAM FOR EDUCATION IN COOPERATION OUTLINED

Reversing the usual order of reports, the committee submits at the outset its recommendations. They are as follows:

1. That a qualified trade-unionist cooperator be appointed by the President of the American Federation of Labor to serve one year as lecturer and adviser on the practical work of Rochdale cooperation.

2. That this appointee shall have office room in the American Federation of Labor Building in Washington, which shall be the center of information by correspondence and otherwise on the subject.

3. That he shall visit localities in which cooperative societies are in process of formation or have already been formed, and give practical information to the officers and members of such societies, making out routes of travel for this purpose so as to conserve his time and perform the work at a minimum of expense.

4. That it shall be understood that central labor unions and local trade unions as such shall not form cooperative societies, but shall appoint committees from their membership to act in cooperation with other citizens who are in sympathy with the trade-union movement in assisting in the upbuilding of a general cooperative movement.

5. That every local trade union under the jurisdiction of the American Federation of Labor be requested to contribute the sum of one dollar ($1.00) in order to establish successfully the Federation bureau for promoting and advancing the cause of true cooperation in the United States and Canada.

COLLECTIVE COOPERATION NECESSARY TO PROTECT WAGE-EARNERS

Your committee believes the submission of this practical program to be of more value to the trade unionists of the country than an extensive survey of the cooperative movements of the world or any exhaustive dissertation on the principles of cooperation, which might be made the subject matter of a report, except to say that we have found that protests, denunciations, condemnations and investigations are alike without power to influence employers to pay the rate of wages they should pay; provide safe and healthful conditions of employment, or establish the relationship that should obtain between the employers and the workers or the reasonable hours that should constitute a day's work.

The only way we have been able to assure these conditions has been through the establishment by the trade-union movement of a powerful organization of workers to enforce labor's just demands.

This is just as true of the merchants and business men as it is of the employers. Protests, denunciations, condemnations and investigations will not enable us to obtain permanently the best articles which we use in every-day life for just prices.

There is nothing that will accomplish this purpose except organization, and the cooperative movement is the organization that is designed to protect the workers in their relations with the merchants and the business men in the same sense that the trade-union movement protects them from the employers. The two movements are twin remedies.

If we had a thorough cooperative movement throughout America, comprising in its membership the workers thereof, there would be less need for official governmental food control agencies.

And without that kind of organization established permanently to deal with this question there is no guarantee to the workers that the cost of living for them and their families will be permanently placed on the basis that should obtain, and it is for that reason that we believe that the American Federation of Labor should assist in establishing, building up and strengthening in every way possible a legitimate organization of bona fide workers in our country and Canada as part of the great world's cooperative movement; so that after the trade-union movement has secured for the workers the wages that they are entitled to for the labor they perform, they may be assured in spending those wages that they will get for them their full value.

We hold that it is just as essential that a workingman should get ten dollars' worth of actual value for his wages when he spends them as it is that he should get the ten dollars that he is entitled to for the labor that he performs.

GOVERNMENT SHOULD UTILIZE AND EXTEND COOPERATIVE ENTERPRISES

We would also recommend that the United States Government be requested by the Executive Council of the American Federation of Labor to take up the question of the cooperative movement in connection with its activities relative to the high cost of living, with a view to utilizing as far as possible the existing cooperative organizations for immediate purposes and encouraging the creation of additional cooperative organizations where they are needed and conditions are suitable.

There has been assembled in the offices of the American Federation of Labor a considerable body of literature on the subject, among which are the standard works, reports from various countries, and lists of recent publications.

Your committee has excluded from its consideration all forms of associated work which do not fall within the strict limits of the Rochdale cooperative system.

GENERAL PRINCIPLES OF ROCHDALE SYSTEM SET FORTH

The simple principles of this system are:

1. A democratic organization.
2. One vote for each member with equality in share ownership.
3. Cash returns quarterly to members of the difference between the total amount they have paid for their purchases and the lesser total cost of these purchases to the cooperative society; including among the costs depreciation and a reasonable amount for a reserve fund to meet emergencies and extend the business.
4. Rejection of the principle of profit.
5. Current interest on loan capital.
6. Sales where possible preferable to members only.
7. Distributive cooperation to precede productive.
8. A sufficient number of retail stores to be established to assure a market before a wholesale department is created.
9. Observance of method recommended by the International Cooperative Alliance.

COOPERATIVE AND TRADE-UNION PRINCIPLE MUTUALLY HELPFUL

All the members of your committee have made the subject of cooperation the study of many years, have had personal experience in conducting or investigating cooperative societies and are acquainted with cooperation as a great world movement. In their judgment the cooperative principle and the trade-union principle give rise to no hurtful interference with each other, but are mutually helpful, and each is in a degree beyond measure a factor in the economic, social, political and educational development of the wage-working masses.

An Important Labor Law

THE FEDERAL EMPLOYEE is in receipt of a clipping from an old issue of the *New York Sunday News* which contains an interesting account of the way in which the Prevailing Rate of Wages law was placed on the statute books of New York State in 1894. So great was the importance of the measure that it was commented on at the time of its passage by the press, legislators, labor leaders, and the public as being the most advanced, albeit conservative measure, ever enacted in this country in recognition of the rights of the working masses. This law amended the labor laws of the state so that mechanics, laborers, or workingmen employed by the state or the cities or their contractors should receive the prevailing rate of wages for a day's work, and that none but citizens of the state should be employed on public works. As a precedent the law had great influence in molding subsequent legislation for the benefit of the country's toilers.

The necessity for the relief sought by the bill had long been apparent. Contractors had been accustomed to bid on public work at figures so low that they could make a profit only by hiring non-union mechanics and laborers at low wages. Men poured into the state each season from Canada, Great Britain, and elsewhere to work for what they could get. By living as cheaply as possible they were able to save money, which they took away with them when the season closed. This resulted in the exclusion of American workmen from many jobs, in the lowering of wages, and in constant contention.

Not the least notable feature of the case is that this far-reaching legislation was carried through the State Legislature very largely through the efforts of Lodge No. 1 of the United Order of American Carpenters and Joiners of New York City (later merged into the Brotherhood of Carpenters). The activities of the lodge in this matter were centered in a committee of which John J. Daly, for many years President of the Immigration Branch of the United States Civil Service Retirement Association, Ellis Island, New York, was secretary. His strenuous and effective work in the cause was recognized by the presentation to him of the pen used by ex-Governor Flower in signing the bill.

Wire Workers *vs.* Mr. Burleson

The recent 20 per cent raise in telegraph rates was not made necessary, as claimed by Postmaster General Burleson, by the wage increase granted telegraph operators in 1918. Light is thrown on the wage question from the wire workers' side. The treatment accorded the Western Union by the Wire Administration is contrasted with that accorded the men at the keys.

Written for THE FEDERAL EMPLOYEE

By S. J. KONENCAMP

President of the Commercial Telegraphers' Union

POSTMASTER General Burleson has announced an increase in telegraph rates amounting to 20 per cent, claiming that the wage increases granted in 1918 make this step necessary. On behalf of the telegraph workers I wish to deny that this claim is valid. In our opinion the increase in rates has been made to take care of the large profits allowed the Western Union Telegraph Company.

THE TRUTH ABOUT WAGE INCREASES GRANTED TELEGRAPH OPERATORS

There have been but two announcements made by the Wire Administration in relation to wages. The first was made in August last, when a bonus running up to about 10 per cent, which had been paid by the Western Union Telegraph Company during 1917 and the early part of 1918, was discontinued and an increase of 10 per cent in wages announced. This bonus did not apply to all employees, nor was the 10 per cent granted to all, but in any event this could not be construed as an increase granted by the Wire Administration. In some cases the readjustment resulted in a slight decrease in pay. The next announcement was on December 31, when employees who had been in the service continuously for six months to one and a half years were granted an increase of 5 per cent, and those who had been in the service continuously for more than one and a half years were granted a 10 per cent increase. The Postal Telegraph Company amended this so as to grant 10 per cent to all employees affected. Thus the maximum wage increase granted, apart from the old bonus of 1917, was 10 per cent.

Even this increase did not apply to the smaller offices, and no fewer than 5,000 employees of the Western Union alone were deprived of any increase by various restrictions announced. In addition to this, the Sunday overtime rate of time and one-half was reduced to about time and one-seventh. Again, the earnings of many workers instead of being increased were actually reduced by the Burleson award of December 31, 1918.

Another reason for our denying the correctness of Mr. Burleson's statement is the fact that there is no wage scale worthy of the name in the commercial telegraph companies. The maximum salary for Morse operators is $160 and the minimum is $70 per month; for printer operators the maximum is $105 and the minimum $55; for clerks the maximum is $100 and the minimum $40. There are no classes nor grades, and most of the workers receive a wage nearer the minimum than the maximum. In actual practice it has happened within the last few months that positions paying the higher ratings have been abolished, and the duties assigned to workers receiving a lower rate. In some cases the reduction has amounted to as much as $35 a month. Wherever they can—and that is almost everywhere—the companies are filling vacancies at lower salaries than were previously paid.

HOW RETURNING SOLDIERS FARED WITH THE TELEGRAPH COMPANIES

Soldiers returning from France have been told that they were not entitled to any increase in pay and are being reemployed at their 1917 ratings. Others have been told there are no vacancies at their old salary ratings and have been offered employment at reduced wages. In several instances workers who were drafted in October and released in December were denied vacations for 1918 on the ground that they had been furloughed. When one or two of these draftees took exception to the term "furlough" they were informed that had they followed the companies' instructions, and sought deferred classification, they would have been entitled to vacations, but that by waiving exemption, they waived also their vacation rights.

With these facts in hand, is it strange that the telegraph workers dispute Mr. Burleson's statement?

HOW THE WESTERN UNION FARED WITH THE GOVERNMENT

Now for the other side of the picture. We find that the earnings of the telegraph companies advanced during 1917 and 1918. President Carlton, of the Western Union, made a statement during March, 1918, showing how the company had added $5,000,000 to its surplus in 1917 to provide for a "rainy day." Incidentally, this surplus totals $30,000,000 put away for a "rainy day" during the last nine years.

The Western Union dividend rate in 1914 was 4 per cent; in 1917 it was 7 per cent. The Wire Administration allowed the Western Union $8,000,000 per year to guarantee the increased rate of dividends during the period of government control. This is 8 per cent on the $100,000,000 capital stock. Of this $100,000,000 nobody has ever been able to find that more than $16,000,000 of real money has been put into the property. In addition to the $8,000,000, the Western Union is allowed to retain all its nonoperating income and the income from its eight transatlantic cables, while the Government, besides meeting all other expenses, promises to maintain reserves for depreciation and sinking-fund purposes on the same basis that the company maintained them.

The original dividends of the company were paid from both land and cable tolls, but the Government allowed 1 per cent additional to be made up from land-line revenues alone. President Carlton, of the Western Union, says this is a fair contract, and surely he should know.

TELEGRAPH OPERATORS UNDERPAID; MR. BURLESON'S FIGURES INCORRECT

As a matter of fact Postmaster General Burleson stated in December last that the revenues of the property

Digitized by Google

would not permit of any wage increase other than the one granted, ranging from 10 per cent to zero—mostly zero. Even Mr. Burleson admits the telegraph workers are underpaid. With a minimum of $2.69 per day for Morse operators, $2.25 per day for printer operators, and $1.92 per day for clerks, the raising of $16,000,000 per year additional—the amount President Mackay of the Postal Telegraph Company claims the 20 per cent increase in rates will yield—to provide for what Mr. Burleson claims is a wage increase of $3,000,000 or thereabouts, is ridiculous on its face. This is evident even if there had been a wage scale adopted the requirements of which would lead us to believe that any of Mr. Burleson's figures as to the expense thereof are correct.

If Mr. Burleson had declared the rate increase essential to make possible necessary increases over and above the present wage scale, we might forgive him, but to say it is for the purpose of making provision for increases in wages already granted is adding insult to injury.

"Mr. Burleson, Sweat-Shopper"

A scathing arraignment of the "Political Master General" (to borrow a Harveyism) for his unjust and inhumane treatment of the postal employees. The author cites cases illustrative of the way in which these workers have been systematically "sweated," not only to their own injury, but also to the marked detriment of the morale of the service.

WHAT'S the matter with the mails? Where's that letter that should have been delivered day before yesterday? What has Mr. Burleson been doing to the postal system? Why haven't the workers had an equitable share in the wage increases granted civilian government employees in general?

Considerable light is thrown on these and other questions that naturally arise in an inquiring mind, in a series of articles by William Hard, in *The New Republic*, in the first of which, entitled "Mr. Burleson, Sweat-Shopper," he summarizes the situation by declaring that the Postmaster General "has demoralized the service by dehumanizing it."

GRINDING DOWN THE PAY OF THE POSTAL EMPLOYEES

After characterizing the substitute letter-carrier system as "an atrocity," the author brings in the case of E. A. Whitney, a substitute carrier in the Chicago postoffice, who testified before the House Committee on Postoffices in December, 1917, that for three and one-half years he had reported for duty at 6.10 a. m., remaining on the bench on call all day, his actual working hours varying from four to zero. Of course a substitute is not paid for holding down the bench, and his earnings average between $40 and $50 a month. Yet in his report for 1914, the Postmaster General recommended that the pay of substitutes (earning an average of $420 a year) be reduced by five or ten cents an hour.

After their years of substituting have passed, those who still have the courage to remain in the service become regulars at the princely entrance salary of $800 a year. An annual increase of $100 is allowed them, if efficient, until they reach the dizzy height of $1,100 in second-class offices, and $1,200 in first-class offices. The department, however, realizing the danger of making the service top-heavy by undue generosity to those higher up, suddenly discovered a distinction between the letter-carriers who collect mail and those who deliver it, notwithstanding the fact that they take the same entrance examination, serve the same sentence as substitutes, and then become regulars at the same basic salary. So, in 1915, an order was issued that "in future the maximum salary of letter carriers assigned to the collection of mail be fixed at $1,000 per annum."

The average annual pay of letter carriers in normal times, on basic salaries, for the first nine years of service, is $742, an amount below the lowest estimate of the cost of decent living for a family even before the war. Yet the First Assistant Postmaster General told the House Committee on Postoffices that salaries of postal service employees for the fiscal year 1920 should not be increased.

In 1917 Congress enacted a 10 per cent advance for certain employees, but the postal service employees were thoughtfully excluded therefrom by special advice of Mr. Burleson in pursuance of his relentless policy of Hooverizing on salaries. During the next two years, however, an intricate device was put into operation, by which the lower-grade employees will get their old annual salary advance of $100, and the top-grade employees (and they alone) will get a genuine additional advance of $100, and even this increase was earnestly opposed by the department.

The cost of living between 1917 and 1918 went up 15 per cent, while the average wage of letter carriers rose to the extent of one-half of 1 per cent; so that, as Mr. Hard observes—

> Mr. Burleson can say that by constant vigilance he has quite succeeded in preventing his employees from coming anywhere near an equalization of their wages and their expenses. He owes this success partly to his pressure on Congress against advances and partly to his continuous ruthless application of all rules tending toward removals of older men and toward their replacement by men younger and lower-graded and cheaper.

But the direct cutting down of salaries and refusal of increases and replacement by men at lower pay were not the only possibilities that opened up before Mr. Burleson's mental vision. To allow clerks who worked on Sunday to take a day off during the week following was deemed an unreasonable favor and forthwith revoked.

Next, it occurred to his fertile mind that still further economies could be effected by reducing promotions from once a year to once in two years.

AGED EMPLOYEES INHUMANELY TREATED UNDER BURLESON REGIME

Nor is this all. In some departments of the Government there are individual instances of consideration towards its aged employees, and in many positions outside of the Government, retirement and pension systems solve the problem of their superannuated, but not so in any office under the supervision of Mr. Burleson, whose First Assistant Postmaster General tells a convention of postmasters—

> Some postmasters refrain for humanitarian reasons from recommending the removal of aged employees. This condition is wrong. The only proper course is for every postmaster to put all his employees on notice that salaries will be scaled and adjusted to meet the declining efficiency of the older clerks and carriers.

TYPICAL BURLESON RECOGNITION OF LOYAL AND FAITHFUL SERVICE

That his merciless system of saving dollars is at the expense of all enthusiasm, incentive, or loyalty on the part of his employees, matters to its author not at all. A typical instance of departmental recognition and appreciation of faithful service is recorded by Mr. Hard in the case of Mr. Richardson, who, after serving the Government for fifty-nine years, was rewarded by a demotion from $1,100 to $1,000 and, a few months later, by a further reduction to the foot of the list of substitutes.

During the first three years after the reduction system was in good

THE ARLINGTON MANSION

Arlington and Decoration Day

This article tells of the origin and growth of the beautiful custom of strewing yearly with flowers the graves of our country's soldier dead, and of the transformation of the historic colonial estate of Arlington, forever to be associated with memories of Washington and Lee, into the Nation's Pantheon.

By GERTRUDE E. MACKENZIE

ON THE THIRTIETH of this month throngs will gather from far and near to make the fifty-second pilgrimage to their common shrine—the silent city of the dead at Arlington—to pay their tribute of love and respect to those who "gave their lives that the Nation might live," and, with renewed patriotism, to "here highly resolve that these heroic dead shall not have died in vain." And again will Memorial guests gather inspiration from the scenes of silent grandeur wrought alike by nature and by art: the quiet waters of the Potomac flowing peacefully between the Nation's Capital and the Nation's Sepulcher; the roomy old mansion which has welcomed Lafayette, Clay, and Webster, and which was so intimately associated with the history of the world's bloodiest fratricidal strife; the last resting-place of its victims, marked by granite shaft or humble headstone; the gardens of blooming flowers that spend their lives each year in spelling out the names of loved commanders, and in perpetuating in form and color the varying designs of army corps badges; the Temple of Fame inscribed with the names of its dozen heroes; the Monument to the Unknown Dead, whose remains, impossible of identification, were gathered from corpse-strewn battlefields, and whose "names and deaths," its inscription reads, "are recorded in the archives of their country, and its grateful citizens honor them as of their noble army of martyrs"; the nearby amphitheater and rostrum where each year the floral offerings are supplemented by the verbal tributes of a grateful people. It is hoped that by another year these exercises may be held in the beautiful new marble structure being erected in the form of a Greek temple, but this is not yet sufficiently near completion to be dedicated before autumn at the earliest.

THE SOUTHERN ORIGIN OF DECORATION DAY

The origin of strewing graves with flowers is thus eloquently described by Chauncey M. Depew:

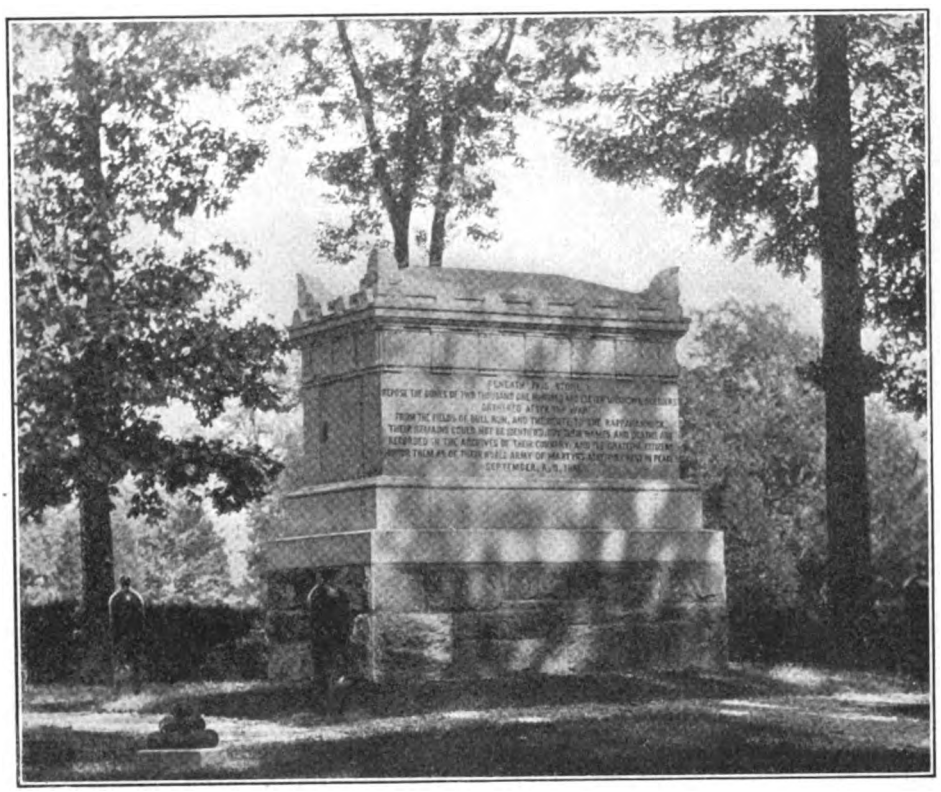
Digitized by Google

When the war was over, in the South . . . the widows, mothers and children of the Confederate dead went out and strewed their graves with flowers; at many places the women scattered them impartially also over the unknown and unmarked resting places of the Union soldiers. As the news of this touching tribute flashed over the North, it roused, as nothing else could have done, national amity and love. . . . It thrilled every household where there was a vacant chair and an aching void in the heart for a lost hero whose remains had never been found; old wounds broke out afresh, and in a mingled tempest of grief and joy the family cried, "Maybe it is our darling!" Thus out of sorrows common alike to North and South came this beautiful custom. But Decoration Day no longer belongs to those who mourn. It is the common heritage of us all, and will be celebrated so long as gratitude exists and flowers bloom.

On May 5, 1868, Gen. John A. Logan issued the following general orders:

The 30th day of May, 1868, is designated for the purpose of strewing with flowers the graves of comrades who died in the defense of their country during the late rebellion, and whose bodies now lie in almost every city, village and hamlet churchyard in the land. For this observance no form of ceremony is prescribed, but posts and comrades will, in their own way, arrange such fitting services and testimonials of respect as circumstances may permit.

In compliance with these recommendations, May 30, 1868, was generally observed as the first Memorial Day. The services were held at the mansion in the afternoon. By executive order, the government offices were closed in order to allow their employees to attend, and flowers were contributed from government conservatories and by the women of Washington. The orator of the day was James A. Garfield, then Congressman from Ohio, and among the invited guests were fifty-four little children who had been orphaned by the war.



THE MONUMENT TO THE UNKNOWN UNION DEAD

FROM A COLONIAL ESTATE TO A NATIONAL CEMETERY

The grounds constituting the National Cemetery were originally part of a grant made by Sir William Berkeley, Governor of Virginia, to Robert Howsen, in 1669. After that it passed to the Alexander family, from whom the city of Alexandria takes its name, and from the Alexanders it was purchased by John Parke Curtis, the son of Martha Washington and the immediate ancestor of George Washington Parke Custis, who, with true artistic appreciation for the beautiful, modeled his home—the present Arlington House—after the ancient Temple of Theseus at Athens; and from the time of its erection to the breaking out of the war it was known as the finest specimen of landed proprietor's residence that could be found within the limits of the Slave States. It was built of brick and stucco, and the material for its construction was produced on the grounds about it. Brickyards were established on a portion of the estate, now part of Fort Myer, where the bricks were burned under Mr. Custis' own supervision.

At the death of Custis, in 1857, the estate was transferred to his son-in-law, Lieut. Robert E. Lee. At the time of the outbreak of the war, Lee was in Texas, but was recalled to Washington by order of the War Department, March 1, 1861. It had been his intention at this time, in case Virginia were not involved in the struggle, to retire to his home at Arlington and refuse to take any part in the conflict, but the secession of Virginia cast the die for him, and he resigned his commission. On April 22 he and his family left Arlington for Richmond, never to return, and on the following day he accepted the position of commander-in-chief of the forces of Virginia.

Two days later the first battalion of the great army of the North swept into the District of Columbia. The first campfires were lighted among the oaks of Arlington, and the mansion itself became the headquarters of the commanders of the troops quartered on the grounds, and soon long lines of tents dotted the hillsides.

By 1864 the interments made at Soldiers' Home Cemetery—then the only military cemetery in Washington—had exhausted every available inch of space, and the disposal of the remains of soldiers dying in Washington had become a serious problem. Late one spring afternoon a year before the close of the war, as Quartermaster General M. C. Meigs was walking past the White House grounds, he heard the familiar voice of President Lincoln inviting him to step into his carriage and take a ride. This ride took them to Arlington, and after a conference with a corps of surgeons in charge of the hospital tents, while the two men stood on the terrace in front of the mansion awaiting the arrival of the carriage, their attention was attracted to a sad procession passing within a few feet of them. On common canvas stretchers, borne by members of a detailed squad, were bodies being carried to the lower part of the grounds to await the coming of the burial squad to convey them to the already overcrowded Soldiers' Home Cemetery. Stopping the sergeant in command of the squad, General Meigs asked, "How many men are there awaiting burial?" "With these, a dozen, sir," answered the sergeant, "no bodies have been taken away during the week." "Set down the stretchers," commanded the Quartermaster General, and then, turning to an officer standing near, he said: "Captain, order out a burial squad and see that all the bodies at Arlington are buried on the place at once."

Digitized by Google

Thus on May 13, 1864, the first interment of Union dead was made on this site, and the National Cemetery established. Every day from that afternoon on, black ambulances made their way along the dusty highway from the Aqueduct Bridge to the gates of Arlington. In the brief interval elapsing from May 13 to June 30 of that year, the interments at Arlington numbered 2,619, which number was increased to 5,291 during the next year.

In January, 1864, Arlington was occupied by two forts with full garrisons and thousands of tents. In consequence, the Secretary of War recommended to the President that the estate be purchased by the United States Government for military purposes. President Lincoln acted on this recommendation, and on January 11, 1864, the estate of 1,100 acres was put up at public sale and, after but little competition, was bid in by the United States for $26,100.

Neither General Lee nor his wife ever attempted to regain possession. They were but life tenants and had no title to the property, which had been devised by George Washington Parke Custis to his grandson, George Washington Custis Lee. Mr. Lee entered suit, which, after dragging through five years, was taken to the Supreme Court, which sustained the claimant's title to the property. After a conference between the Secretary of War and Mr. Lee, the latter expressed his willingness to yield all claims to the Arlington estate and deed the same to the United States for $150,000.

"TO OUR DEAD HEROES"
BY THE UNITED DAUGHTERS OF THE CONFEDERACY

Thus the beautiful grounds, which had passed through such a changing history, from whose hillsides had echoed alike children's merry laughter and the soldier's last tattoo, became at last the undisputed property of the National Government, to be preserved in all ages in memory of the vast army that lies sleeping beneath the shady oaks on the green lawns among the blossoming flowers or drifting snows.

"On Fame's eternal camping-ground
Their silent tents are spread,
And Glory guards, with solemn round,
The bivouac of the dead."

Democracy in Municipal Employment

Joint action by the city and its employees for the improvement of efficiency and of working conditions in the public service is the object of an agreement recently entered into between the corporation of the English city of Bradford and its workpeople. A joint standing consultative board is established which is to be equipartisan and to consist of representatives of the corporation and of the various groups of employees—teachers, clerks, street railway workers, gas workers, laborers, etc., each group being represented in proportion to its numerical strength. The thirty-two members will retire annually but will be eligible for reappointment. Each side of the board will elect a chairman and a secretary, and administrative expenses will be shared equally by the corporation and the employees. The specific objects of the board are:

To provide for the consideration at regular intervals of wages and rates of pay, hours, and working conditions; to take action to prevent differences and misunderstandings between the corporation and its employees; to consider differences that arise and to establish machinery for this purpose.

To encourage the study of processes and design and of research with a view to perfecting the services concerned.

To provide facilities for the full consideration and utilization of inventions and improvements in machinery or method, and for the adequate safeguarding of the rights of the designer, and to secure to every person concerned an equitable share of the benefits, financial or other.

To make inquiries into the special problems of the services concerned, including the comparative study of organization and methods in this and other countries, and, where desirable, the publication of reports.

The consideration of means to secure for the employees a greater share in, and responsibility for, the conditions under which they carry on their work in so far as it affects the health (including housing) of the workers.

To provide the best means of securing (1) the observance of agreements entered into by the corporation and its employees; (2) the greatest possible security and continuity of employment.

The supervision of entrance into, and training for, the various services of the corporation, and cooperation with education authorities.

To take measures for securing the inclusion of all workpeople in their appropriate trade unions or associations.

To provide that the board shall be the "works committee" for any national industrial council which covers any service of the corporation. —*The Survey.*

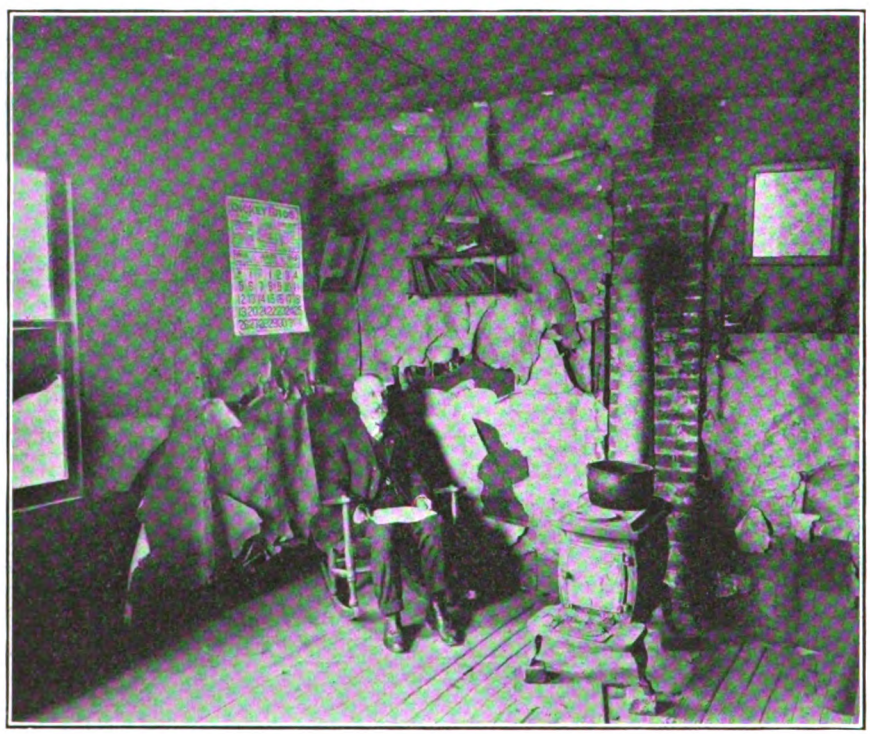
Minimum Wage Strongly Urged

Continuing the discussion of the subject in our March issue, the necessity of the three-dollar-a-day minimum wage, at least in the government service, is strongly urged by a number of Cabinet Officers. Chief Clerk Ayers of the Interior Department presents a graphic and telling argument in support of the proposed legislation.

AS THE TIME approaches for the assembling of the first session of the new Congress the interest of government workers in the various measures to be introduced which have a direct bearing on their welfare naturally begins to rise. This statement is applicable probably as much to the minimum wage question as to any other legislation to be brought again before the two houses. An incident, the account of which recently became available in connection with the consideration of the Johnson-Nolan Minimum Three-Dollar-a-Day Wage Bill, forms a graphic and telling argument for this much-needed relief measure. Chief Clerk E. J. Ayers of the Interior Department, who, it may be said in passing, came up from the position of laborer in the same department, was testifying before the subcommittee of the Senate Committee on Education in charge of the bill named. "I desire," said Mr. Ayers, "to call the attention of the committee to a single case—



A GRAPHIC ARGUMENT FOR A LIVING WAGE

a case similar to that of many others in our department, and there are many who are in worse circumstances than the one that I call your attention to. This is the case of a man by the name of Frank White. The records of our department show that he entered the service in 1889 as a laborer at $660 per annum, after a service of three and one-half years in the United States Navy as a first-class fireman, with an honorable discharge. He has been with us for more than thirty-three years, and is sixty-six years old, and has given more than half of his life to the service of the Government. He owns a little property 3 miles beyond the Chesapeake Junction [about six miles from Washington], and he gets up early in the morning, before daylight, and comes in to work and goes out after dark at night. Today he is getting $840 a year. He has raised a family of nine children—three of whom are now dead—eight boys and one daughter. His elder sons are married and have established homes of their own. Two of his sons are in the military service in France, and his daughter, twelve years old, lives with her grandmother, where he is supporting, educating, and clothing her.

He is a white man, a very intelligent man, eminently qualified for this particular line of work. Now, there is his home [showing photograph to chairman]. That is a little shack, and it has neither lathing nor plastering inside. There are but four small rooms, and the walls are made of paper, and that paper is dropping off, as you can see there. His wife is dead. He is his own housekeeper and he does the cooking and the washing and the ironing. On that stove that you see before you there, which he has had for more than twenty years, he is cooking his Sunday dinner, and that dinner consists of navy beans and fatback. The house is not a suitable place for his daughter to live in, and due also to the fact that there is no one to protect her during the day. Consequently it is impossible for her to live with her father. This small place consists of a shack and a few acres of land on which he has a mortgage of $1,000, and you can judge that he enjoys no conveniences other than the small house, which protects him from the elements.

To my mind, Mr. Chairman, it seems a pity, that the United States Government should employ men of that type, or any other type for that matter, and does not give them enough to live on decently. He has stayed with us as a matter of faithfulness to the Government, and has stayed with us when he could make more in one week outside of the Government than we pay him for one month.

Others have left us, but instances of that kind have been very few. At one time I had in our auditorium our employees and I made an appeal to them to stand by us during the war period, and there were more than 300 of them present, and they all of one accord assured us that they would stand by us and would give us the benefit of their labor in our department during the war period, notwithstanding the fact that the price for labor outside was a great deal more. They did stay with us and they are with us today.

SECRETARY LANE'S VIEWS ON JOHNSON-NOLAN BILL

Adverting to your expressed desire that I take into consideration the general effect of the legislation formulated by S. 3878, I may state that I believe such salary increases would aid this department in obtaining better qualified employees in the mechanical, watch, messenger and labor forces, whose salaries are now less than $1,080. We would be saved from long delays in securing this kind of help, by having fewer vacancies because of reduced turnover in employees, as there would be less dissatisfaction with compensation, and the service would be improved by reason of the fact that better qualified persons would seek appointments whereas they are not now attracted by the salaries paid.

I cannot too strongly advocate the merit of the bill on the ground of its giving a living wage, or more nearly so, to many deserving employees who as a rule have families to support.

Digitized by Google

Some are compelled to do other work out of office hours in order to earn

THE HOME OF ONE STARVATION-WAGE EMPLOYEE
(See page 280)

enough to provide for persons dependent on them, and instances are not uncommon of children who should be at school working to help support the family.

SALARY INCREASES FAVORED BY SECRETARY OF AGRICULTURE

I think there is no doubt that the salaries or compensation of low-salaried employees in the government service should be equitably increased. In its estimates of appropriations for the fiscal year 1920, this department submitted supplemental estimates for a minimum wage scale to apply to certain low-salaried employees as follows:

Clerks	$1,000
Clerks (minor)	900
Repairmen	1,000
Skilled laborers	1,000
Gardeners	1,000
Messengers or laborers	900
Messenger boys	480
Laboratory helpers	900
Watchmen	900
Firemen	1,000
Elevator conductors	840
Telephone operators	840
Cabinetmakers or carpenters	1,200
Electricians	1,200
Painters	1,200
Plumbers	1,200
Blacksmiths	1,200
Mechanics	1,200

These suggestions were not included in the Agricultural Appropriation Bill as reported to the House on January 24, 1919.

SECRETARY OF WAR BAKER SUPPORTS THE BILL

My views in general as to the wisdom of the proposed legislation are favorable to it, especially just at this time when because of the high cost of living the minimum salary, which the proposed legislation would allow, is thought to be not more than enough to furnish bare necessities.

MINIMUM WAGE BILL HAS SECRETARY WILSON'S INDORSEMENT

It is difficult to realize how persons can exist on these salaries, particularly if they have families to support. The department is heartily in favor of this legislation.

DEPARTMENT OF COMMERCE FAVORS GENERAL SALARY INCREASE

While the attitude of the department, as set forth in the Secretary's reports, is decidedly in favor of a general increase in the compensation of employees somewhat coordinate with the increased cost of living, it is reluctant to express an opinion on any particular legislation on the subject pending before Congress.

A. F. of L. Convention

(*Continued from page 267*)

maintain by every honorable means in our power the right to organize for our common defense and advancement, for the exercise of our national and constitutional activities to protect and promote the rights and interests of the workers; to assert at any risk the equal rights before the law of every worker with every other citizen; to aid our fellow-workers against the effort to entangle the workers in the meshes of litigation before the courts in the several states; to make effective in our every day lives the principle declared in the law of our republic (the Clayton law), "That the labor of a human being is not a commodity or article of commerce;" to arouse our fellow-workers and fellow-citizens to the danger which threatens to curb and take away their guaranteed rights and freedom; to meet and help solve the vexatious problems of peace and reconstruction. These and other great questions of equal importance will, of necessity, occupy the attention of the Atlantic City Convention.

No Divided Service

The weekly lesson in Sunday school dealt with the corrupting influence of luxury and worldliness, and the golden text was a well-known sentence that the superintendent wished all the children to remember.

It sounded like an easy text to learn and the superintendent, mounting the platform for a final review of the lesson when the school assembled for closing exercises, was sure of a pleasing response from his pupils.

"Who," he began, "can repeat the golden text?"

A score of hands were raised, and the superintendent chose a little girl with blue eyes, a well-bred, well-behaved little girl.

"Well, Dorothy," he said, "you may tell it to us.

Dorothy stood up in the prettiness of her best dress and the daintiness of her hair ribbons.

"You cannot," she said distinctly—"you cannot serve God and mamma."

Recent Activities of Our National Organizer

AFTER organizing a local at Charleston, W. Va., referred to in our last issue, National Organizer Peabody investigated conditions regarding federal employees at and in the vicinity of Huntington, in the same state. The next step was the formation of a union at Wheeling. After spending several days in Washington in attendance on the meeting of the Executive Council, Brother Peabody, acting in cooperation with Seventh Vice-President Wiegand, brought about the organization of a local at Annapolis, Md. He then had a conference on various organization affairs with the Executive Council of the Baltimore Union and also with labor leaders of that city. The next move on the program was a visit to New York City, where he had the opportunity of consulting First Vice-President Junker with regard to the work in hand. Thence a short jump to Newark, N. J., for the purpose of gaining information first-hand concerning the situation in that city from President McKenna of Local No. 107. Then followed trips to Albany and Watervliet, N. Y., at both of which places unions were formed.

Further reference to the new locals above mentioned will be found on page 255.

His Compliment

An assistant secretary of one of the federal departments at Washington in conversation frequently betrays his Celtic origin.

One day lately he lost his umbrella during a tour of several shops in quest of an article for his wife. Concluding that the umbrella must have been left in one of the three stores in question, he doubled on his trail and revisited them in turn.

"The umbrella has not been found here," he was told at the first establishment.

The same announcement was made at the second shop, whereupon the official, with a hopeless air, made his way to the third store.

There, to his delight, the umbrella was awaiting him. As the floorwalker handed it over, the overjoyed Celt exclaimed:

"Well, I must say you are more honest here than at those other stores!"

The Lighthouse Service

How our 47,000 miles of coast are made safe for the vast commerce which is ever entering and leaving our ports. The present-day organization, with its faithful and highly efficient personnel and fine equipment, is the result of 200 years' evolution. The various features of the Service are discussed in this article.

By WILLIAM SANGER

Of United States Lighthouse Service, Member of Washington Federal Employees Union No. 2

IN order to trace the humble beginning of our Lighthouse Service we must turn back through a sweep of two hundred years the hands of History's clock, the first lighthouse on the American continent having been

COMMISSIONER GEORGE R. PUTNAM
of Bureau of Lighthouses.

built in 1715-16 at the entrance to Boston harbor, by the Province of Massachusetts; this was supported out of the proceeds of charges laid on vessels, both incoming and outgoing, except coasters.

In addition to the Boston harbor light several lighthouses were built by the colonies. In 1789 Congress authorized the maintenance of lighthouses and other aids to navigation at the expense of the United States. There were at that time eight lights in operation maintained by the colonies, which, with five others, completed later, were ceded to the general Government by the states. Today the Lighthouse Service maintains approximately 1,600 aids to navigation and includes in its personnel nearly 6,000 employees, at a yearly expense of about $7,000,000.

SAFETY FOR COMMERCE SECURED BY HIGH EFFICIENCY

The high efficiency of this service is evidenced by the very small percentage of marine disasters which can be traced to inadequate provision for the needs of mariners. This is the more remarkable from the fact that proper safeguards must be maintained along 47,300 miles of seacoast and rivers, from Maine to Mexico, in the Caribbean Sea, from the southern coast of California to the Behring Sea, on the shores of the Hawaiian and Samoan Islands and the Island of Guam, in the Pacific Ocean, along the Great Lakes, and on the Mississippi and Ohio rivers. Along this vast stretch of coastline and river channels the lights are kept burning regularly from sunset to sunrise, and when needed the fog signals send out warnings at regular intervals.

HUMBLE BEGINNINGS CONTRASTED WITH THE DEVELOPMENT OF TODAY

In the beginning the lighting equipment was crude enough, merely a common oil-burner enclosed in a lantern consisting of a cylinder of heavy wooden frames, holding small, thick panes of glass. Not until 1841 was the first lens used for the purpose in the United States installed at Navesink, N. J. This is still preserved by the service, forming a striking contrast to that now in use at the same place, which is one of the most powerful lights in the world, estimated at 25,000,000 candlepower, the glare of which has been seen under exceptional weather conditions 70 miles out at sea. The largest lens now in use in the Lighthouse Service is in Hawaii. Reflectors consisting of silvered parabolic surfaces or prismatic lenses are also in use, particularly for range lights, which are frequently employed to mark the center line of a channel. The highest light in the service, more than 400 feet above the water, is at Cape Mendocino, Cal.

Man's inventive genius has come to the aid of the mariner in many ways, among others in the form of an illuminating apparatus that may be placed in remote localities, since the light will burn for a long time without attention, some such lights having done constant service for more than a year without giving trouble. The light, commonly called a "blinker," shows for a fraction of a second and is then extinguished for several seconds. Some of these lights flash their warnings 10,512,000 times during the year. They are "in commission" continuously except when there is an unusual prevalence of daylight, in which case a valve is attached which automatically shuts off the supply of gas when the sun shines, and turns it on again when darkness approaches, the gas being ignited by a small pilot flame. This is a marked stride from the ancient wood-fire beacons placed on prominent headlands.

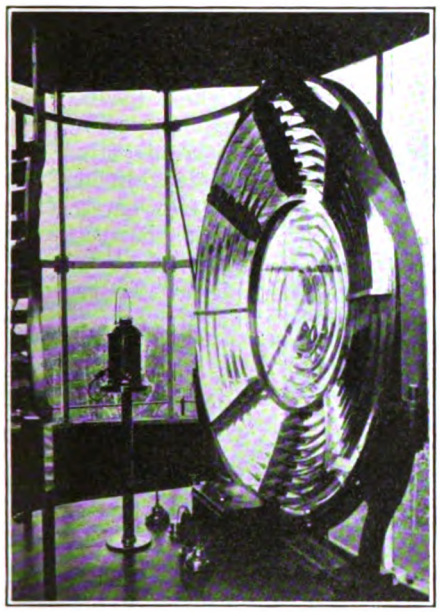
The first fog signal in the United States was a cannon installed at Bos-

DEPUTY COMMISSIONER JOHN S. CONWAY
of Bureau of Lighthouses.

ton Light in 1719, which was fired when necessary to answer the signals of ships in thick weather. The first improvement was the substitution of trumpets about 1855. The next step was the installation of a steam whistle

Digitized by Google

at Beavertail, Rhode Island, in 1857, which was replaced by a hot-air engine about 1866. The earliest experiments with sirens were made in 1857, and



Illuminating apparatus at Staten Island Range Rear Light, Staten Island, New York. Vaporized kerosene is burned under a mantle. The beam of light outside the lens is 300,000 candlepower.

the first installation of such apparatus was made at Sandy Hook East Beacon the following year.

Shoals or other obstructions and channel limits and, in some cases, anchorage grounds are indicated by buoys. These were originally solid wooden spars or were built like barrels. Wooden spars are still extensively used, particularly in inside waters, but built-up buoys are now constructed of iron or steel. In order to give the proper distinctiveness, buoys are marked by certain characteristic colors and numbers.

VARIOUS TYPES OF LIGHTHOUSE CONSTRUCTION DESCRIBED

The type of construction adopted for each lighthouse depends largely on

Cape Charles Light Vessel, off Cape Charles, Va., at entrance to Chesapeake Bay. A modern type. The lens is installed in the lantern, which is reached by a ladder inside the tubular mast.

the importance of the light and the foundation conditions. The simplest type is the post light, consisting of a single wooden post, with a shelf or bracket for the lantern, perhaps with a ladder attached. The daymark or unlighted beacon consists of merely a pile or stake, occasionally with a pointer indicating the channel. In some localities, particularly on rivers in California, where fog is prevalent part of the year, echo boards provided with projecting wings are used, so that passing steamers may be guided by echoes from their whistles.

There are also many different types of attended lights where residents are employed. A common form, frequently used for harbor or like lights, is a combined tower and dwelling of timber or brick construction. For the more important lights the tower is detached from the dwelling and as a rule is fireproof. Many lighthouses at entrances to harbors are built on the ends of breakwaters or pierheads, such structures serving as foundations. A completely equipped light station on a land site usually consists of the light tower, oil house, fog-signal building, keepers' dwellings, work-

Ludington North Breakwater Light, Lake Michigan, showing the accumulation of ice during a severe winter.

shop, water supply and drainage systems, landing wharf, boathouse and ways, barn, and the usual outbuildings, roads, walks, and fences. The heights of towers vary according to the character of the shore and the importance of the light. On the Atlantic coast, where the beach is for the greater part low and presents little relief, comparatively tall towers are required for the principal coast lights, while on the Pacific coast, which is in the main bold and high, a low tower erected on a prominent headland is generally sufficient.

LIGHT VESSELS AND TENDERS PLAY AN IMPORTANT ROLE

In addition to the lighthouses, the service maintains sixty-six light vessels, employed chiefly for warning of danger at sea, at approaches or entrances to harbors, or important points in the courses of vessels where lighthouses would not be feasible or economical; these are of particular value in providing both a light and a fog signal. The details of the interior of the present type of light vessels have been worked out with care; comfortable staterooms and berths are provided; the vessels are steam-heated throughout, sanitary plumbing systems

Lime Rock Light, Narragansett Bay, R. I. Vignette: Mrs. Ida Wilson Lewis.

with baths, toilets, and drainage attachments are fitted, and on some cases electric lights are installed. Three of the most important light vessels on the Atlantic and Gulf coasts—those on Nantucket Shoals, Diamond Shoal, and Frying Pan Shoals, and the relief vessels for these stations, also the vessel on Heald Bank—are equipped with radio, at present operated by the Navy Department in connection with their coast radio system. The complement of a first-class light vessel is generally four officers and ten men, which is varied in the case of smaller and less exposed vessels as conditions justify, down to a minimum of three men all told, for the smallest size of inside light ships.

The work of lighthouse tenders is to attend to the buoyage, to supply the light vessels and isolated light stations both with the ordinary articles for maintenance and materials for construction or repair, and also for inspection purposes when necessary.

A STORY OF SACRIFICE AND DEVOTION TO DUTY

What of the lives of the men (and women, too) who, as keepers of the lights, regardless of hours and hardship and personal sacrifice, give the best that is in them that human life and property on the seas may be safe-

TILLAMOOK ROCK LIGHTHOUSE, OREGON

This lighthouse stands a mile off shore on the summit of a rock seventy feet in height and about an acre in extent. During a terrible storm in October, 1912, the waves carried tons of water and fragments of rock over the tower, 132 feet above the sea, breaking the glass of the lantern, flooding the watchroom, and putting the fog trumpet out of commission. A hundred-ton section of the rock was swept away. Despite the thrilling conditions, the light was extinguished for only fifteen minutes.

ings are provided for this purpose. Necessarily there is great diversity in the types and construction of these dwellings to meet climatic conditions varying from those prevailing on the exposed coasts of Maine, Alaska, and the Great Lakes, to the semitropical environment of Porto Rico and Hawaii. The quarters provided for keepers and their families are, in general, suitable in both architecture and features designed for the comfort of the inmates, including steam heat, where necessary, as well as sanitary plumbing with water-supply and sewerage systems. Wherever conditions permit, keepers are encouraged to raise garden produce for the use of their families. Fuel for heating and cooking is furnished at the expense of the service.

But there is another and sterner side to the picture. The keeper's job may involve living in quarters surrounded by miles of ice, with no vegetation and no water supply other than rainfall, entirely out of touch with the comforts and pleasures of civilized life, without newspapers, theaters, stores, movies, many miles from any seaport and with no companions except the few people required to maintain the light.

A concrete example may be here cited. For real action, a life full of thrills, existence on Tillamook Rock off the coast of Oregon offers opportunities which should satisfy the most exacting. At the outset preparations for the construction of the necessary buildings were made, under great difficulties, by blasting off the top of the rock. The landing of men, materials, and supplies was undertaken only during the most favorable weather conditions. A vessel was anchored clear of the rock and a cable was run to a point where it could be securely fastened. The men were then landed in a breeches buoy and supplies carried over in buckets suspended from the cable. The work was frequently interrupted by storms. Tillamook light was first put into commission in 1881, and since then the keepers have experienced many exciting moments.

The personnel of the Lighthouse Service is of a very high standard considered from the viewpoint of loyalty and devotion to duty without hope of reward. Songs are sung and stories are told of heroes in times of war, but the Lighthouse Service has its heroes and heroines in times of peace, some of whose deeds have become widely known, but in many cases their only recompense is the knowledge of duty well done.

HEROINES AND THEIR DEEDS IN LIGHTHOUSE ANNALS

On this roll of honor are included the names of many women, among whom none is more widely known than Ida Lewis, the heroine of Lime Rock in Narragansett Bay, Rhode Island, who remained in active service until the time of her death eight years ago at the age of sixty-nine. The eldest of four children, she was obliged to row them to school and to bring supplies from the shore to the lighthouse, which is situated on a ledge at the southern entrance of the inner harbor of Newport. Thus she became an expert oarsman. She succeeded her mother as keeper of the light in 1879. During her life she saved thirteen persons, and in all but two of the rescues she was wholly unassisted. In recognition of her heroism she was awarded several medals of honor. Although married, she preferred to be known as Ida Wilson Lewis, by which name she was borne on the rolls of the service.

Mrs. Mary Whitely and Miss Maud King rescued three men from drowning in Charleston harbor on August 21, 1888, and were given medals of honor for the deed.

Many other acts of steadfastedness and daring are recorded in the annals of the Lighthouse Service.

During one year alone (1918) services in saving life and property were rendered and acts of heroism performed by its employees on 158 occasions.

Throughout the service, the employees, from the highest to the lowest, have shown especial devotion and loyalty during the last two years. Many who have been tempted by much higher wages paid by many of the industries incident to the war have remained at their stations. Some who would gladly have "gone over" felt, and rightly so, that their best services could be rendered in their present capacities.

The patriotic zeal of the members of the service rose to the surface during the war in another way that does them great credit. They subscribed to one of the Liberty loans to the number of 1,454, in the amount of $316,550, and the call for military service was answered by more than 1,200.

ORGANIZATION AND FUNCTIONS OF LIGHTHOUSE SERVICE

The Lighthouse Service was under the Treasury Department until July 1, 1903, when it was transferred to the Department of Commerce. The executive center of the service is the Bureau of Lighthouses, comprising an engineering construction division, a naval construction division, and a hydrographic division, at Washington, D. C. The service outside of Washington is divided into nineteen lighthouse districts, each under the charge of a lighthouse inspector, and in each district there is a central office at a location selected on account of either its maritime importance or its geographical position.

This service is charged with the establishment and maintenance of aids to navigation and all incidental equipment and work thereon along the seacoasts and lake coasts of the United States as well as on the rivers of the United States, and on the coasts of all other territory under the jurisdiction of the United States, with the exception of Panama and the Philippine Islands. It has supervision also over the establishment and maintenance of private aids to navigation and the lighting of bridges over navigable waters of the United States. The term "aids to navigation" comprises all land and sea marks utilized

Digitized by Google

for the purpose of aiding the navigation of vessels, and includes light stations, fog signals, gas buoys, bell buoys, whistling buoys, submarine signals, minor lights, and day beacons.

COOPERATION WITH OTHER BRANCHES OF THE GOVERNMENT

In performing its duties the Lighthouse Service cooperates actively with all the other branches of the Government engaged in related work, above all with the War and Navy Departments in accordance with law and executive order. The Naval Appropriation Act passed in 1916 authorized the President, whenever in his judgment a sufficient national emergency exists, to transfer to the service and jurisdiction of the War or Navy Department such vessels, equipment, stations, and personnel of the Lighthouse Service as he may deem to the best interest of the country. The duties performed by these transferred units consisted chiefly in work on submarine nets, patrol and watch service, and drill in mine-laying. There has also been cooperation with the Navy and Treasury Departments in the improvement of coast communication facilities. Information as to deficiencies in aids to navigation is received from the hydrographic office, from naval vessels, and from other maritime services of the Government. The Public Health Service aids in matters of sanitation affecting light vessels and stations, providing free vaccination and medical attention for certain classes of employees, and a free medical handbook on the prevention of disease and the application of first-aid remedies; the Bureau of Standards in the design of radio apparatus and in special tests; the Forest Service in the growing and management of timber on lighthouse reservations; the Steamboat Inspection Service in the inspection of steam plants of vessels, etc. The Lighthouse Service supplies information respecting aids to navigation to all branches of the Government having need for such data and cooperates in the placing of buoys for special purposes.

ALL POSITIONS IN THE SERVICE ARE UNDER THE MERIT SYSTEM

The lighthouse should be, and is, a synonym for absolute reliability. Strict rules for the government of the service must be made and observed, and this has been its policy from the earliest days. President Thomas Jefferson, in approving the dismissal of a keeper in a case referred to him for decision, wrote, "I think the keepers of lighthouses should be dismissed for small degrees of remissness, because of the calamities which even these produce."

All positions in the Lighthouse Service have been governed by civil-service rules since 1896, and all appointments and promotions are made on a strictly merit basis. The compensation of all positions in the service not fixed by the law is based so far as practicable on similar requirements in the commercial world. Thus the entrance salary for draftsmen and other technical employees is, as a rule, $100 to $125 a month; for clerks, $75 a month; for junior officers of vessels, $50 to $80 per month; for assistant keepers of lighthouses, $35 to $40 a month; the latter two grades receiving also a subsistence allowance while on duty. The pay of trade and skilled positions is generally governed by the prevailing rates in the locality.

SHORE LEAVE AND EDUCATIONAL FACILITIES FOR EMPLOYEES

Ninety days' shore leave a year is allowed employees on light vessels, and seventy-two days per year for those at isolated light stations. Careful attention is paid to the welfare of employees in all cases in which remedial measures are authorized by law, including compensation for injury or death sustained in the line of duty, and in special cases medical or surgical attendance.

In the matter of educational facilities at stations not accessible to schools and where there are children of school age, inquiry is made from time to time into the education of the children, and any course which will lead to their suitable education is encouraged. Other things being equal, preference is given to employees having children between the ages of five and sixteen years in filling vacancies by transfer to stations convenient to schools. In some instances the state provides traveling teachers, who are transported by lighthouse tenders in making their visits. In 1876 a library system of carefully selected books, with arrangements for their exchange at intervals, was introduced, available to all light vessels and inaccessible offshore light stations.

Many prominent men have been associated with the work of this service, including George Washington, Alexander Hamilton, Admirals Dewey, Schley, Evans, Benson, Caperton, and Mayo; Generals Poe, Alexander, Haines, Casey, and Ludlow, and Professors Bache and Henry.

Congress has recently provided for the optional retirement of keepers and other employees in the field service who have reached the age of sixty-five years with thirty years' service to their credit, and for their compulsory retirement at the age of seventy years. A number of keepers who have been granted pensions have served continuously for more than forty years. The Commissioner of Lighthouses, George R. Putnam, closes his report for 1918 to the Secretary of Commerce by recommending "legislation providing for a system of general retirement for the civil employees of the Government, including office and shop employees of the Lighthouse Service, the need of such legislation being particularly apparent in the work of the service."

Looking toward the future, the service must necessarily increase its activities to meet the ever-growing demands upon it. The development of Alaska with its tremendous stretch of coastline and numerous unsurveyed harbors; the increasing numbers of our merchant marine, which should greatly augment the amount of waterborne freight; the development of our many inside waterways and the wide field which the use of the aeroplane will open up, requiring some method of guiding the airships safely from point to point in their flights—will call forth the best efforts of the service.

"Mr. Burleson, Sweat-Shopper"

(*Continued from page 276*)

working order, the victims numbered 625, as against 59 in the five years previously.

Another case cited by the writer in *The New Republic* is that of a carrier in Weehawken named Concannon, who, after twenty-six years of service, contracted a cold that brought on a touch of tuberculosis. His doctor thought he could be cured, but after one hundred and forty-two days of absence without pay, he was not cured. He returned to work and tried to walk his route but collapsed. Still his doctor thought that six months more might cure him. The editor of *The Hudson Dispatch*, Mr. Haddon Ivins, went to Washington and presented his case to the First Assistant Postmaster General, who became interested in the man and promised to extend his leave by ninety days, and then by another ninety days if necessary. Mr. Ivins returned to his home much gratified at the success of his mission, and Local Branch 96 of the National Association of Letter Carriers invited Mr. Ivins to attend a meeting to receive the thanks of the members, but as he was starting, he received a letter from the First Assistant Postmaster General expressing his regret that Mr. Burleson had countermanded his permission to extend Mr. Concannon's leave.

Thus, not only are hope and courage ruthlessly sacrificed, but, under the Burleson dispensation, human life is regarded as a cheap commodity, and even a negligible quantity so long as by disregarding it a record for economy can be made, whatever it may cost.

WHO SHALL CONTROL OUR SCHOOLS?

We devote several pages of this issue to the discussion of the teaching of "current topics" in our public schools. The problem in its broader aspect is dealt with by Charles H. Judd, professor of English in the University of Chicago. A concrete case, in many respects typical of cases which are coming to the surface in various parts of the country, is set forth in the experience of Alice Wood, the Washington high school teacher, recently disciplined by the Board of Education of that city for alleged indiscretion in treating the subject of Bolshevism in the classroom. The questions presented, viewed both locally and nationally, are fundamental, particularly to the great mass whom Lincoln lovingly termed "the common people," and to whom our public schools spell Hope and Opportunity for their children and their country.

These questions involve among other things: The right of the people to control their schools, including of necessity the right to know what is being done from day to day by those in charge thereof; the right of teachers to give instruction free from indefinite and unreasonable limitations imposed by members of boards of education; the right of teachers to organize for the proper protection of their interests and for collective bargaining.

With respect to these fundamentals the Washington Board of Education in dealing with the case of Miss Wood has acted without regard to law or justice or sound public policy. Its procedure is but the natural outcome of a vicious system, a system in which the people have no voice whatever in the conduct of their schools, the members of the board being selected by the Justices of the Supreme Court of the District of Columbia who, in turn, are appointed by the President of the United States. That a board composed of persons possessing at least an average of intelligence and ability (such composition we freely grant), one-third of the membership of which consists of lawyers, should persist in the course followed in the Wood case seems incomprehensible. The failure to call the original witnesses (high school pupils) followed by the failure to question the secondary witnesses (the parents) on whose letter the case is based, the star-chamber character of most of the proceedings (seemingly a palpable evasion, if not a violation, of law); the deliberate suppression by the board of one of the most important pieces of evidence—the report of the committee with which Miss Wood sat in supposedly "friendly conference;" the construing to her detriment, of Miss Wood's written communication (included in our report)—these features, among others, combine to produce what would be a veritable "comedy of errors," were it not for the grave considerations involved for the people of the community, the teachers, and the pupils.

Although there may be palliatives for the present situation, such as changing the personnel of the board and developing to the greatest extent attainable the strength of the teachers' unions, which already have accomplished much and are destined to accomplish still bigger things in the days to come, there is but one real remedy. This is to change absolutely the existing system of school control by placing it in the hands of the people of Washington, where it rightfully belongs. Every effort should be made to bring about this result as soon as possible, and to this end the organized federal employees should give their best efforts in cooperation with the teachers, with organized labor in general, and with all other forces and agencies that stand for democracy in education.—J. G. G.

REMEMBER OUR NEXT CONVENTION

Every local should take heed that our next annual convention will be held early in September; that there will be brought before that body for consideration and action problems that will tax to the utmost the brains and the energies of the ablest representatives of our membership; and that now is none too early to begin to give careful thought to questions pertaining to both men and measures for the occasion.

UNIONISM AND SOCIALISM

Can it be possible that some of the statesmen of Texas, since the enactment by that commonwealth of a state-wide prohibition law, have resorted to peyote or similar powerful drugs as a substitute for more orthodox stimulation? Otherwise, how are we to account for their "seein' things" lately that none of the rest of us have seen or even suspected? Last month, former Senator Bailey discovered that the Democratic party had become Socialist, and now we learn, upon authority of the Associated Press, that the Hon. Thomas L. Blanton, of the Abilene congressional district, had, in an address before a national good roads convention held at Mineral Wells, Tex., on April 18, announced his belief that "Socialism is nothing but unionism, and unionism is in with applied Socialism." We furthermore learn from the same despatch that Brother Blanton informed his audience that the people of the United States must awake to the impending danger to their liberty because of the attitude of organized labor and of Samuel Gompers, President of the American Federation of Labor.

"Forewarned is forearmed," and now, following the advice given to Johnny, we can "get our gun" and prepare to sell our lives dearly before "the attitude of Samuel Gompers."

But more than this is necessary. We must dispel from our minds the egregious error that unionism and Socialism are different. Has not Congressman Blanton told us that, although bearing different labels, they are one and the same article; and would he, without full knowledge, have essayed so to inform a good roads convention in his home state?

Just for purposes of comparison, however, we set forth our now exploded notions of the fundamental differences between the aims and objects of Socialism and those of unionism. Congressman Blanton would not, surely, deny us this last poor privilege. Until enlightened by Brother Blanton we had entertained the idea that, while unionism contemplated the modification, in a substantial manner, of the existing industrial system, by substituting collective bargaining for individual bargaining between employer and employee, and democratizing management, Socialism contemplated the complete abolition of the system (which the Socialist calls the "wage system") as *inherently* bad. The Socialist speaks of the present plan of industry as the "competitive regime," and, holding that competition in industry is an evil in itself, advocates in its stead the establishment of what he terms the "cooperative commonwealth," in which employer and employee (whom he usually designates as the "exploiter" and the "exploited") will be unknown. The only "employer," if such it might be called, would, under the plan of Socialism, be the state, or county, or city.

It is common knowledge that in the ranks of the unionists are many Socialists, and both are opposed to unrestricted private capitalism, believing that such a status involves virtual slavery; but the overwhelming preponderance of unionists entertain the belief that competition in the world of industry is a valuable factor, provided it be properly regulated, and, given conditions under which the worker can bargain with the employer on even terms, they do not object to capitalism, or at least are unwilling to abandon the certainty of the present wage system for what they consider the untried sea of the cooperative commonwealth of the Socialist.

Imbued, as we feel he must be, with the true missionary spirit, we bespeak for our companions in error, the authors of our standard text-books on political economy and social science, the kindly consideration of Brother Blanton. Surely he will note their pitiful groping in the darkness, and lead them into light!—G. A. W.

NFFE

OUR VERSATILE POSTMASTER GENERAL

Just now the Hon. Albert Sidney Burleson is coming in for even a larger share of public attention than usual—of the *kind* of attention the less said the better. But few realize the versatility of his genius. Known to all as Postmaster General and as the Supreme High Chief of Wires and 'Phones, many have not yet learned to visualize him as Sweat-Shopper, Unionizer, Service-Wrecker, Espionager, Thought-Junker, and Polit-

Digitized by Google

ical ex-Expert. No one who reads the convincing narratives in the *New Republic,* which hold a very candid mirror before the Postmaster General, will doubt that Mr. Burleson's claim to the distinctions before recited is established beyond question. We may breathe easily once more—the mantle of the many-sided Mr. McAdoo has not departed from us. Verily, the genial Postmaster General seems to have fallen heir to the versatility of the great Secretary. Would that the comparison could be carried farther.

There is no occasion to be envious of Mr. Burleson or to make light of his title-deeds to a place, such as it may be, in history. No mere paper distinctions his—far from it. All of the formidable list of "honors" above rehearsed have been earned by dint of persistent activity in the fields suggested, wherein Mr. Burleson shines as a past grand master. Mr. Burleson stands alone; he need fear no rival in his odious preeminence. True, the past has had cabinet officers who have played the tyrant and cabinet officers who have wrecked the services entrusted to them. But it may well be doubted whether in the entire history of the United States Civil Service there can be found an instance of the head of a great department of the Government whose administration has been so cordially hated and condemned by so many classes of our people on so many grounds as is that of the Postoffice Department under Mr. Burleson. We devoutly hope that in the public interest and for the sake of our brethren in the postal service, whose cause is our own, the day of deliverance from the hand of the Philistine is not far distant.—J. G. G.

NFFE

TO DRIFT OR TO STEER?

Lord Bacon said among many wise things that every man owes a duty to his profession. Is not this true of the government employee? Does he not owe a duty to his calling, a duty over and above the mere performance of his daily work however essential that may be? Is it not true that he should give of his time and effort and means toward building up the public service? In order to do this effectually he must combine with his fellows working toward the same end. No man escapes responsibility by keeping aloof from movements with which he should be connected. Today organization brings the only opportunity for accomplishing the best constructive results. Organization acts as a directing and stabilizing force, as the greatest foe of anarchistic movements and "similar heresies." This is a basic fact often overlooked, especially by those who have not yet learned to look on labor unions with equanimity. The thinking man should see that by acting as an isolated unit he not only deprives himself of the opportunity to do things worth while but deliberately places himself under the direction of his neighbor whose vision is clearer. If one wishes to pass through life without playing the man's part in controlling to some extent at least his environment, he may justify such a course to himself. In that case, however, he should not complain of his lot nor expect aid from others.—J. G. G.

NFFE

THE OBSESSED SCHOOL BOARDS

What strange obsession afflicts school boards that they should be so different from other public bodies? Why should they be among the worst of employers? Why should they forever be quarreling with their employees? There was a time when employers denied their men the right of organization, and refused to see committees representing them. They arrogantly declared they would run their own business as they saw fit. But that is a thing of the past. Few employers now hold out against the demand for collective bargaining; few, that is, aside from school boards, These august bodies, presumably public servants, exclude teachers from any part in the management of education. If protest is made the objectors are investigated to see if they are traitors or have Bolshevist tendencies. Political democracy is recognized, and industrial democracy is rapidly growing. But there must, if we would heed the school boards, be no democracy in education. What nonsense is this? Upon what meats do these men feed that they are grown so great? Must the school teachers go through the long struggle that has marked the advance of organized labor in order to secure simple justice?—*The Public.*

NFFE

A NEGLECTED OPPORTUNITY

Some brother addicted to the statistical habit would do well to estimate what proportion of our membership realizes even in a slight degree the power latent in the union label. The general adoption of the demand-the-label policy by trade unionists, government employees included, of course, would add tremendously to the economic influence and power of the great mass of humanity who work for their daily bread.

"My Day's Work"

As was true of the "Day's Work" stories last month, those which appear below represent federal employees serving Uncle Sam in very different capacities and places—one traveling with a Weather Bureau exhibit in Illinois, the other wrestling with money allotments and similar perplexities among an Indian tribe in the West.

Forecasting the Weather

"My Day's Work" series has hardly more than begun when we come down to talking about the weather. Not a very promising start, you say? But there's weather and weather. Read Brother Hurd's story of the way weather is sent "knocked down" to Washington and there assembled, and then, Oliver Twist-like, you'll ask for more.

By WILLIS EDWIN HURD

United States Weather Bureau, Washington, D. C., and Member of Washington Federal Employees Union No. 2

I BELIEVE that a real air of romance may be brought to surround even the most prosaic of desks. The prosody rests in our own minds, for it is our privilege to see poesy in everything—by which I mean there is nothing unilluminable in any of our daily tasks.

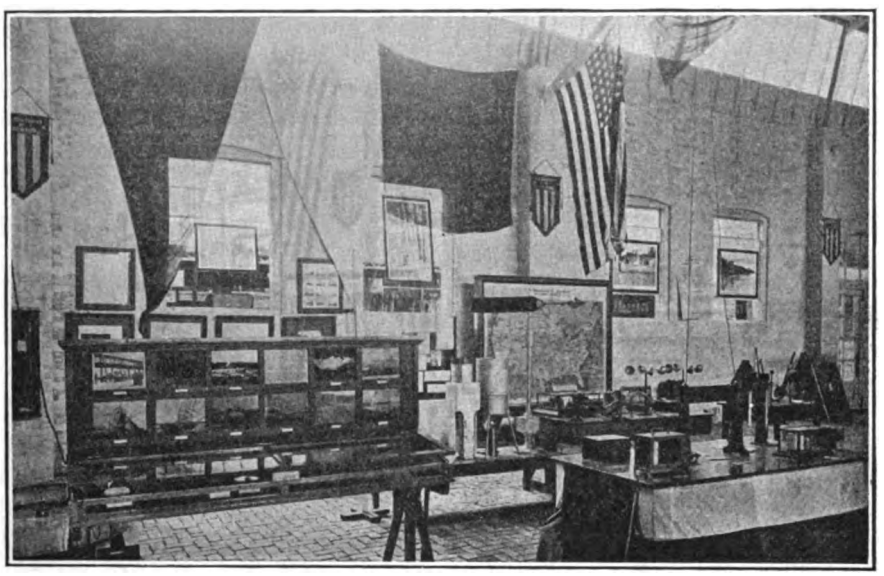
I sit at a desk a greater portion of the time and handle data pertaining to the weather, principally that at sea. But I purpose telling you at this time of another and quite different day's work in the service of Uncle Sam which I have the opportunity of spending occasionally: it occupied nearly three months of my time last year. The reference is to demonstrating government exhibits for the Department of Agriculture in the field.

Every midsummer and fall the Office of Exhibits conducts its "educational official shows" at many of the state fairs of the country, arranging for a sufficient number of separate exhibits by circuits to cover as large a territory as possible. For the season of 1918, in addition to the regular demonstration work amongst the economic features, we were particularizing so far as possible upon our general fitting into the scheme of winning the war.

My first participation in exhibition work was at the Illinois State Fair in Springfield during August. We had three freight-car loads of packed material to be unloaded and assembled in the building set apart for the purpose. Two cars reached us in ample time, but the third arrived late on the evening preceding the opening day of the fair. The freight officials promised to spot the car on the proper siding at 4 o'clock on the following morning, so we made full preparations for unloading at that time. Therefore, imagine us before break of dawn setting out for the fair grounds in a taxi, sleepy-eyed but imbued with the spirit of jolly adventure, ready to take charge of the teamsters and other laborers who had been engaged for the early hour. Yes, we were on hand, and so were the workmen; but it was more than midforenoon before our promised car rolled up. We attacked the packing cases almost savagely.

Well, that day slipped into the spaces occupied by uncountable days, but it left behind for us a finished exhibit and an exuberance of feeling that could only spring from a sense of satisfaction in the accomplishment of work under difficulties.

So, with the opening of the doors on the following morning, behold—to adopt the phraseology of Mayne Reid—the big government exhibit assembled: material from agriculture represented by the Bureaus of Weather, Forestry, Public Roads, Animal Industry, Chemistry, Entomology; material from the Bureau of Fisheries; from the Army; from the Navy. Truly, to be a demonstrator in the midst of this; to watch the crowds pulsing from scene to scene under such conditions; to talk to and with the exuberant people of the prairie and to feel the first real touch of the West was an experience to be joyous over officially and personally.



VIEW OF WEATHER BUREAU EXHIBIT, SPRINGFIELD, ILL., AUGUST, 1918.
Transparencies and instruments in foreground; glass weather map in background.

To me the main exhibit was that of the Weather Bureau. And why not? I had spent over it hours of "fear and trembling;" of pride and confidence. It was a reminder of the weather observer's work in the days of my station experiences, when windvanes and anemometers; sunshine recorders and rain-gauges were a part of my existence. It was my little Weather Bureau world away from home, and when I was not called off on other duties, I was generally to be found "at home" to tell the visitors the great story of how we daily make the picture of the weather experienced over the whole United States at 8 a. m. and 8 p. m., 75th meridian time; of how we foretell the weather that is to come; how we warn of the frost,

Digitized by Google

the hurricane, the flood; how we explore the upper air to chain its knowledge to what we know of the weather around us; how in fact we daily enter into the realms of the partly unknown to probe for the last secret nature holds for us.

It was 9 o'clock in the morning, and a prairie farmer and his wife, after inspecting the case containing bottles of dried products in the chemistry exhibit, came down the aisle between two of my tables, and stopped to gaze interestedly upon the anemometer cups, light aluminum discs which were whirling merrily around.

"I've seen things like those on the top of the Weather Bureau building in Springfield," said the farmer. "Don't they have something to do with the wind?"

"Yes, they measure its velocity," I replied, and explained the instrument. "At all Weather Bureau stations there are certain appliances on the roof, or other open-air exposed position where there is the least possible obstruction from surrounding buildings or trees. Each appliance measures a certain weather condition. Electrical contacts are made and each type of weather is registered in the office on a sheet of paper set to time about a cylinder which is turned by clockwork. The instrument which contains this cylinder and the delicate recording parts you see here in the quadruple register — quadruple, because it registers on a single ruled sheet four different elements of weather: wind direction, wind velocity, sunshine, and rainfall."

"Oh! then that makes the weather forecast?" asked the woman, brightly.

"No, but it helps. Just let me explain a bit of our observation work. We might suppose this to be a real Weather Bureau office—one of the 200 regular stations maintained in the United States for observing weather. Imagine that I am taking the 8 a. m. observation, which is also being taken at every other station simultaneously. On the roof of the building I look at the sky to see if it is clear, partly cloudy, or cloudy. Then I go to the thermometer shelter. You will see my thermometers on this other table. The first instrument gives the air temperature at the present time. In connection with the thermometer by it with the muslin wrapped about the bulb, we obtain the relative humidity of the air, or the percentage of moisture the air can hold as compared with saturation, at the present temperature. Mounted on the next frame are what we call the maximum and minimum thermometers. One gives the highest temperature since the last observation; the other the lowest. And here we have a thermograph, or writer of temperature. This is a combination of metallic thermometer bulb and mechanism, together with a cylindrical clock. The recording pen is set to time on the record sheet around the clock, and the temperature reading is traced thereon throughout the day.

"Over against the wall is the barometer, an instrument by which is read the pressure of the air. The column of mercury in the tube exactly balances the weight of a column of air of the same diameter extending to the limits of the atmosphere. The weight of this air column is continually changing, with the passage of storms and other weather conditions, and the change is indicated by the height of the mercury in the tube.

"Now we come to the 'wind-measurers' which you first noticed. The

A MOMENTOUS OCCASION

In the midst of packing, at the close of the State Fair, we are invited to a special fish dinner at the Bureau of Mines car. Note our general air of comfort and expectancy. Incidentally, this was no dress affair.

cups are so made that a certain number of revolutions—about 500—indicate a mile of wind, by observations made from known velocities. An electrical contact is made on the dial of the anemometer underneath at the end of each mile, and the closing of the circuit through the batteries to the quadruple register is indicated by a hitch in the recording line on the register sheet. The number of these hitches made during an hour indicates the wind velocity during that time.

"The wind-vane is also connected electrically, and as the circuit closes every minute through the clock, the direction of the wind at that minute is shown on the register.

"If there is rainfall, let us measure it. This rain-gauge is constructed for that purpose. The receiver is exactly 12 inches in diameter at the top, but narrows down like a funnel to the bottom. Inside the gauge, under the funnel, is a two-compartment bucket. It is so constructed that each compartment holds exactly one one-hundredth of an inch of the rain falling into the receiver. The full bucket then tips and the other compartment comes into position to catch the rain. Each tip closes an electrical circuit, and the hundredth-inch of rain is recorded on the quadruple register sheet.

"The glass instrument you see here is the sunshine recorder. It is a kind of thermometer which requires actual sunlight to operate it, and while it is in operation, by the action of the register mechanism, a distinctive zigzag line is traced on the sheet. Thus we know the hours of sunshine.

"Now we have the required data: cloudiness, temperature and pressure of the air, wind velocity and direction, and the amount of rainfall, all of which are necessary parts of the observation. The observer at the station now puts the many English words to describe the 8 o'clock weather into a few code words and they are telegraphed to Washington, and distributed as necessary to other stations that make a weather map or a weather forecast. This procedure occurs at every Weather Bureau office, and when the data are assembled on a blank map of the United States, there appears a picture of the weather at the given time over the whole area.

"On these graphic charts the direction and rate of progress of storm and fair weather areas; hot and cold regions; and the distribution of all the other types of weather prevailing at the time, being now mapped out, the forecaster deduces from them the kind of weather which is expected at any given area 24 to 36 hours or more in advance. That is, the forward movement of weather conditions is anticipated, and in our latitudes they always move to the eastward. Thus storms, cold waves, and other adverse as well as agreeable weather may be foretold. Of course thousands upon thousands of dollars' worth of foodstuffs and property, not to mention numbers of human lives, are saved annually by the warnings.

Thus the day went on, the talk being general or special, as the case indicated. "We depend upon the Weather Bureau," said the Illinois farmer, and his remark was echoed by others.

It is great pleasure talking to interested people. There is enthusiasm in it, and as one catches and imparts the up-bubbling spirit of fellowship, the unity of man in his life, ideals, sympathies, and purposes, becomes more closely established.

Payday among the Osage

Again the scene shifts. This time the government worker's day is passed among the richest of our Indians—the Osage—in Oklahoma, who live "on Easy Street," relieved of sundry worries incident to emergency salary increases, reclassification problems, and kindred essentials, which constantly confront Uncle Sam's civilian employees.

By ESTELLE BROWN

U. S. Geological Survey, Washington, D. C.

IT WAS annuity-payment day at Osage Agency, Oklahoma, and as I walked up the steep hill to the agency office I found myself frankly envious of the lucky Indians, who this day were to receive, as recompense for being born Osage, eight hundred odd dollars for each enrolled man, woman, and child. Although early in the day, several high-powered cars were parked in front of the office, from which building presently emerged the newly enriched, low-powered owners, who lumbered into their respective chariots, to be whirled into town to begin the joyful spending of their quarterly allowance.

Oklahoma is inured to the sight of a Chalmers or a Cadillac car, its dusky owner's initials in gold on the doors, driven by Rich Lo, his hair artistically arranged in two long braids over his shoulders, his generous girth upholstered in the finest of embroidered broadcloth blankets, his moccasined foot firmly pressed on the accelerator, and the tonneau of the car filled to overflowing with Mamma Lo and Little Los, proportionately girthed and similarly appareled. Certainly Solomon in all his glory rode not forth like one of these; nor do I believe that Solomon's stenographer, or scribe, or however he designated the unfortunate person who paid the bills, was ever called upon to draw a check or count out shekels for $1,452 to cover a bill for meat and groceries for eighty days for Mr. and Mrs. Solomon and Solomon, Junior—which is one of the many things I did that payment day at Osage.

THE LO FAMILY HAVE NOT LEARNED TO LIVE "ON A DIET"

Doubtless Solomon was a good provider in his day, and all the Mrs. Solomons and juvenile Solomons subsisted luxuriously on locust and wild honey and goat steaks, or whatever in those days was the equivalent of porterhouse and winter strawberries, but still I contend if Solomon had to pay $1,452 for subsistence alone for eighty days for himself and the first Mrs. Solomon and the first baby Solomon, before he had footed the bills for the remaining four hundred and ninety-nine Mrs. Solomons he would have summoned his trusted military police and bade them go find him another gold mine.

EMPLOYEES AT OSAGE AGENCY

Yet on reaching my desk, among the many formal requests from the accounts clerk for checks I found one requesting me to draw a check against the account of David Copperstone for $1,452, in payment of a bill presented by a local grocery company for supplies furnished David within the last eighty days. The bill was carefully itemized and would have been a liberal education for the benighted Caucasian who thinks all Indians are poverty-stricken individuals, existing only by the grace of a paternal government. There were more porterhouse steak, canned lobster, and fancy groceries listed on that bill for one Indian family for a period of eighty days than any government clerk has seen since Germany upset the world's bread basket back in 1914.

Now, David Copperstone's family consisted of himself, wife, and one child, whereupon an official of the agency felt it his duty to remonstrate with David over his extravagance.

"See here David," he said, "it's such excessive accounts as this one of yours that is making Congress consider withholding from parents the funds of the children. When the parents squander money as you are doing, we have to do something to stop it."

But David was not convinced of the error of his ways. "I didn't squander the money," he stated. "I needed those things to live. I only bought what we needed to live well."

The official pointed out to him that in his own family, consisting of six persons, in the same period of time his bill for meat and groceries was less than one-eighth of that of the Indian's, and that his family was well fed.

"Humph!" grunted David, in whose bright lexicon there was no such word as *courtesy;* "you agency white folks live like dogs"—which, after all, is not so bad as it sounds, for an Osage dog lives very well indeed.

I have an idea that the average Washington government employee thinks of Indians, when he thinks of them at all, as wretched creatures living in teepees and eking out a precarious livelihood going on the warpath in the movies. He might be surprised to know that the average yearly cash income of an Osage Indian is five thousand to twenty thousand dollars, seldom less, often more, and that from the Osage point of view being a government clerk in Washington on $2,000 a year or less —Oh, yes! oftentimes quite a bit less —represents a very low stratum of living indeed—which of course is no argument against the lucidity of the Osage viewpoint.

But I digress from the bills on my desk waiting to be canceled by checks drawn in payment thereof. These bills have been appearing in numbers of late, apparently cognizant of the fact that an annuity payment was about due, and mutely begging assistance from a humble government clerk in liquidating themselves. Let us look at some of them.

Most of them are for the so-called necessities of life as seen through the moneyed Osage eye, namely, food and —no, no drink. There were no liquid refreshments listed on these bills, but that does not necessarily imply that the Osage thirst remained unquenched. Not at all. On the contrary, as the seasick but polite Frenchman told the lady who asked him if he had dined.

THE FAMILY RAIMENT IN KEEPING WITH THE TABLE

Silk—yards and yards of it. Osage women wear silk from the time they cut the first tooth till they lose the last one. No cotton frocks for Osage children but the brightest, stiffest of silk. And ribbon! I am positive that an Osage girl of ten years or so can put fourteen yards of ribbon into a hair bow and then look only fairly well caparisoned in the matter of bows.

From this item of $400 for blankets one would suppose this family was equipping a company of soldiers, or perhaps a regiment. Blankets to Indians are what embroidered mottoes were to New England housewives—you simply couldn't keep house without 'em. They indicate your moral standing in the community.

One item on many of the bills puzzled me until I asked the accounts clerk to enlighten me. "June 1, books, $10; June 10, books, $20." Were, then, Osage men literary in their tastes? What were the books? They were "brokeage books," issued by local stores to Indians temporarily "broke," and were good in trade at the issuing store. Not so musical to the ear as coins jingling in the pocket but quite as satisfying in results.

And so all day I pay bills for the members of the Osage tribe who for various reasons could not quite be depended upon to pay them themselves. And now it is closing time. Something like a million dollars has changed hands since the office opened in the morning, and most of us were willing to call it a day. Doubtless we would have found the day's work more exhilarating had the million passed into our hands instead of through them. The financial clerk beckons us on leaving to tell us a joke on Milly. Milly is the pretty girl cook at the school club, whose admirers are legion. A dear old Indian woman, searching for her grandchild at the school, had happened into Milly's kitchen at an opportune moment and surprised one of the admirers ardently kissing Milly. As it wasn't the favorite admirer, Milly was naturally anxious that the matter did not go further, so she gave the old lady a dollar not to tell anybody. The old lady accepted the dollar, came to the office and promptly told her friend, the accounts clerk. Whereupon that kindly disposed gentleman, thrusting his hand into his pocket, produced another dollar and presented it to the old lady, advising her to go out and tell everybody she knew, which she agreed to do.

And so the day ended with laughter, which is a very good way for any day to end.

Industrial Arbitration in Australia

A remarkably frank discussion (here slightly abridged) in the *American Federationist* of the practical workings of compulsory arbitration in Australia for nearly a quarter of a century of the net results.

By GEORGE S. BEEBY

Minister for Labor and Industry and Associate Commissioner of the Board of Trade, New South Wales

MORE than twenty years ago with the concurrence of both employers and workmen, Australian Parliaments passed laws providing for the settlement of all industrial disputes either by courts of arbitration or by wage boards. Many different systems have been tried, and compulsory arbitration has had a fair trial over a period of nearly a quarter of a century. The arguments in favor of the system were, that it saved the community from the waste arising from strikes; that it offered the wage-earner a surer, quicker and less expensive method of getting improved industrial standards; and that by open investigation before public tribunals, the needs and aspirations of workers became better understood by the whole community.

COMPULSORY ARBITRATION HAS FAILED TO PREVENT STRIKES

Arbitration has failed as a means of preventing strikes. Organized labor has refused over and over again to accept the decisions of the tribunals, and has called innumerable strikes, although their duration and intensity may have been lessened. Little regard has been paid to the law which makes strikes illegal. No government has ever yet attempted to rigidly enforce the anti-strike law, and the public generally regard strike penalties with good-natured contempt. It is recognized that no law can make men work, once they become involved in a definite dispute, and that the only effective line of action which a government can take is to provide machinery for conciliation. Today there is a definite movement by all the strongly organized unions against the whole system. They contend that their most effective weapon is the right to call a strike at any time and under any circumstances, and many of them now refuse to submit their cases to the arbitration courts. On the other hand, weaker unions such as shop assistants, laundry employees, women workers in factories, and restaurant employees, still rely on arbitration, as it gives them better results than they can achieve by striking. But even these workers resent the restrictions which the law places on their rights particularly when they want to take part in a sympathetic strike.

CONDITIONS BETTER FOR WORKERS THAN IN "FREE" COUNTRIES

The reproach of sweated industries has been removed from Australasia. With slight exception, women and children who work in occupations which lend themselves to oppression and misery are, compared with those in "free" countries, guaranteed decent factory conditions, reasonable hours of labor, and minimum wages. Child labor is strictly controlled and supervised, and in factories particularly, the tendency is to reduce still further the working hours of women and juveniles.

The unskilled worker, the product of modern industrial methods, is protected from over-competition for employment. Much of his improved condition is attributable to scarcity of labor, but the incentive to organization, the power to drive a collective bargain, originated with the earlier arbitration awards, which gave him a status previously unknown.

The constant open inquiry into wages and working conditions of employees has been of great educational value, and has led to more sympathetic consideration by the public of the workers' agitation for a higher standard of comfort and to a wider public interest in economic problems.

On the other hand the wages fixed by the court have generally become standards. A very small proportion of workmen can command rates above the different minima prescribed. The result has been the leveling down of labor to a common plane.

Compulsory arbitration has also prevented employers and workmen from coming together, and trying to arrange their own conditions of employment.

Today the whole system is in the melting pot. The idea of a minimum wage and the standard eight-hour day will never be repealed. All classes and all political parties in Australia have finally accepted the principle that it is the duty of the State to prescribe a national minimum wage for an eight-hour day, and to allow no competition in the labor market below that living margin. But all the elaborate machinery for the general control of industrial regulation by laws is falling into disrepute and complete revision of the whole system is inevitable.

With the Poets

"Yankee"

(With unusual apologies)

I went into a factory to find a job to do;
The superintendent up an' says: "We got no work for you."
The guy they gave my old job to, he giggled fit to die;
I went into the street again, and to myself said I:
O 'twas Yankee this, and Yankee that, and "Yankee, ataboy!"
But it's "Awful sorry, Yankee," from the people who employ.
The people who employ, my boys, the people who employ;
And it's "Awful sorry, Yankee," from the people who employ.

I went into an office with my chevron o' discharge;
The boss he greets me joyful with a "Glad to see you, Sarge."
"I come to take my job again," I then began to sing.
The boss he says he's sorry, but he hasn't got a thing.
O 'twas Yankee this, and Sammy that, and devil-dog Marines,
But it's pretty chilly comfort with no jack within your jeans;
No dough within your jeans, my boys, no kale within your jeans;
And it's hard to buy a dinner with no jack within your jeans.

You talk o' reconstruction an' a lot o' high-brow truck,
But a bird that's out o' money is a jake that's out o' luck.
Hand out a job to every gob and doughboy when he asks,
An' you won't need no committees on reeducation tasks.
O 'twas Yankee this, an' Yankee that, an' "Yankee, lick the Hun!"
But its "Busy, call again, sir," when the dirty war is done;
The worksome war is done, my boys, the irksome war is done;
An' it's where's the job for soldiers when the nasty war is done?

—F. P. A., in the *New York Tribune*.

The Commuter and His Ticket

My commutation ticket has been punched all full of holes.
Conductors do not realize that tickets may have souls,
But I know (and the ticket knows) that such is not the case:
There's meaning in each punch hole in its travel-punctured face.

For each conductor has a mark that is his very own;
By crescent, circle, spade or square his handiwork is shown.
Each mark relates a story of a trip to East or West—
A story that the ticket holds within its paper breast.

This oblong tells about the trip where first I saw my sweet;
This square reminds me of the time I offered her my seat;
This diamond is the journey where I looked into her eyes;
This arrow is the morning when we only spoke in sighs.

This double star reminds me how a trip for life was planned;
This circle was recorded when I asked her for her hand.
The ticket's month expires there, but I shall not be vexed,
Because its little story is continued in the next.

And when I bring my bride to town I hope they punch a heart,
And when I bring her home they ought to punch a Cupid's dart.
Then later, when I ride to work, to earn her bread and mine,
They'll wish me luck and fortune if they punch a dollar sign.

And if success rewards my daily business trips to town
(Which fact will be recorded on my ticket by a crown),
Perhaps a few years afterward the trainmen of the line
Will find a group of little tickets traveling with mine.

—Henry J. Myers in the *Railroad Men's Magazine*.

Our Soldier Dead

"In Flanders fields, where poppies blow,"
In France where beauteous roses grow,
There let them rest—forever sleep,
While we eternal vigil keep
With our heart's love—with our soul's pray'r,
For all our Fallen "Over There."

. . . . . .

The earth is sacred where they fell—
Forever on it lies the spell
Of hero deeds in Freedom's cause,
And men unborn shall come and pause
To say a prayer, or bow the head,
So leave these graves to hold their dead.

Let not our sighing nor our tears
Fall on them through the coming years,
Who on the land, on sea, in air,
With dauntless courage everywhere,
Their homes and country glorified—
Stood to their arms, and smiling died.

Great France will leave no need nor room
That we place flowers on their tomb—
And proudly o'er their resting place,
Will float forever in its grace,
O'er cross and star, and symbol tag,
Their own beloved country's Flag.

The morning sun will gild with light,
The stars keep holy watch at night,
The winter spread soft pall of snow,
The summer flowers about them grow,
The sweet birds sing their springtime call,
God's love and mercy guard them all.

—Annette Kohn in the *New York Times*.

Morituri Te Salutant

In this last hour, before the bugles blare
The summons of the dawn, we turn again
To you, dear country, you whom unaware,
Through summer years of idle selfishness,
We still have loved—who loved us none the less,
Knowing the destined hour would find us men.

O thrill and laughter of the busy town!
O flower valleys, trees against the skies,
Wild moor and woodland, glade and sweeping down,
O land of our desire! like men asleep
We have let pass the years, nor felt you creep
So close into our hearts' dear sanctities.

So, we are dreamers; but our dreams are cast
Henceforward in a more heroic mold;
We have kept faith with our immortal past,
Knights—we have found the lady of our love;
Minstrels—have heard great harmonies, above
The lyrics that enraptured us of old.

The dawn's aglow with luster of the sun . . .
O love, O burning passion, that has made
Our day illustrious till its hours are done—
Fire our dull hearts, that, in our sun's eclipse,
When Death stoops low to kiss us on the lips,
He still may find us singing, unafraid.

One thing we know, that love so greatly spent
Dies not when lovers die: From hand to hand
We pass the torch and perish—well content,
If in dark years to come our countrymen
Feel the divine flame leap in them again,
And so remember us and understand.

—P. H. B. L. in the London *Spectator*.

The Shepherd of King Admetus

There came a youth upon the earth,
Some thousand years ago,
Whose slender hands were nothing worth,
Whether to plow, or reap, or sow.

Upon an empty tortoise-shell
He stretched some chords, and drew
Music that made men's bosoms swell
Fearless, or dimmed their eyes with dew.

Then King Admetus, one who had
Pure taste by right divine,
Decreed his singing not too bad
To hear between the cups of wine.

. . . . . .

His words were simple words enough,
And yet he used them so,
That what in other mouths was rough
In his seemed musical and low.

Men called him but a shiftless youth,
In whom no good they saw;
And yet, unwittingly, in truth,
They made his careless words their law.

They knew not how he learned at all,
For idly, hour by hour,
He sat and watched the dead leaves fall,
Or mused upon a common flower.

It seemed the loveliness of things
Did teach him all their use,
For, in mere weeds, and stones, and springs,
He found a healing power profuse.

Men granted that his speech was wise,
But, when a glance they caught
Of his slim grace and woman's eyes,
They laughed, and called him good-for-naught.

Yet, after he was dead and gone,
And e'en his memory dim,
Earth seemed more sweet to live upon,
More full of love, because of him.

And day by day more holy grew
Each spot where he had trod,
Till after-poets only knew
Their first-born brother as a god.

—James Russell Lowell.

THE OPEN FORUM

THE FEDERAL EMPLOYEE invites letters from its readers on subjects which properly come within the scope and purpose of the magazine. Particularly desired are suggestions which place the emphasis on the constructive side of things, looking toward the improvement of the United States Civil Service and of the condition of its employees.

Communications should be written concisely and should not exceed 300 words in length, otherwise the editorial blue pencil may have to be used. Please write on one side of the paper only. Typewritten manuscript, OPEN-SPACED, will be greatly appreciated by the editors. Each correspondent should retain a copy of his contribution. Every communication must be accompanied by the writer's name and address, which will be withheld from publication on request.

THE FEDERAL EMPLOYEE assumes no responsibility for expressions of either fact or opinion by correspondents.

PRIZE ANNOUNCEMENT

Until otherwise announced, THE FEDERAL EMPLOYEE will pay the sum of five dollars for the letter published in the OPEN FORUM which shall be adjudged the best in the number of the magazine in which it appears. Contributors will please bear in mind that communications intended for publication in the OPEN FORUM of a certain month should be in the hands of the editors by the tenth of the month next preceding.

The Editors venture to remind correspondents that it is desirable that letters intended for publication in the OPEN FORUM *be written as concisely as possible in order to give the "other fellow" a chance to be heard.*

Fit the Misfit

The government service contains probably thousands of "misfits," owing to lack of machinery to adjust square pegs to square holes. This indicates, suggests our correspondent, an important line of work for our organization.

To the Editors:

A misfit in the sense used in this article is an employee specially trained or fitted for certain duties but who is engaged on other work of relatively less importance. On almost every hand we find these misfits. Why is it that these employees scattered here and there are not occupying positions for which they are specially qualified and in which they can render better service to the Government? This condition exists solely because no systematic effort has been made to collect data relative to the special qualifications of employees and to place such information before the various administrative officials. In other words, no contact point has been established between these employees and the supervising officials. If a supervising official desires to secure the services of a specially trained man, on whom will he call and to whom will he apply? He doesn't know. Does he have complete data on file to help him? No. He picks a man from a limited list furnished by the Civil Service and then has to wait six months before he can determine whether the appointee is qualified. If an employee desires to place himself in a position where he can follow his special line, can he do it? No, because he has no way of knowing of the opportunities offered. There is a need for some arrangement which will bring the two together. The case of an employee whom I have in mind and to whom I shall refer as Mr. A. will serve to illustrate the need for such machinery.

THREE TYPICAL CASES OF MISFITS AND THE OUTCOME

Mr. A was employed in a small division in one of the departments for two and one-half years as a stenographer at $1,200 per annum. Before entering the service he had had several years' experience as secretary and personal stenographer to the president of a large commercial concern, and had been frequently called upon to attend business conferences and to make verbatim reports of the proceedings. This duty he performed with credit. He was intelligent, well versed in English, of excellent appearance, and possessed exemplary habits. Although he had been in the division referred to for two and one-half years, he had not been promoted, because he was a statutory employee and no vacancy had occurred in a higher grade to which he might have been advanced. One morning one of the assistant secretaries of that department called upon the various bureaus for stenographic assistance. Mr. A. was one of those loaned to help perform the task. His work was done so well that he attracted the attention of that official. A little later he was again pressed into service to report a hearing. So well was this work performed that the assistant secretary had him transferred permanently to his office at an increased salary. Within a comparatively short time Mr. A. was receiving $1,800 per annum. The fact was that the assistant secretary had for a considerable period been casting about for a man with just such qualifications as those possessed by Mr. A. A number of employees had been tried but had been rejected. He had not heard of Mr. A. and did not know that he was in existence until he was pressed into service. Mr. A. was clearly a misfit in the little office where he had performed his duties unobserved for two and one-half years.

Another case in point is that of Mr. B., who was employed eighteen months in a file room writing index cards and filing letters. His salary was $900 per annum. He was not promoted because his official superiors felt that the grade of work on which he was engaged did not justify an increase. The work assigned to Mr. B. was entirely out of his line, though he did it well. Before he entered the service he had had nine years' experience as a bookkeeper in a prosperous mercantile establishment. In addition to this he possessed a good knowledge of general accounting. One afternoon while attending a ball game he struck up a conversation with the man who sat in the next seat and who, it subsequently developed, was a near neighbor and the assistant chief of an accounting office in the same department in which Mr. B. was employed. On the way home after the game they "talked shop" and the neighbor became cognizant of the special qualifications of Mr. B. Within a few days Mr. B. was transferred to his neighbor's office with an increase in salary of $200 and assigned to take up a line of rather important work which had theretofore been handled in piecemeal fashion because the neighbor had been unable to find among his acquaintances a suitable man to assign to this task.

An even more pointed case is that of Mr. C., who "plugged away" for two years at $1,000 per annum on miscellaneous work. He was not promoted for the same reason Mr. B. was not promoted in the file room—his work was not of sufficient importance. Before entering the service Mr. C. had been employed by a railroad and had acquired a special knowledge of freight rates. He also had experience as a car tracer. Like Mr. A., his duties

Digitized by Google

were routine and did not bring him in touch with those higher up. Consequently he had little opportunity to know the needs of the various offices of the department. Accident brought him in contact with the head of an office who had been endeavoring for three months to find a man with his special qualifications to take up a certain line of work laid aside when a former employee had been inducted into the army. Mr. C. was appointed to take up this work at an increased salary. In a comparatively short period of time the work was current. The delay in filling the needs of this office was due to the lack of a contact point.

These cases typify a condition which, so far as I have been able to ascertain, obtains in most, if not all, of the departments. There are hundreds, and doubtless thousands, of these misfits, yet no machinery exists, to my knowledge, which is calculated or intended to place them where they can render their best service. It is obvious that if these employees can be placed where the Government can get the benefit of their special skill and training, the interest of the service as well as that of the employee will be materially improved.

HOW THE FEDERAL EMPLOYEES UNION CAN GIVE AID

The Federal Employees Union can render material assistance along this line. A contact point can be provided in the files of the Union. If a survey be made of the various departments, possibly through our collectors, information can be obtained on blanks from which it will be possible to classify all such employees. The data thus obtained can then be made available to all of the administrative officers of the various departments. This plan is not intended to cover cases involving the transfer of an employee from a position in one department or bureau to a position in another department or bureau where no change of duties is involved. It is intended to affect only those cases where the employee possesses special skill or qualifications which better fit him for other duties. The Federal Employees Union can supply this need.

Of course there are certain obstacles to any plan along this line. There are certain laws and executive orders restricting transfers. A complete fulfilment of the plan will involve a withdrawal or modification of these restrictions. Another obstacle is the chief who is unwilling to part with an employee. These obstacles can be overcome if proper effort is made to that end.

ANTI-MISFIT,
Dept. of Agriculture Branch,
Washington F. E. U. No. 2.

"Start Something Social"

Hold members through their interest, is the plea here made. Many can be reached and held by means of social affairs and athletics, contends the writer.

To the Editors:

Just from reading a piece in this month's magazine I presume (I may be mistaken) that many young members after paying their entrance fees and three months' dues drop off your rolls. Am I right? If so, the reason is this: Many will say when you remind them they owe dues that they don't wish to belong any longer. Why? Because—"What do I get out of it?" "Increase in salary regularly," you will say possibly. "Well," they will answer, "we will get that anyway."

What you want to do to keep members is to keep them interested; for example, have athletics, baseball, tennis, etc., among both men and women. Have more socials than you do. Have the members come around and meet one another. I'd never know a member except by the little button on his coat. We should know more about the Union, and the way to learn it is by having lectures, etc. Get the members interested by having them assemble together. That's the only way. I never knew a thing about the Union until I heard a man talk to us publicly, and I have been in Washington for the past year. This shows how much you will learn by books. Books are a help, but an explanation is clearer. I'd rather listen to a good talker than read the best book ever written. Many members won't join because they don't intend to stay here, but if they were to enjoy a few dances or take part in some tennis tournaments it would be a different story.

There are no visible signs of life in the Union, so speed up a bit and don't be like old fogies. The only way to get young fellows or people interested in anything is to start something social.

I wish to lay stress on the fact that you should have the members together at certain times. I am a member of the Union, having joined last month and am working in the State, War and Navy Building.

JOHN L. MCOSKER.
Washington, D. C.

Federal Employees Given Too Much to Complaining

"To set an example of plain living and high thinking" instead of worrying about mere salaries is the ideal here urged. Comment is invited.

To the Editors:

There is something radically wrong with us if federal employees can happily give so much time and energy to complaints. Sixteen years ago, when I first heard of the Forest Service, a friend who was the wife of a forest ranger (and the mother of five children) managed to save $5 a month out of his $60. Now he gets $108.33 a month (plus the $10 bonus), the five are all married and are no longer an expense to him, yet he is one of the loudest complainers. Are we getting the habit? If we are, it is high time to call a halt and "count our marcies."

Yes, living expenses are 40 to 60 per cent higher; yes, our standards of comfortable living are at least 50 per cent higher; yes, "common blacksmiths are getting $6 a day." But what of it? Would you prefer to be a common blacksmith? If so, there is nothing to prevent, as far as one can see—two years' apprenticeship at wages rather higher than those of a "forest fireman" will turn the trick. Why not do it? What is it that being a federal employee gives you that is worth more than the difference between your salary and the blacksmith's wages?

As one of us I can answer my own question: It is the association with people of similar ideals and training in work that is worth doing. The same thing can be said of other underpaid workers—teachers, doctors, ministers of the gospel, university professors. To be sure, there are plums in each of those professions, but taken as a class they rank financially with federal employees. They also rank spiritually with the best federal employees—those who have chosen their line of work because it seems to them the most interesting and worth-while work of which they are capable.

Far be it from me to object to a salary raise—but I do strenuously object to having lack of funds made the center of every argument, every article, every meeting, every association of federal employees. It seems of vastly more importance for a federal employee and his wife and his children to set an example of plain living and high thinking, of good work given in exchange for his salary, no matter what it is. If that salary is below what his living expenses must be, let him find another, better-paying job and resign. Such action will at least impress on the men who make the budget that higher salaries are needed if the best men are to be kept. In fact it is just that which has finally made the impression. But let us never forget that the main thing is to do first-class work, to make the level of service given the country higher than that given private individuals, rather than to give the impression to the public—our employers—that all we really care about is more money.

THE CAPITAL TRACTION COMPANY

The Federal Employees Union and Efficiency

The employees organized under the N. F. F. E. have always stood, and now stand, for raising the standard of efficiency in the government service. With organization has developed a spirit that makes for this all-important result.

To the Editors:

The frank and open manner in which Secretary Keating in the April FEDERAL EMPLOYEE outlined the attitude of the Commission on Reclassification prompts me to respond under the caption above. Among other things he says: "The Government cannot afford to be a foolishly extravagant employer," and, "the money which meets the payroll of the employees is coined in the sweat of honest labor."

Of course any person, or class of persons who take money, or demand compensation, for which they do not render a just equivalent have dulled consciences, to say the least.

One of the first declarations of the Union after its organization in the spring of 1916, which was afterward embodied in one of its earliest constitutions, was that the object of the organization is to promote the welfare of the employees and *to raise the standard of efficiency in the civil service.* It is the latter of these objects to which I direct attention.

It has always been the pride and boast of organized labor that any article of manufacture bearing the union label carries with it a guarantee of good workmanship and reliability; and it has been the general experience that this has been true in so far as the workers themselves are able to control the situation.

This principle could not be less true of employees of the Government, among whom for some years back there has been a growing sense of individual responsibility for an honest day's work and efficient service among the entire body of federal employees. But more than one became discouraged and hopeless because there was no means by which this high purpose could be translated into effective action, since the old theory was and still is held by some that men and women will not do their duty unless they are under somebody's eye.

However, there has been developing in the minds of the people who do the world's work a consciousness of their true position in industry, and this has given them an intensified interest in their work which no other influence has ever given or could give. And this consciousness more than anything else has been the motive force in organization—the organization of the Federal Employees Union. And why should not federal employees stand

Digitized by Google

for efficiency and economy? They are citizens. Many of them are taxpayers direct and all of them indirect. Many of them are more or less interested in affairs, and it stands to reason that they should have as much interest as any one in the proper dispatch of the Government's business.

I am aware that a narrow policy of administration may check this tendency, and no doubt has often done so, for I have observed that the most work and the best work is done where there is the least interference. I have observed that if it is desired to secure the most work and the best work an employee should be made responsible for certain work, and then given credit for having some sense about doing it. I am also inclined very much to the view that even greater efficiency would result through a liberal exchange of views with those actually engaged in doing the work, and it is right at this point that the Federal Employees Union serves such a useful purpose.

In the past, individual employees have been slow to offer any suggestions, however valuable they might feel them to be. They have felt that to do so might be looked on as presumption and give them bad standing. Now they can speak, individually and collectively, through the officials of the union, with the assurance that in time they will be heard and heeded.

It is true that all federal employees have not yet become alive to this possibility of organization, but they will, and it is certain that in the future the chief work of the union will be the raising of the standard of efficiency in the Civil Service.

It was inevitable that the union should first give its attention to the welfare of the employees, because as a matter of fact that was the first step in raising the standard of efficiency. Some persons of narrow vision have not been able to grasp this idea and have found fault with the union because it is always asking something additional for its members, but I predict that if the Commission on Reclassification does what the employees are expecting of it, removing the causes of injustice, and making it impossible for anything but merit and devotion to duty to win, the Federal Employees Union, through whose activities this commission has been brought into existence, will be able to show future statesmen to what heights the standard of efficiency has grown and the reason therefor.

Hard on the Customs Officers

Officials called out at all hours of the night, on Sundays and holidays. Can they get extra pay for this service? Who can answer our correspondent's question?

To the Editors:

After working all day steadily in an office of an inland border port, is there any compensation to be obtained for examination of autos and meeting trains to receive the customary declarations for customs officers?

This auto question is a serious one for us, as it involves midnight telephone calls, dressing, a ten-minute walk to the customs house, examining, sealing cars, engines of autos, baggage, etc., this perhaps as often as seven times a night, and all day Sundays and holidays.

T. D. 34872 (page 101) Customs Regulations, 1915, under Foreign and Coasting Trade by Sea, provide for compensation for duties performed after regular hours, but would that apply in the above case?

D. C. & I.

Our Organization on the Right Track

This correspondent comes to the defense of our organization and THE FEDERAL EMPLOYEE on the charge of not being sufficiently altruistic, taking exception to the article from the pen of Secretary ——— of Local No. —, which appeared in our March issue.

To the Editors:

[Addressing his remarks to the author of the communication to which he takes exception, referred to in the caption of this letter, our correspondent writes:]

You refer to efficiency, devotion, and loyalty as though they were lost arts, or known only to the ——— service. As a matter of fact the N. F. F. E. was founded on these qualities by people full of all three of them, and "our rights" simply mean that the government workers want these qualifications of theirs recognized. Also, our magazine is full of matter pertaining only to us, because it is *our* magazine.

CONSTRUCTIVE WORK DONE BY ORGANIZED FEDERAL EMPLOYEES

You wish to know what constructive work we have done. Well, first, we constructed an "honest-to-goodness union;" then we specialized on trying to change the basis of wages from paying the least for which a man would possibly work to what he is actually worth. Constructive, is it not, when you know one means sullen, pauperized clockwatchers, and the other means willing and loyal workers. Now about your Congressmen and department chiefs. Most Members of Congress are good, keen men, who do not

pretend to know everything, but who have open minds. When considering matters pertaining to government employees they want ideas and facts from government employees. Our union spokesmen give them what they want, and that is why we merit and receive the confidence of most of our Senators and Representatives. Occasionally some Congressmen throw bricks at us. We spit on every fifth brick for luck and heave it back. Sometimes it lands where it does the most good. You may have heard of reclassification and retirement. We are helping Congress with these items and, properly worked out, they mean better government.

Also, we have helped departmental heads considerably. Some have asked for and secured our cooperation, not only for their department problems, but for congressional matters as well. Verify this statement through our president, Mr. Steward.

Finally, brother, do not speak of the "ordinary labor union" with that "holier-than-thou" expression. No good labor union is ordinary. Don't take my word but ask Secretary Wilson or Assistant Secretary Post of the Department of Labor. Ask Secretary Redfield or ask Mr. Wm. H. Taft. Any of them will answer your letter if you give them your name and address. Better still—open your mind and study the real principles of unionism carefully. Then ask yourself.

Changes in Retirement Bill Urged

A protest against placing a burden of cost on the employees and also against fixing the maximum retirement income at $50 a month.

To the Editors:

It is interesting in perusing the debate on the McKellar-Keating retirement bill in the United States Senate, as printed in the December edition of the FEDERAL EMPLOYEE magazine, to note the extremes in human nature as evinced by Senators in the discussion, and the care shown by some to conserve government funds, while sundry river and harbor, public building, etc., projects roll along without objection.

WHY DISCRIMINATE BETWEEN CIVILIAN AND MILITARY SERVICES?

There are a couple of features in the bill under discussion no liberal-minded person can reconcile with justice: first, the shouldering of the cost on employees, and second, the limitation of the maximum amount a retired person shall receive to $50 a month. Why employees who have by industry, study and skill worked up to the higher rounds of governmental usefulness, should on retirement be

dropped down to the same grade as a man who has never exerted himself to rise to anything beyond a mere laborer is beyond reason. If it is considered just to retire a civilian federal employee, who has by conscientious work and efficiency attained an executive position at this maximum of $50 a month, would it not be considered also equitable to retire the higher ranks in military and naval establishments such as generals, admirals, colonels, etc., at the same pay as enlisted men? A man who reaches 65 or 70 years has probably lived a methodical life to reach that age, and has others also depending on him. How far in these times would $50 go toward supporting the family? Surely there should be no discrimination between the declining years of a civilian and those of the army or navy personnel, yet an enlisted man on retirement receives over $90 a month. There is no doubt but what there would be vigorous protest if the Army appropriation bill contained legislation which would retire a commissioned officer at a maximum rate not to exceed $50 a month without regard to rank, instead of 75 per cent of actual pay and allowances now granted by law.

That one may better grasp the subject and form a comparison of various classes of wage-workers, let us assume that thirty years ago a man had three sons upon whom he impressed the necessity of picking out some career and sticking to it. The first chose the army, the second an apprenticeship in an electrical corporation, and the third asked to go to college.

Through influence the first day the first boy obtained an appointment to West Point. Here at the very beginning he was paid by the Government a salary of $600 per annum and allowed a ration. This continued for four years when he graduated and was immediately appointed a second lieutenant at $1,700 per annum. From then on, his quarters, light, heat, medical attendance, etc., were furnished by the Government free of cost to him. His pay the moment he obtained his commission was far in excess of that paid a young man who first enters commercial or government service, while it is is common knowledge the duties are no more exacting than those of a civilian employee in an executive position. As time rolled on promotion came, but whether it came or not, every five years he received an increase in salary automatically by law until said amount equaled 40 per cent increase. Finally, after thirty years, he can, if he desires, retire at three-quarters of his pay, never having had to worry or wonder where his next meal was to come from.

The second boy entered a large corporation at a nominal salary. He became proficient and was advanced—with increased knowledge came increased responsibilities and salary and at the end of thirty years we find him manager of a department with a salary running up in the thousands, while the company which had long before seen the advantage of providing for superannuated employees, placed him on the retired list at an allowance equal to if not better than that of his military brother.

The third boy was sent to college at a great expense to his father, as it is well known that board, lodging, tuition, etc., at college cannot be had at less than $400 per annum. He was a studious young man and devoted himself to learning. The boy finally graduated and had a college degree appended to his name. At that time the army boy was earning $2,200 and the electrician $1,500 a year, while the college boy just commenced to look around for a job. Not finding anything except in the lower rounds of commercial houses, he commenced to teach school, finally took a civil service examination for a clerkship under the Government and later was appointed clerk at $900. Promotions in the Government are slow, and after thirty years' service we find him still a clerk, possibly receiving eighteen hundred a year. He has no future to look forward to, all he can realize for his life's work is demotion as he grows old, supplanted by younger men or thrown out entirely, thus exemplifying the Government's beneficent method of treating its superannuated employees.

The moral seems to be that a young man in choosing his future career, should enter either the army, navy or a progressive commercial firm and shun U. S. Government civil employ as one of the most thankless on earth, a government which has no consideration for a federal employee, classifying him as a mere piece of convenient physical machinery to be "junked" when worn out.

We have often heard the question, "Why create a pension list or retirement for civilians? They do not risk their lives like a soldier for the protection of their country." This idea of conferring pensions or retirements on the army had its origin in the old feudal times when the lords of the manor were princes in themselves. They had their estates, castles and retainers of serfs, and they were masters just as long as they could maintain their possession through force of arms. Each lord, therefore, maintained and kept his force of fighting men, who were born and grew up forming a component part of the

feudal lord's estate. As they grew old, they were not thrown out, but retired and taken care of; if they were killed in battle, their families were pensioned or provided for. As stable governments were formed, the plan of retiring the army and navy was continued "as a custom," until it is now looked on by the army as a vested right.

What would our little regular peace army of 80,000 amount to, scattered as it was all over the world? Would we have jumped into war with the barely 20,000 men we could muster of the regular troops? Did the United States go to war with Germany with only the handful of regulars available? Not much! Uncle Sam called for *volunteers* and then conscripted, and it is the army thus raised that has perpetuated this country whose ranks are filled, not by the regulars of the army Congress is so liberal with, but by the very clerks and government employees that Congress looks down upon and considers mere machines, but without whom, not a wheel of the Government could turn for a single day. Yet Congress is reluctant to create a retirement list for civilians, unless they pay for it themselves, and even then stipulates a maximum amount based on an arbitrary and insufficient allowance.

MORE EQUITABLE RETIREMENT BILL SHOULD BE INTRODUCED

As the bill will necessarily have to be reintroduced in the next session of Congress, it is hoped the national officers of the Federal Employees Union at Washington will see that the defects indicated herein are brought to the attention of the committees of the Senate and House and all work earnestly fit of superannuated federal employees.

GEO. A. WARREN, *First Vice-President, F. E. U. No. 28.*
San Antonio, Texas.

Retirement Mere Justice to Employees

The writer here strongly dissents from the views expressed by Brother F. A. Richardson of the Spokane (Wash.) Local in our March issue.

To the Editors:

I do not agree with Mr. Richardson on his retirement version.

If a man put in twenty or thirty years, underpaid the most of that time and giving more than eight hours a day to faithful work, I do not think there is any charity in giving that man a pension or retirement pay, as the Government owes it to this man the same as railroad companies and other corporations owe it to their faithful employees.

Does Mr. Richardson overlook the retired officers and enlisted men of

Digitized by Google

the Army? Is that charity, or does he think he will never get old?

If Mr. Richardson is a mechanic or a helper he probably does not receive the Saturday half-holiday except during the summer months.

DENNIS CROWLEY, *Member of Federal Employees' Union No.* 49.
Fort Leavenworth, Kans.

What the U. S. Customs Guards Are Fighting For

Salary increase to $4.00 per diem or $1,460 a year; further, the title "Customs Guards" to be changed to "Night Inspector," and to be placed in the First Grade.

To the Editors:

We of the U. S. Customs Guards at the Port of Boston do not believe that Congress and the public in general are familiar with the duties we perform, or with the salaries we receive. I will therefore give a brief outline of existing conditions.

We are required to wear uniforms which formerly cost $22 per suit; these now cost from $35 to $40 per suit. We are under the supervision of a captain, lieutenants and sergeants, or roundsmen of guards.

Our duties are to report at the Custom House daily for roll call, orders, and for the inspection of uniforms. We are then assigned to duty at the piers, to keep a vigilant supervision over the vessels, stores, or merchandise in our custody, for the purpose of detecting and preventing smuggling and other frauds against the Customs service. We are held responsible for the assigned stations during the hours prescribed for duty and until relieved. At gates and driveways or other exits, where imported merchandise is delivered by teams we take up the inspectors' delivery slips from the driver and verify the count and marks. We receive, transmit, and obey all orders from the surveyor, deputy surveyor, and officers in charge, such as captain, lieutenants, sergeants, or roundsmen of guards. The counting of passengers on excursion boats to prevent overloading and the enforcement of motor-boat regulations are also a part of our duties. We are the relief of the day inspectors, and were formerly designated night inspectors, receiving $3 per day. About seven years ago this title was abolished and the name of Customs Guards substituted, and the salaries were reduced from $1,095 to $960 and $1,020 per annum.

This salary is entirely inadequate to meet the present high cost of necessities, causing actual hardship and suffering to our families, and since all classes of labor have received substantial increases, we ask that this privilege be extended to us that our

position as government employees may not suffer by comparison with other less responsible positions outside of the government service. For example, longshoremen working at the docks receive 65 cents per hour for an 8-hour day, and $1 per hour for all overtime and Sunday work. Steamship clerks and checkers receive $5 per day for eight hours' work, and $1 per hour for all overtime work performed. The city of Watertown, Mass., a suburb of Boston, recently increased the pay of its laborers from $3.50 to $4 per day.

Therefore, we have requested through our Boston union that the Customs Guards of all U. S. Customs districts be paid a salary of $1,460 per annum after a probationary period. We also suggest that our present name of Customs Guards be changed to that of Night Inspectors, our former title, and that we be placed in the first grade, since we perform first-grade duties.

I believe there are at present sixty-six Night Inspectors and 453 U. S. Customs Guards, making a total of 519 men in all U. S. Customs districts. All perform the same duties, therefore should receive equal pay. The difference is in designation only. It appears that when the designation was changed seven years ago from Night Inspector to Customs Guard the men at two or three ports were exempted and have always retained the old title, which it is now desired again to make uniform throughout the service.

CHRIS F. GAYLOR, *President and Representative of U. S. Customs Guards, Boston Federal Employees Union.*

Cambridge, Mass.

Collecting Dues

Long experience suggests as essentials promptness and a proper districting of the membership, with a head collector for each district.

To the Editors:

The collection of dues is one of the things upon which the life of the union depends. Difficult, devoid of the spectacular, and requiring hard work, it is a task that sometimes is neglected, much to the detriment of the organization. Being of so much importance the subject merits our study and, as it is work in which I have so long engaged, I respectfully submit a suggestion.

Prompt collection when due is the prime requisite of successful work. Accumulation of past-due payments means delinquency, delinquency runs to suspension, and suspended members are hard to reinstate. On the other

hand, it is comparatively easy to keep members in good standing if the collector can be on hand when the money is due.

Prompt collections mean system. Only by a plan well designed and carefully executed can accounts be prevented from becoming delinquent. A collector must be on hand ready to receive dues each pay day and willing to remind those whose memories may be faulty.

In order to make sure that such collector is on the job I suggest that the local membership be divided into districts as far as practicable, each district to have from 100 or 200 members up. The boundaries of the districts should be determined largely by geographical location. At the head of the collection force of a district should be a head collector, assistant treasurer, or person otherwise designated, who would be charged with seeing that the work was kept up to date and who for that service would receive a percentage of the amount collected, as is now paid collectors. In each district the head collector would select members to make the collections in their immediate localities. For that service the collector's dues might be allowed, especially if he collected from a certain number, say twenty-five.

In addition to the major districts there would remain small isolated groups of members who could be handled through collectors directly under the treasurer, as at present.

This system would relieve the treasurer of a mass of detail and give him more time for duties essentially his; for the organization of new districts, and the development of collectorships into districts. The head collectors, being experienced in their work and subject to the Treasurer, would be of real assistance to him in the financial matters of their respective districts; would be acquainted with those members most suited to be collectors; could keep posted, so that no collectorship would remain vacant; would be qualified to give special attention to those cases which the collectors found difficult to keep in good standing, and would be in position to see that collections were made and reported promptly. The collectors, too, would be benefited by having someone near at hand to whom they could report and from whom they could seek counsel.

Burroughs Ledger Posting Machine

This machine makes bookkeeping largely automatic. It posts direct to card or loose leaf ledger. It enters the items, classifies them, totals debits, totals credits, subtracts, and prints the balance—all with unfailing accuracy and great rapidity.

With a Burroughs Ledger Posting Machine an untrained operator can quickly learn to keep books, prepare the trial balance, and handle similar bookkeeping work easily and rapidly.

Immigration Service Rules Need Amendment

Adoption of the seniority rule, with automatic pay increases, and provision for an adequate retirement system are necessary to building up an efficient service, contends Brother Linwood.

To the Editors:

I trust the suggestions in this brief article will not be misunderstood or taken as a reflection on the splendid personnel or work of any branch of the Civil Service, but, rather, that they will assist in crystalizing sentiment that will result in changes vitally necessary for the good of both the Service and the splendid body of men and women composing its membership.

I firmly believe there are two changes absolutely and immediately necessary in the Civil Service rules and laws as applied to the U. S. Immigration Service, if the Government is to continue to maintain the same high standard of efficiency as heretofore among its employees. One is the adoption of the seniority rule, such as is in force among the railroad men, so that promotions may be made from among those employees longest in the Service, other things, including ability, being equal, and not dependent on the good will of their superior officers or on outside influence. Also, advance in pay and rank should be certain and automatic.

The other change needed is a retirement age and a pension for each and every person in the Service, arranged and provided for entirely by the Government and large enough to enable the recipient to live and keep those dependent on him or her in reasonable comfort, according to American standards of living and the dignity of an American official.

INJUSTICE SUFFERED BY IMMIGRATION INSPECTORS UNDER PRESENT SYSTEM

An inspector long in the Immigration Service, efficient in all branches of it, may be, and often is, at an out-of-the-way station or port, far away from any other inspector and from the office of the inspector-in-charge under whom he serves. He must possess the highest rate of efficiency, for he cannot get help or instruction except by mail or telegraph, and he must be able to understand and do the work that comes to him, without the delay and embarrassment that would result from waiting for instructions. It often happens that an inspector so situated may be called upon to manifest a number of different classes of aliens, each upon a separate manifest, with important data; then hold an investigation as to the right of some person to be and remain in the United States, making a recommendation in

Digitized by Google

the case; then hold a hearing upon a warrant in another case; then investigate the status of some Chinaman who desires to obtain a permit to visit China and return; forwarding numerous copies of all these reports for the consideration of the Secretary of Labor, to assist him in rendering a final decision in the matter, all this highly technical work often being cov-competitive struggle.

It often happens that an inspector so stationed has children who have passed through the common grade schools his small town affords, and he finds himself unable to send them away to the nearest college which may be far distant, and he is unable to effect a transfer to any place where he can educate his children. Thus, not only the inspector himself, but his ambitious children are punished by withholding from them the education and mental equipment necessary in the competitive struggle.

Would it not be just and proper that efficient men in the Service with children desiring an education should be given the preference at stations near universities and colleges?

Again, how often have inspectors in this Service bought and furnished, sometimes outright, sometimes on the instalment plan, homes, only to be suddenly transferred without warning to some distant and, to them, undesirable point, entailing on them and their families loss of friendships, and of property that represented savings of years of frugal living.

The Constitution of the United States stipulates, in effect, that every man shall have his day in court, but, under the prevailing rule in our Service, an employee may be notified of charges filed against him; no opportunity is offered him to face his accuser; he does not know who investigates his case, and is not allowed to present his side to the deciding official, and cannot examine the witnesses who may testify against him. Under these conditions, it is quite possible for an honest, efficient, reliable man to be dismissed from the Service upon charges absolutely and utterly false and ungrounded, without having the slightest chance to defend himself in the matter or to obtain any hearing whatever in his behalf.

OUTSIDE INTERESTS OFFER INDUCEMENTS TO IMMIGRATION EMPLOYEES

With these unfortunate conditions prevailing, it is a wonder that great manufacturing interests and managers of big business in this country and Japan, who are offering such splendid inducements, in both money and chance for advancement, do not succeed in obtaining more men from our

The Retirement Age Limit

Age limit and payments for retirement, this correspondent argues, should be determined by the employees. He suggests certain changes in the bill now being redrafted.

To the Editors:

After reading your NEWS LETTER of March 18 regarding the redrafting of a new bill on retirement of government employees, I feel inclined to believe that the age limit you mention sounds a great deal better, and as the employees will have to bear the burden of the fund created, it would seem to me that they should be the ones, through their Representatives, to fix the age limit and amount to be paid in every instance.

I would like to express my opinion on what would seem to me to be a fair proposition while the subject is open for discussion along the following lines:

If an employee has reached the age of sixty years and has been in *actual and continuous service for the Government for twenty years*, he may retire if he so desires at any time thereafter at a stated sum, to be regulated on the basis of his salary for the last ten years of service. Said employee may have the privilege of remaining in the service of the Government if he so desires until he becomes sixty-five years of age, at which time it will be compulsory for him to retire from the service on the sum stated and on the same terms as if he had retired when he became sixty years of age.

As suggestions were asked for, I am of the opinion that possibly a retirement bill along the above lines would work to great advantage to those who remain in the service continuously for twenty years, and it would seem they are deserving of retirement of some kind if they so desire. Those who are not desirous of retiring until they become sixty-five years of age should be allowed to remain.

From what I have read I judge that

at the age of sixty-five the argument seems to be that they should retire in favor of some younger persons who in most cases can certainly give the Government better service, but of course there are exceptions in all cases.

W. D. LEWIS, *Immigrant Inspector, Member of Montreal F. E. U.*

If You Can't "Boost," Don't "Knock"

The three classes of F. E. U. members defined—in which do YOU belong? Those who will not join in team-work are a drag on the Union.

To the Editors:

The Federal Employees Union, like many other large organizations, is largely composed of members who may be classified in the following three groups:

1. Members who take an active part in promoting its views and ideas;
2. Members who join, pay their dues, read their magazines, and rest content;
3. Members who join, grudgingly pay their dues, then sit back and "knock."

Of the first group little need be said, as their "actions speak louder than words."

The type included in the second group will be found in any large organization and must be considered as a valuable asset, as it is recognized that all of our members cannot be leaders; also that there are many who have neither the time nor ability to take an active part in matters of this character.

The third group, however, must be regarded as a liability in every sense of the word. It is largely composed of members who joined the Union solely because they hoped thereby to increase their own compensation and had no idea of continuing as members after the above-mentioned hope had materialized. Some of these have dropped out, while others, after considerable urging by loyal members, are still upon our rolls. However, instead of "boosting" our organization and the ideas represented thereby, they knock each and every plan of procedure adopted by the Union, unless such plans coincide with their own particular views. They also threaten to resign if the plans are carried out.

The continual knocking of these disgruntled members does much harm and causes many prospective members to refrain from joining the Union.

Fortunately, there are few of this latter type, but it is to be hoped that those who may properly be classified in this group will see their error and in the future refrain from knocking, even though they cannot or will not boost.

The Union Label and the Moral Principle Involved

"In my judgment there is back of this (union label agitation) a great moral reason. We should buy a union-made article, not only out of loyalty to union labor, but out of loyalty to the moral principle it decrees, which is that men should work under pleasant conditions and have living wages. The union label is a guarantee that the article was made under conditions that are somewhat fair. We should make this appeal to the public on this moral ground. When a man buys a union-made article he says to the world, 'I do not want to buy goods which represent the misery and the tears of underpaid workmen.'"

WHEN Mayor Hodgson of St. Paul gave expression to the above words, he went to the heart of the principle upon which the union label is founded, as it was in protest against inhuman and unfair conditions of labor and living that the union label came into being, and because its mission is to make life the more worth living is the reason for extension of its application over such a broad field as we find it covering today.

Even the so-called "direct actionist" is forced to admit that there is no more direct manner of securing relief from unfair conditions of labor than by using his purchasing power in discriminating against articles in everyday use upon which the emblem of fair labor does not appear.

The LABOR MOVEMENT and its auxiliary, the UNION LABEL, stand exclusively for the human element, as represented by the men and women who are doing the world's work in industry, and by securing fair treatment for them, which assures their fullest development physically, morally and industrially, a safeguard is placed around the children, which assures the perpetuation of a stronger and better race.

When purchasing goods bearing the union label let us not think so much of the label attached thereto as we do what the label stands for. Let us visualize the men and women who made the commodity, working in clean, sanitary factories for wages which permit them to keep their children in school, fitting themselves to take their place in the world on an equality with all other children.

Advertising Campaigns

Written for THE FEDERAL EMPLOYEE

By ROGER W. BABSON, *Director-General, Information and Education Service, Department of Labor*

ADVERTISING is an economic necessity. Advertising is the motor force which propels production and distribution. Progressive, live, wide-awake merchants and manufacturers know that advertising offers the greatest assurance of profitable returns.

America has emerged from the war the economic and financial giant of the world. Our colossal war measures were financed through our Liberty Bonds. Would we have gone "over the top" every time if the Liberty Bonds had not been advertised so energetically and enthusiastically?

Realizing this, the Department of Labor is conducting an ADVERTISE NOW campaign addressed to the manufacturer and merchant, urging him to advertise his products. As a complement and consequence to this campaign, we are initiating a BUY NOW campaign which is addressed to purchasers of all classes and all kinds of material. Both of these campaigns function harmoniously side by side; present a complete united campaign.

A series of eight advertisements setting forth the advantages of general advertising has been sent to the metropolitan papers of the country. These advertisements are being released weekly. The splendid cooperation given us by the dominant publications has been an inspiration to the smaller papers to enter the campaign. This circularizing has been followed by special letters and articles and by personal visits. Seventeen thousand national advertisers have been supplied with material and invited to cooperate.

This campaign is directed at the man or the concern who should advertise or who already advertises but should increase his advertising. Advertising is the surest and quickest form of business promotion. Through a judicious use of it business can be stimulated and prosperity made permanent.

In the BUY NOW campaign in addition to following the method of procedure used in the ADVERTISE NOW campaign, we will use other channels, such as chautauquas, lectures, etc., special letters to manufacturers, merchants, and prominent business men in order that the great buying public may be reached from every angle.

The reasons for our campaigns are fundamental. Timidity and hesitation always exist during dynamic economic changes. It is the function of the Government to establish national poise. The atmosphere is charged with un-

THE N.K. FAIRBANK COMPANY

GOLD DUST
LET THE GOLD DUST TWINS DO YOUR WORK

certainty similar to that which followed our entrance into the war, the difference being the readjustment of war conditions to peace instead of vice versa. It is this uncertainty during the period of demobilization of soldiers, sailors, and munition-workers which is retarding and embarrassing the mobilization of our peace-time industries. This uncertainty, this fear, causes the manufacturer to hold up his purchases of raw materials; the merchant to sell, not buy, and the people to hold on to their money.

The object of our campaign is to speed up production, which will not only help the working man to get a job but to keep it. The best way to assure the returning soldier, sailor, and munition-worker of employment is to have the wheels of production and distribution going at normal, prosperous speed. We firmly believe that this will counteract most effectively Bolshevism, which is organized discontent, and which gathers to its ranks the unemployed. England has shown and is showing great vision in the solution of this problem.

It is the duty of those who formulate public opinion to present logical optimistic arguments before the people, the ultimate consumers. In the last analysis they are the controllers of all production and distribution. The great purchasing public has the power to function this country back into peace-time prosperity by buying what they need, what they want, and what they deserve as a reward for their war-time economy and thrift.

Recent Decisions of the Comptroller

THE decisions of the Comptroller of the Treasury, abstracts of which are given below, have been selected as having special bearing on the interests of the civilian employees of the Government:

Transportation of Discharged Government Employees

The act of January 7, 1919, authorizing the furnishing to certain discharged government employees of transportation to their homes is applicable only to those employees who are discharged or whose resignation is accepted because there is no longer need for their services, and the acceptance of resignation for other reasons is not a termination of employment by the Government within the meaning of the law.

The reference in the act approved January 7, 1919, to "the date of the passage of this act" is to be construed as the date the act was approved.—*Comptroller Warwick to the Secretary of the Treasury, February* 3, 1919.

Leave Status of Civilian Employees of Ordnance Department

The transfer to the Quartermaster Corps of a civilian employee of the Ordnance Department of the Army before the end of his first service year puts an end to his leave status as an ordnance employee and deprives him of the benefits accruing therefrom.—*Assistant Comptroller Foree to Lieut. William Woodyard, Ordnance Department, United States Army, February* 5, 1919.

Transportation of Discharged Government Employees

The expense of furnishing transportation to discharged employees of the office of superintendent State, War, and Navy Department Building, who may be entitled thereto under the provisions of the act of January 7, 1919, is not a charge against any unexpended balance of the salary appropriation for that establishment but may be paid from the appropriation for miscellaneous expenses of said establishment.—*Comptroller Warwick to the chairman, Commission in charge of State, War, and Navy Department Building, February* 10, 1919.

Commutation of Quarters, Coast Guard Officer on Sick Leave

An officer of the Coast Guard on duty with the Navy who is ordered to a Public Health Service sanatorium for treatment is in a status of sick leave and not entitled to commutation of quarters.—*Assistant Comptroller Foree to Capt. C. F. Anstett, Coast Guard, February* 11, 1919.

Statement of Duty in Travel Orders

Orders which are intended to direct the travel of officers, enlisted men, and civilian employees of the Army on special duty at home or abroad for aviation purposes within the meaning of the act of July 9, 1918, should definitely show such fact; orders which merely specify "temporary duty" thereunder do not comply with the statute.—*Assistant Comptroller Foree to the Secretary of War, February* 13, 1919.

Restoration of Status of Civilian Employees upon Reinstatement

Civilian employees of navy yards, gun factories, arsenals, etc., who resigned their positions for the purpose of entering the military or naval service are, upon honorable discharge therefrom, entitled under the Executive order of July 18, 1918, to reinstatement in their former positions in the same status with regard to leave of absence under the act of August 29, 1916, as was held by them on the dates their resignations took effect; provided that application for reinstatement is filed immediately upon receiving discharge or that during the period elapsing between the date of discharge and date of applying for reinstatement such persons have not been employed in civil life or under another department of the Government. (25 Comp. Dec., 118, distinguished.)—*Assistant Comptroller Foree to the Secretary of the Navy, February* 13, 1919.

Short Trips as Affecting Temporary Duty Status

Short trips away from a temporary station, made in obedience to travel orders, do not have the effect of extending upon return to such station the thirty-day period during which a civilian employee of the War Department is entitled under paragraph 733, Army Regulations, to per diem in lieu of subsistence of $4 while on temporary duty.—*Assistant Comptroller Foree to Maj. C. E. Gray, Quartermaster Corps, United States Army, February* 14, 1919.

Increased Pay for Philippine Service

The act of April 27, 1914, increasing the pay of clerks and messengers at Territorial departments, divisions, etc., of the War Department, while serving in the Philippine Islands, is not applicable to the case of an employee who, without previously serving in the United States as such an employee, accepts an original appointment in the Philippine Islands.—*Decision by Comptroller Warwick, February* 12, 1919.

Employment under Lump-Sum Appropriations

The provisions of section 7 of the act of October 6, 1917, with respect to the employment of civilian employees under lump-sum appropriations at increased compensation, being limited to those who have served in an executive department or other government establishment, are not applicable to employees of the Senate and House of Representatives.—*Assistant Comptroller Foree to the Secretary of the Treasury, February* 15, 1919.

Use of Taxicabs

The mere fact that a traveler carries with him heavy hand baggage will not authorize the use of taxicabs in transporting himself and such baggage between railway stations and hotels when the travel regulations applicable to the employee authorize payment of porterage to street cars.—*Comptroller Warwick to the chairman, Federal Trade Commission, February* 17, 1919.

Transportation of Discharged Government Employees

A discharged employee who is entitled under the act of January 7, 1919, to be furnished transportation to the place of accepting employment may be given in lieu thereof an equivalent amount as part of the transportation from the District of Columbia to a foreign country.—*Comptroller Warwick to United States Fuel Administrator, February* 19, 1919.

Additional Compensation

Under the act of May 10, 1916, as amended, employees of the District of Columbia who have performed service as members of the district and local selective-draft boards, for which payment is authorized at an hourly rate, are not entitled to such additional compensation if the aggregate of the salaries exceeds the rate of $2,000 per annum.—*Assistant Comptroller Foree to Maj. D. J. Donovan, United States Army disbursing officer, February* 20, 1919.

Immigration Taxes

As various acts culminating in the act of February 5, 1917, which impose a head tax upon aliens entering the United States, have in practice been construed as effecting changes in amount of the tax imposed and not as an addition to the amounts theretofore prescribed, it is unnecessary to decide whether the act of 1917 repeals by implication the act of August 3, 1882, upon the same subject.—*Decision by Assistant Comptroller Foree, March,* 4, 1919.

Effective Date of Act changing Compensation of Clerks of District Courts

Where Congress by the act of February 26, 1919, changed the compensation of clerks of United States district courts from a fee to a salary basis on and after July 1, 1918, without making any appropriation in that or any other act for the salaries of clerks and their deputies, and with no intention evidenced therein of a retroactive application, but a manifest intent that the change be effective with the beginning of the fiscal year next following its passage, the purpose of Congress is clearly shown to have the act take effect from July 1, 1919, since to hold otherwise would result in injury to the clerks and interruption to the orderly procedure of the courts—*Decision by Comptroller Warwick, March* 11, 1919.

Department of Agriculture—Limitation of Salary of Scientific Employees

The appropriations for carrying out the provisions of the Federal Aid Road Act (act of July 11, 1916), not being "general appropriations of the Department of Agriculture," the act of June 30, 1914, limiting the maximum compensation of scientific employees paid from such appropriations, is not applicable thereto.—*Comptroller Warwick to the Secretary of Agriculture, March* 15, 1919.

Appointment of Deputy Commissioners of Internal Revenue

The five deputy commissioners of internal revenue whose appointment is authorized by the act of February 24, 1919, in lieu of the present deputies whose salaries are fixed by law, come fairly within the provision of that act for the employment of "necessary officers," and the appropriation for that purpose is properly chargeable with the salaries of such officers.

The appointment under the authority of the act of February 24, 1919, of five deputy commissioners of internal revenue to be in lieu of those whose salaries were then fixed by law, precludes continuing the fixed salary positions of deputy commissioner which were terminated by the appointment of the five deputies.—*Comptroller Warwick to the Secretary of the Treasury, March* 15, 1919.

Medical Attendance, Retired Officers and Employees, Lighthouse Service

The provision of the act of June 20, 1918, that the retired pay of light keepers and other retired officers and employees of the Lighthouse Service shall not include any amount

on account of allowances precludes the furnishing to them of medical attendance in kind after retirement.—*Assistant Comptroller Foree to the Secretary of the Treasury, March* 17, 1919.

Transportation of Government Employees

Employees who came to the District of Columbia before receiving appointment are entitled to receive the cost of their transportation to the place of their legal residence upon discharge, if otherwise within the requirements of the act of January 7, 1919, as amended by the act of March 1, 1919.

The act of March 1, 1919, amending the act of January 7, 1919, authorizes the furnishing of transportation to the place of acceptance of employment for those employees who resign as weli as those whose services are no longer required.

Where a branch of the government service has both statutory and lump-sum appropriations, the cost of furnishing transportation to discharged or resigning employees under the act of January 7, 1919, as amended is properly payable from the lump-sum appropriation.—*Comptroller Warwick to the Secretary of the Treasury, March* 17, 1919.

Depreciation of Government Facilities Used by Another Branch of Service

While as a general proposition cooperation in use by one branch of the government service of property belonging to another is desirable, the use and accounting for such property are under the control of the administrative branch to which the property belongs and not under the accounting officers of the Treasury.

Operations of the Government not being usually for profit, where a branch of the service permits the use of its facilities by another there is no authority to demand a return or compensation based on the use alone.

A charge for depreciation in the use by one branch of the government service of facilities belonging to another, if made an item of cost, cannot authorize an actual transfer of funds in the absence of appropriation for that purpose.—*Comptroller Warwick to Director General United States Shipping Board, Emergency Fleet Corporation, March* 21, 1919.

Transportation of Government Employees

The proviso of section 4 of the act of March 1, 1919, with regard to the furnishing of transportation to employees who have left the service, which authorizes the expense to be paid from appropriations "for the fiscal year 1920," applies only to the appropriations for the War and Navy departments; the appropriations for the fiscal year 1919 being available for all other executive departments and independent establishments in payment for such transportation.

Where a branch of the government service has no lump-sum appropriation, the expense of furnishing transportation to employees who are within the purview of section 4 of the act of March 1, 1919, is properly chargeable to the appropriation for statutory salaries, it being the appropriation "for the services in which such persons are employed," within the meaning of the act; provided, however, that such readjustment of the statutory roll is made as will provide the necessary funds.—*Comptroller Warwick to the Postmaster General, March* 26, 1919.

service to another does not come within the class of those entitled to the benefits of section 4 of the act of March 1, 1919, which provides for the payment of transportation only in the case of employees whose services are no longer required, or whose employment has been terminated, or who resign from their positions.—*Comptroller Warwick to the President United States Civil Service Commission, March 27, 1919.*

Transportation of Government Employees

Nothing contained in section 4 of the act of March 1, 1919, authorizing the furnishing to civilian employees who have left the service of transportation to their homes requires an appointment to have been made in order to qualify said employee to receive the benefits of the act, a form of employment for "contract employees" being sufficient.—*Comptroller Warwick to the Secretary of the Treasury, March 27, 1919.*

Transportation of Government Employees

In the reimbursement of government employees for the transportation expense incurred in proceeding from the District of Columbia to the place of acceptance of employment in accordance with the acts of January 7 and March 1, 1919, the war tax required to be paid may be properly included as a necessary cost of the transportation for which reimbursement is authorized.—*Comptroller Warwick to the Attorney General, March 27, 1919.*

Explanation of Street-Car Fare

A full explanation of each item of street-car fare in a travel expense account is not necessary, but a statement that certain items of car fare (naming them by dates) were incurred in investigational or other official work is sufficient.

The only reason for explaining items of street-car fare in a travel expense account is to differentiate the items expended in proceeding to and from the place of lodging and subsistence, which are not reimbursable.—*Decision by Assistant Comptroller Force, March 29, 1919.*

Of Two Evils

Dr. Llewellyn Rainey, director of the Overseas War Library, was entertained at dinner by a group of Johns Hopkins students on the eve of his departure for the front.

A rich young sportsman, afflicted with swelled head, said to Dr. Rainey:

"I'm going to volunteer, Doc, but I can't decide whether to take up the cavalry or the aviation wing. Which do you advise?"

"The aviation, most decidedly," Dr. Rainey replied.

"Ah, you've seen me fly, have you?" he said.

"No," said Dr. Rainey; "I've seen you ride."—*Free Press.*

Is War Worse Than This?

There was once great consternation in the office of *Zion's Herald* when the writer of an obituary article upon a mother in Israel having said in pious phrase that she died and "claimed the promises," the paper was made to aver that she had died "and cleared the premises." And it was out at Worcester, Mass., where the Rev. George H. Hepworth having declared in a public address "I am not a free lance," the sedate *Spy* gave him fame by printing the sentence, "I want a free lunch."—*Boston Transcript.*

This Fly's Permanent Home Is Washington, D. C.

You will find him in the United States Patent Office, registered in the name of the Clinton Wire Cloth Company. For many years he has been the symbol of quality in screen cloth for your windows and doors. Whether it be Painted Steel, "Silver Finish" or almost imperishable "Pompeiian" Bronze, the quality of each and all is guaranteed by the presence of the fly on the label.

There are, also, the famous "Clinton" and "Silver Finish" poultry nettings—the artistic "Clinton" grilles and register faces—"Clinton" welded wire fabrics used the world over for concrete reinforcement work—and "Clinton" Welded Sheathing with which you can build your home of durable stucco as inexpensively as of wood.

These are few of many

Clinton Wire Cloth Company

New York **BOSTON** **Chicago**

FEDERAL EMPLOYEES

The up-to-the-last-minute management in non-public industries finds it pays to provide employees with sanitary lunch rooms in which are used tables with pure white enameled iron bases and snow white glass-like tops, especially the variety with the raised rim (SANI-ONYX) and white enameled iron stools and SANI-ONYX Serving Counters.

Instead of losing money in providing employees with sanitary furniture and wholesome food, actual profits result through increased efficiency and a contented mind in a healthy body.

It is a good business venture and not philanthropy or charity, because loyalty and enthusiasm result to those who try to serve the welfare of employees.

Whatever you are getting is up to you

President Grateful for Simonds' Support!

Frank H. Simonds

THE PRESIDENT OF THE UNITED STATES OF AMERICA

Paris, 26 March, 1919.

MY DEAR MR. SIMONDS:

I must not allow the rush of these days to prevent my turning aside at least for a moment to express my very deep appreciation of the fine support you are giving to the things that are worth while in the great settlement we are trying to effect. Your approval and support are of the greatest service, and I do not want to wait any longer to let you know that I am sincerely grateful.

Cordially yours,

WOODROW WILSON.

THE

FEDERAL EMPLOYEE

Vol. IV JUNE, 1919 No. 6

Fraternal Greeting

To the Officers and Delegates of the American Federation of Labor in Thirty-ninth Annual Convention Assembled—

The organized federal employees represented by the National Federation of Federal Employees send cordial fraternal greeting. This message goes to you in the hope and confident belief that the deliberations and acts of your convention will redound to the benefit not only of the country's working masses but to that of the nation and humanity.

The civilian employees for whom the National Federation speaks take this occasion to voice their genuine appreciation of the effectual aid more than once freely given their cause by the American Federation of Labor, especially in connection with the repeal of the "gag law" and the organizing movement of the employees in its earliest days, when such aid was most needed. They are appreciative also of the advanced stand taken by the Federation in recording in its Reconstruction Program the conviction of organized labor that "Public employees must not be denied the right of organization, free activities and collective bargaining, and must not be limited in the exercise of their rights as citizens."

For these and other acts of timely assistance, which have had no small influence in promoting the unionization and solidarity of the civilian workers in the government service, a debt of gratitude is due the American Federation of Labor.

But the wage-earners in the employment of the Government owe to their fellow wage-earners—the organized men and women of the country—a far greater debt. To them they are indebted for the lessons taught not only by precept but by stern example steadfastly set through years of struggle—ofttimes bitter struggle and privation—that political democracy without industrial democracy is but "dust and ashes;" that every self-respecting worker, whether he works with hand or brain, or both, whether he works for a private employer or for the public, must have an adequate voice in determining the conditions of his employment, otherwise the system is autocratic, not democratic; that the manly thing to do, rather than to complain of the inequalities and injustices that fall to one's lot, is to put the shoulder to the wheel and remedy the evils, in frank recognition of the facts that it is idle to depend on others to look after our interests when we ourselves neglect them, and that all real improvement must come from within, not from without; that the individual worker in himself counts for but little; hence combination, the recognized order of the day, is absolutely essential, in order that the power of the united individuals may make itself felt; that effectual unionization presupposes fair consideration and presentation of the needs and rights of all workers, as expressed in the declaration, "One for All, All for One;" that the worker who fails to bear his proper share of the common burden is a slacker, falling short of his duty to his fellow workers as well as to the cause of democracy.

These are the great lessons—the fundamentals—are they not, that Organized Labor, as typified by the American Federation of Labor, has brought to the employees in the civilian forces of the Government? Surely no more vital set of truths was ever placed before a body of wage-earners, and when these lessons shall have been learned, not as mere theory and lip-service but in all their intensity as burned into the very souls of the workers who have for years passed through the fire, there will be better and fairer days for federal employees and a far more enlightened and more efficient public service than this country has ever yet seen.

The government workers are keenly alive to the fact that there rests on them the duty, the obligation, to serve as well as to be served; to give as well as to receive. They will not be found in the ranks of the slackers. It must be remembered in all justice, however, that the trade-union spirit, the concept of unity of interests and of solidarity among the great mass of wage-earners, is not a mushroom growth but a plant that of necessity matures slowly. It cannot be said, moreover, that the atmosphere in which most of the government's civilian employees have carried on their daily work has been, or is now, conducive to the quick development of the spirit which has grown up in the trade-unions as an evolution of many years, and which has been fostered by surrounding conditions, especially by the pressure constantly exerted from without. The progress made in the short period of their existence as a part of organized labor is an earnest of what the thousands of men and women now represented, and to be represented in ever-increasing numbers, by the National Federation of Federal Employees are to bring to the common cause in the days to come.

American Labor's War Record

HON. NEWTON D. BAKER,
Secretary of War

The historian who looks back upon the war will see as one of the principal agencies in the rapid gathering of America's strength and the speedily successful termination of the war, the avoidance of great delays through friction and animosity between the Government and the workmen who

created and operated the vast and complex industrial machine made necessary by the unprecedented task attempted by the United States. To all these people and these agencies, the War Department feels a profound gratitude, and I welcome this opportunity to address this word to the workmen, in and out of the AMERICAN FEDERATION OF LABOR, *who assisted in the great adventure.*

HON. JOSEPHUS DANIELS,
Secretary of the Navy

At every stage of the terrible conflict from which we have just emerged, our Navy was a vital factor. Now that the smoke of battle has lifted, can any man say that the American Navy failed at any time to live up to the high traditions of its glorious past? That the equipment, so complex and varied, of the nation's fighting forces on the sea was adequately developed and maintained under the tremendous stress of the war's needs is due to the splendidly effective work done by the skillful and willing hands of the legion of loyal, enthusiastic men and women who toiled unceasingly in navy yard, dockyard, factory, and munition plant

in order that the men behind the guns might lack nothing essential to victory.

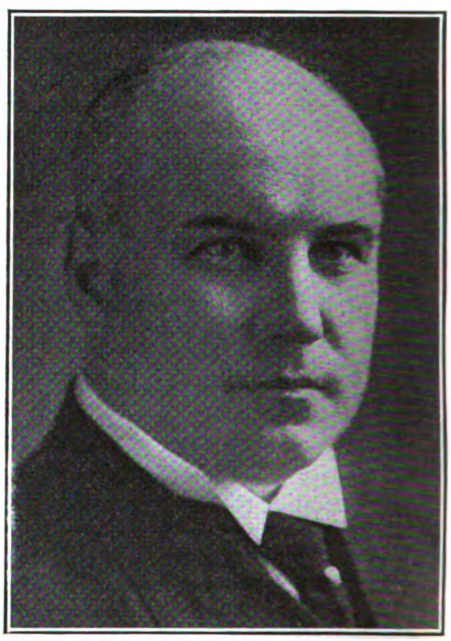
It is fortunate indeed that in the fateful hours of the Great Crisis the nation turned with unquestioning confidence to the AMERICAN FEDERATION OF LABOR *as an organization which patriotically supported the war and cooperated in every way to bring it to a successful issue. Under the leadership of Secretary Wilson and Mr. Gompers labor was a tower of strength.*

HON. CARTER GLASS,
Secretary of the Treasury

The workers of America did their full duty during the war. The patriotic devotion to the Government of the men and women of every trade and profession permitted the mobilization of the might of the United States and made possible the defeat of Germany. To their everlasting honor, they stood loyally behind our heroic sons on the battlefields of Europe. The American Federation of Labor, under the able leadership of Mr. Samuel Gompers, proved its love of country and deserves immeasurable credit in the great result.

HON. FRANKLIN K. LANE,
Secretary of the Interior

Patriotic in act, patriotic in word and patriotic in spirit—this in a word was the AMERICAN FEDERATION OF LABOR *during the war. Had there been no such organization, our difficulties would have been doubled.*

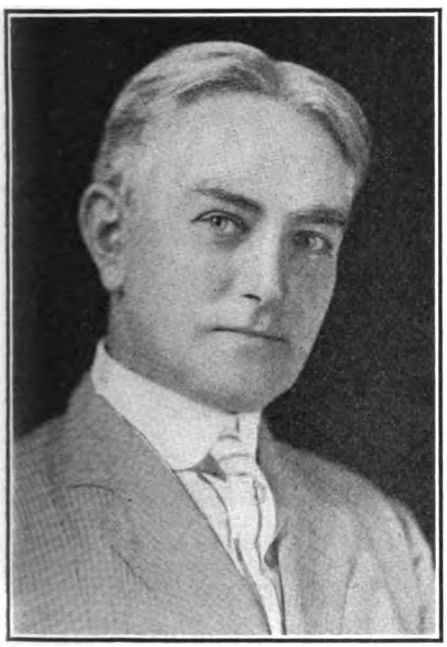


HON. W. B. WILSON,
Secretary of Labor

The world war is over and we are now face to face with the problems of peace. In all of the early wars of the world it was frequently possible for armies engaged in conflict to find means of subsistence in the countries through which they were operating. In modern warfare that is no longer possible. It has been variously estimated, and it is only an estimate because no one has made a scientific survey to determine the facts, that it requires anywhere from six to ten workers in the rear to maintain one soldier in the trenches. Labor has therefore become a very much more

Digitized by Google

important factor in all of our war activities than heretofore. That the wage-workers of our country had an intelligent grasp of the issues involved in the world war was made evident by the enthusiastic patriotism which they displayed. During the entire period of the war we had not a strike of more than local proportions or involving any considerable number of people, and there never was a time when any of our munitions factories were seriously hampered through lack of man-power. Surely, if we can take a peace-time organization and transform it over night into a great military machine, we can by the exercise of the same intelligence and the same energy take a military organization and transform it promptly into a peace-time machine. The attitude of labor during the war is an earnest to all mankind that labor will do its part towards the accomplishment of this great purpose.



DR. P. P. CLAXTON,
United States Commissioner of Education

The great world war has been costly beyond all precedent, in life and money, devastation and destruction. The only adequate result that can come in return for the price paid is freedom for progress unhampered by outworn autocracies, feudalistic aristocracies, enforced ignorance and incompetency. The new world which is gradually emerging from the ruins of the old world that went down in the fire and flood of war must be and will be a world of freedom and democracy. But there can be no freedom without the education of man, and in a democracy all things—individual development and culture, material progress, social purity, civic righteousness, political power, and national safety—wait upon education. This means that in the new world the promotion of education for all the people and the means therefor are of supreme importance. We in the United States and in all other countries of the world where "the common people are in the saddle," must see to it that for all the people regardless of all conditions of birth and fortune is provided full, free, and equal opportunity for that kind and degree of education which will best and most fully develop their manhood and womanhood, and fit them for the duties and responsibilities of citizenship and for making an honest living and contributing their part to the common wealth of the world by some form of intelligent, skillful work done with the good will and joy that come from successful accomplishment.

To do this will cost money, much money, many times more money than we or any other people have ever yet devoted to this cause, and much wisdom in its use. Laboring people know and appreciate the value of popular education, and the AMERICAN FEDERATION OF LABOR *has long been known for its interest in public schools. The record of its efforts for the improvement in the education of all the people is an enviable one. I feel sure it will not be lax, but will now redouble its interest and efforts at this time of need for us and for the world.*

Marked Growth of N. F. F. E. during the Last Month

An increase of 4 in the number of locals and of about 5,400 in membership—this is the progress recorded for the last month.

The new unions are well distributed geographically. New England leads with two—Chelsea (No. 130) and Watertown (No. 132), both in Massachusetts. The former, which was organized through the efforts of Brother Francis McCormick, the active president of the Hingham (Mass.) Local, has its membership among the employees of the Charlestown Navy Yard. The roll of the Watertown Union is made up of workers in the Ordnance Bureau of the War Department, in the government arsenal at that place.

Passing to the South, employees of the Engineer Department of the War Department stationed in and around Tuscaloosa, Ala., recently formed Local No. 131. The new union at Crownpoint, N. Mex. (No. 129) among the latest accessions is the result of the get-together movement among employees in various lines in the Indian Service at that place.

Victor Thomas Jefferson Gannon

VICTOR THOMAS JEFFERSON GANNON was born in Chicago forty-seven years ago last November third. He died May 17 as the result of an automobile accident.

Previous to becoming interested in the handicap work, he was engaged in the insurance and stocks and bonds business, which he temporarily abandoned because of conditions brought about by the war.

Two years ago, when Mr. Benjamin J. Rosenthal of Chicago founded the Handicap Bureau with a view to aiding elderly people and cripples in securing remunerative employment he selected Mr. Gannon as superintendent and manager. One of the first things that Mr. Gannon did was to substitute the phrase "physically subnormal" for the hopeless word "cripple." He never missed an opportunity to address gatherings of employers that he might emphasize the duty of giving employment to these unfortunates, who seemed so hopelessly lost, bringing them courage and making them feel that life is worth living after all. More than 35,000 men and women, elderly or subnormal, will mourn in his death the loss of a real friend.

Mr. Gannon was a member of Washington Local No. 2.

Prize Announcement Postponed

Owing to the unexpected death of Mr. Victor T. J. Gannon of the U. S. Employment Service (a sketch of whose life appears above), it is necessary, much to our regret, to defer for the time being the announcement of the awards in the prize contests now being conducted by THE FEDERAL EMPLOYEE, *which was to have been made in this issue. Mr. Gannon was chairman of the committee charged with the duty of passing on the relative merits of contributions submitted in this connection, and had entered on the task with much interest.*

If practicable, the delayed announcement will appear in the July number.—EDITORS.

Delegates of National Federation to A. F. of L. Convention

The following have been designated delegates of the N. F. F. E. to the A. F. of L. convention, which opens June 9 at Atlantic City: President Steward and Vice-presidents Junker, Leonard, and Etheridge, Alternates: Vice-presidents Kinsell and Wiegand.

THE STORY IN BRIEF OF A GREAT AND RAPIDLY GROWING ORGANIZATION

(*From The Washington, D. C., "Times," of May 16, 1919*)

"The aims of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, plans for action during the coming session of Congress, the reforms accomplished, and the growth of the organization from a handful of members to a great federation including 50,000 government employees, were explained by Luther C. Steward, President, in an interview today.

THE FEDERATION'S IMMEDIATE PROGRAM

'For the present,' said Mr. Steward, 'the NATIONAL FEDERATION OF FEDERAL EMPLOYEES is working for the following: A living wage for all government workers; retirement with pay for all superannuated employees; standardization of duties and wages and automatic increase in pay based on merit; a federal personnel board, with authority to adjust salaries and conditions of employment as circumstances warrant (the employees having representation on such board); equal pay for equal work for government employees, men and women; equal suffrage, greater political freedom for federal employees, a real merit system, including a non-partisan civil service commission to succeed the present bi-partisan commission, and a training school where all government employees may be given an opportunity to study for executive positions—this school to be maintained by the Federal Government.

LARGE RESULTS ALREADY OBTAINED

'Among the changes which were brought about, largely through the activity of the unions, are the following: The defeat of the Borland amendment which proposed to lengthen the working hours of the government employee without increase in pay; in 1917, an increase in salary of 10 per cent for a year for all government employees receiving $1,200 or less and an increase of 5 per cent for one year for all government employees receiving from $1,200 to $1,800 salary a year; at the next session of Congress a flat increase of $10 a month for a year for all government employees receiving up to $2,500 annually.

'At the last session of Congress the Federation asked an increase of $1 a day in pay for all government workers; a measure containing provisions for a $240 increase or bonus was passed. The Federation also succeeded in obtaining the inclusion of the War Risk Bureau in the benefits of this measure. The clerks of that bureau obtained $120 in addition to their basic salary. The Federation has also been active in urging salary reclassification, and it was largely because of the Federation the Joint Committee on Reclassification of Salaries was created.

THE NOLAN MINIMUM WAGE BILL

'The Federation also urged the passage of the Nolan measure providing for a minimum wage of $8 a day for all adult full-time employees. This bill passed the House, but because of the congestion of business during the closing hours of Congress was not acted upon by the Senate. This measure will be reintroduced during the coming session and, we expect, will be passed by both houses, signed by the President, and become law.

THE ORGANIZATION STILL IN ITS INFANCY

'THE NATIONAL FEDERATION OF FEDERAL EMPLOYEES was granted a charter by the American Federation of Labor in September, 1917. The first local was organized in San Francisco in January, 1913, shortly after government employees were given the right to organize. The first Washington local was organized in 1916, and is known as Local No. 2. Locals Nos. 3 and 4 are located in Milwaukee and New York, respectively. In the fall of 1917 the American Federation of Labor granted a charter to the organization, composed of forty locals, and the independent local organizations were affiliated with the national labor organization. This took place after a convention of the locals was held in September, 1917.

AN IMMENSE GROWTH—STRIKES PROHIBITED

'There are approximately 50,000 Federal employees in the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, about 25,000 of whom are employed in the National Capital. This number is being constantly increased. There are four locals in Washington and 130 locals distributed among forty-one States.

'The constitution of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, and the constitutions of all the local unions prohibit strikes against the United States Government, and also prohibit the union from aiding in any strike against the Government.

'The primary basis of the Borland fight involved a labor problem—increased hours without increased pay, and a change of conditions of employment on the part of the employer without consulting the employee.

AMERICAN FEDERATION OF LABOR HELPFUL

'The American Federation of Labor came to the rescue of the federal employees at the critical time and gave the help needed to defeat the Borland amendment. Out of this affiliation the cooperative association of federal employees became the Federal Employees Union.

AFFILIATION SATISFACTORY

'A careful study of our problems will show that nearly all of the larger ones are labor problems. Our affiliation with the American Federation of Labor has been most satisfactory. Every possible help has been given us by that organization, and we owe it much.

BROAD PURPOSES OF THE FEDERATION

'The NATIONAL FEDERATION OF FEDERAL EMPLOYEES was not formed to coerce the Government, but to cooperate with it whenever possible, nor is there anything in the union as organized antagonistic to the Government. On the contrary, the union stands for the highest possible efficiency in governmental affairs, and has become, it is believed, a helpful factor in promoting efficiency in the executive departments.

'The Federal Employees Union is a cooperative business agent for the civil service employees of the United States Government. The general purposes of the union are to protect all government employees from injustice and to promote their interest generally as government employees and to aid the Government in establishing efficiency in administration.'"

The American Labor Movement

A brief account of its makeup, achievements, and aspirations. The American Federation of Labor from its formation nearly forty years ago to the present time is portrayed in outline as are some of the chief principles and measures advocated by the Federation.

This article has been prepared largely from President Gompers' abstract of the statement made by him several years ago before the United States Commission on Industrial Relations. In several instances his use of the first person has been followed. Care has been taken to revise the subject-matter where necessary in order that it may represent present-day conditions. In this connection THE FEDERAL EMPLOYEE is indebted to Secretary Frank Morrison and Editor J. P. Egan of the American Federation of Labor for assistance courteously given.

THE American Federation of Labor was formed in 1881 in Pittsburgh. Samuel Gompers was elected its first vice-president. With the exception of three terms he has been president of the A. F. of L. since that time.

The Federation covers practically the whole field of industry. There are no limitations as to membership. The only requirement, so far as the A. F. of L. is concerned, is that the organization desiring affiliation shall be composed of wage-earners.

THE MAKEUP AND METHODS OF THE A. F. OF L.

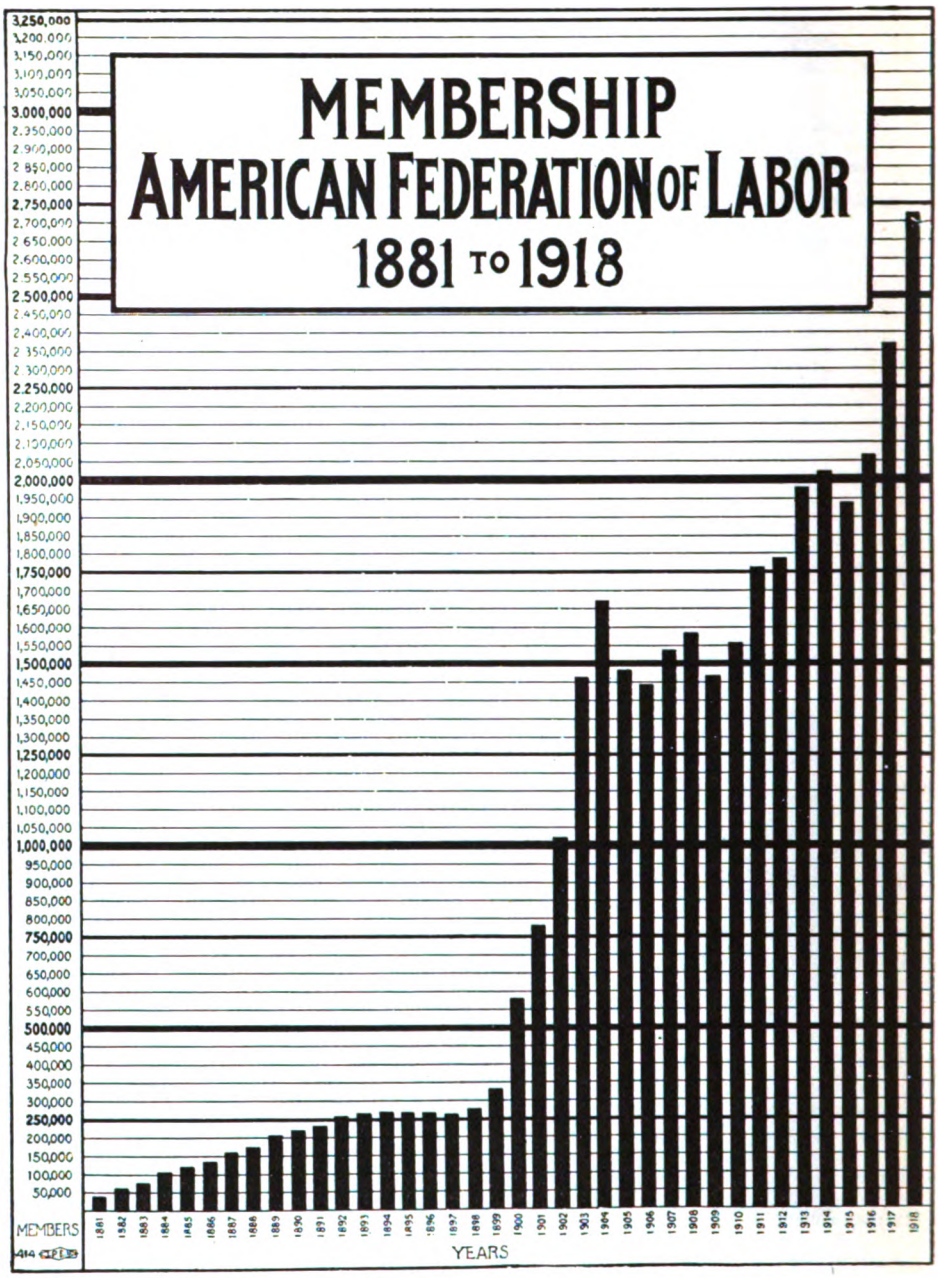
The A. F. of L., as its name implies, is a federation of organizations, each of which has its own government, determined by its own needs and requirements, the result of the expe-

Digitized by Google

riences of the members of the organization. This right to self-government was recognized in the beginning and has been reaffirmed and adhered to as consistently as possible. The Federation has no powers except those which are authorized and conceded by the organizations, which compose it. These powers are enumerated in its written constitution and the definite direction of conventions.

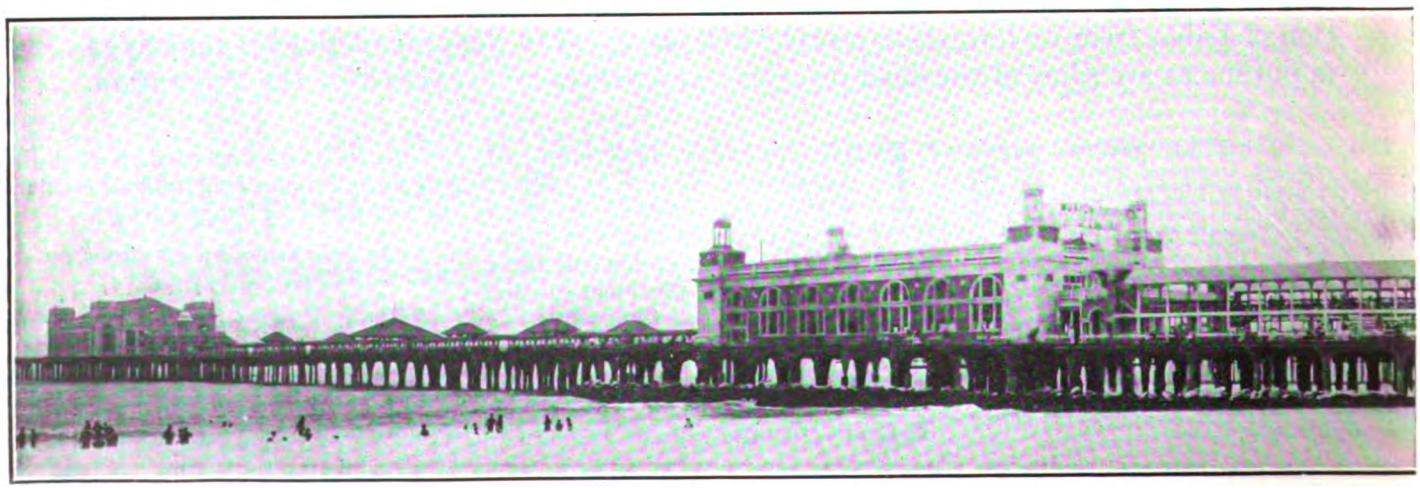
There are affiliated to the A. F. of L. 111 national and international unions, forty-six state federations of labor, 816 city central bodies or local federations of trade unions in a city or town, 884 directly affiliated local trade and federal labor unions whose chartered existence will continue until there are sufficient numbers belonging to each trade or calling to form a national trade organization. There are industrially five departments for the more effective cooperation of allied trades.

The A. F. of L. holds annual conventions. The officers of the Federation consist of a president, eight vice-presidents, a secretary, and a treasurer. These eleven officers constitute the Executive Council. The convention is the supreme lawmaking body of the Federation, exercising all authority within the limitations of power conceded to the Federation by the constituent or affiliated sovereign organizations. The A. F. of L. is modeled after the Government of the United States, both as to federal jurisdiction within federal limitations and state sovereignty with local prerogatives and rights. In the A. F. of L. the right of withdrawal remains with the affiliated unions. No one can question the right of a local organization within the Federation to withdraw. The affiliated organizations are held together by moral obligations, a spirit of camaraderie, a spirit of group patriotism, a spirit of mutual assistance. There are no coercive methods used by the A. F. of L. to prevent the withdrawal of any affiliated organization. Similarly, no coercion is used in



regard to national organizations which are not affiliated to the A. F. of L. We feel that it is the duty of every wage-worker to belong to the union of his trade or calling; that it is the duty of the local union of a trade or calling to belong to the national or international union of that trade or calling; and that it is equally the moral duty of every national or international organization of bona fide workingmen to belong to the A. F. of L.

All the actual power, however, outside of the moral power that the



Digitized by Google

A. F. of L. possesses is the power of expulsion from membership in the Federation, which carries with it the expulsion of local unions from state and central bodies.

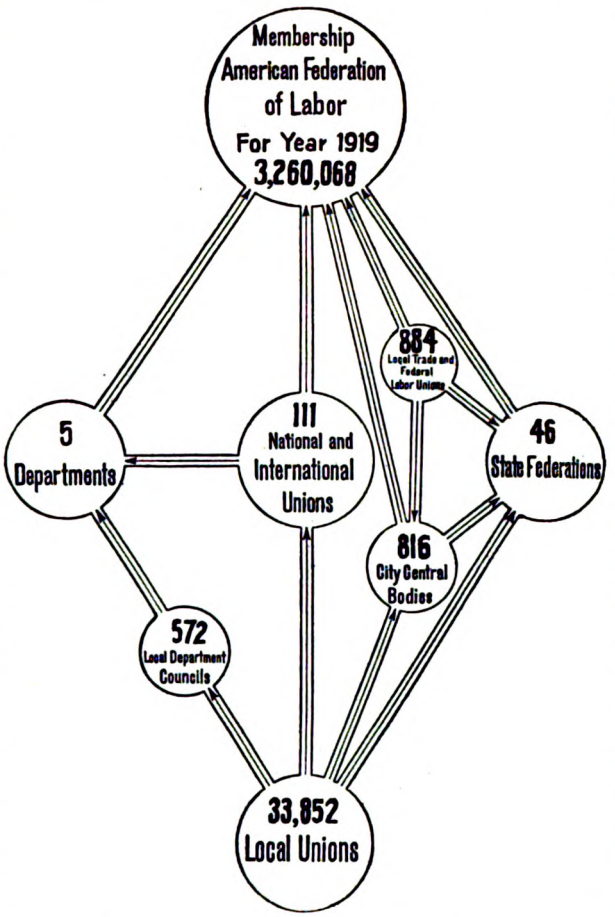
The experiences of the men in the movement have shown one fact standing out in bold relief: that every movement of workingmen which had a system of government by which power, force, or compulsion was exercised aroused resentment, repudiation, and dissolution, while on the contrary an effort which was controlled by exerting moral force upon the doings of men and women has always exercised a beneficent influence. In other words, workingmen are just human beings. No member of any organization has the right to force another to take any certain action, and no trade union has the right to force a member to go on strike. The sole force that any organization has is moral.

The Executive Council of the A. F. of L. is an administrative committee for the purpose of carrying into effect the conclusions reached by the conventions, and to take initiative in any matter, particularly legislative, upon which the convention has not had an opportunity to express itself; to be helpful in any and every way to any activity contributing to the protection, benefit and welfare of the people, particularly the wage-earners. The powers of the Executive Council are set forth in the constitution.

THE A. F. OF L. HAS ENJOYED A REMARKABLE GROWTH

Starting in 1881 with a membership of fewer than 50,000, the A. F. of L. reports an average membership of 3,260,068 for its fiscal year ending April 30, 1919. It is estimated that the membership at this writing is more than 3,625,000. The membership gain by the A. F. of L. is shown in the accompanying chart, which was part of last year's official reports and includes the fiscal year ending April 30, 1918.

Another chart submitted in the same reports illustrates the relationship of



the various affiliated organizations to the A. F. of L. This chart shows that the integral part, the key, the heart of the Federation is the national or international union. The sovereign national and international unions are the primary elements. The five departments were created for the mutual protection, the advancement of the individual trades or callings of the industries interested in the departments. The membership of the organizations affiliated to the A. F. of L. is composed of adults, chiefly men, but there are many women. If you allow five to a family it is only fair to assume that associated and identified with the A. F. of L. we have about 18,000,000.

ATTITUDE OF THE FEDERATION TOWARD VITAL QUESTIONS

Recognizing the fact that associated effort is of greater influence and power to secure a given object than is individual effort, the first purpose toward which the A. F. of L. directs its efforts is the encouragement of trade and labor unions and the closer federation of such unions. These efforts are concerned with local, state, national, and international bodies, the establishment of departments and central bodies in order that the organizations may aid and assist each other in industrial struggles. They aim at the protection of the rights and the interests of the members and of all working people, the promotion and the advancement of their economic, political, and social rights. They aim to make life better worth living in our day, so that the workers may be in a better position to meet any problem that may confront future generations. In a word, the organizations leave no effort untried by which the working people may find betterment in any field of human activity. Economic betterment in all directions comes first. The Federation has from time to time formulated definite programs for such improvements, but it has always concerned itself with first questions first. The conventions have passed resolutions recommending concrete ameliorative measures.

Unions Among Federal Workers

The present-day thriving organizations of government employees had humble beginnings. Chicago post-office clerks formed the first government employees' union affiliated to the American Federation of Labor. The growth of the trade-union movement among federal workers is traced from the beginning to the marked development of today.

By THOMAS F. FLAHERTY

Secretary-Treasurer of the National Federation of Postal Employees

"THERE is one thing that is stronger than armies, and that is an idea whose time has come," said Victor Hugo! The idea that they must effectually organize and cooperate with other wage-earners in a common movement for mutual betterments in working conditions has now come to be generally accepted as an economic truth by thinking government employees. And on this sound foundation there is being upbuilded in the government service an industrial army that will eventually be ranked as one of the most important groups in our varied national life.

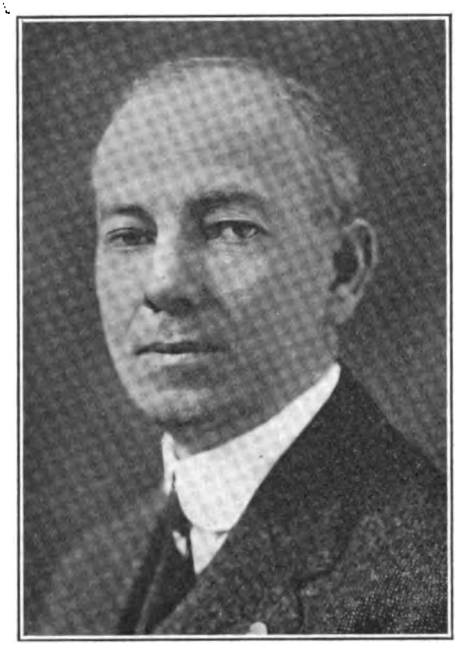
THOUSANDS OF GOVERNMENT EMPLOYEES ARE UNIONIZED

In recent years thousands of government employees in all parts of the country and in every conceivable vocation have formed labor unions and have come within the fold of the American Federation of Labor. In so doing they have corrected in a measure the erroneous public idea that a government employee is a sort of political parasite, an industrial incubus, living a life of indolent ease off the bounty of an indulgent nation. For only workers join unions. The word UNION has a definite meaning to almost everyone. It means an aggregation of wage-earners with problems and grievances and a determination to stick together in order to right collectively existing wrongs and institute a saner and better industrial order.

If the average citizen in this country has had heretofore a misconception of the status of the government employee in our national life, the fault can be traced to the employee himself; for until the employee realized his economic dependence upon his fellow-workers in private industrial fields and the need of joining with them in a rational program for the evolutionary progress of all groups of workers, he could not expect others to see that he was something more than a mere cog in a vast machine.

GOVERNMENT EMPLOYEES LONG INDIFFERENT TO UNIONISM

The past indifference of the employee toward collective action can be traced directly to the fact that until 1883 employment in the government service was conditioned entirely on political favor. Congress appropri-



LUTHER C. STEWARD
President of National Federation of Federal Employees

ated lump sums for the various civil establishments, and these were spent with more regard for political considerations than for the public welfare. The government employee secured his appointment through partisan preference and his promotions—if he got any—in the same manner. He acquired the habit of looking to some outside political source for advancement. The idea of looking toward his associates for mutual advancement by collective action was slow to take root. In such an atmosphere individualism was rampant. Government employment gradually changed, however, from a political to an industrial status. Men and women began entering the service TO WORK, not to escape work, which was the former impelling motive. Civil service rules slowly restricted, although by no means entirely eliminating, political factors in obtaining appointments and promotions. Today the Government's civil establishments are conducted with the same end in view as in private industry—maximum production at minimum expense. And into government employment have crept almost unnoticed many of the abuses and wrongs that workers in private industry fight against—low wages, improper working conditions, autocratic management, and absence of recognition of the human element.

POSTAL EMPLOYEES LEAD THE WAY TO BETTER THINGS

It was natural that the postal employees should be the first group of government workers to feel the need of collective action and to forsake the old doctrine of "each for himself." The postal service is close to the people. The people as a whole, unconsciously perhaps, are hard taskmasters. They demand an efficient mail service—and they are entitled to it. The tradition of the American mail service is speed and accuracy and then more speed. This makes the job an exacting one. Employees are driven harder and longer than in other branches of federal service, and the postal workers therefore first felt the need of organizing to ward off oppression and lighten their labors.

In the early eighties city letter-carriers and postoffice clerks formed local organizations, which maintained secret alliances with the Knights of Labor. In 1888, before they had formed a national organization, the city letter-carriers were granted by Congress an eight-hour law. The bill was reported out of the House Labor Committee. Samuel Gompers and John Lennon, then active young labor agitators (they were called less complimentary names in many circles), appeared before the committee in behalf of this legislation. Yes! the Grand Old Man of Labor, Sam Gompers, was fighting for the government employees more than thirty years ago, long before they had sense enough to fight for themselves.

FEDERAL EMPLOYEES UNIONS GROW INTO NATIONAL ORGANIZATION

In 1900 the Chicago postoffice clerks applied for and were granted the first charter issued by the American Federation of Labor to government employees. This was the pioneer union organization among such employees. It blazed the trail that many have since followed into the American Federation of Labor.

GILBERT E. HYATT
President of National Federation of Postal Employees

From 1900 until 1906 postoffice clerks in various cities formed local unions affiliated with the American Federation of Labor. Unaffiliated organizations, it was discovered, were too easily controlled or ignored by Department bureaucrats. It has been said that Postmaster General Burleson taught the postal workers that they belong to the proletariat. In all innocence or through lack of comprehension he accentuated the need of affiliation with labor, greatly accelerating the movement into the American Federation of Labor, but the records show that the drift toward a more effectual form of organization had started before Mr. Burleson began mismanaging the postal service. The Roosevelt "gag order" of 1902 created unrest among the postal workers, who resented this deprivation of the fundamental right to petition Congress.

August 27, 1906, representatives of the seven local unions then in existence—Chicago, San Francisco, Milwaukee, Louisville, Nashville, Salt Lake City, and Muskogee—met in Chicago and formed the National Federation of Post Office Clerks, exchanging their local charters for a national charter in the American Federation of Labor.

The signers of this postoffice clerks' "Declaration of Independence" were Edward B. Goltra, George F. Pfeiffer, Leon J. Niemschesky, J. Everett Seeley, J. J. Fields, R. P. Dews, H. J. Caveney, and John P. Grogan. Pfeiffer of Milwaukee, Fields of Louisville, Seeley of Salt Lake City, and Grogan of Chicago, are still in the Postal Service in their respective cities. Goltra is an insurance broker in Chicago; Dews is a lawyer in Nashville; Niemschesky is a planter in Texas. Caveney died in San Francisco in 1908.

The leading spirits in what was then a radical departure from the beaten path had to work quietly, almost secretly. They met in a back room of the Briggs House, Chicago, dodging a corps of vigilant postoffice inspectors who had been detailed to thwart the conspiracy in its infancy. The national organization had to fight not only the open opposition of the Post Office Department, which was made manifest by reprisals upon active members by the bureaucrats, who saw in this rising tide of democracy a curtailment of their unlimited authority over subordinates, but also the apathy, prejudice, and lack of understanding of trade unionism among the employees themselves.

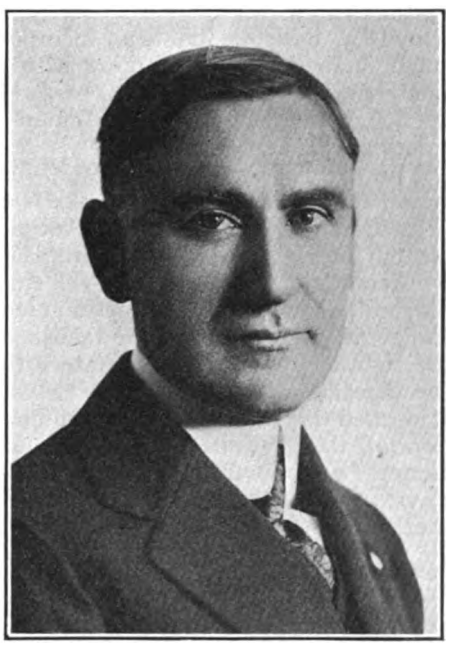
The public press, for the greater part, sustained the action of the postoffice clerks in forming a national organization allied with the American Federation of Labor. This excerpt from an editorial in the *Saturday Evening Post* of November 10, 1906, is typical:

> The attitude of the Department towards the Postal Clerks' Union appears to be that the Union may exist as long as it does not do anything in particular. It is difficult to understand how it makes for the good of the service or for good citizenship, or for a proper relation between employer and employed when the public employee—whether of nation, state or city— is treated as though he belonged to a class different from the employee of a private person or corporation. The right of the latter to form unions and advance their own interests in peaceful ways—even to petitioning Congressmen and threatening to vote against obnoxious candidates for office—is everywhere generally admitted. Everybody knows how little usually comes of recommendations by Department heads. It remained for the clerks to organize and work for better conditions. We see no reason why they should be discouraged in this course. It is pretty certain that in about eight cases out of ten they will not get the improvement unless they do exert themselves for it.

Other leading papers were equally fair. The Chicago *Record-Herald* said in part: "The formation of the new Union may be considered a revolt against the reactionary policy of the old Association." The New York *Evening Journal*: "There is nothing extraordinary in this fact [the organization of the Federation in Chicago] yet it has stirred up to an alarming degree newspaper correspondents and editors all over the country. And why all this fuss over what seems to be a natural step taken by organized workingmen?" Postmaster General Cortelyou prepared a statement to the press, saying: "Employees can form all the Unions they desire as long as they keep strictly within a purely fraternal or beneficiary character." First Assistant Postmaster General Hitchcock said: "There is no postal regulation that prohibits the employees of the Department from joining organizations of this kind [Unions]," but referred to the executive orders of January 31, 1902 (Roosevelt's "gag order"). Chicago *Examiner:* "There is no good reason why the employees of the Government should not organize the same as other employees."

FIGHT FOR RIGHT OF PETITION AND AFFILIATION WON

The leaders in the union movement were quick to see the imperative necessity of having the "gag order" of 1902 abrogated. All the energy and resources of the struggling organization were centered on this large fundamental. A request for the restoration of the right of petition to government employees was embodied in the historic Bill of Grievances submitted to Congress by the American Federation of

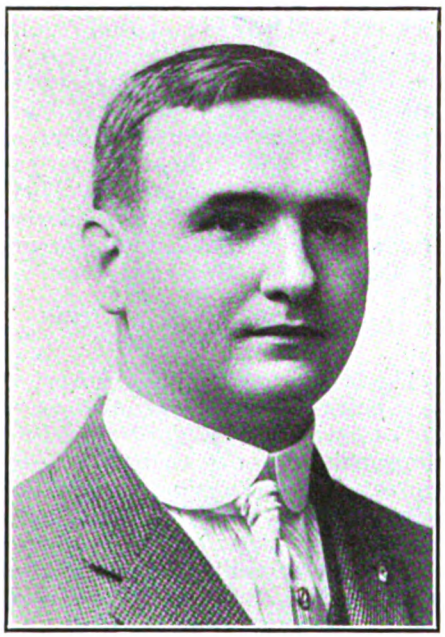


THOS. F. FLAHERTY
Secretary-Treasurer of National Federation of Postal Employees

Labor in 1906. In the 62d Congress bills to this same effect were introduced by Senator La Follette and Congressman Lloyd. Secretary Morrison of the American Federation of Labor; Carl C. Van Dyke, now a Congressman from Minnesota, then

Digitized by Google

a legislative representative of an insurgent railway mail clerks' organization; Oscar F. Nelson, now a conciliator in the Department of Labor, then President of the National Federation of Post Office Clerks, were the principal witnesses in behalf of this legislation before the House Committee on Reform in the Civil Service. President Gompers later appeared before the Senate Post Office Committee, when the substance of the



E J. RYAN
President of Railway Mail Association

Lloyd-La Follettee bill was incorporated into the postal appropriation bill. It was enacted into law August 24, 1912, as part of the postal appropriation bill.

This law of August 24, 1912, for which the Union postoffice clerks had been fighting for a decade, is a veritable bill of rights for the government workers. It not only restored the employees' right of direct petition to Congress, but it clearly established the right to unionize and affiliate with the American Federation of Labor. It opened the way for the later affiliation of the National Association of Letter Carriers, the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, and the Railway Mail Association.

RAILWAY MAIL CLERKS AND CITY LETTER CARRIERS AFFILIATE

The Brotherhood of Railway Mail Clerks was the second national organization of government employees to join the American Federation of Labor. It was chartered May 1, 1914. This organization was merged into the National Federation of Postal Employees April 25, 1917.

The Railway Mail Association, representing a majority of the railway mail clerks, decided in June, 1917, to take a referendum vote on the question of affiliating with the American Federation of Labor. The vote showed 6,827 in favor of affiliation and 2,072 against. On December 22, 1917, the Railway Mail Association was chartered by the American Federation of Labor. Subsequently (February 6, 1918) the National Federation of Postal Employees surrendered its jurisdiction over railway mail clerks to that Association, which now comprises nearly 100 per cent of all railway postal clerks.

The National Association of Letter Carriers is the oldest and one of the strongest of all government employees' organizations. It was formed in Milwaukee in 1889, one year after the city carrier eight-hour law was passed by Congress. Prior to the formation of a national organization city letter carriers were identified in a quiet way, befitting the period, with the Knights of Labor. For years the question of affiliation with the American Federation of Labor was debated by the carriers, but it was not until the Dallas convention in September, 1917, that the sentiment was strong enough to swing the entire organization into the labor movement. On September 25, 1917, the National Association of Letter Carriers was chartered by the American Federation of Labor.

RISE OF THE NATIONAL FEDERATION OF FEDERAL EMPLOYEES

The first unit in the National Federation of Federal Employees was formed at San Francisco in January, 1913. A few clerks in various government departments in Washington had joined the Bookkeepers, Stenographers, and Office Assistants' Union, but there was no noticeable interest on the part of the great mass of federal employees in the District of Columbia in the vital question of organization. Then the late Representative Borland, in March, 1916, introduced his now famous amendment to lengthen the hours of employment for government workers in the District of Columbia without increasing their compensation. At once things began to happen. The apathetic government employees awoke to a realization of their own helplessness. Mr. Borland had succeeded in doing overnight what years of preaching by trade unionists had failed to do. The government employees in the District of Columbia decided to join the American Federation of Labor, and did so in great numbers.

One drink of a certain liquor, it is said, will cause a rabbit to spit in the face of a lion. The Borland amendment had some such effect upon the usually placid Washington employee. The writer recalls addressing a meeting, when the Washington Local of the NATIONAL FEDERATION OF FEDERAL EMPLOYEES was formed, which was wildly enthusiastic and showed signs of real militancy. The same spirit and determination were displayed at other meetings that the writer had the opportunity of addressing in those early days.

The formation of a large, enthusiastic union in the District of Columbia had a stimulating effect on other government workers throughout the country. More than seventy Locals

EDWARD J. GAINOR
President of National Association of Letter Carriers

had been chartered by the American Federation of Labor in about as many cities when a conference was called in Washington, September 17, 1917.

From this conference emerged the NATIONAL FEDERATION OF FEDERAL EMPLOYEES, with a broader jurisdiction than any other unit in the American Federation of Labor and with a potential strength that assures it a high place in the labor movement. Through a combination of fortunate circumstances, combined with wise and judicious leadership, the NATIONAL FEDERATION OF FEDERAL EMPLOYEES has made splendid progress in its relatively brief existence. Its possibilities are unlimited. It has already accomplished this one important thing—it has made articulate the voice of the government employee and has given him an effective avenue of approach to the administrative and legislative officials of our Government.

From that humble beginning—a secret, back-room meeting of a few postoffice clerks in the Briggs House, Chicago, thirteen years ago—there have evolved four powerful union organizations of government employees, working harmoniously together for the one large objective—the thorough democratization of the federal civil service.

The Women in Our Ranks

From a state of comparative indifference toward organization, for reasons which the writer gives from personal observation, the women employees in the government service in large numbers have come into the labor movement in the true spirit. There is no proper place for sex lines in organization work, and practical recognition of this fact is an important factor in the life of our National Federation that has made, and is making, for success.

By FLORENCE ETHERIDGE

Third Vice-President of the National Federation of Federal Employees

ONE of the first observations of writer, as the Treasurer of the Washington Federal Employees Union, who, as the only woman officer of a new and aggressive organization, was keenly alive to the attitude of the Union to members of her sex, and to their attitude, reciprocal or otherwise, to it, was that the women did not come into the Union as rapidly as did the men.

WHY THE INDIFFERENCE OF WOMEN TO ORGANIZATION

There were probably half a dozen factors underlying the comparative indifference shown by the women of the federal service; one of these being, no doubt, despair of any remedy for existing conditions because they had seen efficiency commissions come and go, and inefficient employees come and stay for so many years, that the hope which is said to "spring eternal in the human breast" had lost its elasticity. As just said, there were probably half a dozen factors, but the greatest of these was ignorance. The trade-union movement! To how many people in the federal service, and especially to how many women, did it not mean everything that was dull and sordid, or in any case, unladylike! I am reminded of a little lady from Virginia, who, in the early scorching days of my first interminable summer in Washington, pounded wearily but persistently the punching machine next to mine in the Census Bureau, and who, in a moment of relaxation at the noon hour, confided, "I used to think no real lady ever wilted her collar!" It was, it seemed to me, in the maze of preconceived ideas as to what a "real lady" might or might not do, and fundamentally in an attempted distinction between a "real lady" and that much finer creature, a real woman, that so many of our women government employees lost their way. For a long time they failed to realize the opportunity offered to associate themselves with the highest and most comprehensive economic and social movement of any time.

Then there were those who, having been associated with the Suffrage organizations of an era when these were the center of an attack such as could be weathered only by those who had hardened their souls past any femin-

FLORENCE ETHERIDGE

ine shrinking from storms, expected that the organization would adopt a policy of discrimination against its women members. They were not, it is sad to have to state, without adequate reasons for such forebodings in the occurrences of a too-recent past. In so far as the officers could be said to represent the organization, however, if there was any one of them more urgent in insisting on the rights of the women in every particular than the treasurer (a woman), it was the President, Mr. H. M. McLarin.

JOINT ORGANIZATION WORK OF MEN AND WOMEN GOOD

My experience in organization work with men has been exceptionally fortunate, a fact I appreciate as I read the experiences of other women in the same field. It is true that there were sporadic instances in which I could trace the ancient prejudice against entertaining seriously the opinions and relying definitely on the judgment of a woman unless first filtered through the mind of some man, but I am here to say that in the work of the organization of federal employees, and in the work of the American Federation of Labor, considered as a whole, I have found myself not only unhampered by the fact of sex but in many cases aided by it. Perhaps while we lament the decadence of chivalry among the so-called higher classes, we might discover, if we looked, that it has only been transplanted into the keeping of the people in whose hands alone it can be a living and vital thing—the men, and the women too, who are the workers of the world.

SPIRIT OF LABOR MOVEMENT AMONG THE WOMEN EMPLOYEES

It was only a few months, however, after our organization had begun the steady growth which has characterized it since the first feverish months when a rush of applicants for membership followed the discovery that the infant union was not actively opposed by the Government or its administrative officers, before the women began to enter it in large numbers. They too saw the light that was to bring a new day for the federal employee. By degrees this light—the spirit of the labor movement—somehow has shone through the dull garments with which personal interpretations have enshrouded it, until the women of our organization have become as articulate as the men. They are presenting their claims to recognition reasonably, without the lack of balanced judgment which has been too often charged against them in the past, but with an insistence which is based on the conviction of the justice of those claims; with, moreover, a confidence in the result which arises largely, in my opinion, from the knowledge that their new political power through the ballot will not fail of the immediate reaction upon the Federal Service which every other

BUREAU OF STANDARDS BUILDINGS
(Photographed from an aeroplane)
The Bureau of Standards is one of the best known scientific laboratories in the world.

Scientists Join the Union

Scientific and technical employees of the Government stationed in Washington, without regard to departmental lines, vote, at one of the largest mass meetings of scientists ever held in the National Capital, to form a branch of Local No. 2. This action followed full and free discussion of the subject from several angles, as outlined below. The decision of the scientists means much, it is believed, to the future of both science and organized labor.

By P. G. AGNEW

Physicist, Bureau of Standards, and Secretary of Scientific and Technical Branch of Federal Employees

THE formation of a union of the scientific employees of the Federal Government is an event of much more than local importance; it is a step of great industrial significance.

SCIENTISTS' ACTION MOST IMPORTANT, SAYS PROMINENT NEWSPAPER

Said the *Washington Times:*

One of the most important items in this newspaper or any other newspaper yesterday was the announcement that government scientists and technical men had become members of the Federation of Federal Employees.

Men who have spent years in enriching the country by the concrete results of their scientific study are today drawing salaries that mean privation and want.

The government scientist is a developer. He has been the pioneer who has found the coal, the iron, the gold. He has cleared the waste lands and made the desert bloom.

For scientists to combine for their own betterment is only common sense. This newspaper congratulates them and predicts that in joining hands with other employees and officials of the Government they have not only done themselves justice, but they have fallen into step with the general advance for the benefit of the world.

ADVANTAGES OF PROPOSED ORGANIZATION CLEARLY STATED

The organization was formed at a mass meeting of scientific and technical employees of the Government held at the New National Museum, May 8. The call for the mass meeting outlined the situation as follows:

The question of an organization of scientific and technical workers, which has been widely discussed during the last year, is brought acutely to the fore by the work of the Joint Congressional Reclassification Commission, as the Commission wishes to deal with employees only through organizations, not as individuals. The purpose of this meeting is to determine whether the scientific and technical workers in the federal employ wish to organize, and, if so, what sort of organization they desire.

Some of the advantages of organization that have been urged are:

Improvement of conditions and facilities for more effective scientific and technical work;

Adequate presentation of the needs and results of such work to the public and to legislative and administrative officers;

Greater freedom in both official and non-official activities;

Just and reasonable salaries based on service performed and the economic and social conditions which prevail;

Greater public recognition of the aims and purposes of research;

Advancement of science and technology as an essential element of national life.

Digitized by Google

THE THREE PLANS FOR ORGANIZATION WHICH WERE DISCUSSED

The question of organization was discussed at an informal meeting on April 23 of some thirty men, and the undersigned committee was designated to formulate plans for discussion at a mass meeting to be called by the committee. On account of the urgency of the work for the Joint Congressional Reclassification Commission, only plans of organization limited to government employees are suggested for consideration at this time.

Plan No. 1.—To work only through existing scientific organizations.

Plan No. 2.—To form an independent organization of those federal employees doing scientific or technical work.

Plan No. 3.—To form a scientific and technical branch of the Federal Employees Union.

Dr. R. H. True of the Bureau of Plant Industry acted as chairman, and Mr. J. C. Hoyt of the Geological Survey as secretary of the meeting. The committee charged with calling the mass meeting consisted of H. L. Shantz (Agriculture), chairman; P. G. Agnew (Commerce), L. W. Chaney (Labor), F. L. Newton (Smithsonian), W. L. Thurber (Interior).

A brief description of the British Union for Scientific Workers was read. In order to facilitate the consideration of the question the committee invited speakers to open the discussion from each of the three points of view.

Plan No. 1 received very little support, no one being found to open the discussion by outlining its advantages. The advantages of *Plan No.* 2 were presented by Dr. W. J. Humphreys of the Weather Bureau, and the advantages of *Plan No.* 3 by Dr. E. B. Rosa of the Bureau of Standards. A spirited but good-natured discussion between the advocates of Plans 2 and 3 followed. President Ryan of Local No. 2 was present by invitation of the committee, and answered questions that were raised in regard to the proposed organization, and the attitude of the Union toward it.

Plan No. 3 was adopted by a substantial majority, and it was voted to petition the Board of Representatives of Union No. 2 for admission as a separate branch. The minority included those favoring either Plan 1 or Plan 2, together with a small number favoring a separate organization directly affiliated to the American Federation of Labor.

SUMMARY OF REASONS IN FAVOR OF PLAN ADOPTED

The consideration which led to the adoption of Plan No. 3, namely, organization of a scientific and technical branch of Federal Employees Union No. 2, may be summarized as follows:

1. The belief that science can never play its real rôle in the development of our national life until the great body of workers of the nation has a sympathetic understanding of the significance of research, and that such an understanding can be brought about only by the scientific workers joining hands with the other workers of the nation.

2. Specifically, the belief that the affiliation will greatly accelerate a general understanding of the economic relation between scientific research and the problem of a higher national standard of living; and that, when the workers generally realize fully that there is a limit beyond which the standard of living of the average of the population cannot progress by usual methods of readjustment, and that this limit can be raised only by research and the utilization of the results of research in industry, the cause of science will be placed in a position which we cannot now anticipate.

3. The necessity of contact with a body having the confidence of, and influence with, those with whom decisions rest.

4. The complete autonomy enjoyed by the organized federal employees in affiliation to the American Federation of Labor, and by the Scientific and Technical Branch in its affiliation to the former as represented by Federal Employees Union No. 2.

5. The complete freedom from any compulsion upon the individual, the constitution pledging all its members not to strike nor to support any strike against the Government.

6. The methods and the record of the Federal Employees Union. There has been cordial cooperation with legislative and administrative officials in collating and presenting reliable data, which has produced very concrete results without causing friction or resentment. For half a century the status of the government employees on the whole had not improved, and had perhaps even grown worse. In three years of organization four important advances have been made: the enactment of a compensation law; the Presidential veto of the Borland amendment; the 5 and 10 per cent, the $120 and the $240 salary increases; and the formation of the Joint Reclassification Commission.

7. The urgency of the reclassification problem, which makes it doubtful whether a new independent organization can be formed in time to be effective, while here at hand is a going, experienced organization with machinery and funds available, already working in close cooperation with, and enjoying the complete confidence of, the Commission; and this body already numbers among its members more than 600 of the scientific workers, among them many of the ablest and best-known men in the scientific service.

The Advisory Committee of Federal Employees Union No. 2 has recommended the following resolution for the consideration of the Board of Representatives at the next meeting of the board:

Resolved, That Federal Employees Union No. 2, through its Board of Representatives, extends a cordial welcome to the scientific and technical employees; that we approve of their separate organization within the Union, with their own officers, to consider their group problems, and to present these problems when desirable, through Local No. 2 in any way that is appropriate under our charter and constitution; that we will support them in all ways possible, including such financial support as may be feasible in the study and presentation of their problems, and that to this end the formation of a committee of seven is hereby authorized, to formulate the details of the organic relationship of the new organization to Union No. 2, for the approval of the Board of Representatives, three members of the committee to be designated by the Advisory Committee, three by the new organization, and the remaining one to be chosen by the six so designated.

The Advisory Committee suggests to the new organization that it may be necessary under the constitution of Union No. 2 for the scientific and technical branch or chapter to have its formal representation through the present departmental branches.

TEMPORARY ORGANIZATION FORMED WITH GOOD RESULTS

It seemed advisable to form a temporary organization in order that work on the urgent problem of reclassification might be started without waiting to complete all the details of a permanent plan. This body is composed of a general interim committee consisting of a chairman, a secretary, and representatives from the bureaus, one for each twenty members (or major fraction thereof). R. H. True of the Bureau of Plant Industry (Department of Agriculture) was elected chairman, and P. G. Agnew, of the Bureau of Standards (Department of Commerce), secretary.

The new branch is already functioning. Through President Steward of the National Federation, and President Ryan of Union No. 2, cordial contact with the Commission has been established. Preliminary steps have been taken to increase cooperation from the Engineering Council, thus making available important and extensive data on the compensation of engineers collected by the Council. There is being published in *Science*, the general professional journal of the scientific fraternity, a brief résumé of the organization, together with the following appeal for cooperation and assistance from scientific workers elsewhere:

Digitized by Google

The work of this Commission seems bound to have a profound influence on the scientific services of the Government for a decade or more, no less from the point of view of the Government than from that of the individual. Its influence will not stop with the government service, but will extend indirectly to practically all scientific laboratories, college, university, industrial, state, and municipal. By co-operating, by furnishing data from similar studies that may have been made in other organizations, men in such laboratories can do their colleagues in the federal departments a very real service, and a service to the cause of science and to the fraternity as well. General arguments will not be useful. What is needed is comparative data, such for example as salary studies made by universities or statistical studies of the investment equivalent of a university training, the accuracy of which can be vouched for. The Commission is undertaking the problem in the same spirit that is necessary in an investigation in chemistry or in biology.

The formation of the new organization has already resulted in a large increase in union membership among the scientific and technical employees. Mass meetings have been held in most of the bureaus employing any considerable number of scientific workers, for the discussion of methods and plans. In one of the smaller bureaus, the membership in the union jumped from four to fifty-two.

GREAT FUTURE BENEFIT FOR BOTH SCIENCE AND LABOR

It seems to be the consensus of opinion of those who have been instrumental in the formation of the organization that, while the scientific workers will receive much more from affiliation than they will be able to contribute for the first year or two, yet if the new organization develops to a point of real effectiveness, it is bound to make enormous contributions to the general movement. The results of research are so profound and so far-reaching in our whole social and economic structure, that there cannot but be a very great gain in a close affiliation of the workers in the fields of research in the great body of workers of the nation. This may be seen from the results in Great Britain, where men and women of scientific training and experience have taken a much more active interest and part in the labor movement than has been the case in this country. It is universally agreed that the British labor movement has profited enormously thereby.

Teachers and Organized Labor

The teachers of the country are rapidly organizing—under the jurisdiction of the American Federation of Teachers, affiliated to the American Federation of Labor. Already the organized teachers have done things well worth while. The movement is destined to have profound influence on the future of both Education and Labor.

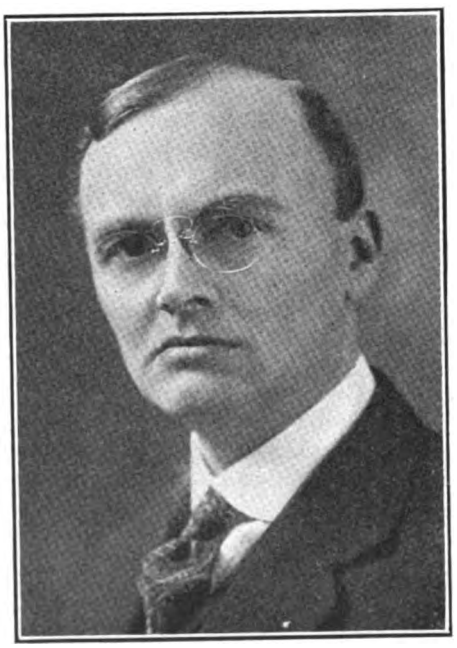
By CHARLES B. STILLMAN

President of the American Federation of Teachers

THIS OPPORTUNITY for a brief statement in the THE FEDERAL EMPLOYEE of the progress of the new alliance between teachers and other workers is very welcome. While the teachers were, and are, slower than the federal employees to awake to the constructive possibilities in cooperation with organized labor, the record of the last year is at least encouraging.

GROWTH OF THE AMERICAN FEDERATION OF TEACHERS

Where a year ago the American Federation of Teachers had chartered 24 locals and its membership was about 1,400, at the present writing (May 10) it has chartered 80 locals, and has a total membership of about 7,000. The last figures may seem small, taken by themselves, but they represent more than a tripling of the number of locals, and a 400 per cent increase in membership in a twelve-month period; and since for the last two months a new charter has been issued every other day, by the time this is read the above figures will require substantial revision upward.



CHAS. B. STILLMAN

Space does not permit the recital of detailed achievements, but with the assistance of organized labor in various sections of the country we have been able to secure material increases in teachers' salaries (if they can be called that), the election of progressive boards of education, the enactment of such legislation as provisions for continuation schools, for free textbooks, for increases in school revenue, and the frank recognition of teachers' unions by school authorities, not only in the matter of receiving committees on grievances, but in requesting the suggestions of the organized teachers, and the cooperation of organized teachers, and organized labor in general, in the improvement of the schools.

An evidence that teachers are genuinely grasping at the outset the spirit of the labor movement, and are bringing some small contribution of their own in partial return for labor's support, is the election and appointment of teachers to offices and positions of responsibility in various central labor bodies, state and local. But their chief return, the return that organized labor most desires and cooperates most earnestly in securing, is the increased efficiency of our public schools in preparing the children of all the people for intelligent participation in the political, economic, and social life of the community.

DANGER OF CONTROL OF SCHOOLS BY REACTIONARY INTERESTS

Reactionary interests are endeavoring to gain control of our schools, knowing that is the most certain method of insuring control of the America of tomorrow. The teachers, organized labor, and liberals generally, are awakening to the danger. Our future citizens, during the impressionable years of their school life, must be educated to do their own thinking, to question sweeping statements unsupported by trustworthy evidence, to base their actions on facts and their own conclusions, rather than on prejudice. And this essential preparation for self-government can be given only by teachers who themselves have a living consciousness of the obligations and privileges of American citizenship, who live and work in an atmosphere of freedom and self-respect, and who are in close touch with the economic and civic life for which they are supposed to be preparing their pupils. Through organization and affiliation with the labor movement teachers are moving forward toward that high goal.

More About Reclassification

A discussion of some problems to be solved, in which the writer points out that the fault lies chiefly in the system itself rather than in its administration. Jobs, not personnel, are to be classified and salaries therefor determined. The Commission has secured expert assistance and is pushing the work. The writer outlines his view of the general plan to be pursued and deals briefly with the question of salaries in relation to living costs.

By HON. COURTNEY W. HAMLIN

A Member of the Joint Commission on Reclassification of Salaries

THOSE OF US who have been members of Congress for a number of years have been conscious of the great necessity for some plan being worked out which would insure more equitable treatment for the army of workers in the government service in the District of Columbia.

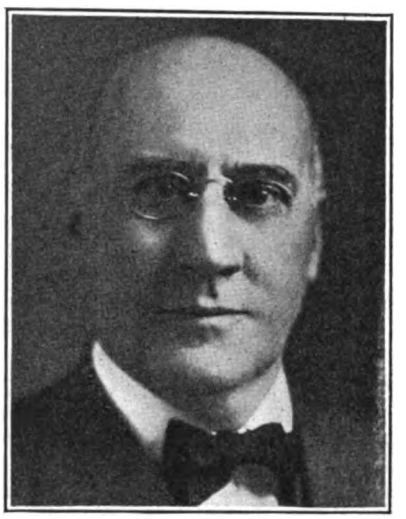
A GOOD WORD FOR ADMINISTRATIVE OFFICIALS AS A BODY

This statement must not be construed, however, as a general indictment against the administrative officers in the several departments of the Government, for I think that, as a body, they are not deserving of criticism. But the fact that there are more than one hundred thousand workers in the District naturally implies the presence of a large force of supervising officials, and out of this number it is to be expected that there would be some whose conduct would be such as to cause, and sometimes to merit, criticism. On the other hand, I think it is a well-known fact among those who have given any attention at all to the subject, that there have been many unwarranted criticisms very largely on account of what the workers claimed was favoritism shown certain employees by their superiors to those whose work did not justify it.

EXISTING FAULTY SYSTEM MAKES COMMISSION'S TASK ONEROUS

Again, it has been apparent that systems have grown up in the departments that are not at all uniform. A clerk in one department doing a certain class of work has been paid a certain salary; a clerk in another department doing practically the same class of work has been paid an entirely different salary. These conditions have all tended to disorganize and dissatisfy the army of workers. Perhaps no particular individuals have been responsible for this situation, but nevertheless it seems to have existed.

There have been many other things which seemed to contribute to an unsatisfactory condition, hence Congress concluded to appoint a commission charged with the duty of reclassifying the various positions throughout the government service, including the municipal government of the District of Columbia, and also to recommend salaries for such positions so determined as to be fair, both to the Government and to the workers. On the face of this, it would not appear that the work of the Commission would be so tremendous or difficult, but as we approach the work and become acquainted with the problem confronting us, we are impressed that it *is* stupendous and is going to require the very best thought and efforts possible if we are to work out our task in a way to be satisfactory even to ourselves and fair alike to employer and employees.



Copyright, Harris & Ewing

HON. COURTNEY W. HAMLIN

WITH EXPERT AID COMMISSION WILL CLASSIFY JOBS ONLY

Before really beginning the work the Commission attempted to secure the advice of experts who had been through this kind of work, with the hope that we could secure information that would enable us to approach these difficult questions correctly, so that as few mistakes as possible might be made. Under any circumstances the aid of such experts would be important, but it is especially so in view of the fact that Congress has required this Commission to complete this task and make a report by the first of the next year. It goes without saying that the Commission must first gather information upon which to base its work, and the only proper basis upon which to make the reclassification is to ascertain exactly what are the various positions throughout the service.

Therefore we started out to classify positions and not individuals. The reason for this is apparent. The personnel changes rapidly, but the positions as a rule are permanent, and so far as the public is concerned it makes no difference whether the duties of a certain position are performed by Smith or Jones, so long as the work is done and well done. We concluded also that the best way to find out the duties of a certain position would be to inquire of the persons who happen to be performing those duties at the present time, in the belief that no other persons are quite so able to give that information. Realizing, however, that there would be a disposition among some of the army of workers to magnify their duties with the hope that in so doing they would succeed in having their positions placed in a somewhat higher class, thereby gaining an increase in salary, we have required employees, after describing the duties of their respective positions, to pass their cards to their immediate superiors for them also to state their conception of the work required of the employees whose names appear thereon. We named the immediate superior because we thought that, next after the worker himself, this person should know best just what the work of the position is.

THE IMMEDIATE WORK ENGAGING THE COMMISSION'S ATTENTION

While the Commission has not determined every move that it will make in performing its task, it has attempted to vision the whole work

American Labor and Peace

The epochal "declaration of principles and international standards and requirements," which "will make for a better life for all workers." This declaration (which appears below) has received the approval of the Peace Conference. The delegates of American organized labor bore their full part in framing and in securing the highest sanction and guarantee for this world-wide labor program.

By SAMUEL GOMPERS
President of the American Federation of Labor

(In the May *Federationist*)

AMERICA IS not simply a name; America is not merely a country; America is not purely a continent. America is an ideal. It is the apotheosis of all that is good and true and just in a nation. It was a great privilege for the members of the Labor Mission of the American Federation of Labor to serve that ideal and to help brighten the hope for a life that is good and true and just for all the men and women and children of the lands "over there," as well as in our own country.

AMERICAN LABOR'S GREAT PART IN WINNING THE WAR

Now, all pay tribute to the fact that the importance, power and influence of labor to the nation's safety were never more clearly revealed and demonstrated than during this great war. No one more fully appreciated the force of labor, no others applied themselves more assiduously to the task of breaking the morale of the workingmen of our nation and of the nations associated with us than did the military advisers, strategists and propagandists of Germany and Austria. That these efforts failed is due in an immeasurable degree to the spirit of loyalty and of profound devotion to the ideals of justice, liberty and democracy manifested throughout this world's conflict by the men and women of labor of America, individually and collectively, through the A. F. of L.

RESULTS OF TWO LABOR CONFERENCES DURING THE WAR

Organized labor's influence was not confined to America alone. The spirit of America reached into the hearts and minds of the workers of all nations associated with our great Republic.

In February, 1918, there was held in London an interallied conference of the representatives of labor and of socialists. After several days a declaration was agreed to by that body, calling upon the governments of those in attendance to bring about peace with Germany and Austria by negotiations with endless chains of concessions and compromises. The hope for a world democracy was indeed dimmed and clouded for the time being.

In September, 1918, seven months after the February meeting, another conference was held representative of the same groups that attended the former gathering, but having in addition a delegation representing the A. F. of L. The September conference declared for unswerving support of the Government of the United States and of our allied countries until victory should have been won on the battlefield and the enemies of humanity, civilization and democracy driven from the soil of invaded countries.

President Wilson on the Labor Program

The Labor Program which the Conference of Peace has adopted as part of the treaty of peace constitutes one of the most important achievements of the new day in which the interests of labor are to be systematically and intelligently safeguarded and promoted. Amidst the multitude of other interests this great step forward is apt to be overlooked, and yet no other single thing that has been done will help more to stabilize conditions of labor throughout the world and ultimately relieve the unhappy conditions which in too many places have prevailed. Personally, I regard this as one of the most gratifying achievements of the Conference.

LABOR AIDS IN THE WORK OF RESTORING PEACE

With the signing of the armistice and the ending of hostilities, the work of the organized labor movement, like the work of the warring nations, was changed into acts of devising terms of settlement and providing agencies for peace and progress between the nations and the peoples of the world. In pursuance of instructions of former conventions of the A. F. of L., the American wage-earners were represented at the councils of the peace plenipotentiaries of the world by five of the executive officers of the A. F. of L., viz: President Samuel Gompers and Vice-Presidents James Duncan, John R. Alpine, Frank Duffy and William Green.

It was the great privilege of these representatives of America's working men and women to meet with the American Commissioners of Peace. There was given to labor an opportunity to make its contribution to the world in the remaking and to present the hopes and aspirations of the toilers of our land and of other lands. To one, as president of the A. F. of L., was granted the additional opportunity of directly representing the American wage-earner in the councils of the Peace Congress and in being selected as presiding officer of the International Commission for Labor Legislation.

The problems of peace, like the problems of war, are great and complex. The A. F. of L. Mission applied itself assiduously to the task allotted to it. The struggle was great and trying and all that could be done within human endurance and capacity, mentally and physically, was done to reach an understanding helpful and hopeful and beneficial to all working peoples of the world.

But the problems have been solved. The rights and advantages of the workers and the integrity and sovereignty of our nation have been safeguarded by the declaration, made a protocol of the covenant of peace, which provides:

In no case shall any of the High Contracting Powers be asked or required through the adoption by the conference of any recommendation or draft conven-

Digitized by Google

tion to diminish the protection afforded by its existing legislation to the workers concerned.

DECLARATION OF BASIC PRINCIPLES AND INTERNATIONAL STANDARDS

Then, too, a great international organization to promote the interests of the wage-earners the world over has been provided. There was submitted by the International Commission for Labor Legislation to the Peace Conference and approved by it, a declaration of principles and international standards and requirements, not one of which can react to the disadvantage of the workers of any country, but which, on the contrary, will make for a better life for all workers.

These principles, standards and requirements are as follows:

1. In right and in fact the labor of a human being should not be treated as merchandise or an article of commerce.
2. Employers and workers should be allowed the right of association for all lawful purposes.
3. No child should be permitted to be employed in industry or commerce before the age of fourteen years, in order that every child may be ensured reasonable opportunities for mental and physical education.

Between the years of fourteen and eighteen, young persons of either sex may only be employed on work which is not harmful to their physical development and on condition that the continuation of their technical or general education is ensured.

4. Every worker has a right to a wage adequate to maintain a reasonable standard of life, having regard to the civilization of his time and country.
5. Equal pay should be given to women and to men for work of equal value in quantity and quality.
6. A weekly rest, including Sunday, or its equivalent for all workers.
7. Limitation of the hours of work in industry on the basis of eight hours a day or forty-eight hours a week, subject to an exception for countries in which climatic conditions, the imperfect development of industrial development or industrial organization or other special circumstances render the industrial efficiency of the workers substantially different.

The International Labor Conference will recommend a basis approximately equivalent to the above for adoption in such countries.

8. In all matters concerning their status as workers and social insurance foreign workmen lawfully admitted to any country and their families should be ensured the same treatment as the nationals of that country.
9. All states should institute a system of inspection in which women should take part, in order to insure the enforcement of the laws and regulations for the protection of the workers.

OUR WAR DUTY DONE, WE TURN TO THE FUTURE

The American Labor Mission, late on the evening of Thursday, April 10, returned to the sacred soil of our great Republic. American organized labor performed its full duty during the trying days of war. American organized wage-earners left nothing undone that the triumphant victory on the battlefield should not be lost around the peace table and that the wage-earners of the world should not be made to pay for the folly of kings, czars or kaisers, but that out of this great war there should come greater freedom, a better understanding and a brighter day for all our people.

And now, with this task successfully accomplished, let us devote ourselves as energetically to the trying problems of peace, reconstruction and progress as we applied ourselves to the conduct of war. There is still much to be done. . . .

More about Reclassification

(*Continued from page* 339)

from beginning to end; but we are proceeding step by step, realizing that our experiences as we go along will give us some light to guide us in our future action. The Commission holds almost daily sessions to determine questions affecting its present work and to consider suggestions as to the next step in its procedure; therefore I am not in a position to state officially the program of the Commission very far in the future. As is well known, we have prepared a questionnaire which has gone to more than one hundred thousand employees, to develop the information we feel we must have as a basis for our work. It is with a great deal of satisfaction that I am able to state that the Commission has had, and is having, the heartiest cooperation of an overwhelming majority of those connected with the government service.

THE WRITER'S VIEW OF THE COMMISSION'S GENERAL PROGRAM

As to our future plans, I can state them in only a tentative way, or perhaps I should say, can give only my own ideas of the general plan to be followed. When these cards are returned to the Commission, we shall organize a force of expert classifiers—I mean by that a force of people who will be competent to select similar positions and place those in the same class. In that way we shall establish classes for the radically different kinds of work, and after they are classified there will probably be established certain grades within each class; and when all this work is done the Commission will take up the question of compensation and attempt to recommend to Congress salaries for the various grades and classes which shall be fair to all concerned.

Then, I think, a system should be worked out whereby clerks who make good will be promoted automatically, promotion being based, of course, on their efficiency records. My thought is that by working out a scheme like this we shall very largely eliminate opportunities for the many complaints about favoritism which have heretofore been so prevalent. Of course the human element cannot be entirely eliminated. Favoritism may creep in despite all we can do, but I believe that it can be cut to the very minimum. I recognize that there is another side to this, however; that is, that one clerk is naturally more efficient than another and ought to be advanced and the other not; yet the one not advanced will never concede that he is less efficient than the one who is promoted. These conditions frequently give rise to very unjust complaints against the superior officer, and this is one of the human elements that I do not believe can be entirely eliminated; but the system that I have in mind will undoubtedly do away in large measure with the necessity for Congress to single out certain individuals in the several departments for increases in salary, thereby destroying the morale of the other workers.

SALARIES IN RELATION TO LIVING COSTS DISCUSSED

I should like to suggest to the workers that while they are most interested in their salaries, they must not lose sight of the welfare of the whole country. We all recognize that under the abnormal conditions produced by the war the cost of living has gone skyward—it seems to me unfortunately that the limit has not yet been reached. I think that every thoughtful man must realize that these conditions cannot always prevail. There must come a leveling down of prices before long. If the Government, as perhaps the greatest individual employer in the world, and all other employers of labor should undertake to increase wages to keep pace with the inflation of prices, disaster would be inevitable, and a large proportion of the citizens of our country would be simply crushed. To my mind this mode of procedure is unthinkable. The ideal way, it seems to me, is for everyone to do his part in endeavoring to level down the prices to a reasonable basis, and then if necessary salaries must be increased to meet stable conditions. There are many things to be taken into consideration in trying to determine what is fair and just compensation—the character of services rendered, the conditions under which they are rendered, the cost of living at the particular place where rendered, the purchasing power of the dollar paid employees for their services. It must be understood that in these last observations I am speaking for myself only and in no sense for the Commission.

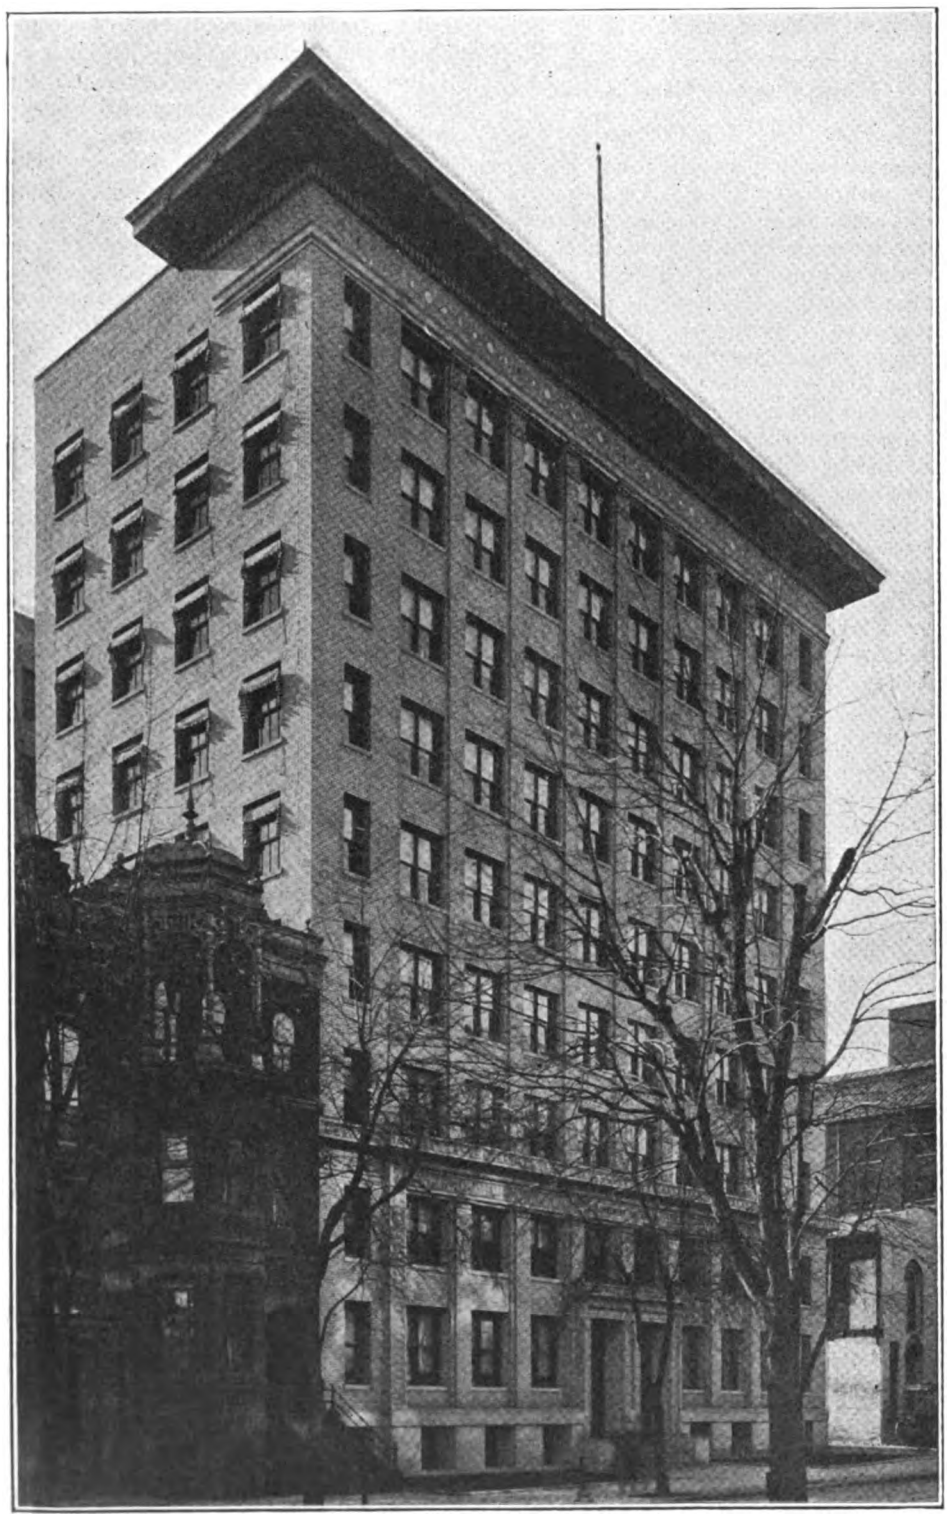
The Department of Labor

Although wage-earners with their families constitute so large a proportion of our people—now probably 90 per cent—it was not until 1913 that a full-fledged Department of Labor was created to look after their interests. The author traces the growth of the movement leading up by degrees to the formation of this governmental agency. Its purposes and organization are explained, as are the changes made to the end that the Department might function to the greatest advantage in connection with the supreme task imposed on the Nation—that of winning the war.

By HON. LOUIS F. POST
Assistant Secretary of Labor



THE DEPARTMENT OF LABOR

Fairness to Every Interest, the Department's Policy

"One of its [the Department of Labor's] strongest and most characteristic policies has been the right of both employers and wage-earners to organize and bargain collectively. The denial of this right on either side is the denial of the only means of peaceable settlement they have. Where both sides to a controversy have attained such a form of organization that they can send responsible delegates to confer with each other there has always been not only a possibility but almost a certainty of agreement. The element of fairness to every interest is of prime importance. 'The department has, in fact, made fairness between wage-earner and wage-earner, between wage-earner and employer, between employer and employer, and between each and the public as a whole the supreme motive and purpose of its activities. The act of its creation is construed by it not only as a law for promoting the welfare of the wage-earners of the United States by improving their working conditions and advancing their opportunities for profitable employment, but as a command for doing so in harmony with the welfare of all industrial classes and all legitimate interests and by methods tending to foster industrial peace through progressively nearer realizations of the highest ideals of industrial justice.'"

THE Department of Labor was created in the interest of the wage-earners of the United States, of whom there are about 37,000,000, exclusive of farmhands. Together with their families, wage-earners make up probably 90 per cent of the population. That this department was created in the particular interest of wage-earners is expressly declared in its Organic Act. "The pur-

Digitized by Google

pose of the Department of Labor," the first section of that Act reads, "shall be to foster, promote and develop the welfare of the wage-earners of the United States, to improve their working conditions and to advance their opportunities for profitable employment."

LACK OF A DEPARTMENT DEALING WITH THE COUNTRY'S WORKERS

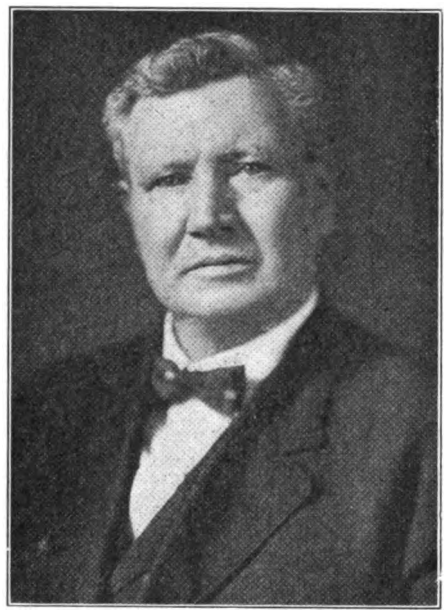
Before its organization there were many other departments that dealt with labor; but they were concerned with labor products rather than laborers. With the welfare or working conditions of human beings they had no concern. While they were so conducted as to ignore the human aspects of labor, they could not properly be charged with negligence, for the law did not contemplate that such matters should be their care. They were charged primarily with other affairs. The Department of Agriculture, for instance, had to do with farming, stockraising and kindred occupations, and, in general, with the use of soil for the production of food. Agriculture is merely the scientific application of labor to land. The Department of Agriculture had no official concern with kinds of labor, whether bond or free. The fact that the wages paid were high or low was of no concern to the department as such, however sympathetic its staff might be in particular instances. So also regarding the Bureau of Mines in the Department of the Interior.

BEGINNING OF AGITATION FOR A DEPARTMENT OF LABOR

Shortly after the Civil War agitation for a department of labor in the United States Government arose. In 1865 more than 2,000,000 men who laid aside the weapons of war and took up the tools of industry found few opportunities for profitable employment. Many of them were obliged to compete with others. There was then no department of labor to direct them to places where employment might be had or to advise them as to the possibilities of employment. It was not that there were no opportunities for profitable employment at the close of the War between the States. There were jobs enough, but the workmen of that day did not know where to find them, and the Government had little information to offer. Large areas of untilled land awaited the touch of labor, and men were directed to places where they could locate those lands. But aside from that nothing was done to find jobs for the jobless. The vast public domain was then large enough to afford an industrial outlet for those who had sufficient means to engage in farming, but the cities and towns were crowded for a long time with men who were unfitted for farm life, and who could not find other employment.

EMPLOYER'S VIEWPOINT CHIEFLY REFLECTED IN THE GOVERNMENT

At that there was a feeling that there was no representation for workers in the Government. This feeling did not arise from any sense of unfairness on the part of government officials, although instances of unfairness were by no means rare. It came about simply because there was no representation of labor by laborers. It was felt that every department of the Federal Government was then or had been operated by professional men, business men, and manufacturers. They had nearly all been employers of labor, or their business affiliations had been in close relation to employers of labor. Those of them



SECRETARY WILLIAM B. WILSON

who were professional men or lawyers had naturally been connected with the employers' side almost wholly and reflected employers' views.

LOUISVILLE CONFERENCE CALLS FOR DEPARTMENT OF LABOR

In August, 1865, a group of men met in the city of Louisville. They were all trade unionists, many of them old soldiers. But a few months before some of them had worn the blue and some the gray. They had faced each other across the parapets of opposing rifle-pits. But when the war was over they realized that they must get together on a new basis. Knowing that their own interests lay wholly in labor, they began an agitation for representation at the National Capital. Resolutions adopted at that conference contained the following: "There should be in Washington a department of labor to be operated by men who are affiliated with labor. The duty of that department should be the guarding of labor interests everywhere now known or which hereafter may become known."

LABOR MEN CONTINUE TO PRESS FOR LABOR DEPARTMENT

After the Louisville Conference correspondence was carried on among the chief officers of many of the national and international unions, and as a result the agitation became very widespread. The situation was quite similar to the present one, when labor is asking for so many things as a result of this war. Labor was asking among other things for a department of labor as a result of the Civil War. They felt they had carried the burden of the protection and preservation of the Union, and that they were entitled to special representation for that reason as well as for reasons of substantial justice. Their psychology must have been similar to that of our wage-earning soldiers who are returning now from abroad and declaring for a greater share in that democracy which they have fought to uphold.

During many years thereafter this small group of men continued to agitate the idea that labor is the foundation of both happiness and prosperity, that it was to the interest of the Government, as well as its duty, to take prompt action, and that a Secretary of Labor should be chosen directly from the ranks of the workmen. Not until 1871, however, was any bill introduced into Congress which proposed to carry out these suggestions. In that year a bill was introduced by Hon. George F. Hoar providing for a Commissioner of Labor; but it did not become a law. Although no immediate action came from the agitation of the workingmen so far as the Federal Government was concerned, the demand for a department of labor was not abandoned. The agitation continued for State departments and bureaus of labor and many of the State labor bureaus owe their origin directly to the agitation for a federal department.

RISE OF LABOR ORGANIZATIONS; DEPARTMENT OF LABOR CREATED

The panic of 1873 wrought havoc with labor generally. Labor unions suffered in common with others. In 1869 a secret organization, the Knights of Labor, was organized in Philadelphia. It grew out of the indiscreet habit of organized workmen who discussed the affairs of their unions in shop and on street corners. The basic principle of the Knights of Labor was cooperation, but it concerned itself with everything of interest to labor. It demanded and worked for the passage of laws creating labor bureaus, factory inspection departments, the

Digitized by Google

abolition of prison contract labor, and child labor. One of its demands was for "equal pay for equal work for both sexes."

In 1879 a member of the Granite Cutters' Union and a Knight of Labor, Thomas W. Murch, of Maine, was elected to Congress. He introduced in that year a bill to establish a Bureau of Labor, but Congress did not act favorably on the measure. In 1884 the first Committee on Labor was established in the House of Representatives. Two former members of labor unions were on that committee. As a result the bill formerly introduced by Representative Murch was resurrected and reported out of the committee. Trade unions throughout the country rallied behind it, and it was passed by the lower House. Shortly afterward, through the efforts of Senator Blair, favorable action was taken in the Senate also and the bill was signed by President Arthur June 27, 1884. This bureau of labor, now the Bureau of Labor Statistics, was made part of the Department of the Interior and remained there until 1888, when it was transformed into an independent department. Its chief was known as Commissioner of Labor. Although it was called a department it did not have a Secretary at its head, nor was its Commissioner entitled to be called into the Cabinet of the President.

In 1903 the name of this new department was changed back to Bureau of Labor, and it was placed under the jurisdiction of the Department of Commerce and Labor, where it remained until 1913. It then came into the newly organized Department of Labor as the Bureau of Labor Statistics, a title which it still retains and under which it is now administered under the direction of Dr. Royal Meeker.

FORMATION OF DEPARTMENT OF COMMERCE AND LABOR

Meanwhile the original agitation for a Secretary in the President's Cabinet continued. In 1885 Representative Weaver, afterward Populist candidate for President, introduced a bill for an executive department of labor with a Secretary of Labor at its head.

General Weaver's bill was referred to the Committee on Labor and got no further, nor for that matter did any of the several bills introduced for similar purposes during the next eighteen years.

In the early nineties efforts which paralleled those of the labor interests were made by the commercial interests for the organization of a department which should represent commercial business. The general purpose of these efforts was the organization of a department which should resemble somewhat in function the present Department of Commerce. Since the division of interest between employer and employee was not apparent to many members of Congress, it was quite natural that many of them should have seen the possibility of accomplishing both objects in one organization. As a result the two proposals, one for an executive department in the interest of commercial business and the other for an executive department in the interest of wage-earners, became blended and there was established a Department of Commerce and Labor by an Act which was approved February 14, 1903.

For ten years thereafter the welfare of the wage-earners of the United States was entrusted to an executive department designed to represent the interest of employers also. This

ASSISTANT SECRETARY LOUIS F. POST

course was based on the theory that, after all, the interests of employers and employees are alike. While this statement is probably fundamentally true, it is not always so apparently true upon the surface. During the last year, for instance, there have been many bitter disputes between employers and employees. During the war alone the Department of Labor exercised its conciliatory and mediatory services in industrial disputes between employers and employees involving in all more than 2,000 cases.

The reason why a department of commerce and labor is impracticable does not lie in the fact that the interests of labor and capital *are entirely antagonistic*. It lies in the fact that wage-earners and employees frequently *think that they are antagonistic*. An analogy may be furnished by the administration of justice. It is to the interest of both parties in a suit that exact and substantial justice be administered to both; yet the complainants and the defendants to a suit cannot always agree as to what justice is. If they could agree they would not be in court. So it is with commerce and labor; so long as there is surface antagonism between the commercial interests and the wage-earners of the nation, just so long will it be impossible to represent them in a single organization. If one tried to merge the functions of the attorney for the defense with those of the attorney for the prosecution in a criminal trial, we should soon find that the joint official would become either a prosecutor or a defender; he could not very well be both. Similarly, a department of commerce and labor must eventually represent either commerce or labor.

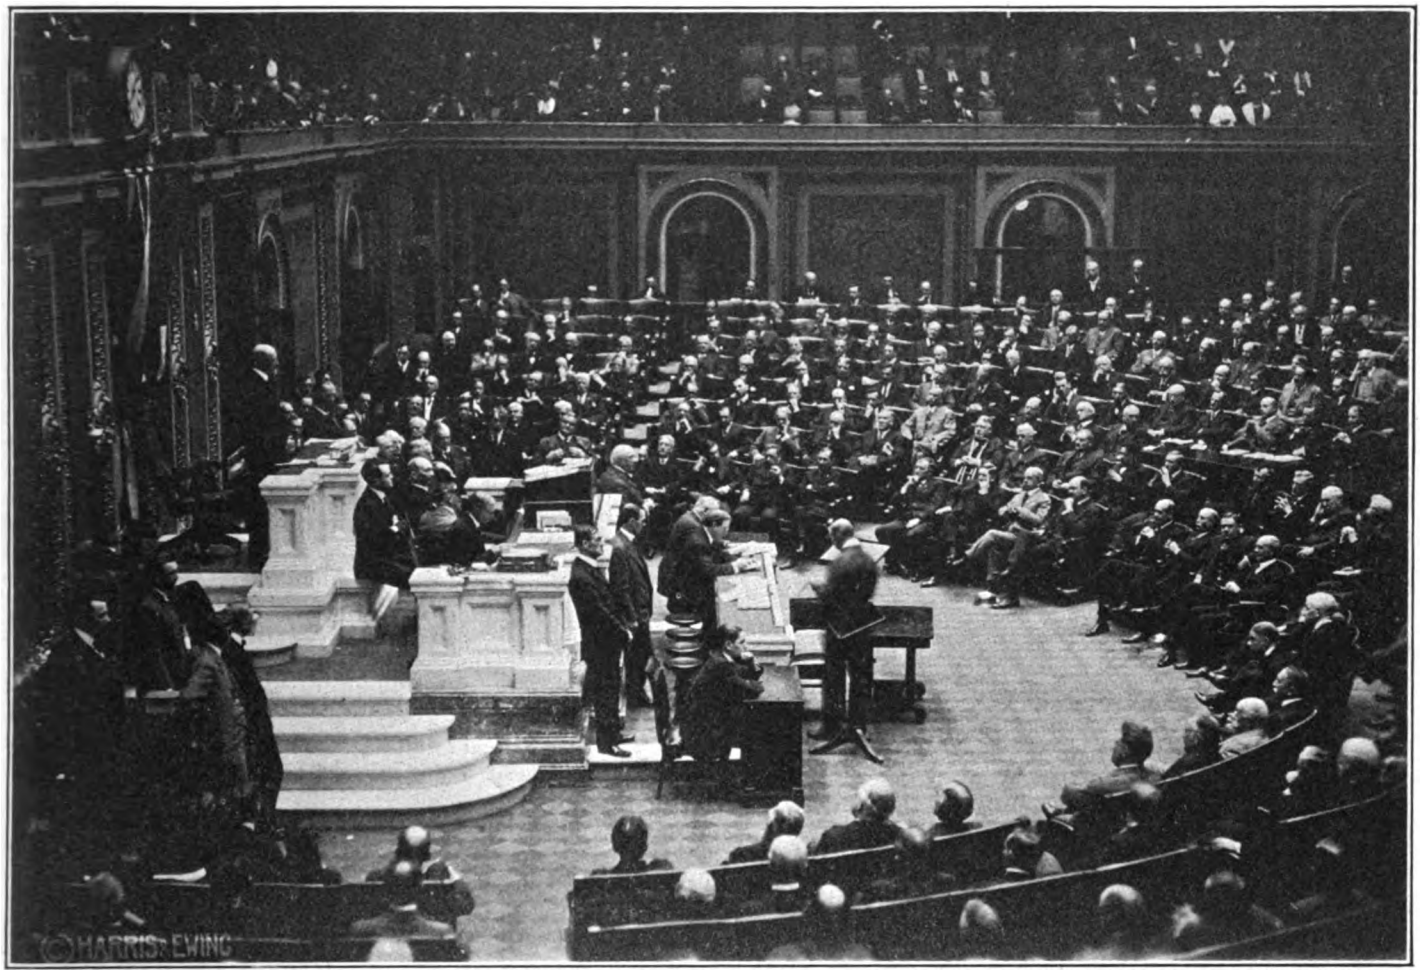
AT LAST A FULL-FLEDGED DEPARTMENT OF LABOR

So the agitation continued, although the official connection between employers and employees continued for nearly ten years. It made little headway, however, until 1913. At that time there was at the head of the Committee on Labor in the House of Representatives a man who had been himself for many years connected with trade unions. He knew intimately the thoughts and aspirations of labor. The result was a favorable report on the bill creating a department of labor with a Secretary at its head with a seat in the President's Cabinet. This bill was passed under very happy circumstances. The Congress which passed it was Democratic, but the bill was signed by the outgoing Republican President, Mr. Taft. Since it was signed in the closing days of Congress, no Secretary was appointed in the outgoing administration. The incoming President, Mr. Wilson, appointed the present Secretary of Labor, a man who for twenty-seven years had been a member of the great Miners' Union and for many years its secretary. He had traveled from east to west in search of work. He knew intimately the problems of labor, not merely through books but through intimate contact and from personal experience.

It is therefore particularly fitting and is a tribute to the democracy of our institutions that the very President who signed the bill creating the Department of Labor should be at the present time a member of its departmental staff. Mr. Taft, as is well known to everyone, is Joint Chairman with Basil Manley, of the War Labor Board, which is one of the subsidiary organizations in the Department of Labor.

(*To be continued in our next issue*)

Digitized by Google



FIRST SESSION OF THE HOUSE OF REPRESENTATIVES, SIXTY-SIXTH CONGRESS

With the New Congress

The special session opened May 19 confronted by a mountain of proposed legislation. Appropriation bills which failed of passage in the last Congress given right of way. Measures of special concern to our membership are the Nolan Minimum Wage bill, the new Retirement bill, and provision for the abolition of existing restrictions on interdepartmental transfers.

FROM THE viewpoint of the government employees as a class, whose salaries or wages, hours of labor, and other conditions attached to their employment, are determined to a considerable extent by our national legislature, the big event of the official world during the last month is the opening of the Sixty-sixth Congress. Promptly at noon on May 19, the day set by President Wilson for the beginning of the special session, the two houses were called to order by their respective presiding officers—Vice-president Marshall and the newly elected Speaker, Hon. Frederick H. Gillett of Massachusetts—for what will doubtless be a prolonged session. The proposed legislation which looms before Congress is no less than staggering with respect to both quantity and importance. There is every indication that the legislative machine will be worked at high pressure throughout the entire session.

The first business to be disposed of will be the great money bills that failed of enactment in the closing hours of the Sixty-fifth Congress. These include the Sundry Civil, Agricultural, Army, Naval, Indian, and District of Columbia appropriation bills, and a large deficiency bill. Among other important questions involved is the continuance of the United States Employment Service, which was forced to cut down its scale of operations to about 20 per cent of its former magnitude owing to the failure of Congress at the last session to appropriate for this great governmental agency.

As a general proposition the salary question was of course put out of the way at the last session by the granting of the $240 temporary increase for 1920. To this extent the government-employee docket was cleared for a while. Nevertheless there will come up from time to time on various appropriation bills items of moment to large groups of federal workers, which will engross their attention and command the best efforts of our National Federation. These will be dealt with from month to month in the THE FEDERAL EMPLOYEE and in the NEWS LETTERS.

An old legislative friend, in the form of the Nolan Three-Dollar-a-Day Minimum Wage Bill, made its appearance promptly at the beginning of the session, and will no doubt be heard

Digitized by Google

from more than once in the days to come. As before, Congressman Nolan of California stands sponsor for this measure, and is determined to press it vigorously for enactment into law. His efforts will be heartily backed by our National Federation and other forces, which regard this bill as of great moment to many thousands of the poorest paid employees of the Government besides embodying a basic principle that should be recognized on the statute books. In the House the Nolan bill will be in charge of the Committee on Labor, of which Representative John N. C. Smith of Michigan is chairman. On the other side of the Capitol the Committee of Education and Labor will deal with the measure. Its friends in the Senate are much encouraged by the designation of Senator Kenyon of Iowa, whose friendliness to the labor cause is well known, as chairman of this committee.

The newly revised Retirement Bill, which differs in some important features from the McKellar-Keating bill of the last Congress (as explained at some length on page) has just been introduced into the House (as H. R. 3149) by Representative Lehlbach of New Jersey, Chairman of the Committee on Reform in the Civil Service, which will have charge of the measure. In the Senate the bill is in the hands of the Committee on Civil Service and Retrenchment, which is presided over by Senator Sterling of South Dakota.

No time will be lost in organizing the most effectual campaign to bring about the passage of this bill the enactment of which means so much to the upbuilding of a more efficient civil service as well as to thousands of deserving employees to whom the proposed legislation is a matter of justice and humanity, already much too long delayed.

Another item on the program of our National Federation that will be brought to the front as soon as practicable and pushed ahead as rapidly as circumstances will permit is the proposition to repeal the restrictions in existing law on transfers among the various executive departments and independent governmental establishments. Such restrictions have proved very detrimental to the best interests of the service and have, moreover, worked injustice and hardship in thousands of cases to employees deserving of better treatment.

Such are some of the chief questions that will engage the attention of those charged with representing our National Federation, and hence our membership, "on the Hill." There will be many other matters, of course, as the session develops that will also demand their watchful care, and of these the members of our locals will be kept informed.

The New Retirement Bill Submitted to Congress

As the result of careful and persistent work on the part of the Joint Retirement Conference a revised Retirement measure was presented to Congress shortly after the opening of the session. Below is a comparison in essential points between the new measure and the McKellar-Keating bill of the last Congress

THE DRAFT of the bill which provides for retirement of superannuated and disabled employees in the classified civil service includes several new features as compared with the McKellar-Keating bill, which was reported to both houses of the last Congress but failed of passage. The text of the new measure will be found on pages 369-375.

DATE WHEN LAW IS TO BECOME EFFECTIVE

Under the terms of the revised bill the law will become effective at the end of ninety days next following its enactment instead of beginning on the first of July next following the passage of the act, as provided in the other bills. As it is anticipated that the bill will be passed in the near future, the change in date will operate to make the law effective without undue delay.

WHAT CLASSES OF EMPLOYEES ARE INCLUDED IN BILL

All employees in the classified civil service of the United States, employees of the Library of Congress and the Botanic Gardens, and regular annual employees of the municipal government of the District of Columbia are included in the provisions of the act. Certain employees in the Lighthouse Service who come within the provisions of a retirement law enacted in June, 1918, and postmasters, are excluded from this act. Public school officers and teachers in the District of Columbia, who have a bill of their own, and policemen and firemen in the District of Columbia, already provided for by existing legislation, are likewise excluded.

PROVISIONS AFFECTING AGE, CLASSES AND ANNUITIES

The McKellar-Keating bill provided for retirement at 68 years of age except for certain preferential classes, for which the age was fixed at 65 years. In the new draft the optional age for retirement for the large mass of employees is fixed at 65 years; for mechanics, city and rural letter carriers, and postoffice clerks at 62 years, and railway postal clerks at 60 years.

During the first ten years under the operation of the act employees may be continued in the service for two-year periods indefinitely; after ten years, however, they may be continued in the service only four years beyond the retirement age, thus making retirement compulsory at 69 years, 66 years, and 64 years in the respective classes.

Employees must have had at least fifteen years of service to make them eligible for retirement on annuity. The years of service are divided into six classes as follows:

Class A, thirty years or more.

Class B, twenty-seven to thirty years.

Class C, twenty-four to twenty-seven years.

Class D, twenty-one to twenty-four years.

Class E, eighteen to twenty-one years.

Class F, fifteen to eighteen years.

RETIREMENT ON ACCOUNT OF DISABILITY PROVIDED FOR

Employees who have served not less than fifteen years, and who, before reaching the retirement age, become totally disabled for efficient service, may be retired on an annuity, computed in the same manner as retirement for age. Unless the disability is permanent in character, the annuitant must submit to a medical examination annually until reaching the retirement age to determine the continuance of the disability. Adequate provision is made for safeguarding the interests of the Government in this class of cases.

Provision is made so that those who are injured in the performance of their duties may have the right of election between benefits under the Federal Employees Compensation Act or annuity under the retirement law.

ADMINISTRATION OF LAW BY COMMISSIONER OF PENSIONS

The new draft provides for administration of the law by the Commissioner of Pensions under the direction of the Secretary of the Interior. In harmony with present practice in pension matters an appeal to the Sec-

"Mr. Burleson, Unionizer"

A striking narrative of the career of "Political Master General" Burleson as the most effectual organizer of postal employees. How one victory in this field led to another, Mr. Burleson all the while, bourbon-like, learning nothing and forgetting nothing, and seemingly being oblivious to the inevitable results of his ruthless policy. Finally "the chickens came home to roost," to the common benefit of the postal employees, the postal service, and the American Federation of Labor.

By WILLIAM HARD
(In *The New Republic*)

IN 1917 Mr. Burleson put forth his supreme efforts to induce his employees to join the American Federation of Labor.

MR. BURLESON AS ORGANIZER OF RAILWAY MAIL EMPLOYEES

In April, through his Second Assistant Postmaster General, he sent a notice of discharge from the service to Mr. E. J. Ryan, president of the Railway Mail Association. The Railway Mail Association included some 70 per cent of the "railway postal clerks," who work on railway mail cars and in the great railway-junction distribution centers called "terminals." Mr. Ryan had sent out to these men a circular in which he said:

"While private employees have benefited by voluntary acts of their employers, railway postal clerks, have been forced to accept changes that have made working conditions in the service worse than at any time in the past."

The facts on which Mr. Ryan's statement was based will be presented in the next issue. The department did not attempt to change the facts. It continued them. But it notified Mr. Ryan to show cause why he should not be discharged for "publishing and circulating false and misleading statements which foment discontent and create disloyalty among the employees of the service."

Mr. Ryan, in reply, offered to substantiate his statements before an "impartial tribunal." The "impartial tribunal" was not furnished. It does not, in customary practice, exist. In the Postoffice Department (as throughout the Government) there is no "Trial Board" for accused employees. In each case the department is itself the accuser, the investigator, the verifier and the executioner. Mr. Ryan was executed forthwith. He departed from the service, remarking to the Second Postmaster General that the "discontent" and the "disloyalty" in the service were "fomented" and "created" not by circulars but by "false economy" and "idiotic efficiency systems" and "unfair transfers and reductions."

Mr. Ryan's discharge was the finish. In October the Railway Mail Association took a referendum vote on joining the American Federation of Labor. Under previous postmasters-general the members of the Railway Mail Association had been strictly civil servants and nothing else. Now they became a part of the organized working class. The result of the count of the referendum vote was:

For joining the American Federation of Labor: 6,827. Against: 2,072. The "for's" had it by more than three to one.

"An Extraordinary Indictment"

"Each [of Mr. Hard's articles on Mr. Burleson] in itself reveals abysmal ignorance of modern management. Together they constitute the most extraordinary indictment of an administrative officer of the government that has been published in our time. They show how Mr. Burleson has destroyed the esprit de corps, the morale, of the department; how he has, in the name of efficiency, promoted sabotage; how he has provoked strikes; how he has organized blundering, and made it a science.

"Each statement Mr. Hard makes is supported by the documents. His articles reveal Mr. Burleson as the leading official exponent of civil service revision —downward."

—GOOD GOVERNMENT, *Official Organ of the National Civil Service Reform League.*

EQUALLY SUCCESSFUL IN UNIONIZING RURAL LETTER CARRIERS

Thus successful with the railway postal clerks, Mr. Burleson turned to the rural letter carriers. With them, however, he failed. They have an organization, but it is relatively small. Rural letter carriers are more scattered, less thrown together, than railway postal clerks or postoffice clerks or city delivery letter carriers. Still, the rural carriers did have an organization, and it was possible to outrage it. Mr. Burleson did so.

In April of 1917, through his Fourth Assistant Postmaster General, he sent a notice of discharge from the service to the president of the National Rural Letter Carriers' Association, Mr. Fred L. White. Mr. White had printed, in a postal periodical, the following statement:

"We have learned from the very best authorities that the department intends to reorganize the rural delivery service by making the majority of the routes 30 miles long instead of 24."

This statement, even if a mistaken one, would not seem to most people to be unforgivably important; but to a Fourth Assistant Postmaster General under Mr. Burleson it was an opportunity of the utmost value. The Fourth Assistant at once gave Mr. White ten days in which to show cause why he should not be discharged for making false statements. Mr. White replied by claiming that his statements were based on information gained in the department itself and by setting up certain events communicated to him from Stoughton in Wisconsin by one M. J. Hokernson, as follows:

Mr. Hokernson was a rural letter carrier. He carried in the Stoughton neighborhood. His was one of the six routes. It was 22 miles long. The department had just reorganized the routes. It had reduced them from 6 to 5. Under the reorganization the shortest route was 26⅞ miles long. The longest route was 29⅞ miles long —within ⅛ mile of 30.

Mr. White thought that such events tended to substantiate his view that the policy of the department was leading to lengthening of the routes from 24 toward 30. The department thought not. Or rather, it finally grounded itself on the assertion that Mr. White claimed to have got his information in the department and that in fact he did not get it there. On this technicality, having to do with the source of Mr. White's information and having nothing to do with the merits of the griev-

Digitized by Google

ances of rural letter carriers, Mr. White was severed from the service.

Mr. Burleson had now got rid of the leaders of two of the postal service organizations. He proceeded to a third. He attacked the city delivery letter carriers.

MR. BURLESON SCORES AGAIN BY UNIFYING CITY LETTER CARRIERS

The city delivery letter carriers had, and have, the strongest organization in the whole service. The total number of city delivery letter carriers in the United States is 34,592. The membership of the National Association of Letter Carriers is 33,297. It is a solid body and conservative in its methods. It gets out a periodical written in the restrained style of a cautious business trade paper. It has kept its secretary, Mr. E. J. Cantwell, as its representative in Washington for twenty years continuously. In 1917 Mr. Burleson contrived the discharge (from the postal service) of its president, Mr. E. J. Gainor.

It had been a custom in the Postoffice Department to allow officers of postal service organizations to have leaves of absence without pay during their terms of duty as officers. It was supposed that officers of postal service organizations, being engaged in work for the welfare of the employees, might be regarded as working also for the welfare of the department. This humane and harmonious understanding was not understood by Mr. Burleson. In the spring of 1917, because of the war, he had issued a general order generally revoking all leaves of absence. He proceeded to apply this order to Mr. Gainor. Mr. Gainor asked for a leave of absence. He was refused it. The routine presumption was that he would return to letter carrying at Muncie, Ind. It was a presumption contrary to fact. Mr. Gainor could not return. His duty as president of the National Association of Letter Carriers, in the midst of his period of office, would not permit him to return. He resigned.

It was a great triumph for Mr. Burleson. In the ensuing January the National Association of Letter Carriers took a referendum vote on joining the American Federation of Labor. It had taken a similar vote five years previously. At that time the count of the vote was as follows:

For joining the American Federation of Labor: 4,118. Against: 19,783. Majority *against:* 15,665.

This time, with the Burleson system fully operating and fully appreciated, the count of the vote was:

For joining the American Federation of Labor: 23,551. Against: 1,971. Majority *for:* 21,580.

THE POSTMASTER GENERAL NOW HELPS THE POSTOFFICE CLERKS

Mr. Burleson had now visited his displeasure upon the presidents of postal service organizations in three of the four principal branches of the service, and he had put two of those organizations into the American Federation of Labor. The fourth principal branch of the service is postoffice clerks. They do the distributing and other work in the regular postoffices all over the United States.

Among them, when Mr. Burleson came into office, there was a rather struggling union, affiliated with the American Federation of Labor. It had started in Chicago in 1900 and had got a national charter in 1906, and it now bore the name of National Federation of Postal Employees. In 1917 Mr. Burleson had already discharged its secretary-treasurer and active promotor, Mr. Thomas F. Flaherty. The circumstances of Mr. Flaherty's dismissal were almost amusing.

Mr. Burleson as Seen by "The Nation"

"Never in our recollection has there been such an outpouring of wrath upon the head of a single official as is now being showered upon Mr. Burleson. That he has been utterly incompetent as an administrator, that his whole attitude towards labor has been false and archaic—these are things which no amount of blustering denial can conceal. But the worst phase of him has been beyond question his whole mental bent. His ignorance and intolerance as a press censor and his ruthless suppression of weak periodicals because he did not like their opinions—here lies his chief offense against American honor and the American spirit. Surely, never was there an official by birth, training, and experience in life so unfit for the task of moulding and controlling public opinion as Albert Sidney Burleson."

Mr. Flaherty had gone to the department in Washington to present a grievance on behalf of a certain clerk in the Chicago postoffice. This clerk had been demoted $100 a year for scattering certain notices of the clerks' organization in the mails among the letters he was handling in order to reach his fellow-clerks who would subsequently handle them. Mr. Flaherty said that it had been a custom to permit postal-service employees to adopt this method of acquainting their fellow-employees with the news of organization events. Mr. Flaherty asked the department to remember that it had been a custom of the trade and to pardon the clerk in Chicago. He remarked further that he himself, in his own old office of San Francisco, had seen clerks scattering organization notices in the mails. The department was moved. It was so moved that instead of merely demoting the clerk in Chicago it altogether discharged him; and also, on the ground that Mr. Flaherty had himself scattered organization notices in the mails, it discharged Mr. Flaherty.

Nevertheless Mr. Flaherty's union was a rather struggling union. It needed help. Mr. Burleson gave it a great deal of help by his passion for sweat-shopping, by his passion for demotions and reductions, by his passion for resisting wage advances in Congress. In 1917, compared with 1916, the cost of food went up 28 per cent. In 1917, compared with 1916, the average salary of postoffice clerks went up less than one-half of 1 per cent. This was injustice. But people can sometimes forgive injustice by itself. They do not forgive injustice joined to insult.

"DELIBERATE INSULT" AND MENDACIOUS STATISTICS

In 1917, in his annual report, Mr. Burleson used the following language:

"It is regrettable that the organized postal employees are making many selfish demands and are insisting that their salaries be permanently increased, although they are justly compensated, receiving more than three times as much as those fighting in the trenches who must of necessity suffer the hardships of warfare."

Postmaster General Burleson's salary is $12,000. The salary of a real general is $6,000, in the brigadier rank. Mr. Burleson does not seem to know why he gets a larger salary than a real general. He does not seem to know why civilian incomes are larger than military incomes. Everybody else knows. Every letter carrier, every railway postal clerk, every postoffice clerk knows. The soldier is destined to battle. Battle has been thought of as a sacrifice to one's country. It has not been thought of as an enterprise in personal economics. It has not been thought of as a gainful occupation to be entered into for the primary purpose of supporting one's self and of feeding and clothing one's wife and of founding a family and of perpetuating the race. Battle is not a livelihood. Sorting letters is, or ought to be.

To reproach letter sorters for wanting more money than was being earned at Chateau-Thierry was to do a thing so unjustified by the manifest facts of life that postal employees could

Digitized by Google

take it only as a deliberate insult deliberately designed to disparage and discredit them in the eyes of their fellow citizens undeservedly and dishonestly.

In the second place, the statistics of this insult were mendacious. The private soldier gets indeed only about one-third of what the average postoffice clerk gets, in money. But there are certain further fairly notorious facts, current in the common public prints. A private soldier gets food, clothes, quarters, medical service, for nothing; the clerk pays for them. The private soldier is also reputed to get an allowance from the Government, at intervals, for his family; the clerk gets no such allowance. Considering these facts, and considering their notoriety in all sections and sexes and ages of the population, the postal service employees could not believe that Mr. Burleson himself believed that they were earning three times as much as soldiers. They took his remark not as an attempt at truth but as an attempt at hatred and malice.

Finally, they resented the character of his allusion to their demand that their future increases in salary should be made permanent. They resented it, and they rebutted it, in precisely the same manner in which Senator La Follette resented and rebutted it when it afterwards came to debate on the floor of the Senate.

Senator La Follette went over all the important wage advances of the last fourteen years. He showed that the wages of the President, of Senators, of Congressmen, of the Postmaster General, have been raised 50 per cent. These advances have been made *permanent*. But when an advance is considered for a clerk, the department arises in the robes of scientific management and efficiency and economy to say that it should be made *temporary*. And it gets made temporary.

UNIONIZATION OWES HEAVY DEBT TO MR. BURLESON

In 1917, in 1918, Mr. Flaherty's struggling union among the postoffice clerks struggled toward strength. From a membership of 8,000 it grew to a membership of 12,000. From a membership of 12,000 it grew to a membership of 20,000. Its growth continues to date. In the months of September of 1918 to March of 1919 it established 100 new local branches in 100 new localities.

Mr. Burleson can now say that in all three branches of the postal service in which the employees are thrown closely enough together to make unionization possible he has effected unionization. He failed among the scattered rural carriers on their lonely routes, but he has given us three new vigorous arms of the American Federation of Labor on our city delivery routes, in our postoffice buildings and in our railway mail cars and railway mail terminals.

Mr. Burleson is precisely the Postmaster General that Nicolai Lenin would choose for the United States. Mr. Burleson has convinced the civil servants of the American postoffice that they belong to the proletariat.

The Women in our Ranks

(*Continued from page* 335)

change in the political barometer has produced since the fathers first set up the government shop on the banks of the Potomac.

SEX LINE IN ORGANIZATION WORK TO DISAPPEAR

One of the chief satisfactions which have been mine in doing what I could to organize the women federal employees has been the knowledge that the NATIONAL FEDERATION OF FEDERAL EMPLOYEES is not an organization of women alone. In the past it has been necessary, and it has not yet ceased to be necessary, for women to band themselves together as a sex for their own protection and for the protection of their special interests against those men and women who are either lacking in knowledge as to what those interests consist of, or are too selfish or indifferent to consider them. This is merely the reverse of the shield on which we see women represented as acting as separate subordinate committees, as "ladies' aids," as auxiliaries of men's organizations, with unlimited powers of work but none at all of deciding policies. As I told the men of my little town a few nights ago, in discussing whether the women should be admitted to full membership in the Chamber of Commerce or be made a Woman's Auxiliary, "An auxiliary body is where you bake the cake and freeze the ice-cream and don't get to know any of the secrets." But it is my opinion and my hope that these separate organizations of women, whether organized through the selfishness of men or through the women's protest against that selfishness, will not last indefinitely. Women are not men—lesser men nor greater men; they are different human beings, for that very reason, and the reason of the common humanity of the sexes, there should be no artificial barriers between them in their councils. There will always be some phases of all subjects on which men will be better informed and more competent to judge, and there will be others on which women will have in like measure peculiar information and ability. As soon as we have come, by virtue of our advance in civilization, to a general recognition of what is, after all, a fundamental physiological as well as psychical fact, we shall cease, either as men or as women, to organize ourselves into bodies segregated along sex lines, because the necessity for such exclusiveness will have disappeared.

This is the reason, in my opinion, why our NATIONAL FEDERATION OF FEDERAL EMPLOYEES and the American Federation of Labor are organized on the more ideal theory, the theory that is based solely on neither likeness nor on difference between men and women, but on both likeness and difference, and on the immeasurable advantage to both sexes of a true appreciation of that likeness and that difference in relation to all the problems of human life. I am tempted to quote if necessary that often repeated, eternally true, observation, of Tennyson:

"The woman's cause is man's; they rise or fall
Together, dwarfed or godlike, bond or free."

New Retirement Bill

(*Continued from page* 346)

retary of the Interior shall lie from the final action or order of the Commissioner of Pensions affecting the rights or interests of any person under the act.

Other administrative details have been worked out carefully in the bill, which will warrant prompt adjudication of claims for annuities, and prompt payment of the same when granted. Checks in payment of annuities will be issued monthly—a decided improvement over other plans heretofore advocated, which provided for payments quarterly.

The Civil Service Commission is required to keep a record of appointments, transfers, changes in grade, separations from the service, reinstatements, loss of pay, and such other information as will enable it to furnish the Commissioner of Pensions with reports necessary to the proper adjustment of claims under the act.

In brief, the general plan for administration of the law provides for adjudication of claims and payment of annuities by the Commissioner of Pensions, the keeping and certification of relevant data by the Civil Service Commission, and the bookkeeping and auditing by the Secretary of the Treasury. This plan is in harmony with present administrative practice, and it is believed that a retirement law can be most efficiently and economically administered under this plan.

THE CASE OF THE SCIENTISTS

The recent decision of the scientific and technical employees of the Government stationed in Washington, representing many lines of science and branches of the service, to unite with Washington Local No. 2 as an occupational group, or branch thereof, is an event of more than passing interest and significance. This is shown by the comments of the press in various parts of the United States, which attach much importance to the incident as fraught with large meaning.

Although many employees in this general class have been members of our organization for varying periods, the action here considered marks the first step on the part of men of science as an integral group to ally themselves with the trade-union movement. That the accession of this body of workers to the wage-earning brotherhood of the country carries with it great good is not open to serious question in the judgment of the writer.

Our present-day life is so complex that scientific research touches our most vital interests at every turn. Problems affecting food, sanitation, housing, education, wages, child labor, insurance, and a thousand other things are becoming more and more dependent for adequate solution on the investigations of the trained men of science. These investigations are naturally for the greater part in the field occupied by the wage-earning classes, from the "submerged tenth" up to and including that section of our population usually classed as of "moderate means." Is it not essential to the proper understanding of, and sympathetic attitude toward, their problems, needs, aspirations, and limitations that the investigator should have as close knowledge as possible of the human material he is studying, knowledge which can best be gained by direct contact with the people themselves?

The benefit to be derived from association of this kind, however, will inure at least as much to the men of science as to their brother workers. The necessities of the case constantly call for increasing allotments for scientific research, calls which do not always meet with the response to which their merit entitles them. The remedy lies in awaking a keener appreciation on the part of the average citizen of the necessity for liberal expenditures by the state for such purposes, and he can be brought into the proper frame of mind in no other way more effectually than by closer association with those who direct the work of research. In order to secure the highly desirable result, then, each class—the man of science on the one hand and the wage-earners in general on the other—must come together to a greater extent than they do now for the common purpose of advancing the well-being of both classes and that of the community as a whole.

Our scientific brethren do not stand alone in the step they have taken. The old line of demarcation between the brain-worker and the hand-worker is rapidly approaching the vanishing point. Workers must frequently supplement the work of the brain with that of the hand and vice versa. The modern labor movement is gathering in its own in a steadily augmenting ratio. Teachers, physicians, newspaper reporters, actors, drug clerks, photographers—even ministers—are merging with the trade-union fraternity in the growing consciousness that they are wage-earners by the stern fact of their economic condition. It remains for them merely to decide whether they will be organized or unorganized wage-earners.—J. G. G.

NFFE

OUR "SHRINKING DOLLAR"

Few things affect the material well-being of the Government employee more than the lack of a stable unit by which to measure values. The salary he receives is apt to remain virtually unchanged for excessively long periods—periods sometimes exceeding half a century—while the purchasing power of the dollars composing it may during that period depreciate, in fact has been known to depreciate 50 per cent or more. An "unshrinkable dollar" is, therefore, a matter of vital importance to him. The merchant can remark his goods or change his price list practically

Digitized by Google

overnight; the banker or investor may contract for a higher rate of interest; the mechanic, through his trade union, may, and often does, arrange a schedule of wages yearly or even oftener; but it takes an Act of Congress to change the salary rates of most government employees, and such acts are not obtained "while you hop on one foot," and when obtained are quite apt to be, by express terms, temporary. Of course, in times of financial depression, this tendency is temporarily the other way, and the relative purchasing value of the dollar increases, but, if any considerable period be used as a basis, the tendency or trend is always upward. In other words, while the pendulum, so to speak, swings part way back, it does not go back the whole way. Measured by decades (except under extraordinary conditions), the purchasing power of the dollar has steadily diminished, and in the last twenty years this diminution, or "shrinkage," as it is sometimes termed, has been so marked as to be startling.

Various plans have been proposed for correcting this tendency, or of obviating its results, and there exists great diversity of opinion on the subject, but such diversity of opinion is largely as to what is a *complete* remedy. Persons of fixed income, including government employees, will be glad to see adopted a plan that affords even partial relief. The matter is the more serious to them because of a widespread opinion that the present inflated standards of value are to become more inflated ere we have a decline.—G. A. W.

NFFE

THREE YEARS' GROWTH

A trifle more than three years ago the movement for the unionization of the civilian workers of the Government in general was hardly perceptible. Today approximately fifty thousand men and women in the employ of Uncle Sam are enrolled under the standard of our National Federation, and the number is steadily increasing at a rate that augurs well for the future. This statement does not take into account the many thousands who are affiliated to the American Federation of Labor through the several organizations of postal employees, to whom belongs the honor of having been the pioneers who blazed the way for those who later followed the same path, nor the great number organized along strictly craft lines. There is every indication that the unionization movement among federal employees is in full swing, and the effect in the long run on such employees, and on the forces of the organized workers of the country as a whole, can hardly be over estimated.—J. G. G.

NFFE

THE SUFFRAGE VICTORY

Thanks to the commendably prompt action of the new Congress the Equal Suffrage Amendment has at last gone on its way rejoicing to the several States, to be passed on by them in due course. Thus, after a struggle of more than half a century which on the whole has been waged by its advocates with ability and pertinacity seldom if ever equaled, and never surpassed, in our political annals, the cause of freedom and democracy has materially advanced in this land of ours, for it is not to be doubted that the necessary number of States will ratify the amendment in the near future. No class of our people should hail the action of Congress with greater satisfaction than the organized federal employees, to whom it means much both in that capacity and as citizens.—J. G. G.

NFFE

THE COMPTROLLER'S DECISIONS

A few words directing attention to the abstracts of selected decisions of the Comptroller of the Treasury, which appear from month to month in our pages, may not be superfluous. As the Comptroller passes on a multitude of questions raised in connection with the various appropriation bills enacted into law by Congress, it follows that the financial interests of government employees are being ruled on constantly by this high official. Judging from communications which reach THE FEDERAL EMPLOYEE from time to time, it would seem that many of our members have already acquired the habit of consulting the decisions, and it is thought that many others might be interested on having their attention drawn to them.—J. G. G.

The Employment Service Vital

"In a period of less than 18 months more than 4,000,000 persons of every grade and type of employer and employed have made use" of the facilities of the United States Employment Service. This cold fact is an emphatic argument for the retention and development of this Service, especially at this time when general employment affords the best protection against possible unrest and disorder.

By J. B. DENSMORE

Director General of the United States Employment Service

TIME WAS when if a man wished his children to be taught, if he wished to communicate with a distant friend, if he needed to trade the product of his toil beyond the confines of his village, he must plan and carry out the entire project himself. Popular learning was undreamed of under such difficulties; even kings could not sign their names. Families lived and died without having journeyed ten miles from home.

The common man, who had no information about work because he had no chance even to read of what men over the next ridge thought and did, gradually lost even the chance to barter his labor at home. The laborer of the Middle Ages, when diffused information was at lowest ebb, was typically either a vassal, most of whose labor was owned by his overlord, or a serf, all of whose energy was thus conscripted.

Since that time the world has progressed to the point where most fields of knowledge are classified and thrown open to every one through the medium of educational, communicative, and transportational facilities. Modern democracy is the political form of which these things are the substance. But with all this progress, with whole sciences developed and galvanized into popular utilities, information about the fundamental necessity, WORK, has been shamefully neglected.

NECESSITY FOR NATIONAL EMPLOYMENT SYSTEM POINTED OUT

A nation-wide employment system is a more important right of the citizens of a democratic country than are adequate systems of schools, roads and railways, postal and other utilities. Labor, beyond even education, communication, and transportation, is a necessity to society. Schools close for months yet the world moves on. Roads break down, wrecks clog traffic —the check to business and living conditions is serious but not unconquerable. But let work cease in even a single city, and an unthinkable paralysis results. Let a wave of drastic unemployment sweep across the country, and the outbreak of disease, and death, crime and anarchy, which manifest the defectiveness of a civilization that does not protect its workers, is worse than the paralysis of strike.

Try as it may, no agency other than an employment system which has the support of the Government, of business, and of workers, can, to judge the future by the past in every modern country, do more than touch the fringe of the complicated problem of labor information and labor distribution. In this country only one agency has been created which, in its brief period of existence, has approximated solution of the problem. In a period of less than 18 months more than 4,000,000 persons of every grade and type of employer and employed have made use of its facilities. More than 10,000 applicants come to it each week now, when nearly half its offices are closed for lack of funds because of the filibuster in the Sixty-fifth Congress. Gifts totaling $125,000 a month, without restrictions on its operation, are being given this Service by States, municipalities and organizations for use until appropriation therefor can be made by the new Congress.

J. B. DENSMORE

WHAT THE U. S. EMPLOYMENT SERVICE HAS DONE

The United States Employment Service is not to be compared with any other war service or public utility. While it was created to meet war needs, present support by those most interested in the maintenance of an employment system proves that its reconstruction period and permanent work will become more valuable than its war work. No other agency than the Government has developed a comprehensive system of employment offices. Despite effort put forth by private interests, municipalities, state labor commissions, and disinterested organizations, a trade union can handle only its own trade; a municipality its own community. Therefore antebellum efforts were with a few exceptions narrow in scope, and if exerted as public functions, were frequently little more than abortive attempts at charity for the nearly unemployable.

More than 2,000,000 clerical and public-service workers are listed in the last census. To judge by your own experience, how many of them used public employment offices? How many even knew where these offices were located? Recently in one month the stenographers and typists alone who registered with the United States Employment Service numbered 12,000, and 5,000 of them are known to have been placed.

In potential importance to the country the United States Employment Service stands out among all public utilities and services at this time. The next few weeks must determine whether it is to be continued so as to develop a service that has been criminally neglected in the past, or is to be junked to satisfy the ambitions of private fee-charging agency owners and their selfish interests.

[NOTE.—There is now before the House Committee on Labor and the Senate Committee on Education and Labor a bill submitted by the Secretary of Labor, making provision for a permanent national employment service.—EDITORS.]

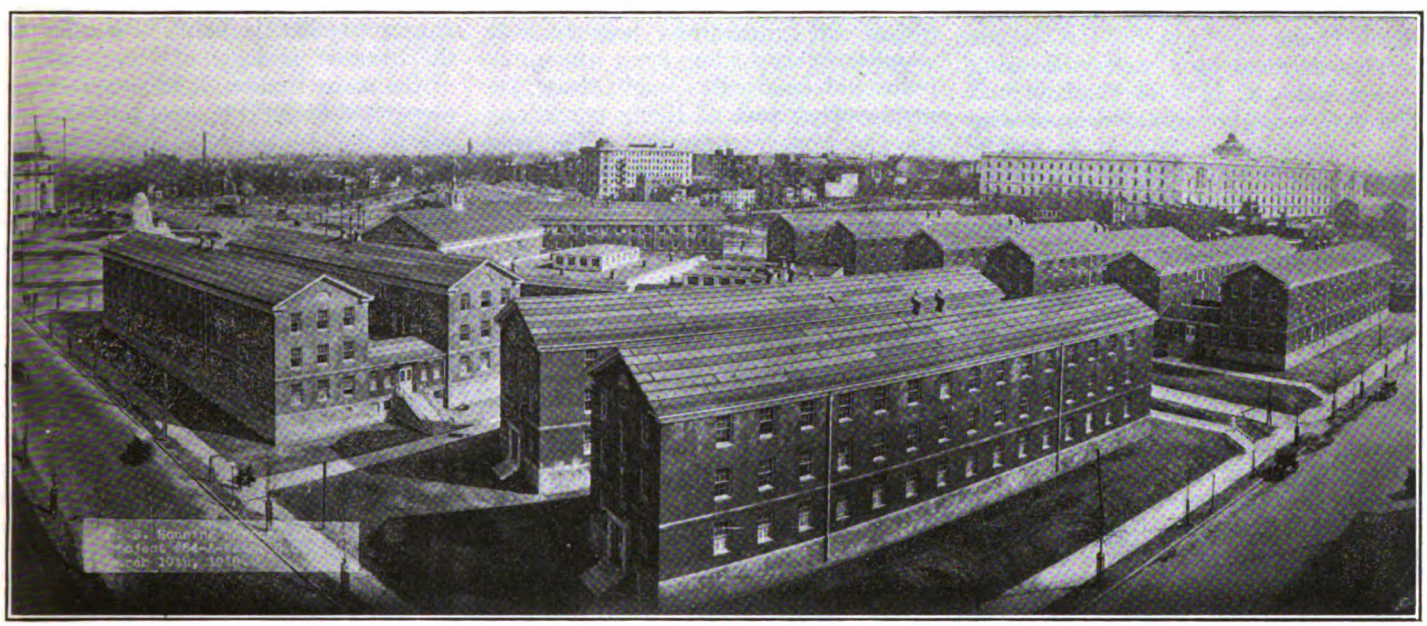
Uncle Sam as "Mine Host"

Glimpses into the life led by some two thousand women war workers as pay guests of Uncle Sam in his capacity of hotel keeper. The harrowing experiences through which many of the workers passed in wartime Washington are touched on. The writer tells the story with the firsthand knowledge of one who has lived "behind the scenes." The general question of government activity in the housing field is also discussed.

By LAVINIA H. EGAN

A Member of Washington Federal Employees Union No. 2



"GOVERNMENT HOTELS" FOR WAR WORKERS IN WASHINGTON

In the background, on the extreme left, is seen the east end of Union Station. Just beyond the "hotel," shown in the left center, is the Columbus Memorial Statue and Fountain. The large white marble structure in the right background is the Senate Office Building, beyond which may be seen the dome of the Library of Congress.

NOW THAT the Government's housing plan has become an accomplished fact in so far as it applies to the Plaza-Capitol group of residence halls in the District of Columbia, the story of the undertaking as it has thus far progressed should make interesting reading. As the initial step toward what, no doubt, will develop into one of the most effective and far-reaching by-products of the general reconstruction plan to be adopted by the United States as a result of the readjustment occasioned by the war, this little group of twelve hotels in which some two thousand women employed in various departments of the Government are housed and fed at $45 per month each, a rate not in excess of actual cost according to present-day estimates, deserves to be focussed rather conspicuously in the spotlight.

HOW THE WAR WORKERS ARE HOUSED AND CARED FOR

As to the houses themselves, they are conspicuously plain of exterior, built of hollow tiles stuccoed, with white wood trim, all quite neat and pleasing in appearance, though the bareness of the lots and the unattractive surroundings leave something to be desired. In this respect, the Capitol group has the advantage of the Plaza group, as the elevation is greater, the surroundings better, while the Capitol grounds with the beautiful show of trees and green lawn give a more attractive atmosphere. Each group of six buildings has its administration building and dining hall, and for the entire group are provided one large auditorium and amusement hall, where entertainments of various kinds including picture-shows may be given. The houses are three stories each, built in pairs, with a common reception room, parlor and reading room, the alphabetic designation, as buildings P-Q, N-O, etc., following the usual trend of singularly unimaginative nomenclature peculiar to the District of Columbia. On each floor are a tub bath and three most attractive showers; and adequate steam heat, electric light and telephone service are provided. The rooms are small, but simply yet attractively furnished, each one having a locker or closet, stationary washbowl with unlimited flow of hot and cold water, a dresser, desk and desk chair, a comfortable arm chair, and a cedar chest that accommodatingly rolls under the cot bed. Each house-mistress is provided with assistants and with orderlies, maids and men, and the rooms are kept immaculately clean and furnished with abundance of clean linen, towels, etc. A victrola in each living room and plenty of periodical literature on the tables take care, in a measure, of the few leisure hours that the government worker has at her disposal.

With the appropriation by Congress of $50,000,000 for the housing of working men employed in shipbuilding for the Emergency Fleet Corporation and the organization under the Department of Labor of a bureau to direct the expenditure of additional millions, $400,000 of which was to be applied to the District of Columbia plans, the interest of the whole country has been awakened to the important problem of town planning and industrial housing.

THE EXPERIENCE OF ENGLAND WITH THE HOUSING PROPOSITION

For a somewhat similar situation let us turn back a few pages of history. It was the Boer War that demonstrated to Great Britain that living conditions in the United Kingdom were such as to require immediate government action. More than 80 per cent of the young Englishmen offering themselves for service in the Transvaal were found physically unfit. In the investigation which followed this alarming state of affairs improper housing came in for the principal share of the blame.

The ferment for better housing which followed in both England and Germany was given greater impetus by the appearance in 1902 of an epoch-marking little book by Ebenezer Howard, called "The Garden City." The dream of Ebenezer Howard became a reality some fifteen years ago in the establishment of the model city of Litchworth, 34 miles out of London. The Litchworth plan, following the Garden City idea, covers about 34,000 acres and includes a business center surrounded by a community of houses, an industrial district, and an encircling area of farm land owned by the village and rented to farmers, who in turn supply the town with farm products. Port Sunlight and Bourneville belong to a somewhat earlier period and are both well-known examples of industrial housing, while Hempstead Garden is the most striking example of the semi-philanthropic working out of the problem by a corporation, which in this instance, by the way, happens to be under the leadership of a woman, the widow of the late Canon Barnett.

It was with this background of pre-war experience that England had to build when she entered the great struggle for democracy, and her energy and activity in this line of endeavor have demonstrated how well she has learned that good homes are essential to good work and to good workers. After various wasteful efforts at economy through the construction of temporary quarters, permanent houses were found to be more economical, and during the three years just passed, England has spent no less than $700,000,000 in her housing projects.

WAR NECESSITY DRIVES UNITED STATES TO CONSIDERING HOUSING

In the United States a survey of the housing question prior to our entrance into the war reveals a decided apathy on the part of the general public despite the noteworthy efforts of civic betterment bodies in various parts of the country. The reasons for this condition are apparent. The influx to our hospitable shores of more than a million emigrants each year furnished an apparently inexhaustible supply of cheap labor from which our industrial enterprises might draw, no matter what sort of living conditions for the workers prevailed. The war in Europe and the consequent drafting of the emigrant class for military purposes put a stop to this, and, for the first time in our history, the United States began to take serious notice of the housing question. The great industrial enterprises which were necessary for the fighting of the war had to have laborers, for the greater part skilled workers, and in order that laborers might be obtained houses had to be provided and living conditions made at least comfortable and in a measure attractive.

A WAR WORKER "AT HOME"

THE PLIGHT OF THE WAR WORKERS IN WASHINGTON

Born of this necessity, by an Act of Congress approved May 16, 1918, "the President was authorized to provide housing, local transportation and other general community utilities for such industrial workers as are engaged in arsenals and other industries in the United States and industries connected with and essential to the national defense, *including employees of the United States whose duties require them to reside in the District of Columbia.*"

While the act was national in its scope, covering the whole industrial situation so far as war enterprises were concerned and affecting some twenty-five or more cities and localities where government activities were connected with the manufacture of shipping, munitions, and other war material, it is the italicized clause quoted above that extended the application so that it materially affected the lives of at least a few thousand of the many thousands of women who responded to the country's call by coming to the city of Washington to take government employment. The response to the call was immediate and nationwide, so that during the year and a half that the United States was actually at war there marched into Washington, unheralded, the overwhelming array of war workers, whose story must be told when history records the part America has played in making "the world safe for democracy."

This rising tide of women workers was so overwhelming and the need for their services so insistent that the city of Washington found itself unable to cope with the situation, and not only the entire District but adjoining towns in Virginia and in Maryland, even as far as Baltimore, 40 miles distant, were called on to relieve the congestion by opening their doors to the war workers. The results that followed this unprecedented condition were somewhat startling, altogether interesting, and ran, of course, along thoroughly human and historic lines. Every incoming train during the actual war period brought its quota of girls of various ages who had to be provided each one a place—or places, as they were seldom the same—to eat and to sleep. The situation quickly resolved itself into a condition comparable to that referred to in the Scriptures, in which the foxes were said to have holes while "the son of man hath not where to lay his head."

Digitized by Google

Many of these "holes" as well as more desirable quarters were rented to the girls at enormous prices, hundreds of uncleanly and insanitary restaurants and cafeterias came into being, and the work of war profiteering went merrily on, unchecked by remonstrance, appeal, or act of legislation.

The conditions soon became well-nigh intolerable, and certain quasi-government agencies, as the Red Cross, the Y. W. C. A., the War Camp Community Service, and the Council of National Defense were utilized to list the available rooms and boarding houses where girls could be located on arriving in Washington, but in the stress of wartime activities of every sort these praiseworthy efforts were inadequate to meet the increasing needs. The result was in many cases disastrous, in most of them deplorable, and in all of them regrettable. Girls were charged beyond their ability to pay; they were crowded into uncomfortable, insanitary rooms; they were forced to go without heat; they were forbidden such common necessities as light and hot water, and, in some instances, the use of the bath itself. They were forbidden to have their girl friends visit them in their rooms, or, worse still, were prohibited the use of the parlor, so that they were forced to entertain men friends in their bedrooms; they were locked out of the house if by chance they stayed out after a certain hour, and were often forced to apply for police protection under such circumstances.

These things do not make pleasant reading, and should rest heavily upon the consciences of those citizens of Washington who "opened their homes to the war workers" after such fashion, but they are actual facts as brought out in the testimony before the Public Buildings and Grounds Committee of Congress in whose hands the housing projects were placed for consideration and disposition.

Into this already unbelievable condition there projected itself another horror, the Spanish influenza. This found in the war workers easy victims. Thousands of them died of the disease, the number of deaths in the city of Washington during a single day numbering more than those in Philadelphia for a whole week. The report of the board of health disclosed the facts that the war workers were peculiarly susceptible to the disease by reason of their lowered vitality occasioned by overcrowded, insanitary housing conditions and malnutrition due to improper diet forced on them by the exorbitant prices of food, which they could not pay. These conditions were bad enough, but the war workers' troubles were not yet over. Along in November there came what seemed for the moment another calamity to the war worker, cleverly disguised as a blessing to humanity, that somewhat misleading thing called "the armistice." The war was ended; the war worker's task was over; she should leave her job "to the boys who had won the war and go back home where she belonged." This was the cry that went forth rather vociferously from the press and elsewhere. Some thousands of the girls contracted the demobilization fever as readily as they had contracted the "flu;" many of them went home, so that their places had to be filled by new, untrained girls brought on for the purpose, and the waste and loss in efficiency caused by this trunover in the office forces of the Government were enormous.

WORSE SITUATION THREATENED BY ACTION OF SENATE

But, like the proverbial cow that ate the grindstone, it remained for the Congress to add the final chapter to the war worker's tale of woe by the passage through the Senate of a "joint resolution directing the United States Housing Corporation to suspend work upon all projects where construction is not more than 75 per centum completed and to cancel all contracts for furniture and for other purposes."

That was indeed the last straw. When the resolution passed the Senate committee it seemed unbelievable that a body of sane men having in their hands the power to control the destinies of so many human lives should be so unaware of conditions actually existing not only in Washington, but in other localities where government workers were employed.

Those who are interested to know how the joint resolution was finally defeated and the various individuals and organizations that were active in presenting the matter in its true light and saving the House of Representatives from making the same blunder that had been made in the Senate, are referred to Public Buildings and Grounds Report No. 17, Hearings before the Committee of the House of Representatives on S. J. Res. 194. That bulletin is a human document since it tells of conditions as they actually existed in the Capital City of the United States while the united forces for good were fighting for the freedom and the betterment of mankind on the battlefields of Europe. No story of the great war will be complete without the little homely tales of self-sacrifice and hardship and suffering that went on out of sight far from the scenes of actual conflict, and among those homely little tales belong the record of the deeds of the war worker in Washington in the year of grace 1918.

But, happily, the struggle is over; the war has been won, and, along with other valuable lessons, it has taught us that better modes of living make for efficiency, and it has awakened our national consciousness to the need of good homes for industrial workers of all kinds.

PRINCIPAL MEN IN CHARGE OF HOUSING PROJECT

The story of the Government's housing undertaking would be incomplete without reference to the men who have handled the project from its incipiency. At the head of the United States Housing Corporation was Otto M. Eidletz, of New York; Vice-president, Joseph D. Leland, 3d, of Boston; General Manager, Burt L. White, of McKim, Mead & White. The operating division, which had to do with the upkeep and the sociological side of the undertaking, was in charge of Allan Robinson, of the City and Suburban Homes Company of New York; Chief Town Planner, Frank Law Olmstead, the younger; Chief Engineer, John W. Alvord, of Chicago; Manager of Construction Division, Daniel T. Webster; Manager of the Real Estate Division, William E. Shannon, of Washington, who has recently become the official head of the corporation.

After Long Years

The storyette editor sat in his den and his visage was puckered and blue. He was wading through piles of ancient jests that were stale when the world was new. There were jokes of the plumber that Adam made when he was a gay young spark. There were nautical wheezes by Mariner Noah when he sailed with the Zoo in the ark. There were jokes of goats, of mothers-in-law, the anglers and mythical fish. There were midsummer jestlets and Christmas puns—a widely assorted dish.

But the editor knew them all by heart, and his heart grew black with guile as he read the jokes that the Pharaohs told to the crocodiles down by the Nile.

But all of a sudden he gave a cry and his breath came thick and fast, and he scanned a post-card eagerly, and then shouted:

"At last! At last! A brand-new joke! Can it be, ye gods? Yes, 'tis; yes, 'tis, I vow."

Then his brain gave way with a horrid crack, and he's in the asylum now.—*Tit-Bits.*

Federal Employee leaving city wishes to dispose of a paid up Y. M. C. A. membership, at a greatly reduced rate. 112 McGill Building.

"My Day's Work"

This month we listen first to a sister worker, who chats interestingly of her duties ane of the motley array of people among whom her lot is cast, way down on the southern confines of Uncle Sam's big domain. We no sooner say good-bye to her than we are with two of our brethren whose "day's work" is carried on in the biting cold of a winter's day on the New England coast. And the work of these fellow-employees is fully as different as are their environments.

In a Passport Office on the Mexican Border

A true-to-life pen picture of the diversified stream of humanity that pours constantly through the Federal Passport Office at Laredo, Texas. Surely our readers will agree that here is one post of duty at least on which the employees can draw their salaries without twinges of conscience.

By BLANCHE BYERLY

Filing Clerk, Passport Office, Laredo, Texas, and a Member of Federal Employees Union No. 36

THE FEDERAL employees arrive at the Passport Office about 8.15 a. m., except the Control Officer, who stops by the Immigration Office in another building to get the mail and any instructions the Chief may have for him. In about fifteen minutes he arrives, and by this time everything is shipshape for handling the usual morning crowd of train arrivals just in from San Antonio, on their way to Mexico. It is not customary to permit the crowd to enter the Passport Office until the Control Officer arrives, they remaining in the hall until the doors are opened to them. This Monday morning someone knocked, using a knock similar to the one the employees use in order to pass the crowd. One of the men employees went to the door, expecting to let in an employee, but instead there stood a beautifully dressed woman, and the employee, manlike, did not have the heart to refuse entry to a pretty woman, so asked her to come in. She chatted awhile, stating that she was an opera singer on her way to Mexico City to fulfill an engagement there; that she had had the bad luck to get on a Pullman car No. 13, and that therefore the baggage car had something happen to it, so that it had to be left behind, and her little dog was on it. Her chat was cut short by the arrival of the Control Officer, who viséd her passport and let her go. Then the door was opened for the train crowd, and they pushed in, and the day's work began in reality.

The train arrivals above mentioned

TOO IGNORANT TO FILL OUT AN APPLICATION

MANY VARYING TYPES OF HUMANITY DEALT WITH

are composed principally of American citizens bearing American passports to be viséd for entry into Mexico. This takes but a short time; then they are manifested, which takes a little longer, as quite a few questions are asked, but in a short while they are "cleared" by this office and on their way to Nuevo Laredo, Mexico, to board a train which leaves there about 10.30 a. m., American time, for the interior of Mexico; that is, they are "cleared" if there is nothing irregular about their passports. Sometimes persons come from Canada or France who failed to get their passports stamped, which means they have never been admitted; therefore they are illegally in the United States, and this port cannot permit their departure until their entry is verified. This necessitates telegrams and delay, and makes these persons furious, especially if this oversight is the fault of the immigration employees at the port of entry, but this morning there was none of that irregularity. One woman, with rather a severe expression (she must have been the kind of suffragette who wants to rule everything), objected to the question asked in the manifesting concerning "original descendants," expressing her dislike in not very ladylike terms, thus: "What in the devil is the use of knowing who your descendants are when you have an American passport? The Control Officer looked up somewhat surprised, but responded calmly and politely that it was merely a matter of law, which seemed to satisfy her completely. One man and woman who were in transit through the United States had had to enter at Halifax instead of New York on account of the strike in New York, but their passports had been properly viséd, so they had no trouble at this port of egress.

There is nothing passive about the Passport Office but a constant stream of humanity of all types and nationalities coming and going. While the front office is handling the train crowd, the employees in the adjoining rooms are taking care of the ignorant, destitute, border permit and citizen's identification cards. On this Mexican border those aliens too ignorant to make application are not required to do so, but instead an employee in the Passport Office questions them and gets the data necessary for the files to let them pass. Oh, what a job! What ignorance! What destitution! This is dealing with the lower class of Mexicans, and most of them cannot read or write, hardly ever know exactly when and where they were born, or how to spell their names. The men taking care of this part of the passport business have to have a good sense of phonetics and a knowledge of how to spell Mexican names and be

Digitized by Google

judges of ages; also a surplus supply of patience is necessary from which to draw when a host of them is outside the door waiting their turn, and one person takes years, it seems, to think up the answers to these questions all should have at their tongue's end. About half a hundred a day of this class pass through the mill of the Passport Office, and today was about the same as usual. What a picture this moving mass of humanity makes. Perhaps there may be Juan Perez with his wife, Angelina Gonzales de Perez, and several children with names of Angel, Jesus, José, and you gaze upon the dark-skinned, poorly clad, dirty family, and ponder on their heavenly names, and somehow there seems to be an incongruity somewhere.

THE FORTY-MILE-ZONE SYSTEM IN OPERATION

Those persons living within forty miles of the border on either the Mexican or the American side can secure "border permit" cards, if aliens, or "citizens' identification" cards, if citizens, to cross and recross the border, by making application in duplicate, having photographs attached with their descriptions written out. Some of the passport employees make out the border permit card, taking the thumb impression, pasting the photograph on the card, making a description of the party, and examining the applications to see whether the questions are answered properly and sign them. One application goes to Washington, one remains in our files, and the card is given to the applicant. The number of these vary from ten to thirty a day, and today was about an average day. About the middle of the morning a man who had just arrived in town and expected to be here only a short time sought a border permit. When told he could not secure a border permit, as he was not a resident of the forty-mile zone, he just asked the Control Officer who was the "man higher up." I imagine the "man higher up" will try to convince him that he is not a resident and therefore must secure an American passport, and I hope he will not be angry at the federal employees for complying with regulations. A woman from New Braunfels, Texas, seeks a border permit. She lives outside the zone, so this cannot be granted; but she has a Mexican passport, which can be viséd for her to cross the border. Upon questioning her, it is found she can neither read nor write; she is told if she goes across she cannot get back, as it is against the immigration laws to permit illiterates to enter. She decides this side of the Rio Grande is the better. A good decision, don't you think? Not long ago a woman whose brother was a slacker sought a border permit card. He had evaded the draft and skipped to Mexico. She was informed that the privilege of a border permit was not granted to the families of slackers. She promised if permitted to go she would get her brother and deliver him to the Department of Justice, as his actions had caused the family untold anguish and trouble. She kept her word, and Uncle Sam has the slacker in custody.

In order for either aliens or American citizens who reside in the zone, or outside of it, to go into the interior of Mexico beyond the forty-mile zone, it is necessary to file application in duplicate; this office sends one copy of the application to Washington, retaining one in its files. It takes about eighteen days for the application to return from Washington, giving the permission or denial. Today a woman filed application who was an American citizen, but married

TYPICAL DESTITUTE MEXICANS

a Turk, making her at the present time a subject of Turkey. She doesn't know where her husband is; she is in poor health and wishes to go to Mexico. As she is a subject of a country which was not one of the Allies in the war, a sworn statement has to be taken from her. I feel sorry for her, exchanging American citizenship for that of Turkey even for love's sake, don't you? A shoe salesman from St. Louis who failed to make application in his own city, as he should have done, so had to make one here, stepped in to see if his permit had come. A dentist in the Reserve Corps of the United States Army dropped in to see if his permit from the War Department had come, that he may depart from the United States. A watchman from the International Foot Bridge brings up two border permit cards taken up Sunday for drunkenness of the owners and smuggling mescal, a Mexican drink said to be stronger than whisky. Since John Barleycorn is an outlaw in the United States saloons have been established on both sides of the street on the Mexican side of the International Foot Bridge and it is said that a whiff of the odor of liquor is wafted to the passerby before he gets halfway over the bridge. Although these saloons are in Mexico, the signs upon them are in *English*. It is a good thing the Passport Regulations require a person to have a specific business to go across or some might be tempted to go across just to regale themselves and be the worse for the experience.

Now (dear reader) you have a glimpse of what goes on in a Passport Office. Eight federal employees are kept busy questioning, interpreting, examining papers, taking oaths, manifesting, writing letters and telegrams, and keeping records for the more than 100 per day of various classes and nationalities of people departing into our neighbor country, Mexico. As one man said: "They surely get your pedigree in the Passport Office." Some people call Laredo "the jumping-off place," but happily for us we haven't jumped off yet, but are standing as a sentinel guarding the border at this point of the dear old U. S. A.

Inspecting Boilers and Hulls Not a Job for Weaklings

The hoary saw that a government job is a "soft snap" is rudely challenged in this article. Our correspondent, who keeps his grip on the payroll by virtue of pursuing the gentle avocation of crawling in and out of, and through and over and under and around the boilers of sundry vessels, in order to examine them, thinks the "soft-snap" notion is "greatly exaggerated,"

By JOHN STEWART

U. S. Assistant Inspector of Boilers, Steamboat Inspection Service, and Member of the Boston Federal Employees Union

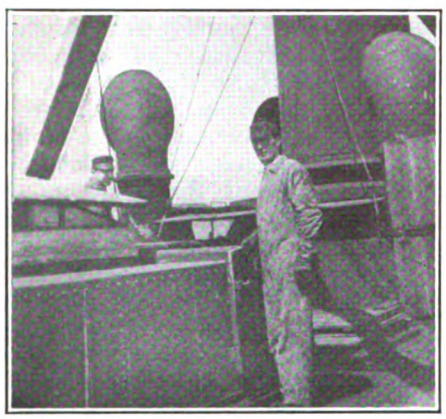
A DAY'S WORK of an Assistant Inspector of Steam Vessels. Whew! If some of the critics who think a government employee's day consists of a few hours spent in an office with feet cocked up on a desk, reading newspapers and smoking Havana cigars, would follow one of these inspectors, they would revise their opinion.

Digitized by Google

Suppose we take as a sample a day's work in the month of January, with the official thermometer registering two degrees below zero, which means four or five below along the water front, where our work is done.

THE DAY BEGINS WITH A FIFTY MILE JOURNEY

At 4 p. m. we receive our assignment for the following day. This is to inspect a large passenger steamer fifty



READY FOR WORK

miles distant from the home port, which means taking a train at 7.15 a. m. To do this we have to carry our bags, weighing about twenty pounds, home with us, with all the inconvenience of dragging them through the crowded subways during the rush hours going to and coming from our homes.

Shortly before 8.30 a. m. two well-dressed gentlemen arrive at the railroad station in the city where the vessel is. The wharf is about ten minutes' walk from the station with no cars running between. Our economical government will not stand for taxicab hire for such a short distance, so buttoning up our coat collars, we grab our bags and march down the street in the face of a cutting northwest wind. Arriving at the vessel, we separate, the assistant hull inspector going to the chief officer's room, the assistant boiler inspector to the chief engineer's room. In a few minutes we again appear on the scene, but ye gods, what a metamorphosis! The two prosperous-looking, neatly dressed gentlemen now look like laborers, one having the appearance of a stevedore, the other a coal heaver.

REAL WORK NOW BEGINS—TESTING BOILERS FROM WITHOUT

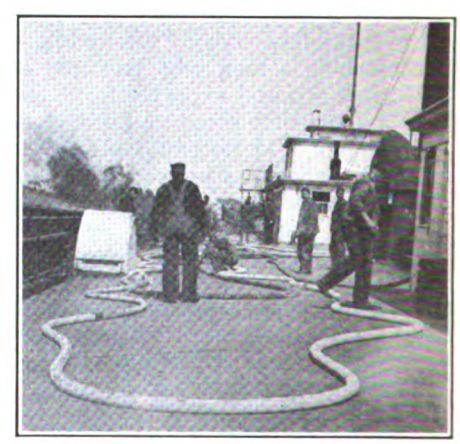
Down into the boiler room we both go, the first operation being the application of the hydrostatic test to the eight boilers in the vessel. This is one and one-half times the working pressure allowed to be carried on the boilers, and must be witnessed by the hull inspector. Our paternal government does not trust the boiler inspector to do this alone, presumably because he might be blinded by a greenback held in front of his eyes, and would stop the pressure before it reached the limit. This pressure is obtained by closing all outlets from the boilers, filling them completely and then continuing to pump water in until the pressure reaches the amount required. It is anything but comfortable in the boiler rooms while this is being done. The water leaks out of joints and valves and it is almost impossible to find a dry place anywhere in the fire-room. The inspectors are compelled to stand where they can see the test gauge to note the pressure, and fate nearly always wills that this place is under the joint that is leaking the worst. This means a cold shower bath with the thermometer below zero, at the very beginning of the inspection.

When the pressure is obtained the hull inspector goes on deck in the biting weather, his clothes and feet wet, to do his part of the inspection and take chances of getting pneumonia. The boiler inspector makes a thorough examination of the boilers while they are under the hydrostatic pressure. This of itself would be considered a fair day's work by some of the government employee's critics. The eight boilers in this vessel have four furnaces each, which means thirty-two trips in and out of these furnaces, crawling through small furnace doors on the stomach, over bridgewalls of rough fire brick, into the combustion chambers with a flash light and test hammer in the hands. In each combustion chamber are hundreds of stay-bolts that have to be examined and tested with the hammer to locate any that may be broken. By the time the thirty-two trips through the furnaces are completed, the back is aching and legs are cramped, but there is no time to rest them. Just a chance to stretch and then under and over the eight boilers to see if any leaks or cracks have developed under the test pressure. Aching back and cramped legs notwithstanding, into cramped places, through small holes, first on the back, then on the stomach, scraping shins, knees and elbows, wriggling and twisting around pipes through the water which is trickling down from the leaky joints, every part of the shells of the boilers are examined. Then out into the boiler rooms to test the safety valves, which have been clamped down during the hydrostatic test. The pressure is lowered below the working pressure allowed, clamps are removed from the safety valves and pressure is pumped up again until the safety valves blow off. If they blow at the working pressure, well and good; if not, as is frequently the case, several trips to the tops of the boilers, where the valves are located, are necessary to adjust them.

TESTING FIRE HOSE ON DECK IN ZERO WEATHER

Finally this part of the work is done, but the work of inspection is not completed; far from it. The boilers are now to be emptied, and while this is being done, the boiler inspector goes on deck to test the fire hose though soaking wet, in the biting wind, with the thermometer below zero.

All fire hose on steam vessels must be tested to 100 pounds per square inch, and again, our suspicious Government does not trust one inspector to do this work. It must be witnessed by both hull and boiler inspectors. Several lengths of the hose are coupled together, one end closed with a cap into which a test gauge is inserted, the other end coupled to the fire main and water pumped into the hose until it reaches 100 pounds pressure. Hose has a habit of bursting, and when it does somebody gets wet. However, it makes little difference to the boiler inspector; he is about as wet as he can get anyway. When a section bursts, it is removed, and the pressure applied to the remainder. Forty sections of hose are tested in this manner, taking at least one hour to do so, by which time hands and feet are numb, heart and soul sick, and prayers going up that rheumatism or some worse sickness will not develop from the cruel exposure. Then all the fire extinguishers are discharged and refilled. In most cases this must be done in the presence of both inspectors, al-



TESTING THE FIRE HOSE

though not specifically required by law.

By the time this is done it is noontime, and there is a short respite for lunch. A half hour is all the time that can be spared for this, as time presses, and the inspection must be completed. Sailing schedules must not be interrupted for such an insignificant person as a government inspector.

Digitized by Google

EXAMINING INTERIOR OF BOILERS NOT A REST CURE

By the time lunch is eaten the boilers have been emptied, manhole doors removed, and the boiler inspector goes below again to examine the interior of the boilers. The examination of the exterior of the boilers was a strenuous enough job for anybody, but it was easy in comparison with the interior examination. The manhole doors are usually 11 inches by 15 inches, and the average-size man has just about room enough to squeeze through them. The interior of the boilers is filled with braces and pipes, through, around, and over which the boiler inspector has to twist and crawl to get to all parts of the boilers. It frequently happens that he gets stuck between these braces and then comes a back-breaking, heartrending experience. Twisting, squirming, wriggling, at last he slips through to the place he wishes to examine, worrying about the difficulty he will have getting back again through the same place. When the eight boilers have been thus examined the arduous work of the boiler inspector has been completed.

There only remains the noting of repairs that have been made since the previous inspection, examination of the licenses of the engineers, examination of all parts of the engine and fire rooms for fire hazards, exposed parts of the machinery to see that they are protected by hand rails and guards, and a few other details.

Up to the chief engineer's room, out of the overalls, a rough wash in cold water usually, back into the decent clothes again, then a look for the hull inspector, who has been just as busy in his part of the inspection, examining life-preservers, buckets, axes, lifeboats and equipment, etc.

HOME AGAIN TO LATE DINNER AND REPORT WRITING

The work completed, the two inspectors, again changed to respectable-looking citizens, leave the vessel to get the 5:30 p. m. train for the home port. If the train is on time they arrive home soon after 7 p. m., to a late dinner, but not to rest or take in a show; not so you would notice it. A telephone message has come from the office detailing the boiler inspector to visit a vessel at 9 a. m. the next morning to examine some repairs that are being made to the boilers, thence to a dry dock to examine a vessel that has been ashore and is being repaired, after which he must return to the office. Seeing that these assignments will keep him busy the following day, he sits down at his desk when he finishes dinner and writes up his report of the inspection he has made, and is then ready for bed.

Business Management for the State of Illinois

SOMEWHAT in line with the change from old systems of city government to the modern commission form that is so rapidly winning the West is the step recently taken by the State of Illinois.

Governor Frank Lowden, in describing this experiment in a recent issue of *The Nation's Business,* says that under the old system it was a practical impossibility for him to see to the administration of the affairs of his State, and its citizens came finally to realize the necessity for "binding all of their scattered fragments into one bundle and then making someone responsible for the bundle."

NINE DEPARTMENTS INSTEAD OF 125 LOOSELY RELATED AGENCIES

In pursuance of this policy Illinois abolished her 125 or more independent, competing, and often overlapping commissions distributed over the State, substituting in their place nine distinct departments, namely: Finance, Agriculture, Labor, Mines and Minerals, Public Works and Buildings, Public Welfare, Public Health, Trade and Commerce, Registration and Education.

Each of these departments is under the supervision of one director, with his offices in the State Capitol, thus making it possible for the Governor to be in almost instant touch with any department of the Government.

The powers and duties of each department are defined and are conferred on its director, who prescribes rules and regulations for his subordinates. Objection was raised at first that this placed too much power in one man, but Governor Lowden says:

> We have gone under the theory that we could tie men's hands for evil, but at the same time leave them free for good—an absurd theory. It is as if we sent men into battle without arms, fearful that weapons might be turned against us. . . . We believed that what was needed was not more but fewer agencies of government, not less, but more power lodged in the responsible heads. We believed that if instead of the law fixing in detail the duties of each official within the department, the head of the department were authorized to fix those duties himself, there would be little red tape. Individuals execute best. A commission may be more desirable where quasi-judicial and quasi-legislative powers are exercised, but where the duties are purely or largely ministerial, experience has shown that it is a man and not a body of men who get results.

Provision is made for advisory boards composed of public-spirited men willing to serve without pay when their advice is needed. The department head is not bound to accept any decision of this board, but as yet none has failed to follow its counsel.

CAREFULLY PLANNED BUDGET SYSTEM NOW IN FORCE

One of the greatest savings to the State has resulted in the method of preparing the appropriation bills, which, under the old system, were prepared by the heads of the various offices, boards or commissions, without regard to the income of the State or the needs of other departments, and referred to an appropriations committee which, having neither time nor the opportunity for adequate investigation, passed the appropriation requested.

Contrasting this with the new system, with its Finance Department acting as "the eye of the Governor," Mr. Lowden concludes his description thus:

> The director has the power to provide under the Governor's control a uniform system of bookkeeping in all branches of the Government; to prescribe forms for accounts and financial reports; to supervise and examine the accounts and expenditures of the several departments; to examine into the accuracy and legality of accounts, receipts and expenditures of the public moneys; to keep summary and controlling accounts; to examine, approve or disapprove vouchers, bills and claims of the several departments. Each department, before an appropriation becomes available for expenditure, must prepare and submit to the Department of Finance an estimate of the amount required for each activity to be carried on, and an account must be kept and reports rendered, showing the expenditures for such purposes.
>
> His most important duty, however, is the preparation of a budget. He is required to procure information as to the revenues and expenditures for the two preceding years; the appropriations made by the previous General Assembly; the expenditures therefrom; encumbrances thereon and the amounts unencumbered and unexpended; an estimate of the revenues and expenditures needed for the next two years. He is empowered by law to make any inquiries and investigations needed as to any item desired by any official charged with the expenditure of public money.
>
> He is required before the first of January preceding the convening of the General Assembly to submit to the Governor in writing his estimate of revenues and appropriations for the next succeeding biennium. This will enable the Governor to submit to the General Assembly a genuine state budget, which he is required to do not later than four weeks after the Assembly convenes.
>
> The fiscal year of our present biennium began on July 1, 1917. In the exercise by the Director of Finance of his duty to supervise expenditures, he began at once preparation of the budget to be submitted to our next General Assembly, which meets in January next year. Tabulations and detailed analysis of such expenditures during the current fiscal year are now being compiled for use in checking up and comparing the requests for future appropriations.
>
> His investigation of expenditures, as actually made, will greatly help him when estimates are submitted to him by heads of departments in determining whether those estimates are warranted or not. If not needed, he will reject them; if too large, he will reduce them. In other words, we have the machinery for presenting a real and intelligent budget.

THE OPEN FORUM

THE FEDERAL EMPLOYEE invites letters from its readers on subjects which properly come within the scope and purpose of the magazine. Particularly desired are suggestions which place the emphasis on the constructive side of things, looking toward the improvement of the United States Civil Service and of the condition of its employees.

Communications should be written concisely and should not exceed 300 words in length, otherwise the editorial blue pencil may have to be used. Please write on one side of the paper only. Typewritten manuscript, OPEN-SPACED, will be greatly appreciated by the editors. Each correspondent should retain a copy of his contribution. Every communication must be accompanied by the writer's name and address, which will be withheld from publication on request.

THE FEDERAL EMPLOYEE assumes no responsibility for expressions of either fact or opinion by correspondents.

PRIZE ANNOUNCEMENT

Until otherwise announced, THE FEDERAL EMPLOYEE will pay the sum of five dollars for the letter published in the OPEN FORUM which shall be adjudged the best in the number of the magazine in which it appears. Contributors will please bear in mind that communications intended for publication in the OPEN FORUM of a certain month should be in the hands of the editors by the tenth of the month next preceding.

The Editors venture to remind correspondents that it is desirable that letters intended for publication in the OPEN FORUM *be written as concisely as possible in order to give the "other fellow" a chance to be heard.*

Red Tape—by the Spool

Many twists and turns through the Navy Department in quest of official information —"'tis a sad story, mates."

To the Editors:

The writer recently had occasion to secure information in regard to the wages paid in shell-loading plants. It developed in the course of the investigation that all shell loading was done under the supervision of government officials. It was comparatively easy to get this information in so far as the War Department was concerned, through the Ordnance Bureau, but when the inquiry was pursued at the Navy Department a striking example of governmental red tape was encountered.

Inquiry was first made of the Chief of the Ordnance Bureau, who stated that shell loading and wages came under their jurisdiction, but that he was unable to supply the information, and referred me to Captain A.

Captain A stated that the manufacture of the shells came under his jurisdiction, but that he had no information in regard to the wages paid to the employees, and referred me to Commander B.

Commander B said that the loading of the shells came under his jurisdiction, but he could give me no information in regard to the compensation of the employees, and referred me to Captain C.

Captain C stated that he had the information at hand but declined to give it to me, advising me to make application to the Assistant Secretary of the department for the information.

I went to the Assistant Secretary's office and interviewed his secretary, who at once advised me to take up the matter with the Appointment Clerk. I then explained to him that I had been to the Appointment Clerk, to the Chief of the Ordnance Bureau, to Captain A, to Commander B, and Captain C, and inquired if it would be necessary for me to go over the entire route again.

He seemed to appreciate the humor of the situation and requested me to be seated, saying that he himself would take up the question with the Appointment Clerk. After the lapse of about fifteen minutes he returned and informed me that after consultation with the Appointment Clerk, it was decided that the information could not be given out except on a request addressed to the Secretary of the Navy.

I then returned to my office, drafted a letter addressed to the Secretary, embodying what was desired, and after a lapse of about ten days, received a reply.

This is a striking example of governmental red tape.

"LOBBYIST."

Washington, D. C.

"Plain Living and High Thinking" Versus Low Salaries

"Plain living and high thinking" is a beautiful standard, but the high thinking is interfered with to a large extent when one has to make a very small income cover a very large outgo."

To the Editors:

I do not agree with the sentiments expressed [in our May issue, page 295] by the honorable clerk of the Sierra Forest when she deplores the fact that federal employees use up much energy in complaints. This may be true in Northfork, where the number of federal employees is necessarily very small, but it is not true in Los Angeles, where there are so many hundreds. In ten years in the Service I have never heard a salary complaint from any *other* department than the Forest Service. "There's a reason." Better salaries are paid in other departments. Clerks entering other branches here receive more money than Forest Service clerks, after ten to fifteen years of satisfactory work, can hope to receive, and field men in other branches receive almost twice the salary paid Forest Rangers. I know this to be a fact because I have inquired largely into the matter.

It seems to me that the man or woman who does not want, and plan for unceasingly, a better salary is lacking in ambition, is now receiving all he or she is worth, *or* is located in a town where living expenses have not soared to heights beyond the stars. If there were no unrest, no ambition, there would be no advancement in any line in the world today.

"Plain living and high thinking" is a beautiful standard, but the high thinking is interfered with to a large extent when one has to make a very small income cover a very large outgo. The raising, clothing and educating of a family in these days is a hazardous undertaking, and I cannot find it in my heart to criticise any ranger who may voice its difficulties, and I can readily understand where he may be led into discussing the "filthy lucre." It is what he needs to feed little Johnny and Mary and Robert and possibly Emma and Jane, to say nothing of paying for their shoes.

"Put yourself in his place," Mrs. Shinn, and see where your budget will land you in supporting a "large and interesting" family on a small salary.

The Government Employee's Fate

Since the sixties the salaries of Congressmen, and even those of ministers, have advanced materially, while the stipend of the lowly federal employee remains nearly in statu quo.

To the Editors:

There appeared a few days ago in the Washington city papers an item concerning the death of Miss Julia Torrey, aunt of ex-President Taft. It stated that many years ago, between 1860 and 1870, she was engaged to be married to the Rev. Samuel S. Dutton, pastor of the Second Congregational Church of New Haven, Conn. At that time the minister of that church was paid a salary of $1,200 per annum, the same that a government clerk of the first class received. Since 1868 that church society has paid its ministers a salary of $6,000 a year, an increase of 400 per cent, but the first-class government clerk receives practically the same salary of $1,200, which rate was fixed before 1860.

A Congressman received at that time a salary of $3,000 per annum. The members of Congress at the present time draw from the United States Treasury (including their clerk hire, mileage and other "pickings") practically $10,000 per annum. The government clerks' salaries, however, remain at the rates fixed between 1850 and 1860. The last increase (from $5,000 to $7,500) in congressional salaries was made ostensibly on account of the high cost of living here in Washington. These high rates were caused by the excessive and extortionate prices so readily paid by these same Congressmen. In ordinary times a Congressman is in Washington three months in one year and perhaps six months the other year. The government clerk has to endure for the whole twelve months these same outrageous prices. If the government clerks could fix their salaries as Congressmen do, would they remain at the low rates established before 1860?

Financing Our Locals

The suggestion is made that locals should raise a certain proportion of their required income by means of entertainments, thus lightening the burdens of the members least able to pay dues.

To the Editors:

One of the problems connected with organizing and conducting local unions of federal employees is how to get and retain the poorer-paid class of government employees. At least 75 per cent of the men to whom membership appeals are of this class, but in these days of extremely high prices for everything that enters into the bare

existence of their families every nickel has to be carefully expended, and the dues of the union constitute an item of expense that has to be taken into consideration by this class of men.

It is very evident from the trend of the articles in THE FEDERAL EMPLOYEE that 35 cents per month dues is not sufficient to pay the tax of the national organization, including subscription to THE FEDERAL EMPLOYEE, and leave enough for the Local to carry on any aggressive work for the promotion of the welfare of the members; hence a movement to increase the dues to 50 cents per month.

Undoubtedly this additional revenue is needed, but the question of raising it by increasing dues is open to argument, as it will keep many of the rank and file from uniting, and many who do unite will drop out when they find the dues are a tax on their meager pay. There is no way of making the organization strong enough to be recognized by the political "powers that be" except by a large membership, and it must not be forgotten that the poorest paid man in the government service has a vote as well as the highest salaried official.

How then to raise this additional revenue without decreasing the membership is a vital question in the organizing and conducting of Locals. Criticism that is merely destructive is without value, and the writer would suggest that the needed revenue be raised by some other means than an increase of dues.

Many of the Locals are giving free socials and entertainments. Would it not be a good idea for the Locals to give one or more entertainments a year for the distinct purpose of raising money? This would divide the additional burden between those who feel that they can afford it and outsiders, who would be glad to help in the work of the Federal Employees Union and not add anything to the financial burden of those who are finding it difficult enough to make one dollar do the work of three.

A "Comeback" at Single Tax

Again Brother Jul Johnson's voice is heard from the far-off Canal Zone, protesting that Single Tax means confiscation and should not be given a hearing in this magazine.

To the Editors:

As I have been taken to task for making the statement that the Single Tax propaganda has no place in the columns of THE FEDERAL EMPLOYEE, I ask your indulgence while I explain my reasons for so doing. As I have

Digitized by Google

been accused also of being unfamiliar with the writings of Henry George, let him speak for himself.

HENRY GEORGE'S POSITION AS DEFINED IN HIS WRITINGS

In *Progress and Poverty* (p. 340), under the headings "Justice of the Remedy" and "Injustice of Private Ownership in Land," in speaking of titles to land, he says:

> Whenever the people, having the power, choose to annul those titles, no objection can be made in the name of justice.

And on page 341:

> But it will be said: There are improvements which in time become indistinguishable from the land itself: Very well, then the title to the improvements becomes blended with the title to the land; the individual right is lost in the common right. It is the greater that swallows up the less, not the less that swallows up the greater.

And on page 435, under the heading "Effects of the Remedy upon the Production of Wealth," he says:

> For this simple device of placing all taxes on the value of land would be in effect putting up the land at auction to whoever would pay the highest rent to the State.

FARM AND HOME OWNERS IN THE UNITED STATES

There are in the United States nearly 7,000,000 privately owned farms, the vast majority of which serve as the means of the owners' livelihood, and at the same time, make it possible for you and me to live while we work at something else, which we elect to do for reasons of our own. In addition to these 7,000,000 farms there are twice that number of city, town, and suburban homes title to which is held in like manner as is title to farms. Thus there are nearly 20,000,000 titles all told. The average number of members in the families of those home-owners is four, making a total of 80,000,000 people who are members of home-owning families. Who then are the people having the right to annul at will those titles?

HOW THE SINGLE TAX PLAN WOULD WORK IN PRACTICE

The second sentence quoted specifically includes improvements as subject to the same consideration as the land itself, and the third shows how the scheme would work in practice. The land on which improvements stand will be put up at auction to whosoever would pay the highest rent to the State. That is to say: In order to retain possession of his improvements, an owner would be compelled to bid against all others for the rental of the land on which the improvements stand. That everyone may understand plainly

Pioneers on uncharted seas—

Far back in the old days, when you were a little codger at school, how you thrilled at the story of Columbus!

How he sailed straight into the horizon, when every one said the world was flat! How his men feared they would come eventually to the edge and drop off! How one fine day came the gladsome shout of—*"Land! Land!"*

Fundamentally—the story of Columbus is the story of every successful business. Always there was some pioneer—some man with a vision—some discoverer:—some one who charted the course for generations to follow.

Years ago, scientific filing was little more than an undiscovered country. Letters, reports, memos were filed flat or on hooks. But as business grew, there came the need for more system. *And out of that need grew Library Bureau.*

So it was that Library Bureau originated vertical filing—the card record system—the card record desk—counter-hight units—the L. B. Automatic index—and practically all the filing methods that are accepted as standard the world over.

L. B. is today the world's largest manufacturer of card record and filing equipment. Its forty-three years experience will keep you off the rocks and shoals and insure safe passage through all your filing difficulties.

Get Our Prices Before Buying

how this would work out in practice, let us consider a vacant lot and a house on another lot in a suburb of Washington, D. C. The owners paid $1,000 each for the lots. The money was the product of their labor; they had saved it. One of them built a house for $3,000. This money he borrowed, paying off the debt in monthly instalments, also the product of his labor. The rental value of this house, whether he occupies it himself or rents it to a tenant, is $20 per month. It is immaterial whether this rental value is due to the value of the land or of the improvements he has placed on the land. In my humble opinion, the rental value of the house is due entirely to the improvements. My opinion is based on the fact that there is a vacant lot alongside of this house, and it has no rental value. The only difference between the two lots is that one has a house on it and the other has not. Any advocate of Single Tax may differ from this view if he cares to. It does not alter the facts in the least.

Now comes the Single Tax system duly installed, and the land (lot) on which the house stands is put up at auction to whosoever will pay the highest rent to the State. The vacant lot is also put up, but no bids are received because it has no rental value. The owner bids that, but any one of the "whosoevers" may come along and raise the bid to $25. The owner must meet that, and if anyone goes to $26 the owner must keep going up.

In other words: The application of the Single Tax on land values, as advocated by Henry George, means the absolute and unrestricted confiscation of all improvements standing on land, and putting up the land to the highest bidder.

The question now arises: Could not the owners of the improvements be protected in any way?

On page 342 we read:

> Thus if we concede to priority of possession the undisturbed use of land, confiscating rent for the benefit of the community, we reconcile the fixity of tenure which is necessary for improvement with a full and complete recognition of the equal rights of all to the use of land.

There is the guarantee to the owner of the improvements. He is conceded priority of possession, but all others have an equal right to bid for that possession. He must compete with the whole world for the use of his own property.

SINGLE TAX "A CONFISCATORY FORM OF BOLSHEVISM"

This is the most radical form of socialism ever advocated by any of the various agitators who have sought, from time to time, to overthrow modern civilization. It is a confiscatory

form of Bolshevism. It is directly opposite to what is contemplated in the Constitution and is a direct violation of the Fourteenth Amendment to the Constitution, which provides that no person shall be deprived of his property without due process of law. To take any person's property away from him and turn it over to whosoever would pay the highest rental for it is not due process of law; it is merely robbery. Every person in the federal service must take an oath of office wherein he promises to uphold the Constitution of the United States. That is my reason for saying that an argument in favor of Single Tax has no place in the columns of THE FEDERAL EMPLOYEE. A certain publication in the United States, discussing the action of the Government in the matter of deporting a number of I. W. W.'s, sounded this warning: "Today it is the I. W. W. Tomorrow it may be the socialists and the next day the American Federation of Labor." This seems to me a rather far-fetched and uncalled-for anxiety. But I say this, that any person or organization that will advocate the overthrow of our constitutional safeguards of life and property should be sent to a place where that sort of propaganda is in practical operation—Russia, for instance—in order to save him the trouble of bringing about the same conditions over here. The disregard of property rights and the substitution of might for right does not stop with the confiscation of property. As soon as property rights are disregarded human life is disregarded also.

POSITION OF NON-PARTISAN LEAGUE OF NORTH DAKOTA

If I am given the opportunity, I am in position to defend all the other statements I made in my former article on this subject. Where I am accused of misrepresenting Henry George the burden of proof is on the accuser. The "straw man" I set up is built out of Henry George's own material. I am afraid, though, that THE FEDERAL EMPLOYEE is subject to the charge of libel for accusing the Nonpartisan League of North Dakota of being in favor of Single Tax. That statement is indeed so laughable that it surprises me that it ever got into print. Every member of the Nonpartisan League is a land-owner and would be in a fine fix to advocate the confiscation of his own property. The Nonpartisan League has already saved hundreds of millions of dollars formerly wasted in the handling of foodstuffs, from producer to consumer, by eliminating unnecessary middlemen. No wonder that it should be slandered and libeled by the adherents of the political machine it broke up; but

there is no reason why we should lambast it when its aim and object is to bring to us ultimately for 35 cents what we now pay a dollar for. The workings of the Nonpartisan League, its failures and its accomplishments, are something worth while studying by all of us; but this article is too long already. Hence I will defer further discussion of the Nonpartisan League until some other time.

The resolutions adopted at the convention in Chicago and cited as authority for the publication of the Single Tax article do not grant license to anyone to advocate the overthrow of the fundamentals of our Constitution.

JUL JOHNSON, *Member of Federal Employees Union No. 6.*

Balboa Heights, Canal Zone.

Why Customs Guards Should Be Better Paid

Night work, dangers to which they are exposed in discharge of their duties, and the responsibility imposed on them—these should be better recompensed, argues Brother Berndt, who speaks from experience.

To the Editors:

Few realize what a Customs Guard must endure in the performance of his duty, and why so few seek the office. Many vacancies have occurred in the last few years, due in the first place to night work. Any reasonable person will say night work was never intended for man, as it means a complete change of habits of life and is a detriment to health.

As everyone knows, the lowest elements of society settled in our large cities, such as Philadelphia, and today they are lying in wait for their victim—and the victim may be a Customs Guard. One Customs Guard was seriously injured, yet the Department will offer him neither money nor help. There are many hold-ups going on and this is one of the chances taken in accepting this position. The ground traveled by Customs Guards lies along the river front, and many frequenting that section were jailbirds in their own country and not to be trusted, yet the Customs Guards must handle them. Is there any wonder they are asking for more money? Are they not justified? Would this be robbing the Treasury? No, it would be only justice to a worthy class of men who doing their full duty, who have been alert at all times, faithful to the duties entrusted to them and true to the oath they have taken.

Philadelphia is a center for export; hundreds of ships and cargoes representing hundreds of millions of dollars are loaded and shipped to the other side, yet during the war period through the watchful care of the Customs Guards not one mishap occurred, not one cent was lost by either shipper

Digitized by Google

or Government. For this alone are they not worthy of consideration by those in authority? They have been commended for their good work on several occasions; they appreciated the kind words, and today they are looking for the reward which rightly belongs to them, and their only hope is that the commission appointed by both Hous s of Congress, while investigating the matter of reclassification, will go deeply into the case of the Customs Guards and report a flat four dollars per night, or $1,460 per year.

PAUL H. BERNDT, *Member of Philadelphia F. E. U. (No. 23).*
Collingswood, N. J.

Physical Requirements Waived for Discharged Service Men

The Civil Service Commission recently authorized the following:

The civil service regulations specify certain physical defects which will debar from all examinations and other defects which will debar from certain examinations. These regulations are based upon the requirements of the service as established by the several departmental heads.

The Civil Service Commission had no authority to waive the physical requirements in favor of any person. Upon the recommendation of the Civil Service Commission, the President issued on April 16, 1919, this order:

"Provided that the Commission may, in its discretion, exempt from the physical requirements established for any position a disabled and honorably discharged soldier, sailor or marine upon the certification of the Federal Board for Vocational Education that he has been specially trained for and has passed a practical test demonstrating his physical ability to perform the duties of the class of positions in which employment is sought."

In substituting its recommendation to the President, the Civil Service Commission said: "Where it is apparent to this Commission that his (the disabled soldier's, sailor's or marine's) physical condition is such that he would not ordinarily be accepted, the case will be referred to the Federal Board for Vocational Education. That board will then decide whether it is practical to educate him for the position sought. If considered practicable, the rehabilitation and education will be given, and when completed, certification of that fact will be made to this Commission. Where the Board does not consider it desirable to attempt the education for the position sought other positions will be considered and suggested to him, but he will not be admitted to the one for which his physical condition constitutes an irremediable bar."

Notable Career Ended Death of David Lubin

THE WORLD lost recently one of its most valuable citizens in the passing of David Lubin, father of the rural credits system and the public crop report. It may be added that he was the organizer of the California Fruit Growers' Association.

While this Polish Jew, then but a lad, peddled overalls through the farming districts of California, he learned much at first hand of the handicaps suffered by those who till the soil, and of the hardships inflicted by the middlemen through whose hands their product must pass on its way to the consumer. Believing that the producer should enjoy all credit advantages possessed by the speculator, he set about trying to improve the situation, succeeding finally in establishing a just system of rural credits and also a modification of parcel post rulings which added materially to the farmer's profits at the expense of the commission merchant.

And that he was keenly alive not only to present wrongs but to future dangers is evidenced by his ringing words at the National Farm School in Doylestown two years ago when our nation was being eulogized by others:

> It can and should be the greatest nation, and we may and will be the greatest people if we determine to preserve an agricultural democracy. But with nearly 40 per cent of our farm lands in the hands of renters, we are drifting dangerously toward conditions which will weaken us at the very source of our being. To counteract this drift, we must insure a national marketing system and a national rural credit system.

As a fruit and grain raiser, he early learned to his sorrow the power of the stock manipulator to build a fortune on false reports concerning crops in remote and unknown regions. From this experience was born the idea of an international exchange of reports concerning crop conditions.

The simplicity of this remedy, as well as the need of its application, led him to believe that it needed only to be explained to insure its adoption, even though it was merely for the public good with no special interest behind it. But to America, England and France he appealed in vain, and it was not until the King of Italy listened to his plan that the machinery was set in motion which resulted in the establishment in 1905 of that general clearing house, the International Institute of Agriculture, of which fifty-three nations are now members, and the annual crop reports, which render the schemes of the prevaricating stock profiteer less easy of accomplishment.

And Operators Like the Burroughs Calculator

Because it is small, compact and occupies but very little desk room, and can be carried to any part of the office. Its easy key action permits of all day, continuous use without tiring the operator's fingers.

The many improved mechanical features of the Burroughs Calculator include the Column Lock, which prevents "fumbling," the Locked Adding Wheel device, which prevents "overadding," and the One-Motion, Quick Cancelling Mechanism, which saves the operator hundreds of unnecessary motions daily.

Burroughs Calculators handle all figures from units to billions, and add, subtract, multiply and divide with almost unbelievable speed in the usual accurate Burroughs way.

Retirement Bill as Revised by Joint Conference

APPENDED IS the Retirement bill, the preparation of which was completed by the Joint Conference on Retirement, representing the various organizations of federal employees interested in the measure, a few days after the opening of this session of Congress. A comparison between this bill and the McKellar-Keating bill will be found on another page.

A BILL

For the retirement of employees in the classified civil service, and for other purposes.

Be it enacted, etc., That beginning at the expiration of ninety days next following the passage of this Act, all employees in the classified civil service of the United States who have on that date, or shall have on any date thereafter, reached the age of sixty-five years and rendered at least fifteen years of service computed as prescribed in section three of this Act, shall be eligible for retirement on an annuity as provided in section two hereof: *Provided,* That mechanics, city and rural letter carriers, and postoffice clerks shall be eligible for retirement at sixty-two years of age, and railway postal clerks at sixty years of age.

The provisions of this Act shall include employees of the Library of Congress and the Botanic Gardens, excepting such persons as are appointed by the President and confirmed by the Senate, and may be extended by Executive order, upon recommendation of the Civil Service Commission, to include any employee or group of employees in the civil service of the United States not classified at the time of the passage of this Act. The President shall have power, in his discretion, to exclude from the operation of this Act any employee or group of employees in the classified civil service whose tenure of office is intermittent or of uncertain duration.

All regular annual employees of the municipal government of the District of Columbia, appointed directly by the Commissioners, including those receiving per diem compensation paid out of general appropriations but whose services are continuous, and including public school employees, excepting school officers and teachers, shall be included in the provisions of this Act, but members of the police and fire departments shall be excluded therefrom.

Postmasters, and such employees of the Lighthouse Service as come within the provisions of section six of the Act of June 20, 1918, entitled, "An Act to authorize aids to navigation and for other works in the Lighthouse Service, and for other purposes," shall not be included in the provisions of this Act.

SEC. 2. That for the purpose of determining the amount of annuity which retired employees shall receive, the following classifications and rates shall be established:

Class A shall include all employees to whom this Act applies who shall have served the United States for a total period of thirty years or more. The annuity to a retired employee in this class shall equal sixty per centum of such employee's average annual basic salary, pay, or compensation from the United

States for the ten years next preceding the date on which he or she shall retire: *Provided,* That in no case shall an annuity in this class exceed $720 per annum, or be less than $360 per annum.

Class B shall include all employees to whom this Act applies who shall have served the United States for a total period of twenty-seven years or more, but less than thirty years. The annuity to a retired employee in this class shall equal fifty-four per centum of such employee's average annual basic salary, pay, or compensation from the United States for the ten years next preceding the date on which he or she shall retire: *Provided,* That in no case shall an annuity in this class exceed $648 per annum, or be less than $324 per annum.

Class C shall include all employees to whom this Act applies who shall have served the United States for a total period of twenty-four years or more, but less than twenty-seven years. The annuity to a retired employee in this class shall equal forty-eight per centum of such employee's average annual basic salary, pay or compensation from the United States for the ten years next preceding the date on which he or she shall retire: *Provided,* That in no case shall an annuity in this class exceed $576 per annum, or be less than $288 per annum.

Class D shall include all employees to whom this Act applies who shall have served the United States for a total period of twenty-one years or more, but less than twenty-four years. The annuity to a retired employee in this class shall equal forty-two per centum of such employee's average annual basic salary, pay, or compensation from the United States for the ten years next preceding the date on which he or she shall retire: *Provided,* That in no case shall an annuity in this class exceed $504 per annum, or be less than $252 per annum.

Class E shall include all employees to whom this Act applies who shall have served the United States for a total period of eighteen years or more, but less than twenty-one years. The annuity to a retired employee in this class shall equal thirty-six per centum of such employee's average annual basic salary, pay, or compensation from the United States for the ten years next preceding the date on which he or she shall retire: *Provided,* That in no case shall an annuity in this class exceed $432 per annum, or be less than $216 per annum.

Class F shall include all employees to whom this Act applies who shall have served the United States for a total period of fifteen years or more, but less than eighteen years. The annuity to a retired employee in this class shall equal thirty per centum of such employee's average annual basic salary, pay, or compensation from the United States for the ten years next preceding the date on which he or she shall retire: *Provided,* That in no case shall an annuity in this class exceed $360 per annum, or be less than $180 per annum.

The term "basic salary, pay, or compensation" wherever used in this Act shall be so construed as to exclude from the operation of the Act, all bonuses, allowances, overtime pay, or salary, pay, or compensation given in addition to the base pay of the positions as fixed by law or regulation.

SEC. 3. That for the purposes of this Act and subject to the provisions of section ten hereof, the period of service shall be computed from the date of original employment, whether as a classified

or unclassified employee in the civil service of the United States, and shall include periods of service at different times and services in one or more departments, branches, or independent offices of the Government, and shall also include service performed under authority of the United States beyond seas, or honorable service in the Army, Navy, Marine Corps, or Coast Guard of the United States: *Provided*, That in the case of an employee who is eligible for and elects to receive a pension under any law, or compensation under the war-risk insurance Act, the period of his or her military or naval service shall not be included for the purpose of assignment to classes defined in section tow hereof, but nothing contained in this Act shall be so construed as to affect in any manner his or her right to a pension, or to compensation under the war-risk insurance Act, in addition to the annuity herein provided.

It is further provided that in computing length of service for the purposes of this Act, all periods of separation from the service shall be excluded; and that in the case of substitutes in the postal service only periods of active employment shall be included.

SEC. 4. That for the purpose of administration, except as otherwise provided herein, the Commissioner of Pensions, under the direction of the Secretary of the Interior, be, and is hereby authorized and directed to perform, or cause to be performed, any and all acts and to make such rules and regulations as may be necessary and proper for the purpose of carrying the provisions of this Act into full force and effect. An appeal to the Secretary of the Interior shall lie from the final action or order of the Commission of Pensions affecting the rights or interests of any person under this Act.

SEC. 5. That any employee to whom this Act applies who shall have served for a total period of not less than fifteen years, and who, before reaching the retirement age as fixed in section one hereof, becomes totally disabled for useful and efficient service by reason of disease or injury not due to vicious habits, intemperance, or willful misconduct on the part of the employee, shall, upon his or her own application or upon the request or order of the head of the department, branch, or independent office concerned, be retired on an annuity under the provisions of section two hereof: *Provided, however*, That no employee shall be retired under the provisions of this section until examined by a medical officer of the United States, or a duly qualified physician or surgeon or board of physicians or surgeons designated by the Commissioner of Pensions for that purpose, and found to be disabled in the degree and in the manner specified herein.

Every annuitant retired under the provisions of this section, unless the disability for which retired is permanent in character, shall, at the expiration of one year from the date of such retirement and annually thereafter until reaching the retirement age as defined in section one hereof, be examined under direction of the Commissioner of Pensions, by a medical officer of the United States, or a duly qualified physician or surgeon or board of physicians or surgeons designated by the Commissioner of Pensions for that purpose, in order to ascertain the nature and degree of the annuitant's disability, if any: if the annuitant recovers and is restored

to his or her former earning capacity before reaching the retirement age, payment of the annuity shall be discontinued from the date of the medical examination showing such recovery; if the annuitant fails to appear for examination as required under this section, payment of the annuity shall be suspended until continuance of the disability has been satisfactorily established. The Commissioner of Pensions is hereby authorized to order or direct, at any time, such medical or other examination as he shall deem necessary to determine the facts relative to the nature and degree of disability of any employee retired on an annuity under this section.

Fees for examinations made under the provisions of this section by physicians or surgeons who are not medical officers of the United States shall be fixed by the Commissioner of Pensions, and such fees, together with the employee's reasonable traveling and other expenses incurred in order to submit to such examinations, shall be paid out of the appropriations for the cost of administering this Act.

In all cases where the annuity is discontinued under the provisions of this section before the annuitant has received a sum equal to the total amount of his or her contributions with accrued interest, the difference shall be paid to the retired employee, or to his or her estate, upon application therefor in such form and manner as the Commissioner of Pensions may direct.

No person shall be entitled to receive an annuity under the provisions of this Act, and compensation under the provisions of the Act of September 7, 1916, entitled, "An Act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," covering the same period of time; but this provision shall not be so construed as to bar the right of any claimant to the greater benefit conferred by either Act for any part of the same period of time.

SEC. 6. That all employees to whom this Act applies shall, upon the expiration of ninety days next succeeding its passage, if of retirement age, or thereafter on arriving at retirement age as defined in section one hereof, be automatically separated from the service, and all salary, pay, or compensation shall cease from that date, and it shall be the duty of the head of each department, branch, or independent office of the Government, to notify such employees under his direction of the date of such separation from the service at least sixty days in advance thereof: *Provided,* That if within sixty days after the passage of this Act or not less than thirty days before the arrival of an employee at the age of retirement, the head of the department, branch, or independent office of the Government in which he or she is employed certifies to the Civil Service Commission that by reason of his or her efficiency and willingness to remain in the civil service of the United States the continuance of such employee therein would be advantageous to the public service, such employee may be retained for a term not exceeding two years upon certification by the Civil Service Commission, and at the end of the two years he or she may, by similar certification, be continued for an additional term not exceeding two years, and so on: *Provided, however,* That at the end of ten years after this Act becomes effective no employee shall be con-

Digitized by Google

tinued in the civil service of the United States beyond the age of retirement defined in section one hereof for more than four years.

SEC. 7. That every employee who is or hereafter becomes eligible for retirement because of age as provided in this Act, shall, within sixty days after its passage or thirty days before reaching the retirement age, or at any time thereafter, file with the Commissioner of Pensions, in such form as he may prescribe, an application for an annuity, supported by a certificate from the head of the department, branch, or independent office of the Government in which the applicant has been employed, stating the age and period or periods of service of the applicant and salary, pay, or compensation received, as shown by the official records: *Provided, however,* That in the case of an employee who is to be continued in the civil service of the United States beyond the retirement age as provided in section six hereof, he or she may make application for retirement at any time within such period of continuance in the service, but nothing contained in this Act shall be construed to prevent the compulsory retirement of such employee when in the judgment of the head of the department, branch, or independent office in which he or she is employed such retirement would promote the best interests of the service.

Upon receipt of satisfactory evidence the Commissioner of Pensions shall forthwith adjudicate the claim of the applicant, and if title to annuity be established, a proper certificate shall be issued to the annuitant under the seal of the Department of the Interior.

Annuities granted under this Act for retirement on account of age shall commence from the date of termination of pay for active service on or after the date this Act shall take effect, and shall continue during the life of the annuitant. Annuities granted for disability under the provisions of section five hereof shall be subject to the limitations specified in said section.

SEC. 8. That beginning on the first day of the third month next following the passage of this Act and monthly thereafter there shall be deducted and withheld from the basic salary, pay, or compensation of each employee to whom this Act applies a sum equal to two and one-half per centum of such employee's basic salary, pay, or compensation. The Secretary of the Treasury shall cause the said deductions to be withheld from all specific appropriations for the particular salaries or compensation from which the deductions are made and from all allotments out of lump-sum appropriations for payments of such salaries or compensation for each fiscal year, and said sums shall be transferred on the books of the Treasury Department to the credit of a special fund to be known as "the civil service retirement and disability fund," and said fund is hereby appropriated for the payment of annuities, refunds, and allowances as provided in this Act.

The Secretary of the Treasury is hereby directed to invest from time to time, in interest-bearing securities of the United States, such portions of the "civil service retirement and disability fund" hereby created as in his judgment may not be immediately required for the payment of annuities, refunds, and allowances as herein provided, and the income derived from such investments shall constitute a part of said fund for the purpose of carrying out the provisions of section eleven of this Act.

hereby authorized and empowered in carrying out the provisions of this Act to establish special funds supplementing individual contributions by the employees, and to receive, invest, and disburse for such purpose all moneys in the form of donations, gifts, legacies, bequests, or otherwise, which may be contributed by private individuals or corporations or organizations for the benefit of the civil service employees generally or any special class of employees.

SEC. 9. That every employee coming within the provisions of this Act shall be deemed to consent and agree to the deductions from salary, pay, or compensation as provided in section eight hereof, and payment less such deductions shall be a full and complete discharge and acquittance of all claims and demands whatsoever for all regular services rendered by such employee during the period covered by such payment, except the right to the benefits to which he or she shall be entitled under the provisions of this Act, notwithstanding the provisions of sections one hundred and sixty-seven, one hundred and sixty-eight, and one hundred and sixty-nine of the Revised Statutes of the United States, and of any other law, rule, or regulation affecting the salary, pay, or compensation of any person or persons employed in the civil service to whom this Act applies.

SEC. 10. That upon the transfer of any employee from an unclassified to a classified status, or upon the reinstatement of a former employee, credit for past service rendered subsequent to the date this Act shall take effect, or for any part thereof, shall be granted only upon deposit with the Treasurer of the United States, of the amount of such deductions with interest as provided in this Act, as would have been made for the periods of actual service, or part thereof, for which credit is to be given, but such interest shall not be computed for periods of separation from the service: *Provided*, That failure to make such deposit shall not deprive the employee of credit for any past service rendered prior to the date this Act shall become operative, and to which he or she would otherwise be entitled.

SEC. 11. That in the case of an employee in the classified civil service of the United States who shall be transferred to an unclassified position, and in the case of any employee to whom this Act applies who shall become absolutely separated from the service before reaching the retirement age, the total amount of deductions of salary, pay, or compensation with accrued interest computed at the rate of four per centum per annum compounded on June thirtieth of each fiscal year, shall upon application be returned to such employee; and in case an annuitant shall die without having received in annuities an amount equal to the total amount of the deductions from his or her salary, pay, or compensation, together with interest thereon at four per centum per annum compounded as herein provided up to the time of his or her death, the excess of the said accumulated deductions over the said annuity payments shall be paid in one sum to his or her legal representatives upon the establishment of a valid claim therefor; and in case an employee shall die without having reached the retirement age, or without having established a valid claim for annuity, the total amount of deductions with accrued interest as herein provided, shall be paid to the

legal representatives of such employee.

SEC. 12. That annuities granted under the terms of this Act shall be due and payable monthly on the first business day of the month following the month or other period for which the annuity shall have accrued, and payment of all annuities, refunds, and allowances granted hereunder shall be made by checks drawn and issued by the disbursing clerk for the payment of pensions in such form and manner and with such safeguards as shall be prescribed by the Secretary of the Interior in accordance with the laws, rules, and regulations governing accounting that may be found applicable to such payments.
